The Associated General Contractors (AGC) of California (Ex. 4–108) endorsed the use of a "qualified engineer" for alternative design (anything other than a standard practice) and for any design for excavations deeper than 20 feet. The commenter stated that their organization could not cite any evidence that requiring designs by qualified engineers would decrease the risk of injuries and fatalities, but noted that they were not aware of any failures of engineered plans which were properly followed. The AGC of California did not support the use of a registered professional engineer, but noted the qualified engineer must have expertise and skill in structural design and soils mechanics. The commenter also confirmed the cost data supplied by the LASACE (Ex. 4–75) discussed above, citing hourly fees of $65 to $75, and complete shoring plans for small to medium projects at $200 to $800.

Other commenters, like the State of California, the Michigan Department of Labor, and Schield Construction (Exs. 4–4, 4–46 and 4–56) did not address Issue 2 directly, but supported limiting design responsibility to a "qualified engineer" or a registered professional engineer (California) in their comments on the standard.

The comments received prompted OSHA to seek additional information in the hearing notice (53 FR 5280) on the suggestion that a registered professional engineer be required instead of either a "qualified person" or "qualified engineer" for all original design work, for the development of all original tabulated data, and for determinations regarding the stability of adjacent structures. In response the Agency received the following comments:

Peoples Gas (Ex. 8–6) commented that most companies use qualified engineers from within the company to examine special cases.

The W.M. Lyles Co. (Ex. 8–7) objected to the suggested requirement for a registered professional engineer. The commenter's objection was basically the same as the previously discussed objections to a requirement for a "qualified engineer" (Exs. 4–5 and 4–62).

The Exxon Company (Ex. 8–10) commented that its procedure involved performing soil borings and laboratory analysis of soils, and based on the results, its "qualified engineers" apply previously developed equations to calculate a stable slope. Exxon noted that possession of an engineering license is not required to apply these equations safely.

The Milwaukee Construction Industry Safety Council and the Associated General Contractors of America (Exs. 8–14 and 8–18) commented that they did not support deletion of "qualified person" or "qualified engineer," nor the substitution of registered professional engineer.

The Associated General Contractors of California (Ex. 8–18) did not support the use of the term "registered professional engineer."

The Carolina Branch of the Associated General Contractors of America (Ex. 8–19) agreed with the use of a registered professional engineer in special situations, but recommended retention of the term "qualified person," because of the implied experience factor.

Several commenters (Exs. 8–21, 8–22, 8–26, and 8–29) responded to the hearing notice with objections to using the terms "qualified person" or "qualified engineer" for design work, but did not address the use of registered professional engineer. However, these commenters did not state clearly whether their comments were support for the use of a registered professional engineer or an objection to any limiting of design responsibility.

The South Dakota Engineering Society (Ex. 8–24) was in total support of the ACCSH recommendation to use a registered professional engineer.

Southern California Gas Company (Ex. 8–25) commented that the use of a registered professional engineer in lieu of "qualified person" or "qualified engineer" was unnecessary, but provided no rationale for this statement.

The Texas Department of Highway and Public Transportation (Ex. 8–27) recommended that OSHA not require a "registered professional engineer" to perform the work required in the standard, but did recommend "the most competent possible person be used to insure safety in excavation work."

Mr. William E. Patten (Ex. 8–3) did not specifically address this issue, but in his comments suggested design by a qualified engineer for any alternative means of protection.

In addition to the comments received specifically addressing Issue 2, OSHA also received comment on other provisions of the standard which relate to this issue and are discussed here in order to provide a complete discussion of this Issue in one place. The following comments were received on proposed § 1926.650(b)(14), which defined "qualified person."

Granite Construction (Ex. 4–28) agreed with the criticism of the definition of "qualified person," as discussed under Issue 2, and also raised an objection to allowing the competent person to choose among the options allowed in § 1926.652(b) and (c). The commenter noted that this could be dangerous

because there was no limit on the depth of excavation for which this person was permitted to choose or to design protective systems.

The National Institute for

The Agency disagrees with those commenters who suggest that experience, per se, qualifies an individual to design protective systems. The principles of soil mechanics are too state, and would make enforcement by OSHA easier in regards to the qualifications of the person responsible for any design.

The wording of the Final Rule,

OSHA received 16 comments on this issue, and additional input from the ACCSH.

Several commenters (Exs. 4–5, 4–13, 4–28, 4–57, 4–82, 4–102, 4–106 and 4–109) disagreed with the concept. Many of

because there was no limit on the depth of excavation for which this person was permitted to choose or to design protective systems.

The National Institute for Occupational Safety and Health (NIOSH) (Ex. 4–30) recommended tying the qualification of a "qualified person" to the opinion of a registered engineer with required documentation of that opinion. OSHA notes that the Final Rule recognizes this type of arrangement by not specifying who designs a set of plans or tabulated data, but requires that plans or data be approved by a registered professional engineer. The Agency does not require the documentation suggested by NIOSH but notes that the "responsibility" for the design rests with the registered professional engineer.

Exxon Pipeline Company (Ex. 4–53) recommended that OSHA allow the competent person to design less complex protective systems. The Agency notes that in the Final Rule the competent person is permitted to design protective systems under the limitations of the appendices, manufacturer's data, or other tabulated data without an engineer's approval. In addition, the competent person can develop original designs, but these designs must be approved (simply by stamping and signing the design) by the registered professional engineer before use.

Finally, the BCTD and WMACSA (Exs. 4–17 and 4–111) recommended elimination of the term, "qualified person" as they did in their direct response to Issue 2.

After careful consideration of the comments received, OSHA has determined that the term "qualified person" should be dropped from the standard. This decision is based on the evidence in the record which indicates that most of the individuals who fit this broad definition lack the qualifications necessary to do original design work and may often have insufficient incentive to provide adequate protection to employees. The Agency agrees with the many commenters who point out that the proposed definition of "qualified person" was so broad and subjective that almost anyone with construction experience would meet the requirements and, therefore, be permitted to design protective systems for excavations. The Agency's position is supported by commenters, like Johns Hopkins University (Ex. 4–11), who highlighted the frequency of accidents where experienced "qualified persons" dug unprotected excavations which caved in, resulting in unnecessary fatalities and injuries.

The Agency disagrees with those commenters who suggest that experience, per se, qualifies an individual to design protective systems. The principles of soil mechanics are too complex to learn on a trial and error basis. In addition, OSHA notes that many of the commenters that supported design by a "qualified person" conceded that engineers were necessary in some situations, or stated that field-developed designs were verified by engineers (Exs. 4–35, 4–54, 4–78, 4–105, and 8–6).

The Agency wants to emphasize that this decision does not limit the employer's ability to use supervisors who meet the criteria for competent persons to choose protective systems from the numerous other options available. OSHA notes that these persons are permitted to design protective systems using the appendices to Subpart P, manufacturers data, or other tabulated data, in accordance with this Final Rule. However, they may not develop original designs (i.e., those not based on any of the other options), unless the supervisor is also a registered professional engineer or has the design approved by a registered professional engineer.

The Agency also notes that this revision does not mean that an engineer must be on site at every excavation, as suggested by some commenters.

In addition, OSHA has determined that the term "qualified engineer" should be replaced by the term "registered professional engineer" in the final rule. This decision is based on evidence in the record which demonstrates the need for original designs to be developed by a person whose qualifications in this field have been demonstrated and are readily recognizable. The Agency agrees with the commenters who point out the difficulty OSHA would have in establishing criteria, evaluating individuals and certifying these individuals as qualified to develop original designs for protective systems. The commenters also note that such a process would be impractical and a duplication of state licensing boards. OSHA recognizes that the registration process is the only nationwide certification program in place that attests to the qualifications of a person to do the required work. OSHA also recognizes that registered professional engineers are legally liable for their work, work under a code of ethics, and have a license which can be withdrawn for cause. The Agency also notes that the current registration system allows each state to establish the criteria necessary to practice engineering in that state, and would make enforcement by OSHA easier in regards to the qualifications of the person responsible for any design.

The wording of the Final Rule, requiring approval of original designs by "a registered professional engineer" recognizes the industry practice where junior engineers, engineers-in-training, or non-engineers may, in fact, develop the actual design, but the design is verified and approved by a registered professional engineer.

Finally, OSHA agrees with the many commenters who recommended that excavations under foundations, excavations deeper than 20 feet, and excavations where unusual site conditions exist require the expertise of an engineer in all cases. The Agency has revised this final rule to reflect these concerns. Therefore, with respect to the issues, the agency has determined that revision of the standard is justified and promulgates the standard as revised.

Issue 3 of the proposed rule (52 FR 12294) sought to determine if OSHA should require specific visual or manual tests when using proposed appendix A to classify soils.

OSHA received 17 responses to this issue (Exs. 4–3, 4–5, 4–13, 4–17, 4–28, 4–35, 4–37, 4–57, 4–62, 4–88, 4–91, 4–101, 4–102, 4–105, 4–106, 4–109, and 4–115). Although the rationale expressed in these responses differed, almost all commenters agreed that a specific test(s) should not be required. One commenter, Union Electric Co. (Ex. 4–35), observed that mandated testing was unnecessary because most soils can be classified by visual analysis. OSHA disagrees with this observation because of the complexity of soil make-up and the number of conditions that affect soil stability. On the other hand, most commenters agreed that some type of soil testing is necessary, but that the method of testing should be left as an employer prerogative. OSHA agrees that soil testing is necessary, but has determined that mandating a specific test would lock in current procedures and discourage new development. Therefore, with respect to this issue, the Agency promulgates the standard as proposed. A complete discussion of acceptable tests is provided below in the summary and explanation of appendix A.

Issue 4 of the proposed rule (52 FR 12294) solicited public input on § 1926.652(b), which would permit employers to have a steep slope for excavations open less than 72 hours (short term), but which would require flatter slopes for excavations open longer than 72 hours (long term).

OSHA received 16 comments on this issue, and additional input from the ACCSH.

Several commenters (Exs. 4–5, 4–13, 4–28, 4–57, 4–82, 4–102, 4–106 and 4–109) disagreed with the concept. Many of these commenters assumed this provision would create a paperwork burden, and felt any time frame established would be arbitrary. They also pointed out that the effect of time on an excavation depends on the type of soil, and noted that weather, vibration, water, and superimposed loads must also be considered. In addition, these commenters pointed out that there is no technical or engineering basis for establishing any specific time frame to differentiate long term or short term, and that this concept should not be made part of the standard. One of these commenters, the AGC of California (Ex. 4–106), asserted that the proposed provision would be overly restrictive, and supported slope angles presented by R.T. Frankian which, for simple slopes, were somewhat similar to the short term slopes presented by OSHA in the proposal.

Another commenter, Underground Contractors, Inc. (Ex. 4–115), suggested that the passage of time should not be recognized in the standard, but provided no rationale.

One commenter, the Tennessee Valley Authority (Ex. 4–39), argued that only one set of slopes should apply to excavations, the ones that provide the greatest protection regardless of the time the excavation is open, while another commenter (Ex. 4–78) argued that protection should match site conditions, not time.

Another commenter, Lone Star Gas (Ex. 4–105), asserted that time definitely has an effect on the stability of an excavation, noting, however, that 72 hours may not be the appropriate dividing line. The commenter provided a qualified endorsement for a 24 hour cut off, but noted that the effects of the environment should be the basis for calculating time limitations.

Other commenters (Exs. 4–17 and 4–101) noted that the critical time is when the trench is first opened and recommended that "short term" should be considered to be 24 hours or less.

Two commenters (Exs. 4–27 and 4–91) endorsed the proposed handling of short term/long term as a necessary improvement, with one commenter (Ex. 4–91) enthusiastically supporting the 72 hour dividing time.

In addition, the ACCSH (Tr. 8/5/87 p. 520) suggested the time division be reduced to one work shift or eight hours.

After careful consideration of the entire record, OSHA has determined that, while there is no scientific basis to delineate short time exposure, time must be considered to some extent in the regulation because long term stresses are different from short term stresses. The Agency points to documents in the record (Ex. 2–1 p. 2–3 and pp. B–44 and B–47 and Ex. 2–5 pp. 20, 21, 28–30 and 70–71) which support the recognition and use of short term/long term time frames for sloping. One commenter (Ex. 41) submitted several studies to the record which support the use of this practice.

However, because of the great concern expressed by many commenters regarding soil type and environmental factors, the Agency has determined that it is appropriate to limit the use of steeper slopes for short term exposure to Type A soils, as defined in appendix A. These soils have the greatest strength, next to stable rock, and field experience has shown that these soils can stand on a slope steeper than ¾ horizontal:1 vertical (as prescribed in Table B–1 of the Final Rule) for short term exposures to a depth of 12 feet and still provide adequate employee safety.

OSHA disagrees with those commenters who believe this concept would create a paperwork burden. The Agency notes that no recordkeeping burden was required or implied in the proposal. The Agency believes the information needed to verify the amount of time the excavation is open can be readily obtained by questioning employees on site.

While the Agency accepts the argument that no specific time frame has scientific backing, and that selection of a time frame, to some extent, is arbitrary, OSHA believes the amount of time an excavation is open does play an important role in employee protection. The Agency raised this issue in order to determine a reasonable time frame for distinguishing between long term and short term excavations. OSHA also notes that this short term/long term concept must be used with the soil classification system in Appendix A, which recognizes other important conditions that affect soil stability. These other conditions were also noted by many commenters.

OSHA disagrees with the AGC of California (Ex. 4–106) position that a long term/short term concept is overly restrictive. The Agency notes that the slopes proposed by OSHA on that basis were less stringent in many cases than those already required by the State of California. In addition, OSHA notes that the use of long term/short term distinction is only one of the options available to employers under § 1926.652(b). The employer can comply with one of the other options provided, and, therefore, may use different slopes from those listed. The Agency realizes that the allowable slopes and required soil classification system in Appendix A may, in some instances, be conservative, but believes this is necessary since this option is intended for use by field personnel, without benefit of laboratory generated soils analysis.

OSHA has also determined that the time frame for differentiating long term from short term excavations in the case of Type A soil should be reduced to 24 hours. Although there was no clear consensus on a time frame, this period has more support in the record than the proposed 72 hours or the one work shift recommended by the ACCSH. This decision also is in line with the Agency's belief that it is best to have an excavation open for the shortest reasonable amount of time. OSHA believes that a period of time less than 24 hours could be disruptive and would not be appropriate, in light of the other requirements in subpart P, such as § 1926.651(k) which requires daily inspection of the excavation.

Therefore, based on the above discussion OSHA promulgates the standard, as revised, in regard to this issue.

Issue 5 of the proposed rule (52 FR 12295) raised ACCSH suggestions that design specifications for shields be available at the worksite, and that shields should be certified that they can withstand the specified maximum loads. The proposal also asked for information on the effects of such requirements on manufacturers and users, and for information on current industry practice.

OSHA received 14 comments on this issue. Eight commenters opposed a requirement for design specifications to be available on site. Four of these commenters (Exs. 4–82, 4–102, 4–106, and 4–109) argued that design specifications contain proprietary information and should not be available on site. These commenters did recommend that the design maximum load for the shield be displayed on the shield. Two other commenters (Exs. 4–35 and 4–115) recommended that these specifications should not be on site, but should be made available to OSHA upon request within a reasonable amount of time. Another commenter (Ex. 4–54) noted that "paper at the jobsite inhibits attention to productivity and safety." The last commenter (Ex. 4–57) to disagree with the proposed requirement for design specification availability at the worksite also noted that the specifications often contain certain proprietary information and would be of

minimal value on site. The commenter went on to state that what would be more important to have at the site are installation and placement instructions,

Another commenter (Ex. 4–105) stated that such a requirement would likely eliminate shop-built protection, and would require an engineer on each job.

Another commenter (Ex. 4–37) stated that the surface disturbance resulting from construction provides enough

The revised subpart M will also incorporate the fall protection requirements in existing § 1926.651(t).

Therefore, in respect to this issue, the agency promulgates the standard as

constantly for signs of danger when employees are in an excavation. This issue also solicited input on the extent to which such a requirement would

Several commenters (Exs. 4–5, 4–13, 4–37, 4–82, 4–88, 4–102, 4–106, and 4–109) noted that it is industry practice to have a "top person" in many situations, but

VOL 54 ISS 209 OCT 31 1989 UMI

minimal value on site. The commenter went on to state that what would be more important to have at the site are installation and placement instructions, drawings, allowable load restrictions, weights, lift points and maintenance instructions.

Three commenters (Exs. 4–27, 4–28, and 4–78) supported the suggestion to require shield design specifications to be available at the job site. Two other commenters (Exs. 4–101 and 4–105), in addition to supporting the suggestion, noted that manufactured shields usually have the load requirements stamped on them, and also noted that design specifications are easily obtained from the manufacturers. Finally, one commenter (Ex. 4–14) recommended that design specifications, which indicate the circumstances under which the shield can be used, should be on site to enable a competent person to know how to use the shield properly under changing soil conditions.

OSHA has determined that detailed drawings, which usually contain proprietary information, would be of little use on the job site because the Agency has no way to confirm certain criteria, such as the grade of steel used in a shield. However, as suggested by several commenters, the Agency will require that information necessary for the safe installation, placement, use, and removal of a shield must be on site. OSHA has also determined, based on the above comments and testimony presented at the informal public hearing (Tr. 4/19/88 p. 184), that most manufacturers already provide the above information with their product, and, therefore, such a requirement will not impose a significant burden. Therefore, with respect to this issue, the Agency is promulgating the standard as revised.

Issue 6 of the proposal (52 FR 12295) solicited input on a suggestion to require design specifications (a plan or drawing) and a statement of a support system's limitations to be available at the worksite. OSHA received 10 comments on this issue. Three commenters (Exs. 4–82, 4–102, and 4–109) stated that it would be unreasonable to require design specifications for support systems to be on site, but noted that the requirement should be for the employer to furnish the design specifications to OSHA, given reasonable notice. Two other commenters (Exs. 4–106 and 4–115) objected to the proposal that design specifications for *all* (emphasis added) support systems be maintained at the job site. These commenters noted that under CAL/OSHA, only alternate or special designs must be made available. Another commenter (Ex. 4–105) stated that such a requirement would likely eliminate shop-built protection, and would require an engineer on each job.

On the other hand, two commenters (Exs. 4–17 and 4–101) agreed that specifications necessary for the proper use of the support system should be on site while the system is in use, in order to enable the employer to make modifications to the system if necessary. These commenters also noted that reputable manufacturers already furnish this type of information for their product. This was also confirmed by testimony presented at the informal public hearing (Tr. 4/19/88, p. 184). Another commenter (Ex. 4–28) recommended that design plans and specifications for support systems be available at the job site for any unusual or alternate design.

One other commenter (Ex. 4–37) noted that if the system is designed by an engineer, the requirement would have little effect on the employer, since a set of drawings would be on site anyway.

Based on the record, OSHA has determined that the information necessary for the safe installation, placement, use, and removal of a support system must be available at the work site. Further, the Agency has determined that this information is usually supplied by the manufacturers of these support systems when the systems are delivered to the site or to the user. Therefore, with respect to this issue, the Agency is promulgating the standard as revised.

Issue 7 of the NPRM (52 FR 12295) solicited comments on an ACCSH recommendation that OSHA require some form of warning along the edges of excavations that are five feet or more in depth to warn employees who work adjacent to excavations, but who are not directly involved with the excavation activity, that a fall hazard exists.

The Agency received 17 comments on this issue. Two commenters (Exs. 4–54 and 4–101) supported such a requirement, but supplied no rationale. One of these commenters (Ex. 4–54) indicated that a barrier bank (the spoil pile) was itself an effective means of warning.

Other commenters (Exs. 4–37, 4–49, and 4–105) noted that a requirement for some kind of warning along the edges might be appropriate for some excavations but was impractical for larger (longer) excavations such as pipeline excavations. One commenter (Ex. 4–49) pointed out that most pipelines go through remote areas with little potential for unwarranted access. Another commenter (Ex. 4–37) stated that the surface disturbance resulting from construction provides enough delineation. A third commenter (Ex. 4–105) noted that it is present practice to provide such warnings except for trenches of great length.

Two commenters expressed strong support for such a requirement. The first commenter, BCTD (Ex. 4–17), recommended that this requirement be implemented at multiple contractor worksites because employees not directly involved with the excavation may not be aware of the specific location of the excavation. The second commenter (Ex. 4–39) noted that a warning system not only protects workers not directly involved in the excavation, but should help to maintain the stability of the excavation by keeping mobile equipment away from the edge of the excavation.

On the other hand, many other commenters disagreed with this type of requirement. Several commenters (Exs. 4–5, 4–13, 4–82, 4–102 and 4–109) implied that this type of requirement will not prevent falls into excavations, because most falls are the result of inattention. The commenters also noted that falls occur despite the fact that employees are aware that excavation activity is being undertaken. Another group of commenters (Exs. 4–57 and 4–115) noted that warning barriers would only result in more problems, because they would become additional obstacles in the work environment, and matérial, such as shoring, would have to be moved around, over or under these obstacles, creating other unspecified hazards.

Finally, several commenters noted that this type of requirement is impractical and unnecessary (Ex. 4–28) because many types of work, such as pipeline excavations, are completed or move from one area to another too fast for barricades to be effective (Ex. 4–91), and their use should be left to the discretion of the employers as site conditions require (Exs. 4–35 and 4–106). Additionally, one commenter (Ex. 4–19) noted that contractors working at one site for any length of time normally provide this type of protection as a matter of course.

OSHA appreciates the input received on this issue. However, the Agency has determined that this subject is more appropriately addressed in its Final Rule revising subpart M, "Safety Standards for Fall Protection in the Construction Industry," (Docket S–206) which is on OSHA's Regulatory calendar for publication in the **Federal Register** later this year. The proposal was published on November 26, 1986 (51 FR 42718).

The revised subpart M will also incorporate the fall protection requirements in existing § 1926.651(t).

Therefore, in respect to this issue, the agency promulgates the standard as proposed.

In Issue 8 of the proposed rule (52 FR 12295) OSHA solicited public comment on the ACCSH recommendation that a written log or record of all required inspections be kept at the job site. OSHA received 16 responses to this issue. An overwhelming majority of the commenters opposed such a requirement. Most of these commenters (Exs. 4–5, 4–13, 4–35, 4–57, 4–82, 4–91, 4–101, 4–102, 4–106, 4–109, and 4–115) stated that the benefit of a record to verify inspection was questionable, and that a record could be falsified. Further, they contended that the time spent by the competent person filling out a record of required inspections would be better spent maintaining and improving worker safety. Two commenters (Ex. 4–28 and 4–78), while disagreeing with the proposed requirement for a written log, noted that if other commenters established an overwhelming need for a written record, then a certification would be adequate. Other commenters, while not directly endorsing the recommended written log, noted that maintaining a log of inspections might not be necessary if the competent person were constantly vigilant (Ex. 4–17), but that keeping records and logs would not add a financial burden because the inspector is already on the job site (Ex. 4–105). Finally, one commenter (Ex. 4–37) suggested that a log be kept of conditions that vary from those for which the system was designed and of any subsequent actions taken to bring the system into compliance.

Based on the above comments, the Agency has determined that a written log or record of inspections is not necessary. OSHA agrees with the commenters who note the questionable value of a record in this situation. The information contained in a log can be obtained by other means, such as communicating with the competent person and with employees on the site, and by reviewing the elements of the protective system being used by the employer. Further, OSHA agrees that the time required to fill out a log could be better spent by the competent person ensuring worker safety. Therefore, in regard to this issue OSHA promulgates the final rule as proposed.

Issue 9 of the NPRM (52 FR 1295) solicited input on whether or not the Agency should require that a "top man" be present to observe work conducted within the excavation, and to watch constantly for signs of danger when employees are in an excavation. This issue also solicited input on the extent to which such a requirement would increase safety, on other duties that could be assigned to the "top man," on the responsibilities the "top man" should have; and on the cost of such a requirement.

OSHA received 20 comments on this issue, including input from the ACCSH (Tr. 8/5/87 p. 477). The ACCSH recommended that a "top person" (as opposed to "top man") be defined as "a person at the top of the excavation constantly in visual and oral contact with the workers in a trench or excavation, and able to recognize and respond to hazardous trenching or excavation conditions." Further discussion by the ACCSH indicated that the "top person" should not necessarily be the competent person required by proposed § 1926.651(k), but rather, could be someone with less experience who is still able to respond to hazardous conditions and effect a rescue. The rationale for this suggestion was that the competent person would be engaged in other activities (Tr. 8/5/87 p. 477–79.)

Three commenters fully supported the use of a "top person." In particular, the Building and Construction Trades Department of the AFL–CIO (BCTD) (Ex. 4–17) noted that a "top person" was essential for all trenches and for all excavations until a permanent protection system was in place. BCTD also commented that reputable contractors already provide a "top person," that the "top person" would logically be the competent person, and that the main responsibility of the "top person" would be the safety of the workers. A second commenter, the Washington Metropolitan Area Construction Safety Association (WMACSA) (Ex. 4–101), indicated that such a requirement would improve safety. WMACSA also noted that the logical "top man" would be the competent person, that the primary responsibility would be worker safety, and that many contractors currently have a "top man." A third commenter, Lone Star Gas (Ex. 4–105), noted that a "top man" is industry practice and serves to decrease the risk of injury. Lone Star also commented that the "top man" should not perform any duties that would prevent the performance of his or her safety function, and that the "top man's" responsibilities are to warn those in the excavation of danger and to remove workers in danger as quickly as possible.

Many other commenters objected, however, to a requirement for a "top person" for every excavation.

Several commenters (Exs. 4–5, 4–13, 4–37, 4–82, 4–88, 4–102, 4–106, and 4–109) noted that it is industry practice to have a "top person" in many situations, but that not every situation requires one. Most of these commenters also indicated that even when needed, a "top person" could perform other duties in many situations without detracting from the safety function. Additionally, three of these commenters (Exs. 4–82, 4–102, and 4–109) pointed out that limiting this person's functions could decrease rather than enhance safety because of boredom and the accompanying lack of attention.

Other commenters (Exs. 4–28, 4–37, 4–54, 4–78, 4–106, and 4–115) opposed this requirement, commenting that it was primarily the foreman's (competent person) responsibility, and a secondary responsibility of other workers, to watch for signs of danger.

Two commenters (Exs. 4–35 and 4–115) also pointed out that the job of a "top person" would be a boring job where concentration would waver, and really would not provide any effective protection or safety.

Two other commenters (Exs. 4–49, and 4–91) supported the need for an observer on excavations five feet or greater in depth. Additionally, one of these commenters (Ex. 4–49) supported the intent of this provision on the condition that the person be able to perform other responsibilities which do not impair the duty to watch for signs of danger. The other commenter (Ex. 4–91) opposed a mandatory "top person" as described in this issue.

After careful consideration of the comments on this issue, OSHA has determined that a requirement for a "top person" for every excavation is not appropriate. The Agency believes that the responsibilities of a "top person" are already adequately assigned to the competent person or his/her designee in the Final Rule. OSHA notes that the majority of the commenters supporting a specific requirement for a "top person" for all excavations agreed that most contractors, in fact, already have a "top person," who is also the competent person.

Issue 10 of the NPRM (52 FR 12295) solicited public input on a suggested fourth option for sloping, which would permit the use of tabulated data in the same manner as such data would be used in option three, which addresses shoring. The intent would be to allow the use of tabulated data, meeting specified requirements, in designing sloping or benching systems in a larger geographic area than the proposed

VOL 54 ISS 209 OCT 31 1989 UMI

sloping option three, which is site specific.

The Agency received 13 responses to this issue, with most commenters supporting the addition of a "tabulated data" option for sloping.

Two commenters, (Exs. 4–37 and 4–91), disagreed with the addition of another option for sloping. The National Utility Contractors Association (NUCA) (Ex. 4–91) commented that this option would add confusion to the inspection process, and that the proposal already provided enough latitude for the contractor to work outside the standard. In addition, Pacific Gas Transmission (PGT) (Ex. 4–37) commented that this option would not be appropriate given the variety of soil conditions in larger geographic areas. PGT also noted that seismic activity should be considered in design.

However, most commenters supported this suggestion (Exs. 4–28, 4–49, 4–78, and 4–101). Several other commenters (Exs. 4–82, 4–102, 4–106, 4–109, and 4–115), in addition to supporting a "tabulated data" option for sloping, noted that this type of data is already available in California. These commenters also recommended that, if the data meets the prescribed requirements in the standard, the only other restriction should be that the use is limited to the soil classifications and geographic areas specified. Another commenter (Ex. 4–105) suggested that restrictions should apply in areas of previous excavation and backfill, and where excavations are close to structures. One other commenter (Ex. 4–17) noted that in addition to the criteria listed in the issue, any tabulated data used for sloping should have either political or professional stature in the locality where it is being used.

After careful consideration of the comments, OSHA has determined that a "tabulated data" option for sloping is appropriate. The Agency believes that this addition will not add confusion to the inspection process, because an employer using this option would be required to provide the tabulated data, including instructions for the safe use of the data, to the inspector during the inspection. OSHA also notes that soil variations in larger geographic areas would be adequately addressed by the standard, since this sloping option would be required to be based on a recognized soil classification system which takes into account such variations. The Agency declines to require consideration of seismic activity, because the Agency has no data on the subject and the commenter did not submit any supporting data.

Issue 11 of the proposal (52 FR 12295) solicited comment on allowing employees to remain inside shields during repositioning of the shields. Proposed § 1926.652(g)(1)(iv) prohibits employees from being inside shields when the shields are being installed, removed, or relocated.

OSHA received 14 responses to this issue.

Twelve of the commenters (Exs. 4–5, 4–13, 4–17, 4–28, 4–78, 4–82, 4–91, 4–102, 4–105, 4–106, 4–109, and 4–115) endorsed permitting workers to remain in shields during repositioning. Two of these commenters, BCTD and ABC (Exs. 4–17 and 4–78), further stated that this practice is acceptable if the shield is only moved horizontally and is not lifted. Most of the other commenters stated that the increased risk of falls that would accompany the repeated exit and re-entry of a shield would make it safer to remain in the shield.

Two other commenters (Exs. 4–39 and 4–101) recommended retaining the prohibition on employees remaining in shields being repositioned, but supplied no rationale.

Based on the comments in the record, OSHA has determined that employees can remain safely inside a shield being repositioned, provided the movement of the shield is horizontal and the shield is not lifted. Additionally, the Agency agrees that repeated exiting and re-entry will increase the fall hazard to employees.

Therefore, OSHA has revised proposed § 1926.652(g)(1)(iv) to permit employees to remain inside shields being repositioned provided movement is horizontal and the shield is not lifted.

Issue 12 of the NPRM (52 FR 12295) solicited comment on a suggestion that hardpan and caliche be moved from a "Type A" soil classification to a "stable rock" classification.

OSHA received 13 responses to this issue. Most commenters supported this suggestion for a variety of reasons.

Several commenters (Exs. 4–5, 4–13, 4–57, 4–105, and 4–115) supported this change for at least some depth beyond five feet, citing a cost benefit. Other commenters (Exs. 4–37, 4–82, 4–102, 4–106, and 4–109) supported the suggestion, but noted that the hardpan or caliche must be consistent, uniform, and continuous for the full depth of the excavation; it must also be dry; and the depth of the excavation must be limited to 12 to 15 feet in depth. One other commenter (Ex. 4–35) expressed support, but provided no rationale for the support.

On the other hand, one commenter (Ex. 4–17) noted that these terms have too diverse a range of properties, and have a different meaning in different areas of the country. The commenter recommended allowing hardpan and caliche to be classified as stable rock locally, in accordance with the requirements of the standard. Another commenter (Ex. 4–101) made a similar recommendation.

After careful consideration of the comments, OSHA has determined that upgrading the classification of hardpan and caliche from "Type A" soil to stable rock, on a national basis, is not appropriate. The Agency notes that much of the support for this upgrade is tempered with recommended limitations. OSHA agrees with the comments that these terms have a wide range of meanings in different areas of the country. The Agency, however, does not preclude such a reclassification if done on a regional or site-specific basis, provided that the requirements of the standard are met. Specifically, this would require approval of a registered professional engineer, as required for the use of other tabulated data or site-specific designs. Appendix A does not permit this reclassification.

Therefore, in regard to this issue, OSHA promulgates the Final Rule as proposed.

Issue 13 of the NPRM (52 FR 12295) solicited comment on whether or not, in addition to § 1926.652(f), the Agency should provide more specific coverage for bell bottom pier holes under a separate section of subpart P, and if so, what a separate new section should address.

OSHA received nine comments on this issue. Three commenters (Exs. 4–82, 4–102, and 4–109) opposed having a separate section addressing bell bottom pier holes. Another commenter (Ex. 4–115) noted that bell bottom pier holes should not be included in this standard. On the other hand, several commenters (Exs. 4–17, 4–72, 4–91, 4–101, and 4–106) agreed that bell bottom pier holes should be addressed under a separate section of this standard. Only one of those commenters (Ex. 4–72) provided any input as to what should be addressed in a separate section.

Based on the comments received, the Agency believes a separate section covering bell bottom pier holes might be appropriate in the future, but does not have sufficient data and information at this time to propose or promulgate such regulations at present. Therefore, in regard to this issue the Agency promulgates the Final Rule, as proposed.

Issue 14 of the NPRM (52 FR 12295) requested public comment on a suggestion that OSHA allow the use of

established regional practices for the construction of protective systems. The Agency also solicited comment on the criteria to be used to ensure that these practices are effective.

OSHA received 14 comments on this issue, with most commenters supporting OSHA's recognition of regional practices for shoring or sloping.

Two commenters opposed the suggestion. One commenter (Ex. 4–91), while recognizing the importance of regional practices, recommended that these practices be subject to the existing variance procedure. The other commenter (Ex. 4–37) opposed the use of localized standards because they could result in non-uniform standards and practices, which could lead to on site conflict and misunderstanding.

Several commenters (Exs. 4–28, 4–35, 4–37, 4–78, and 4–101) expressed support for recognition of regional practices, but provided no criteria for evaluating these practices. Other commenters (Exs. 4–82, 4–102, 4–106, and 4–109) supported recognition of regional practices and suggested that evaluation criteria should include approval by local authorities and a proven safety record. However, they opposed as unrealistic the OSHA suggested requirement of five years of successful use without failure. Another commenter (Ex. 4–105) supported the suggestion, but noted that approval by local authorities may be difficult. One commenter (Ex. 4–115) supported the suggestion and agreed that approval of a local authority should be an evaluation criteria, but recommended that the authority be at a state or regional level. Another commenter (Ex. 4–17) agreed with the use of regional practices, noting that this is more likely to lead to voluntary compliance. However, the commenter also noted the difficulty of evaluating regional practices even if approved by a political entity, and suggested that these regional practices have the support of engineering analysis followed by a trial period.

After careful consideration of the comments, OSHA has determined that information on and evidence of recognition of regional practices should be considered to be "other tabulated data" on the practices in question, and, therefore, must meet the prescribed criteria required in the standard in order to be acceptable for use.

OSHA disagrees with the comment that these local practices should be subject to the variance procedure before they are recognized. The Agency notes that the criteria for "other tabulated data" will provide sufficient assurance that these regional practices will protect workers. The Agency also disagrees with the comment that non-uniform standards and practices could lead to on site conflict and misunderstanding. OSHA has no evidence which shows the recognition of other local standards would cause any problems or lessen employee protection. In fact, comment on this issue indicates that compliance would be more likely if OSHA permits the use of local standards and practices with which employees and employers are already familiar.

Finally, OSHA has determined that the most expeditious way to recognize these local standards and practices is to evaluate them using the same criteria required in the standard for "other tabulated data," because that criteria will ensure adequate employee protection.

Issue 15 of the NPRM (52 FR 12295) solicited comment on allowing a greater degree of employer flexibility in the design of protective systems. In addition, OSHA requested input on the type of information necessary to ensure design adequacy.

OSHA received 13 comments on this issue, and all of the commenters expressed support for the flexibility of the proposed amendment. Several commenters (Exs. 4–5, 4–13, 4–57, 4–82, 4–102, and 4–109) noted that some employers will be irresponsible no matter what the rules are. Four commenters (Exs. 4–82, 4–102, 4–106, and 4–109) also recommended that OSHA not specify factors to be considered in a design, but require instead that the designs be in accordance with accepted engineering practice.

Other commenters, in addition to supporting the flexibility allowed by the proposal, suggested several factors which should be included in the design of protective systems, in addition to soil tests and results, intended or expected load conditions, environmental considerations, and design limitations listed by OSHA in the proposal. These additional factors include the extent of vibration and depth of excavation (Ex. 4–105); surcharge, depth, and vibration (Ex. 4–17); and ground water elevations, materials specification, required monitoring devices, and dewatering requirements (Ex. 4–37). Another commenter (Ex. 4–28) suggested that such designs be made by a qualified engineer, using the criteria listed in the issue, and that such designs be available at the job site. The commenter also recommended that OSHA not recognize standard practices for trenches deeper than 20 feet.

Two commenters (Exs. 4–17 and 4–101) recommended dropping "qualified persons" from the standard. One of the commenters (Ex. 4–17) recommended the use of a registered professional engineer while the other (Ex. 4–101) used the term "qualified engineer" in its comment. Both recommended that OSHA require the same design specifications that are required for manufactured systems.

The last commenter (Ex. 4–115) supported the flexibility of the proposal and noted that it could eventually save millions of dollars.

After careful consideration of the comments received, OSHA has determined that employers should have some flexibility in choosing a protective system for employees, but notes that, as discussed under Issue 2, original design will now require the approval of a registered professional engineer. The Agency has also determined that specific information should be included on the design, in order to provide a minimum degree of safety, and additional guidance should be provided by the system designer to employers concerning the use proper of the design.

Therefore, in regard to this issue, OSHA promulgates the standard as revised.

Section 1926.650 Scope, Application and Definitions Applicable to this Subpart

Section 1926.650(a) states that this subpart applies to all open excavations made in earth surfaces and that excavations are defined to include trenches. Whenever the word "excavation" is used in the final standard, it applies to all excavations, including those also falling within the definition of a trench.

In the preamble of the proposed rule OSHA included a statement intended to clarify the Agency's jurisdiction with regard to excavations which fall under the authority of other Federal agencies. The statement noted that OSHA jurisdiction does not apply to working conditions which fall under the statutory authority of other Federal agencies to prescribe or enforce occupational safety or health regulations, if that authority is being exercised. This statement was directed primarily at excavations (surface mines) covered by the Mine Safety and Health Administration (MSHA), because MSHA does prescribe and enforce comprehensive regulations intended to ensure worker safety and health.

Almost half of the total number of comments received during the comment period were sent by companies involved in excavations related to natural gas pipelines. About 75 percent of these comments (e.g., Exs. 4–6, 4–8, and 4–14) expressed concern with two of the proposed paragraphs, § 1926.651(g)(1)(iii), hazardous

atmospheres, and § 1926.651(g)(2)(i), emergency rescue equipment. In general, these commenters stated that the proposed hazardous atmospheres

In considering the appropriate treatment of the preemption question, however, it must also be recognized that other agencies such as OPS may choose

entrap, bury, or otherwise injure and immobilize a person."

OSHA received two comments and an ACCSH recommendation (Tr. 8/5/87, pp. 449–450) on this definition. Both the

of identifying existing and predictable hazards in excavation work or taking prompt corrective measures.

The Agency received only one comment on the actual definition. The

VOL 54 ISS 209 OCT 31 1989 UMI

atmospheres, and § 1926.651(g)(2)(i), emergency rescue equipment. In general, these commenters stated that the proposed hazardous atmospheres provision was preempted by an existing Office of Pipeline Safety (OPS) (of the Department of Transportation) regulation which directly addresses the same subject. In addition, these commenters also stated that the proposed regulation for emergency rescue equipment was not appropriate for situations dealing with the repair or replacement of natural gas pipelines, since these were routine operations performed by trained personnel and not "emergencies" as understood in normal construction operations.

Other commenters however, asserted that the OSHA excavation regulations are preempted in their entirety by OPS regulations, even though those regulations provide very little guidance in the area of employee safety. OSHA raised this subject as an issue in the hearing notice (53 FR 5280) and received several comments (Exs. 8–11, 8–12, 8–13 and 8–17) and hearing testimony (Tr. 6/19/88 pp. 84–105) in response.

Whether an OSHA standard is preempted by a regulation of another agency, such as OPS, will depend on the nature and scope of that regulation, and the degree to which it regulates a working condition. For example, in *Columbia Gas of Pennsylvania, Inc.* v. *Marshall*, 636 F.2d 913 (3rd Cir., 1980), the U.S. Court of Appeals for the Third Circuit determined that existing paragraph (v) of § 1926.651, which required atmospheric testing in a trench where gaseous conditions are possible, was preempted under section 4(b)(1) of the OSH Act by an OPS regulation (49 CFR 192.751), which, in the Court's words, "envisions the working conditions faced by petitioner's employees" (636 F.2d at 916) in the trench. Where another Agency issues and enforces regulations covering a particular working condition involving employee safety, OSHA cannot enforce its own standard which would otherwise cover that working condition. However, the other agency's regulation will be preemptive of OSHA only insofar as it constitutes an exercise of statutory authority over employee safety and health. It should be noted that although OSHA does not concur with much of the court's rationale on the scope of preemption in Columbia Gas, the Agency acknowledges that current OPS regulations may well have a preemptive effect over some provisions of this final OSHA standard on excavations.

In considering the appropriate treatment of the preemption question, however, it must also be recognized that other agencies such as OPS may choose to revise or even revoke their regulations, and such actions would clearly affect the scope of any preemption. Were OPS to revoke a regulation which preempts an OSHA standard, OSHA authority would no longer be preempted with regard to the specific working condition. For these reasons, OSHA does not believe it appropriate to address preemption directly in the text of this final excavation standard. OSHA believes that preemption is more appropriately addressed in the enforcement context, in which specific claims of preemption can be evaluated and decided.

Section 1926.650(b) lists and defines all major words used in the Final Rule. Many of the definitions are the same as those in the existing standard and the proposed revision. Others have been revised based on the record, and these changes will be discussed below as appropriate.

Section 1926.650(b) defines "accepted engineering practices" as "those requirements which are compatible with standards of practice required by a registered professional engineer."

The existing definition, found in § 1926.653(a), has been in use since the standard was first promulgated in 1971, and reads as follows: "Those requirements or practices which are compatible with standards required by a registered architect, a registered professional engineer, or other duly licensed or recognized authority."

That definition was revised in the proposal to clarify its meaning, at the suggestion of the ACCSH, and also as suggested in the industry sponsored workshops (Ex. 2–26) discussed above. The proposed definition read as follows: "Those requirements which are compatible with standards of practice required by a registered professional engineer or other duly-licensed or recognized authority."

Prior to the publication of the proposed revision, OSHA received other suggestions concerning this definition. These included: dropping the words "other duly-licensed or recognized authority" because they are unclear and imply something broader and less demanding than the standards required by engineers; limiting "accepted engineering practices" to the standards of practice required by a registered professional engineer, not just compatible with those standards of practice; and defining accepted engineering practices as those described in published literature, such as a textbook.

OSHA received six comments on this definition and on the suggestions set forth above. Four commenters (Exs. 4–82, 4–102, 4–106, and 4–109) recommended retaining the words "compatible with" in the definition, and objected to defining accepted engineering practices as those described in published literature, because that source is ambiguous. Two commenters, Granite Construction and the Associated General Contractors (AGC) of California (Exs. 4–28 and 4–106), agreed with the suggestion to drop the words "or other duly-licensed or recognized authority" because of the ambiguity of the terms. Finally, the National Institute for Occupational Safety and Health (Ex. 4–30) suggested that OSHA provide examples of "other duly licensed or recognized authority," for clarification purposes.

Based on the above discussion and the Agency's desire to provide clear guidance to employers, OSHA is revising the definition to remove the phrase "or other duly licensed or recognized authority," which is ambiguous and confusing. However, the Agency is not adopting the suggestion to define these practices as those described in published literature because, as discussed above, doing so would add further ambiguity.

Section 1926.650(b) defines "aluminum hydraulic shoring" as "a pre-engineered shoring system comprised of aluminum hydraulic cylinders (crossbraces) used in conjunction with vertical rails (uprights) or horizontal rails (walers). Such a system is designed specifically to support the sidewalls of an excavation and prevent cave-ins." This new definition is included to clarify the provisions of the new Appendix D (Aluminum Hydraulic Shoring for Trenches) discussed in detail later in this preamble.

Section 1926.650(b) defines "bell-bottom pier hole" as "a type of shaft or footing excavation, the bottom of which is made larger than the cross section above to form a belled shape." The definition for this term replaces the definition for a similar term, "belled excavation" found in existing § 1926.653(d). Although defined, the term "belled excavation" is not used in the existing standards. Instead, the term "bell-bottom pier hole" is used in existing § 1926.652(f). OSHA proposed a new definition of "bell-bottom pier hole" to replace the term "belled excavations", in order to make the standard consistent.

The proposal defined "bell-bottom pier hole" as "a type of shaft or footing excavation, a portion of which is made larger than the cross section above to form a belled shape." OSHA received three comments on this definition. CAL/OSHA and the Associated Builders and Contractors Inc. (ABC) (Exs. 4–4 and 4–78) suggested the definition should read "the bottom of which" not "a portion of which", since that more accurately describes the situation. The other commenter, Talbert Corporation (Ex. 4–72), suggested a completely revised definition in conjunction with a new section on excavation of pier holes. The commenter's suggestions are discussed in detail under Issue 13 abcve. OSHA has determined that the amendment suggested by CAL/OSHA and ABC presents a more accurate description of the defined conditions.

Section 1926.650(b) defines "benching" as "a method of protecting employees from cave-ins by excavating the sides of an excavation to form one or a series of horizontal levels or steps, usually with vertical or near-vertical surfaces between levels." This term is not used in the existing standard and therefore was not previously defined. The definition in the final rule is virtually identical to the proposal, except that the word "from" has been substituted for "against," based on a general comment made by the ACCSH (Tr. 8/5/87, p. 448). No other comments were received on this definition.

Section 1926.650(b) defines "cave-in" as "the separation of a mass of soil or rock material from the side of an excavation, or the loss of soil from under a trench shield or support system, and its sudden movement into the excavation, either by falling or sliding, in sufficient quantity so that it could entrap, bury, or otherwise injure and immobilize a person." The existing standard did not use or define the term "cave-in," but used the terms "moving ground" and "hazardous ground movement" instead. However, neither of these terms was defined in the existing standard. In order to eliminate this deficiency and resolve the confusion as to what these terms mean, OSHA proposed to eliminate these two terms and replace them with a definition of "cave-in," which would accurately convey the intended concept of the hazard by describing the mechanism of the hazard and its results. The proposed definition stated that cave-in means, "The separation of a mass of soil or rock material from the side of the excavation and its sudden movement into the excavation, either by falling or sliding, in sufficient quantity so that it could entrap, bury, or otherwise injure and immobilize a person."

OSHA received two comments and an ACCSH recommendation (Tr. 8/5/87, pp. 449–450) on this definition. Both the ACCSH and the Building and Construction Trades Department of the AFL–CIO (Ex. 4–17) noted that the definition did not cover the loss of soil from under a shield or support system. The Agency agrees that the hazard noted by the commenters needs to be addressed and has revised the final rule to reflect this input. The Carolinas Branch of the Associated General Contractors of America (CBAGC) (Ex. 4–54) supported the proposed definition of cave-in, but recommended that the term "hazardous moving ground" be retained and properly defined. However, CBAGC did not suggest a definition for "hazardous moving ground" and did not explain the rationale for recommending the inclusion of another term which has a similar if not identical meaning to "cave-in." Therefore, with regard to this recommendation, the Agency declines to act.

Based on the above discussion, OSHA promulgates this definition as revised.

Section 1926.650(b) defines "competent person." This definition is identical to the definition in § 1926.32(f) of subpart C of the current Construction Safety and Health Standards. The term is used throughout existing subpart P, but was not defined within the subpart, and there were no references to the existing definition in subpart C. In the proposal, OSHA added the definition to subpart P to help those using the standard. In addition, an explanatory note was added at the end of the definition in order to clarify the Agency's intent that the "competent person can act as the employer's designee for the purpose of choosing a protective system from the options provided in § 1926.652 (b) and (c) below, but cannot take an original design responsibility allowed by § 1926.652 (b)(3), (c)(3) or (c)(4), unless otherwise qualified."

Although the definition of "competent person" in § 1926.650 has not been changed from the proposal and is the same as that in existing § 1926.32, it is important to note that what constitutes a "competent person" depends on the context in which the term is used. In order to be a "competent person" for the purposes of this standard one must have had specific training in, and be knowledgeable about, soils analysis, the use of protective systems, and the requirements of this standard. One who does not have such training or knowledge cannot possibly be capable of identifying existing and predictable hazards in excavation work or taking prompt corrective measures.

The Agency received only one comment on the actual definition. The Michigan Department of Labor (Ex. 4–46) recommended dropping the term from the standard and making a reference to either "qualified person or qualified engineer." OSHA declines to act on this suggestion. The "competent person," as defined, is the appropriate person to use whenever an assessment of working conditions must be made with respect to safety. By definition, a competent person is capable of recognizing hazards and has the authority to correct them. By contrast, a "qualified" person or engineer, as defined in § 1926.32(l) might have more technical expertise, but would not necessarily have expertise in hazard recognition or the authority to correct identified hazards.

OSHA did receive input from the ACCSH (Tr. 8/5/87, p. 450) concerning the explanatory note at the end of the definition. The ACCSH recommended deleting "or otherwise qualified" from the note because it is ambiguous and there is no other way to be qualified to develop original designs unless the person is a registered professional engineer. The Agency recognizes the potential confusion that could result if the note remained, and has decided to delete the explanatory note from the Final Rule.

Section 1926.650(b) defines "cross braces" as "the horizontal members of a shoring system installed perpendicular to the sides of the excavation, the ends of which bear against either uprights or wales." This definition is identical to the proposed definition, and replaces the existing definition "braces (trench)." In the proposal, the term "stringers" was dropped from the current definitions and replaced with the term "wales." The existing standard defines "wales" and "stringers" identically as "the horizontal members of a shoring system whose sides bear against the uprights or earth." OSHA believes use of the term "wales," which is more consistent with industry terminology, would improve the definition of "cross braces."

The Agency received no comment on this definition, and therefore, promulgates this definition as proposed.

Section 1926.650(b) defines "excavation" as "any man-made cut, cavity, trench, or depression in an earth surface, formed by earth removal." The existing definition in § 1926.653(f) defines "excavation" as "any man-made cavity or depression In the earth's surface including its sides, walls, or

VOL 54 ISS 209 OCT 31 1989 UMI

faces, formed by earth removal and producing unsupported earth conditions by reason of the excavation. If installed forms or similar structures reduce the depth-to-width relationship, an excavation may become a trench." In the proposal, the definition was revised to read "any man-made cut, cavity, trench, or depression in an earth surface, formed by earth removal, and producing unsupported earth conditions (sides, faces)."

OSHA received two comments (Exs. 4–17 and 4–91) on the definition, and a recommendation from the ACCSH (Tr. 8/5/87, p. 451–52). All the commenters recommended removing "and producing unsupported earth conditions (sides, faces)," because the phrase is confusing and is not necessary to the definition. The Agency agrees that this phrase could cause confusion and, therefore, promulgates this definition as revised.

Section 1926.650(b) defines "faces" or "sides" as "the vertical or inclined earth surfaces formed as a result of excavation work." This definition and the proposed definition are identical to existing § 1926.653(k), except that the term "walls" was dropped from the standard. The Agency received no comments on this definition and therefore promulgates it as proposed.

Section 1926.650(b) defines "failure" as "the breakage, displacement, or permanent deformation of a structural member or connection so as to reduce its structural integrity and its supportive capabilities." This definition is intended to apply to protective systems and to the members and connections of protective systems, where applicable. Use of the concept of "failure" introduces a measure for the performance of protective systems, their members, and their connections. Such a measure is not present in the existing standard. This concept will help clarify the intent of the standard and the duty of employers to provide adequate protective systems.

There is no definition of failure in the current standard. In the NPRM, OSHA proposed to define "failure" as "the breakage, displacement, or permanent deformation of a structural member or connection as to affect its supportive capabilities." The Agency received two comments on this definition. The Building and Construction Trades Department of the AFL–CIO (Ex. 4–17) merely noted that this was a narrow structural definition. However, CAL/OSHA (Ex. 4–4) suggested revising the definition to read "so as to *reduce* its *structural integrity* and its supportive capabilities" (emphasis added). The commenter felt the revision was necessary to explain more fully what constitutes failure. The Agency believes this revision will help clarify the regulatory intent and therefore promulgates this definition as revised.

Section 1926.650(b) defines "hazardous atmosphere" as "an atmosphere which by reason of being explosive, flammable, poisonous, corrosive, oxidizing, irritating, oxygen deficient, toxic, or otherwise harmful, may cause death, illness, or injury." This definition is identical to the proposed definition, which was taken, with some modification, from the definition of "hazardous substance" in existing § 1926.32(k).

OSHA received seven comments on this definition (Exs. 4–21, 4–23, 4–31, 4–40, 4–42, 4–78, and 4–86). All commenters recommended removing the word "irritating" from the definition because irritating and hazardous are different. The Agency disagrees with these commenters because irritating substances can incapacitate employees to a point that would hamper escapeduring an emergency, or cause employees to rush jobs, thereby increasing the likelihood of mistakes and accidents. For example, OSHA notes that it is not uncommon to encounter hydrogen sulfide in excavations. This substance is anirritant at very low concentrations, deadens the sense of smell at or below 100 parts per million, and can be lethal in a very short time at concentrations of 400 parts per million or less. Therefore, OSHA declines to make the requested revisions and promulgates this definition as proposed.

Section 1926.650(b) defines "kickout" as "the accidental release or failure of a cross brace." This definition is identical to the proposed definition, which was taken from existing § 1926.653(i) with some modification. This definition was changed by substituting the new term "cross brace" for the current term "brace," and by dropping reference to the term "shore." The first change was made for purposes of consistency in the use of terms. The second change was made in order to clarify the definition. The term "shore," as used in the current definition of "kickout," is not defined. However, in accordance with accepted industry terminology, a "shore" is considered to be a vertical member, such as a post, or as defined in the current standard, an "upright." It is not OSHA's intention, however, to define "kickout" as failure of any vertical member. Therefore, use of the term "shore" was dropped in the proposed revisions of "kickout."

OSHA received no comment on this proposed revision and, therefore, promulgates this definition as proposed.

Section 1926.650(b) defines "protective system" as "a method of protecting employees from cave-ins, from material that could fall or roll from an excavation face or into an excavation, or from the collapse of adjacent structures. Protective systems include support systems, sloping and benching systems, shield systems, and other systems that provide the necessary protection." This term is not defined in the existing standard. References were made throughout the proposal to "protective systems." The approach taken in the proposed standard was to classify, under the term "protective system," all systems and methods of protecting employees from the hazards set forth in the definition.

OSHA received two comments (Exs. 4–17 and 4–91) and input from the ACCSH (Tr. 8/5/87 p. 456) recommending that "against cave-ins" be changed to "from cave-ins." The Agency agrees with this change and, therefore, promulgates this definition as revised.

Proposed § 1926.650(b)(13), which defined "qualified engineer" and proposed § 1926.650(b)(14), defining "qualified person," have both been deleted from the final rule. The rationale for these deletions were discussed in detail above, under Issue 2. Although the Agency received other comments on this definition, the points raised are more pertinent to other parts of the standard and will be discussed in the appropriate section of this preamble below.

Section 1926.650(b) of the Final Rule defines "ramp" as "an inclined walking or working surface that is used to gain access to one point from another, and is constructed from earth or from structural materials such as steel or wood." This definition is basically identical to proposed § 1926.650(b)(15) except for an editorial revision, moving "that is" from before "constructed" to before "used." The Agency received no comment on this definition and, therefore, promulgates this definition as revised.

Section 1926.650(b) of this Final Rule defines "registered professional engineer" as "a person who is registered as a professional engineer in the state where the work is to be performed. However, a professional engineer, registered in any state is deemed to be a 'registered professional engineer' within the meaning of this standard when approving designs for 'manufactured protective systems' or 'tabulated data' to be used in interstate commerce."

This definition is similar to the definition recommended by the ACCSH

(Tr. 8/5/87 p. 466) which was also proposed in the Notice of Informal Public Hearing (53 FR 5281). However, OSHA is deleting language from that definition which becomes unnecessary because the Agency intends to rely on state registration of professional engineers to demonstrate that the person approving designs is, in fact, qualified. In addition, the Agency is providing an exception to the requirement that a registered professional engineer within the meaning of this standard be licensed in the state in which work is being performed. A professional engineer registered in any state (as defined in section 3(7) of the OSH Act) who designs support systems, shield systems, or other protective systems that are to be manufactured and used in interstate commerce, or who prepared "tabulated data" to be used in interstate commerce, is deemed to be a "registered professional engineer" within the meaning of this standard. To limit such work to engineers licensed in the state in which the work is being performed would unduly burden the manufacturers of protective systems and may be counterproductive to employee safety. Moreover, the possibility of product liability actions if manufactured systems fail should assure that "manufactured protective devices" and "tabulated data" of general applicability will be designed prudently. The incentive to design manufactured systems safely to avoid such lawsuits is an adequate substitute for the incentive of an in-state engineer to avoid risking his or her professional license.

Section 1926.650(b) defines "sheeting" as "the members of a shoring system that retain the earth in position, and in turn are supported by other members of the shoring system." This definition contains some wording from the current definition of "sheet pile" (§ 1926.653(i)). The definition for "sheet pile" has been dropped since the term is not used in the final standard. "Sheeting" is a broader term. It includes all special types of sheeting, including sheet piles, where the purpose is to retain earth in position.

In the proposal, § 1926.650(b)(16) defined "sheeting" as "the members of a shoring system such as dimensional lumber uprights, plywood, or other materials that are driven or placed in contact with the earth, usually in a vertical position, for the purpose of retaining the earth in position and in turn being supported by other members of the shoring system."

OSHA received three comments on this definition and input from the ACCSH. Two commenters (Exs. 4–17 and 4–91) and the ACCSH (Tr. 8/5/87 p. 741) recommended deletion of "such as dimensional lumber uprights * * * for the purpose of * * *" The only other commenter (Ex. 4–111) noted that the standard did not include directions on the use of plywood, but made no suggestion as to what those directions should be.

The Agency has determined that the recommended deletion is appropriate, as the examples cited could give the false impression that only wood was acceptable as sheeting. The proposed definition contained the phrase "or other materials," in recognition of other equally effective materials, such as steel sheeting, but the Agency understands that the definition, as phrased, could be misinterpreted, and has made the recommended deletion.

In addition, the Agency recognizes that the standard does not include directions for the use of plywood, but notes that the use of tabulated data for protective systems which utilize plywood sheeting, or a design prepared by a registered professional engineer utilizing plywood sheeting, is acceptable under the standard. Additionally, OSHA does not believe it is necessary to provide directions for all variations of protective system design.

Therefore, based on the above discussion the Agency promulgates this definition as revised.

Section 1926.650(b) of the Final Rule defines "shield" as follows:

> A structure that is able to withstand the forces imposed on it by a cave-in and thereby protect employees within the structure. Shields can be permanent structures or can be designed to be portable and moved along as work progresses. Additionally, shields can be either premanufactured or job built in accordance with § 1926.652(c)(3) or (c)(4). Shields used in trenches are usually referred to as "trench boxes" or "trench shields."

The definition replaces existing § 1926.653(p) which defines "trench shield" as "a shoring system composed of steel plates and bracing, welded or bolted together, which support the walls of a trench from the ground level to the trench bottom and which can be moved along as work progresses," and it replaces the proposed definition § 1926.650(b)(17) which defined "shield" as:

> A structure that normally will not prevent a cave-in, but is able to withstand the forces imposed on it by a cave-in and thereby protect employees within the structure. Shields can be permanent or can be designed to be portable and moved along as work progresses. Additionally, shields can be either premanufactured or job-built, in accordance with § 1926.652 (c)(3) or (c)(4). Shields used in trenches are usually referred to as "trench boxes" or "trench shields."

The concept of a shield, as used in both the proposed and final standards, is different from the concept of a shield as defined in the existing standard. The major difference however, is the manner in which shields are defined with respect to how they provide protection. Unlike the current standard, the proposed and final standards do not refer to shields as devices which provide protection to employees by supporting the sides of an excavation and thereby preventing cave-ins. Instead shields generally do not prevent cave-ins, but, rather, protect employees from cave-ins that do occur. They provide a limited but safe, sheltered space in which employees work. In addition, the new definitions do not place any limits on the material from which a shield may be constructed.

Shields are one of several types of protective systems that may be used to guard employees from cave-ins and other hazards. Some shields are designed to be expandable. Once in place they can be altered such that their faces are pressed against and actually begin to support the sides of the excavation. In this configuration, depending on the degree of support provided, such a device may also be considered a support system.

OSHA received three comments and input from the ACCSH on this definition. Two commenters (Exs. 4–17 and 4–91) and the ACCSH (Tr. 8/5/87 p.474) recommended deletion of the phrase "normally will not prevent a cave-in but" because they felt the language was gratuitous and misleading. The third commenter (Ex. 4–111) suggested that the definition should read "not designed to prevent a cave-in." The Agency disagrees with the suggestion that shields are not designed to prevent a cave-in, and notes that some shields, in fact, are designed to be expandable, and can support the sides of excavations. On the other hand, the Agency agrees with the ACCSH and the other two commenters that the language noted above could be misleading and unnecessary and therefore, deleted this phrase. However, the Agency declines to delete the sentence stating that a shield could be either premanufactured or job-built, as recommended by ACCSH (Tr. 8/5/87 p. 474) and two commenters (Exs. 4–17 and 4–91). OSHA assumes the commenters opposed to this part of the definition interpreted this sentence as giving total discretion to employers in regard to job-built shields. However, the Agency's regulatory intent is that job-built shields must be built in

VOL 54 ISS 209 OCT 31 1989 UMI

accordance with the options provided in § 1926.652(c)(3) and (c)(4). The Final Rule has been revised to clarify this point.

Section 1926.650(b) of the Final Rule defines "shoring" (shoring system) as "a structure such as a metal hydraulic, mechanical, or timber shoring system that supports the sides of an excavation and which is designed to prevent cave-ins." This term is not defined in the existing standard, even though it is extensively used. The final definition is almost identical to the proposed definition in § 1926.650(b)(19), except that "metal hydraulic" shoring is included in the Final Rule, as recommended by the only commenter (Ex. 4–114). OSHA agrees that "metal hydraulic" shoring is used extensively and should be included in the definition as an example.

Section 1926.650(b) of the Final Rule defines "sides" by referring the reader to the definition of "faces."

Section 1926.650(b) of the Final Rule defines "sloping" (sloping system) as "a method of protecting employees from cave-ins by excavating to form sides of an excavation that are inclined away from the excavations as to prevent cave-ins. The angle of incline required to prevent a cave-in varies with differences in such factors as the soil type, environmental conditions of exposure, and application of surcharge loads." This definition is virtually identical to the proposed definition, except that "against cave-ins" was changed to "from cave-ins" as recommended by the ACCSH.

The definition of "slope" found in existing § 1926.653(1) was not used in the proposal because the concept in that definition was not applicable in the proposed standard. The existing definition states that "slope" means "the angle with the horizontal at which a particular earth material will stand indefinitely without movement."

The proposed and final definitions of "sloping" both address a broader concept of employee protection by referring to "systems" or "methods" of protection which prevent cave-ins. The definitions recognize that the slope or multiple slopes used in a sloping system can vary with the soil types involved and site conditions.

OSHA received one comment (Ex. 4–46) on this definition, other than the editorial comment by the ACCSH. The one commenter recommended that "sloping" should be called "angle of repose" and that OSHA should include a definition for "underpinning." OSHA disagrees with the suggestion to use the term "angle of repose" for the reasons discussed above in the section entitled "Problems with the Existing Standard." The Agency also declines to define the term "underpinning," because the Agency believes the term is already readily understood by the construction industry.

Section 1926.650(b) of the Final Rule defines "stable rock" as natural solid mineral material that can be excavated with vertical sides and will remain intact while exposed. Unstable rock is considered to be stable when the rock material on the side or sides of the excavation is secured against caving-in or movement by rock bolts or by another protective system that has been designed by a registered professional engineer.

The proposed definition of "stable rock," in paragraph (b)(21), was similar except that it did not use the phrase "natural solid mineral material" and the second sentence of the definition was an explanatory note; and design by a "qualified engineer or a qualified person" was permitted. There was no definition for rock or rock conditions in the existing standard. Reference was made to rock in the existing standard in the footnotes to Table P–2, "Trench Shoring—Minimum Requirements." The footnotes stated that "Shoring is not required in solid rock, hard shale, or hard slag."

It is recognized in the industry that excavations in rock normally do not present a cave-in hazard because of the inherent stability of rock, and the ability of rock to carry loads. However, rock varies to a great extent in its ability to remain intact while exposed, just as soil does. There are conditions that are found in some rock formations, such as fractures and seams of less stable material, that can present serious hazards. When such conditions are encountered in rock, such as shale which contains layers of clay, the rock cannot be considered stable.

The proposed definition for "stable rock" was developed from the definition that was proposed by the National Bureau of Standards (NBS) at the above discussed workshops. Originally, NBS used the term "unfractured rock," instead of "stable rock." However, many comments were made that it is impossible to excavate any rock without fracturing it in some way. The Construction Advisory Committee suggested that the definition be changed to "stable rock" (Ex. 2–8, p. 356). This recommendation was incorporated into the NBS definition.

Unstable rock, i.e. rock that cannot be excavated with vertical sides and remain intact while exposed, can be made stable if a proper system is used to support the excavation side. A note to this effect was placed at the end of the proposed definition of "stable rock" to alert the user to this possibility. Finally, OSHA has adopted the ASTM term "natural solid mineral matter" to define rock for clarity.

OSHA received two comments (Exs. 4–17 and 4–111) and input from the ACCSH (Tr. 8/5/87 p. 475), concerning the term "qualified person" in the proposed definition. All three commenters recommended deletion of "qualified person." One commenter (Ex. 4–17) and the ACCSH recommended changing "qualified engineer" to registered professional engineer, similar to the recommendations received on Issue 2, discussed above.

An editorial change has been made to incorporate the proposed explanatory note into the second sentence of the final definition.

Therefore, based on the record, OSHA promulgates this definition as revised.

Section 1926.650(b) of the Final Rule defines "structural ramp" as "a ramp built of steel or wood, usually for vehicle access. Ramps made of soil or rock are not considered structural ramps."

Proposed paragraph (b)(22) defined "structural ramps" as "ramps built of material other than soil or rock." The Agency received one comment (Ex. 4–106) which suggested the definition should be expanded to describe clearly a ramp of steel or wood for vehicle access. Since this is in line with the Agency's regulatory intent, the Agency agrees to amend the definition to express more clearly what OSHA considers to be a structural ramp.

Section 1926.650(b) defines "support system" as "a structure such as underpinning, bracing, or shoring, which provides support to an adjacent structure, underground installation, or the sides of an excavation." The proposed definition, paragraph (b)(23), is identical to this final definition. There is no definition of support system in the existing standard. However, examples of supporting systems are given in existing § 1926.651(f), such as "supporting system; i.e., piling, cribbing, shoring, etc., * * *" Theconcept of a support system as used in the proposed standard remained the same as in the existing standard. The definition was included to provide a more clearly defined concept.

A "support system" is one type of protective system. It should be noted that a "shoring system" is a type of support system. Support systems are more broadly defined than shoring systems to include structures that support adjacent structures or

underground facilities, whereas shoring systems are defined as systems that support the sides of an excavation.

The Agency received no comments on this definition. Therefore, the Agency promulgates this definition as proposed.

Section 1926.650(b) of the Final Rule defines "tabulated data" as "tables and charts approved by a registered professional engineer, and used to design and construct a protective system."

The definition of tabulated data in paragraph (b)(24) of the proposal did not recognize the use of local practices, and required preparation by a "qualified person" or "qualified engineer." The changes made to the Final Rule are based on the discussion of Issue 2 (qualified person/qualified engineer) and Issue 14 (regional practices). In addition, OSHA received two comments (Exs. 4–17 and 4–111) and input from the ACCSH (Tr. 8/5/87 pp. 475–76). All of these commenters recommended dropping "qualified person," and two commenters (Ex. 4–17 and the ACCSH) supported changing "qualified engineer" to "registered professional engineer."

The Agency believes that most tabulated data provides the flexibility necessary to make minor adjustments to the protective system without requiring the approval of an engineer provided those changes do not exceed the designlimitations of the data. The OSHA Tables in Appendix C, for example, provide flexibility by permitting two or more shoring configurations, in most case, for given site conditions. This allows the employer to choose the configuration that best fits the particular circumstances. Flexibility also is provided in that the spacing prescribed by some tabulated data is normally the maximum spacing permitted. Of course, an employer can always decrease the spacing of members and still be in compliance. For example an employer, using a configuration that allows a maximum horizontal spacing of six feet for uprights, could encounter a situation where the positioning of an upright at a six foot interval is not feasible due to an obstruction. In this situation, the employer could decrease the spacing for that upright or set of uprights whatever is necessary to address the situation. This type of change is within the limitations of the tabulated data, and would not require approval of a registered professional engineer. If, on the other hand, the employer wanted to increase the spacing to 6½ feet or more, that change would exceed the design limitations of the data and would require approval by a registered professional engineer. The approval is necessary to ensure that, in the event of a cave-in, the capacity of individual components would not be exceeded resulting in a failure of the system.

Section 1926.650(b) of the Final Rule defines "trench" (trench excavation) as "a narrow excavation (in relation to its length) made below the surface of the ground. In general, the depth is greater than the width, but the width of a trench (measured at the bottom) is not greater than 15 feet (4.6 m). If forms or other structures are installed or constructed in an excavation so as to reduce the dimension measured from the forms or structure to the side of the excavation to 15 feet (4.6 m) or less (measured at the bottom of the excavation), the excavation is also considered to be a "trench."

This definition is virtually identical to the definition proposed in § 1926.650(b)(25) except that the explanatory note has been incorporated into the text of the definition. This definition remains basically unchanged from the current definition in existing § 1926.653(n). The changes that have been made are for the purpose of clarifying the definition. For example, the words "trench excavation" have been added to indicate more clearly that trenches are considered to be excavations.

A note was added to the end of the definition of the word "trench" in the proposal. The substance of the note came from the second part of the existing definition of "excavation" found in existing § 1926.653(f) and addresses depth-to-width relationships in trenches. The wording was revised to indicate more clearly how a portion of a large excavation can become a trench, for purposes of the proposed standard, as a result of creating a relatively narrow space between the side of an excavation and a structure that has been constructed in the excavation.

The proposal and the Final Rule are formatted to indicate that most of the provisions of the standards apply to all types of excavations. However, some of the provisions of subpart P apply only to excavations that are trenches. Forexample, § 1926.651(c)(2) sets forth special requirements for means of access and egress in trenches, and § 1926.652(c)(1) sets forth the option of using Appendices A and C for determining the configuration of timber shoring in trenches. Those provisions in the proposal, and now the Final Rule, that apply only to trenches are clearly indicated by use of the word "trench" within the provision.

The only input OSHA received on this point was an ACCSH recommendation (Tr. 8/5/87 p. 480–482) to state specifically that the terms "trench" and "excavation" are interchangeable. The Agency declines to adopt this recommendation because those provisions which apply or are appropriate only for trenches cannot be clearly defined if the two terms are used interchangeably. Blurring this distinction would introduce uncertainty into the standard and would not provide clear guidance to employers as to what provisions apply.

Section 1926.650(b) defines "trench box" and "trench shield" and refers the reader to the definition of "shield." OSHA received no comment on these definitions and promulgates these definitions as proposed.

Section 1926.650(b) of the Final Rule defines "uprights" as "the vertical members of a trench shoring system placed in contact with the earth and usually positioned so that individual members do not contact each other. Uprights placed so that individual members are closely spaced, in contact with or interconnected to each other, are often called sheeting." This definition is virtually identical to the proposed definition in § 1926.650(b)(28), except that the explanatory note has been incorporated into the text of the definition.

This definition revises the definition in existing § 1926.653(r). The definition was changed in the proposal to be more consistent with definitions of other shoring system members that were in the proposed standard, and to expand the concept of the term.

The term "uprights," as used in the proposed standard, referred only to vertical members used in trench shoring systems. Such uprights are usually spaced some distance apart when in position. Normally uprights are referred to as "sheeting" when they are very closely spaced, in contact with adjacent uprights, or interconnected. This definition of "uprights" is intended to clarify the application of the proposal in each of these positions.

Section 1926.650(b) of the Final Rule defines "wales" as "horizontal members of a shoring system placed parallel to the excavation face whose sides bear against the vertical members of the shoring system or earth." This definition is identical to the proposed definition in paragraph (b)(29).

Section 1926.653(s) of the current standard refers the reader to existing § 1926.653(m) for the definition of "wales." That paragraph states that "stringers" (wales) are "the horizontal members of a shoring system whose sides bear against the uprights or earth." However, the term "stringers" is also referred to in existing § 1926.650(d) as

VOL 54 ISS 209 OCT 31 1989 UMI

the supports for plank steps, which is inconsistent with its definition.

OSHA addressed this problem by dropping use of the word "stringers." In the proposal, only the term "wales" was defined and used to refer to the horizontal members of a shoring system. The term "stringers" did not appear in the proposal nor does it appear in the Final Rule.

OSHA received no comment on the definition and, therefore, promulgates this definition as proposed.

For reasons to be discussed below, the following terms which are contained in the current standard are not used, and therefore need not be defined in the Final Rule: § 1926.653(b) "Angle of repose"; § 1926.653(c) "Bank"; § 1926.653(h) "Hard, compact soil"; § 1926.653(j) "Sheet pile"; § 1926.653(l) "Slope"; § 1926.653(m) "Stringers"; § 1926.653(o) "Trench jack"; § 1926.653(q) "Unstable soil"; and § 1926.653(t) "Walls."

The term "angle of repose," as defined in the existing standard, is not consistent with its use in the civil engineering field. The existing definition in § 1926.653(b) defines "angle of repose" as "the greatest angle above the horizontal plane at which a material will lie without sliding." The specific standards in existing § 1926.651(e), § 1926.651(g) and § 1926.651(h) speak of determining the "angle of repose," "excavating to the angle of repose," and flattening the "angle of repose," all of which suggest that a single "angle of repose" can be determined for any particular soil. However, in the American Society for Testing and Materials Standard D653–87, "Standard Definitions of Terms and Symbols Relating to Soil and Rock Mechanics," "angle of repose" is defined as follows:

> Angle between the horizontal and maximum slope that a soil assumes through natural processes. For dry granular soils the effect of height is negligible; for cohesive soils the effect of height of slope is so great that the "angle of repose" is meaningless.

What this essentially means is that there is no one "angle of repose" for a given type of soil, for in practice, most soils encountered have some degree of cohesion. In addition, while the "angle of repose" for granular soils is unaffected by the height of the cut, it does change in response to soil density, and in changes to environmental conditions or exposure.

The concept of "angle of repose," as used in the current standard, differs from that accepted by the civil engineering community and has led to confusion as to the meaning and intent of the standard. To eliminate this confusion, OSHA believes that use of the term "angle of repose" should not be continued. Therefore, it was not used in the proposed standard and it is not used in the final standard.

The term "bank" is defined in existing § 1926.653(c) as "a mass of soil rising above a digging level." The definition is not entirely clear in its meaning because the use of the term "digging level." The OSHRC has interpreted the term "digging level" to mean "the level at which digging is commenced" (2 BNA OSHC 1130). Under this interpretation, the sides of trenches would not be considered "banks" because the sides of trenches would be below "the digging level" rather than above it. However, the wording of existing § 1926.652(a) suggests that sides of trenches be included in the meaning of the term "bank." For example, existing § 1926.652 states:

"Banks more than five feet high shall be shored, laid back to a stable slope, or some other equivalent means of protection shall be provided where employees may be exposed to moving ground or cave-ins." The OSHRC interpretation does not conflict with the above wording. However, § 1926.652 goes on to state: "Trenches less than five feet in depth shall also be effectively protected * * *." Thus, the OSHRC interpretation is a contradiction to the wording of existing § 1926.652(a). In addition, existing § 1926.652(a) makes the statement: "Refer to Table P–1 as a guide in sloping of banks." Table P–1 is titled "approximate Angle of Repose for Sloping of Sides of Excavations." Thus, "banks" and "sides" are again equated.

OSHA is eliminating the use of the term "bank" to eliminate the problems discussed above.

The terms "hard, compact soil" and "unstable soil" were used in the existing standard to describe particular soil conditions. These terms were not used in the proposal,and are not found in the Final Rule. All soil conditions will now be defined in a completely new soil classification system which does not use the terms "hard, compact soil" or "unstable soil." (See discussion of appendix A, Soil Classification, below.)

The reasons for eliminating the definitions for "sheet pile," "slope," and "walls" have been discussed above.

The term "trench jack" was also not used in the proposed standard or in the Final Rule and needs not to be defined.

Section 1926.651 General Requirements

Section 1926.651 of the Final Rule contains requirements for the protection of employees against several different types of hazards of excavation-related work. The section is arranged with eleven major paragraphs, most of which are revisions of the current requirements in existing §§ 1926.650, 1926.651, and 1926.652. Changes have been made to clarify ambiguous language and eliminate redundant requirements. Some paragraphs have been reformatted to improve ease of understanding. Other revisions have been made to clarify OSHA's intentions as to the scope and application of current provisions. New requirements have been added to protect employees against known hazards where gaps in coverage currently exist.

Section 1926.651(a), "surface encumbrances," requires that "all surface encumbrances that are located so as to create a hazard to employees shall be removed or supported, as necessary, to safeguard employees." This provision is similar to the proposed provisions which required that "Trees, boulders, and other surface encumbrances that are located so as to create a hazard to employees shall be made safe or removed." The proposal noted the hazard presented by surface encumbrances, including trees and boulders, primarily arises if excavation operations undermine or otherwise cause such encumbrances to become unstable and fall or collapse onto employees. Surface encumbrances can also impede smooth traffic flow on excavation sites. The wording of the proposed requirement is essentially the same as in existing requirement § 1926.651(b).

The requirement applies to all employees involved in construction activities at the worksite. The existing paragraph includes the wording "involved in excavation work or in the vicinity thereof at any time during operations." OSHA proposed to drop this additional wording as it is redundant.

The requirement that surface encumbrances be removed or made safe "before excavating is begun" did not appear in the proposal. In many instances, it is not feasible to remove all surface encumbrances from a site before excavating is begun simply because the site is too large. The proposal required such removal but implied that this action would be taken as the surface encumbrances are encountered.

OSHA received two comments (Exs. 4–4 and 4–46), and input from the ACCSH (Tr. 8/5/87 p. 482) on this provision. The ACCSH recommended eliminating the words "trees, boulders, and other" and replacing these examples with "all." One commenter, CAL/OSHA (Ex.4–4), suggested adding

"spoil pile" to the list of surface encumbrances. The other commenter, the Michigan Department of Labor (Ex. 4–46), recommended clarifying the phrase "shall be made safe" because it is ambiguous. The Agency has determined that the ACCSH recommendation best expresses OSHA's regulatory intent and also addresses the concern expressed by one commenter. In addition, the Agency has clarified the meaning of "shall be made safe" by defining what actions the employer must take. Therefore, based on the comments received OSHA promulgates § 1926.651(a), as revised.

Section 1926.651(b) of the Final Rule specifies requirements for dealing with existing utility and other underground installations that may be encountered during excavation operations. Underground installations include all types of utility lines either in service or abandoned. They also include foundations and underground storage tanks of all kinds.

Employees may be exposed to serious hazards as a result of damage to underground installations. Flooding, shock, asphyxiation, electrocution, fire, explosion, and collapse of undermined installations are some of the hazards that result when underground installations are damaged. These hazards can be eliminated if the locations of underground installations are properly identified prior to excavation, and if such installations are properly supported or protected when excavation takes place near them.

Paragraph (b)(1) of the Final Rule requires that "The estimated location of utility installations, such as sewer, telephone, fuel, electric, water lines, or any other underground installations that reasonably may be expected to be encountered during excavation work, shall be determined prior to opening an excavation." This requirement is identical to the proposal. The proposal differed from the existing standard, § 1926.651(a), which required only that an effort be made to determine whether such installations will be encountered and, if so, where such underground installations are located.

At the suggestion of the ACCSH (Ex. 2–8, p. 358), the proposal was made more stringent than the existing rule by requiring the employer to determine the estimated location, at a minimum. OSHA believes that the revision is needed to prevent many of the accidents resulting from damage to underground installations. The proposed language was intended to insure that the effort to locate existing installations is carried to the point where, at the very minimum, an estimated location is determined.

OSHA recognizes that the existence of underground installations is not always readily apparent. However, in many locations there are features which would indicate the presence of underground installations. An example of this would be that in a housing subdivision where there are no utility poles, it could reasonably be assumed that certain utilities are underground in this situation. The proposal also recognized those situations in which underground installations are not known to exist beforehand, but can be determined through the exercise of reasonable diligence prior to excavating.

OSHA received one comment (Ex. 4–91) on this provision which supported the proposed language. OSHA also received ACCSH input (Tr. 8/5/87 pp. 483–486) which recommended removing the word "estimated" from the provision. The Agency declines to make this change, noting that it is not always possible to get an exact location of an underground utility installation prior to opening an excavation. The Agency believes that a reasonable determination of the estimated location, combined with notification of the affected utility, and a cautious determination of the exact location of the utility line when excavation approaches the estimated location, will provide adequate employee protection.

Therefore, OSHA promulgates § 1926.651(b)(1), as proposed.

Section 1926.651(b)(2) of the Final Rule requires that "Utility companies or owners shall be contacted within established or customary local response times, advised of proposed work, and asked to establish the location of the utility underground installations prior to the start of actual excavation. When utility companies or owners cannot respond to a request to locate underground utility installations within twenty-four hours (unless a longer period is required by state or local law), or cannot establish the exact location of these installations the employer may proceed, provided the employer does so with caution, and provided detection equipment or other acceptable means to locate utility installations are used."

This provision is similar to the proposal, but has been amended to clarify OSHA's regulatory intent and to address comments concerning coverage, as discussed below. The proposed provision was unchanged from the existing standard, which required, in § 1926.651(a) that "utility companies shall be contacted and advised of proposed work prior to the start of actual excavation."

OSHA received three comments and input from the ACCSH on the proposed provision. One commenter (Ex. 4–28) noted that not all underground installations are owned and operated by utility companies. OSHA agrees and has amended the final rule to reflect this point.

The ACCSH had an extensive discussion (Tr. 8/5/87 pp. 486–494) on a requirement recommended to the full committee by an ACCSH study group. This requirement would prohibit the start of an excavation until the utility company marked the exact location and depth of their underground installations. During the discussion, several participants noted the difficulty of determining the exact location of underground installations, and they related instances where detecting equipment was put on the bucket of a backhoe to locate installations that even the owners could not pinpoint. Other participants recommended differentiating between types of installation (water lines versus high voltage electrical lines) or between an excavation operation and an uncovering operation (used to locate utilities).

OSHA also received one comment from the Public Service Electric and Gas Co. (Ex. 4–89) noting the existence of "one call" programs and attesting to their effectiveness. Another commenter, NUCA (Ex. 4–91), supported the proposed provision but disagreed with any prohibition on starting work until the installation has been marked.

OSHA recognizes that some utility installations are privately owned, and has amended the Final Rule to reflect this point. The Agency also recognizes that the provision, as proposed, did not clearly require the employer to request all utility companies to establish the location of their underground utility installations. In order to clarify OSHA's regulatory intent, the Final Rule has been amended to state clearly that the employer must request the utility owner to locate the installations.

OSHA recognizes that in some cases the utility company cannot respond to contractor requests in a timely manner. The Agency notes that most "one call" or "Miss Utility" programs require a prescribed lead time, usually 24 to 48 hours prior to excavation. However, in areas with heavy construction activity, the utility company resources may not be able to respond as rapidly as desired. OSHA also notes that, for a number of reasons, the installation owner may not be able to provide an exact location. In each of these cases the employer might have to begin the work before the exact location is established. OSHA believes that, in those instances, the employer should be able to proceed with the

VOL

1989
UMI

excavation work, provided the employer locates these utility installations using caution and using detection equipment or other acceptable means.

In the Final Rule OSHA has specified that if a utility company or owner cannot respond to a request to locate underground utility installations within twenty-four hours (unless a longer period is required by state or local law), or cannot establish the exact location of these installations, the employer may proceed, provided certain precautions are taken. The specification of waiting period has been added to the Final Rule because it is not OSHA's intent to allow an employer to proceed with excavation work absent a concerted effort to have the utility determine the exact location of its installations.

The Agency recognizes that a prohibition on starting an excavation until utility installations are located may not be practical, but believes the suggestion put forward at the ACCSH meeting, permitting the use of an uncovering operation to locate these utilities, is the correct approach in the circumstance discussed above.

OSHA believes most utility owners respond to contractor requests to locate their utility's underground installations in the interest of maintaining service to their customers, and notes the increasing use of "one call" programs to respond to these contractor requests. However, in those circumstances where the utility cannot respond or cannot identify an exact location, the Agency believes it is appropriate to prescribe a course of action for the contractor to follow.

Therefore, based on the above discussion OSHA promulgates § 1926.651(b)(2) as revised.

Paragraph § 1926.651(b)(3) of the Final Rule requires that as the excavation approaches the estimated location of underground installations, the exact location must be determined by safe and acceptable means. This requirement is similar to the proposal, which was taken unchanged from the existing standard.

OSHA received two comments (Exs. 4–17 and 4–111) and input from the ACCSH (Tr. 8/5/87 p. 492) on this provision. All commenters recommended dropping "such as probing with hand-held tools" from the proposed provision, because this could create a hazard to employees by damaging the installation or its insulation.

The Agency agrees with these comments and, therefore, promulgates § 1926.651(b)(3) as revised.

Section 1926.651(b)(4) of the Final Rule requires that "While the excavation is open, underground installations shall be protected, supported, or removed as necessary to safeguard employees."

This language is almost identical to the proposed requirement, which was intended to prevent employee injuries resulting from damage to exposed installations, contact with energized lines, the collapse of unsupported installations, and other similar hazards. The existing standard requires only that installations be properly supported, and as such is insufficient to protect employees adequately because the type of installation, its location with regard to the excavation, or other site conditions could render this type of protection infeasible or ineffective. Removal or protection of exposed installations can, at times, be more appropriate ways of protecting employees.

OSHA received one comment (Ex. 4–25) on this provision. The commenter expressed concern that use of the term "removed" presupposes or technically requires damage to the facility. The commenter suggested amending the provision to list "protected" first in the sequences, and that "altered in a manner acceptable to the facility owner" be used in place of "removed."

In response, OSHA has changed the sequence of options, because the Agency has no preference for how employees are protected in these circumstances, as long as the protection is adequate to ensure the safety of the employees. OSHA emphasizes that "protected" is intended to safeguard employees, not to "protect" the facility from damage. If both concerns can be addressed at the same time, so much the better, but employee protection is the primary concern.

The Agency declines to revise the provision to limit employee protection to what is acceptable to the facility owner. OSHA notes that removal or alteration of an underground installation may be necessary to provide employee protection, and this may not be considered acceptable by a facility owner. Such situations will have to be resolved between the employer and the owner, but, as discussed above, employee protection is the primary concern.

Therefore, based on the above discussion OSHA promulgates paragraph (b)(4) as revised.

Section 1926.651(c) of this Final Rule sets forth the requirements for access to and egress from excavations. Similar requirements are found throughout the existing standard in §§ 1926.650 (b), (c), and (d), 1926.651(x), and 1926.652(h). These requirements address hazards resulting from inadequate design and construction of ramps and runways and from inadequate placement of exits in trenches.

Paragraph (c)(1) specifies five general requirements for the design and construction of ramps and runways. The first of these, under paragraph (c)(1)(i), states that "Structural ramps that are used solely by employees as a means of access or egress from excavations shall be designed by a competent person. Structural ramps used for access or egress of equipment shall be designed by a competent person qualified in structural design, and shall be constructed in accordance with the design."

This provision differs substantially from the proposal, which did not differentiate between ramps used solely for employee access and ramps used for equipment. The proposed paragraph was intended to address the hazard of structural ramps collapsing under heavy vehicle or personnel load conditions because of underdesigned members or connections. In some large excavations, ramps of steel or wood are provided for vehicle access and egress. More frequently, however, earthen ramps are used. These earthen ramps are created out of material that is left in place as the excavation is made. For this reason, the word "structural" was added to clarify when design of particular ramps by a qualified individual would be necessary. In addition, the existing provision, § 1926.651(x), required ramps to be designed and constructed by a qualified person in accordances with accepted engineering practices.

However, the actual construction of ramps is usually not spoken of in terms of engineering practices. Therefore, OSHA proposed to revise the existing language to maintain this distinction. The proposed language required that structural ramps be "constructed in accordance with their design" instead of in accordance with accepted engineering practice. As noted, the proposed rule required ramps to be designed by a "qualified person, a qualified engineer or a person under the direction of a qualified engineer."

In the proposal, the current requirement for design by a "qualified person" was changed so that the language used would be consistent with other language and requirements in the proposal. OSHA requested comment and data on whether or not structural ramps used by a limited number of employees (five or fewer) should be required to be designed by a qualified individual or, alternatively, should structural ramps be a certain height before design by a qualified individual is required?

OSHA received six comments and input from the ACCSH on this provision.

One commenter (Ex. 4–78) stated that earthen ramps should be allowed, and indicated that these would be prohibited by this provision. OSHA disagrees with this interpretation of the rule, noting that the provision applies to structural ramps only. Earthen ramps normally consist of dirt left in place during excavation, and are not required to be "designed." However, among other things, the competent person would be required to inspect these ramps to check for any hazards, as required by § 1926.651(k).

The ACCSH (Tr. 8/5/87 p.494) suggested requiring only that a "competent person," rather than a "qualified person," design structural ramps used solely by employees as a means of access or egress. Along the same lines, several of the commenters (Exs. 4–82, 4–102, 4–106, and 4–109) recommended that only ramps used for vehicle access and egress need to be designed by a qualified individual. Three commenters (Exs. 4–82, 4–102, and 4–109) recommended that design should not be required at all unless ramps are over 10 feet in height, but supplied no rationale for this recommendation. Another commenter (Ex. 4–111) recommended deleting "qualified person" from the proposed language. The sixth commenter (Ex. 4–91) recommended that the phrase "designed to prevent slipping or tripping" be added to the rule. That commenter did not specify who would develop the design.

Based on these comments, the Agency raised an issue in the hearing notice (53 FR 5281) concerning design of structural ramps. The Agency received 11 responses to this issue. Six commenters (Exs. 8–6, 8–14, 8–16, 8–18, 8–25, and 8–27) agreed with the recommendation that competent persons be allowed to design structural ramps used solely by employees. One commenter (Ex. 8–7) opposed any requirement for design unless the ramp was over 10 feet high and used for equipment. This commenter did not provide any rationale for this recommendation. Several other commenters (Exs. 8–21, 8–22, 8–26, and 8–29) objected to the use of a competent person to design structural ramps for the sole use of employees, but were unclear as to whether their objection was to having the competent person design these ramps, or whether they objected to a requirement for any design at all.

After careful consideration of the record, OSHA has determined that the proposed paragraph should be amended to address separately those structural ramps used only for employee access and those structural ramps used for vehicle and equipment access. However, the Agency declines to act on the recommendation to require the design of a ramp only if it is to be over 10 feet high. The Agency has no basis to impose a 10 foot limit since the commenters did not supply any rationale, and there are no technical reasons of which OSHA is aware that support this arbitrary limit. Therefore, OSHA promulgates § 1926.651(c)(1)(i) as revised.

Paragraphs (c)(1) (ii) through (v) of § 1926.651 address the hazards of slips, trips and falls, and replace the requirements in existing § 1926.650 (b), (c), and (d).

Paragraph (c)(1)(ii) of the Final Rule requires that "Ramps and runways constructed of two or more structural members shall have the structural members securely connected together to prevent displacement." This provision is virtually identical to the proposed rule except that the term "structural members" has replaced the term "planks" at the suggestion of the ACCSH (Tr. 8/5/87, p. 495). The Agency agrees with this recommendation because it recognizes that material other than wooden planks can serve as ramps and runways. OSHA also believes that this change will express more clearly its regulatory intent that ramps or runways constructed of two or more "members" must have these "members" securely connected together, regardless of what material these members are made.

OSHA received no other substantive comments on this provision. Therefore, based on the above discussion, OSHA promulgates § 1926.651(c)(1)(ii) as amended.

Paragraph (c)(1)(iii) of the final rule requires that "Structural members used for ramps and runways shall be of uniform thickness." This provision is virtually identical to the proposed rule, except that the term "structural members" has replaced the term "planks" at the suggestion of the ACCSH (Tr. 8/5/87, p. 495). The Agency rationale for making this change is the same as discussed above for paragraph (c)(1)(ii). The Agency received no other substantive comments on this provision. Therefore, OSHA promulgates § 1926.651(c)(1)(iii), as revised.

Section 1926.651(c)(1)(iv) of the Final Rule requires "cleats or other appropriate means used to connect runway structural members shall be attached to the bottom of the runway or shall be attached in a manner to prevent tripping." This provision is similar to the proposed rule except that "planks" has been replaced with "structural members," as discussed above, and the phrase "or other appropriate means" has been added. OSHA added the new language in recognition of other acceptable means of securing both wooden structural members and structural members made of other materials. For example, metal structural members could be bolted or clamped together to prevent separation. In addition, the Agency has deleted the phrase "or be beveled," as discussed below.

OSHA received one comment on the issue of cleats. That commenter (Ex. 72) stated that attaching cleats and beveling cleats would require additional labor, and noted that the nails used to secure the cleats to the bottom would penetrate the plank and would have to be bent over, thereby creating a tripping hazard. The commenter also argued that beveled cleats (on the top of a runway) do not provide traction and noted that he was unaware of any tripping injury caused by unbeveled cleats.

OSHA recognizes that nails used to secure cleats to the bottom of the runway could penetrate the top surface of the plank and would have to be bent over. OSHA also notes that nails that are bent over and hammered flush would not cause the problem anticipated by the commenter.

In addition, upon reevaluation of the issue of "beveled" cleats, the Agency agrees with the commenter, and is dropping the requirement for "beveled cleats" from both this provision and § 1926.651(c)(1)(v) of the final rule. This decision is in line with the existing § 1926.650(d) which requires only the use of "cleats."

Therefore, based on the above discussion, OSHA promulgates paragraph (c)(1)(iv) as revised.

Section 1926.651(c)(1)(v) of the Final Rule requires "Structural ramps used in lieu of steps shall be provided with cleats or other surface treatments on the top surface to prevent slipping." This provision is similar to the proposed rule except that it specifies "structural ramps" and recognizes the use of other surface treatments to prevent slipping. These changes were recommended by a majority of the 11 commenters on this provision (Exs. 4–21, 4–23, 4–30, 4–31, 4–40, 4–42, 4–54, 4–78, and 4–86). One commenter (Ex. 4–111) merely noted that the provision related to structural ramps. Another commenter (Ex. 4–72) suggested "beveled" be deleted for the same reasons as discussed above relating to paragraph (c)(1)(iv).

The Agency agrees with the majority of the commenters that it is appropriate to specify "structural ramp" in the context of this provision and to recognize other equally effective means

VOL 54 ISS 209 OCT 31 1989 UMI

of preventing slipping. In addition, the Agency is dropping "beveled," as discussed above under § 1926.651(c)(1)(iv). Therefore, based on the above discussion, OSHA promulgates § 1926.651(c)(1)(v) as amended.

Section 1926.651(c)(2) of the Final Rule requires that "A stairway, ladder, ramp, or other safe means of egress shall be located in trench excavations that are four feet (1.22 m) or more in depth, so as to require no more than 25 feet (7.62 m) of lateral travel for employees." This provision is virtually identical to the proposed rule except that the explanatory note allowing a negotiable slope to be used as a means of egress has been deleted. This provision is similar to existing § 1926.652(h) except that the final rule recognizes ramps and other safe means of egress.

OSHA received five comments on the proposed rule, and input from the ACCSH. The ACCSH (Tr. 8/5/87, pp. 495–496) suggested deleting the explanatory note and the word "trench" from the definition, so as to require this protection for all excavations. Two commenters (Exs. 4–17 and 4–91) also recommended deleting the explanatory note because the term "negotiable slope" is too subjective. Another commenter (Ex. 4–30) suggested that OSHA define "negotiable slope," and pointed out that its personnel have observed employees using sloped areas as access to trenches with the assistance of knotted rope lines. This commenter also noted that a knotted rope line would not provide "adequate and rapid escape for more than one employee" in case of an emergency.

One commenter (Ex. 4–46) agreed with the ACCSH recommendation for inclusion of all excavations in this provision, but provided no rationale for the comment.

Another commenter (Ex. 4–53) objected to the provision in its entirety. This commenter stated that its employees do the bulk of their work on the bank, and that they do not traverse trenches at 25-foot intervals. It also raised the issue of increased compliance costs that would result if required to provide crossings every 25 feet.

After careful consideration of the record, OSHA has determined that a safe means of egress every 25 feet is necessary in trench excavations, but not in every excavation. The Agency notes that egress during an emergency in a large excavation does not pose the same problem as it would in the confines of a trench excavation.

The Agency has also determined that the explanatory note, intended to provide additional guidance, could be misinterpreted to permit the situation described by one of the commenters (Ex. 4–30) above. That is not the Agency's intent, and in order to prevent any confusion as to what is necessary to protect employees, OSHA is deleting the explanatory note from this Final Rule.

OSHA disagrees with the commenter (Ex. 4–53) who objected to this provision in its entirety, and notes that the commenter apparently misunderstood the provision. OSHA points out that this requirement is intended to provide employees working down in a trench with a safe means of escape from the trench in case of an emergency. The provision does not require a safe means of crossing (traversing) a trench at 25-foot intervals. Therefore, if the work is done outside of a trench, as stated by the commenter, and no employees are required to enter the trench (i.e., there is no exposure to cave-in hazards), this provision would not apply.

Section 1926.651(d) of the Final Rule requires that "employees exposed to public vehicular traffic shall be provided with, and shall wear, warning vests or other suitable garments marked with or made of reflectorized or high visibility material." This is virtually identical to the proposed provision, except that the word "public" has been added to clarify OSHA regulatory intent.

The proposed requirement differed from the existing requirement in § 1926.650(f). The proposal required employees to "wear" vests, whereas the current standard states the "Employees * * * shall be instructed to wear * * *" The words "be instructed to" were deleted. This change, carried over into the Final Rule, is necessary to clarify the intent of the standard.

Employees, particularly those involved in trenching work, frequently work where vehicular traffic flow is maintained in close proximity to the excavation operations. Employees may be assigned to direct traffic flow adjacent to construction sites. These employees are exposed to the hazard of being struck by such vehicles. This hazard is increased during dark or near-dark periods of the day. The provisions of this paragraph are intended to reduce this hazard.

OSHA received 13 comments on this provision. Four commenters (Exs. 4–82, 4–102, 4–106, and 4–109) argued that this provision is not appropriately located in subpart P and should be addressed in another subpart. OSHA disagrees with these commenters and notes that the specific hazards addressed by the provision are not covered adequately in another subpart. (OSHA notes that § 1926.201(a)(4), for example, only applies to flag persons.) Eight commenters (Exs. 4–21, 4–23, 4–31, 4–40, 4–42, 4–54, 4–72, and 4–86) recommended adding the word "public" to clarify the intent of the provision. OSHA recognizes that the provision, as proposed, could be misinterpreted to require all on-site employees to wear warning vests, because of exposure to on-site construction vehicular traffic. This is not OSHA's intent and, therefore, the agency is revising the provision to specifically state "public vehicular traffic."

Another commenter (Ex. 4–28) suggested revising the provision to require warning vests for all employees on foot exposed to mobile equipment or motor vehicle traffic. OSHA recognizes that almost every employee on a construction site is exposed to mobile equipment or on-site vehicular traffic at some time during the day, but does not believe all employees at a site should be required to wear warning vests. The Agency is concerned that employees be highly visible to public vehicular traffic which can be of relatively high speed and where the drivers are not aware of the presence of construction employees. These are not conditions which are common with construction traffic.

Therefore, based on the above discussion, OSHA promulgates § 1926.651(d), as amended.

Section 1926.651(e) of the final rule requires that "No employee shall be permitted underneath loads handled by lifting or digging equipment. Employees shall be required to stand away from any vehicle being loaded or unloaded to avoid being struck by any spillage or falling material. Operators may remain in the cabs of vehicles being loaded or unloaded when the vehicles are equipped, in accordance with § 1926.601(b)(6), to provide adequate protection for the operator during loading and unloading operations."

This requirement is virtually identical to the proposal, except that an explanatory note used in the proposal has been added directly to the provision. In addition, the basis for an operator exemption from this provision has been included to provide additional guidance to employers.

The proposed requirements were basically unchanged from the existing requirements in § 1926.650(h), except the words "power shovels, derricks, or hoists" were changed to "lifting or digging equipment." This change was made to make the requirements apply to all kinds of lifting or digging machines rather than be limited to those listed in the existing standard. In this way, backhoes and other such equipment are clearly included in these requirements.

In addition, the words "or unload" were added to the proposed provision. OSHA believes that the hazard to employees from loads falling during unloading is just as great as during loading.

A note within proposed paragraph (e) indicated that operators of vehicles may remain in cabs that provide adequate protection from falling loads during loading and unloading operations.

The Agency received 15 comments on this provision, including input from the ACCSH.

The ACCSH (Tr. 8/5/87, pp. 496–497) recommended deleting the explanatory note because it could cause problems, and because the hazard is covered elsewhere. OSHA declines to act on this recommendation because the note was intended to provide additional guidance to employers by making it clear that operators of vehicles meeting the requirements of § 1926.601(b)(6) may remain in the cab of those vehicles.

Two commenters (Exs. 4–17 and 4–91) suggested changing "equipped" to "designed." The Agency declines to act on this suggestion as the Agency believes that a requirement for "design" would not ensure that the cabs are unmodified. Another commenter (Ex. 4–46) suggested that the operator not be allowed in the cab of these vehicles. However, OSHA believes a requirement that the vehicles be equipped in accordance with existing § 1926.601(b)(6) provides the necessary safeguards.

Four commenters (Exs. 4–82, 4–102, 4–106, and 4–109) argued that this provision did not belong in subpart P because it is not appropriate in the excavation standard. Other commenters (Exs. 4–21, 4–23, 4–31, 4–40, 4–42, 4–72, and 4–86) recommended revising this provision so it applies only to loads of excavated materials handled by digging equipment, noting that slung loads (material, pipe, etc.) must be guided into the excavation by employees who may be underneath the load at some point. The Agency recognizes that "slung loads" may have to be guided into excavations by employees, but does not accept the argument that employees must be under the load at some point. OSHA notes that this type of load could be guided from a safe position. In those instances where a load, such as pipe, must be positioned as closely as possible to its final location, the load can be lowered into the excavation to a height where it is not suspended over any employee. From there it can be guided into its final place by an employee without the danger of the load falling and injuring that employee. OSHA, therefore, declines to revise this provision to exclude "slung" loads.

Based on the above discussion, OSHA promulgates § 1926.651(e) as revised.

Section 1926.651(f) of the Final Rule requires that "When mobile equipment is operated adjacent to an excavation, or when such equipment is required to approach the edge of an excavation, and the operator does not have a clear and direct view of the edge of the excavation, a warning system shall be utilized such as barricades, hand or mechanical signals, or stop logs. If possible, the grade should be away from the excavation." This is virtually identical to the proposal except that the explanatory note has been merged directly into the text of the paragraph.

This paragraph (f) replaces the requirement in existing § 1926.651(s) which states "When mobile equipment is utilized or allowed adjacent to excavations, substantial stop logs or barricades shall be installed."

The language of the current standard is unclear because the word "substantial" makes it difficult for employers to determine if the intent of the rule is to provide for physical barriers which will prevent mobile equipment from going over the edge into an excavation, or if the intent is for the log or barricade merely to alert an operator not to proceed any further toward the edge of an excavation. OSHA's intent in this provision is for the stop logs or barricades to serve as a reminder to the operator of the proximity of excavations.

It is OSHA's opinion that there are several effective alternatives available to protect workers in and around excavations from the danger of mobile equipment. Therefore, the requirement both clarifies when warning systems are needed and identifies the types of warning systems that are acceptable to protect vehicle operators and workers in excavations. OSHA believes that signals from observers can be used effectively for the purpose of protecting employees against the hazard in question. Signals are currently specified in other existing standards (see § 1926.601(b)(4)) as an acceptable means of guiding mobile equipment which is backing up.

OSHA notes that the words "if possible the grade should be away from the excavation" currently appear at the end of the existing paragraph. Although the language is advisory it does provide an example of a safe practice to follow in addition to the required practices. Therefore, OSHA is maintaining this language in the Final Rule.

OSHA received one comment (Ex. 4–17) and input from the ACCSH (Tr. 8/5/87, p.497). Both comments merely noted a typographical error in the document.

Therefore, the Agency promulgates § 1926.651(f) as revised.

Section 1926.651(g) of the Final Rule addresses work in hazardous atmospheres. Paragraph (g)(1) presents the introductory text for requirements related to testing and controls. This provision states: "In addition to the requirements set forth in subparts D and E of this part (29 CFR 1926.50–1926.107) to prevent exposure to harmful levels of atmospheric contaminants and to assure acceptable atmospheric conditions, the following requirements shall apply:" This is identical to the proposed rule. OSHA received no comments on this provision and, therefore, promulgates paragraph (g)(1) as proposed.

Section 1926.651(g)(1)(i) of the Final Rule requires that "Where oxygen deficiency (atmospheres containing less than 19.5 percent oxygen) or a hazardous atmosphere exists or could reasonably be expected to exist, such as in excavations in landfill areas or excavations in areas where hazardous substances are stored nearby, the atmosphere in the excavation shall be tested before employees enter excavations greater than four feet (1.22 m) in depth." This provision is identical to the proposed rule, except the sentence has been reordered to describe first when testing would be appropriate.

The proposed and Final Rule require testing for oxygen deficiency or gaseous conditions in excavations greater than four feet (1.2 m) in depth where these conditions exist or could reasonably be expected to exist. Further, the rules require that the testing be done before employees enter the excavation. This differs from the existing language in § 1926.651(v), which would appear to require that all excavations be tested regardless of employee exposure. The existing rule states: "In locations where oxygen deficiency or gaseous conditions are possible, air in the excavation shall be tested."

The definition of "confined" or "enclosed space" in existing § 1926.21(b)(6)(ii) includes "* * * open top spaces more than four feet in depth such as pits, tubs, vaults, and vessels." The four foot (1.2 m) depth requirement in proposed § 1926.651(g)(1)(i) was added to clarify where testing is required for excavations, and to be consistent with the above definition.

The existing language requiring that tests be performed "where oxygen deficiency or gaseous conditions are possible" was changed to a requirement that OSHA believes is more reasonable, but still provides appropriate employee

VOL 54 ISS 209 OCT 31 1989 UMI

protection. Taken literally, the conditions listed in the existing rule are possible in any given excavation if the proper circumstances are present. However, hazardous atmospheric conditions are more likely to exist or occur in some circumstances than in other circumstances. For example, work involving the extension or maintenance of sewer utility or gas utility systems, work near refineries or near areas where petroleum distillates are handled or stored, and work near landfills or hazardous waste dumps are situations where hazardous atmospheric conditions are likely to occur (Ex. 2–6, pp. 224–226, 369–370). Atmospheres in excavations in these types of situations must be tested.

However, it is OSHA's opinion that it is not reasonable to require that all excavations be tested routinely since there is limited potential for oxygen deficiency or gaseous conditions in the vast majority of situations. Where the conditions are such that these hazards could not reasonably be expected to occur, OSHA believes that routine testing should not be required. Accordingly, the final requirement is written to reflect what OSHA believes to be a more reasonable approach to testing.

The examples cited above of areas that are more likely than not to be hazardous are not intended to be a comprehensive list. There are many unique circumstances that could result in the formation of a hazardous atmosphere in excavation-related work. An excavation that is free of hazardous atmospheric conditions on any particular day may not be safe the following day. To ensure that employees are continually protected against the development of hazardous atmospheres in excavations, OSHA is requiring in § 1926.651(k)(1) that daily inspections (not necessarily involving air testing) for evidence of potentially hazardous atmospheric conditions be conducted by a competent person. It is intended that such inspections be conducted to identify areas or situations where hazardous atmospheric conditions exist, or could reasonably be expected to exist, during the course of work. Where such areas or situations are identified, the requirements of paragraph (g) apply.

OSHA received six comments and input from the ACCSH on this requirement. Two commenters (Exs. 4–25 and 4–67) objected to the requirement for testing the atmosphere, noting that the gas industry normally tests for hazardous atmospheres. Both commenters also contended that respiratory protection or ventilation should be permitted in lieu of testing.

OSHA notes that respiratory protection or ventilation is required by § 1926.651(g)(1)(ii) of this final rule, and the requirement for testing establishes what, if any, precautions or additional precautions are necessary. If an employer chooses to provide adequate employee protection in accordance with the appropriate regulations as a matter of procedure, the failure to test would be de minimis.

One of the commenters (Ex. 4–67) also recommended extending the four-foot level to six or seven feet. OSHA, however, is not convinced that the four-foot level should be increased. OSHA points out that the four-foot level is consistent with other regulations and notes again that the testing requirement does not apply to every excavation, only to those where oxygen deficiency or hazardous atmospheres can be reasonably anticipated. OSHA believes that the requirement, as proposed, provides adequate employee protection, without being unnecessarily burdensome.

Two other commenters (Exs. 4–17 and 4–111) suggested modifying paragraph (g)(1)(i) to reorder the sentence, putting the conditions which require testing first. Some commenters (Exs. 4–21, 4–23, 4–31, 4–40, 4–42, and 4–86) indicated that this whole paragraph (g)(1), as written, implied that respiratory protection and ventilation are required at all times when hazardous, flammable, and oxygen-deficient atmospheres exist. OSHA agrees with the suggested reformatting of this provision, but disagrees with the comments that interpret this provision to require respiratory protection and ventilation at all times. The requirement specifies when the atmosphere is or could be reasonably expected to be either oxygen-deficient (less than 19.5 percent oxygen) or otherwise hazardous, then testing must be done before employees enter.

Another commenter (Ex. 4–91) supported the provision and suggested a revision reading in part: "Where oxygen deficiency [exists] * * * the atmosphere in the excavation shall be tested * * *." OSHA sees merit in defining when testing would be required to alert employers that special precautions may be necessary, and therefore has made the recommended reordering of the sentence.

The ACCSH (Tr. 8/5/88, pp. 497–507) recommended treating all excavations four feet or more in depth as confined spaces. The Agency, lacking public input on this point, raised such an issue in the hearing notice (53 FR 5281).

OSHA received 11 comments on the hearing issue, and testimony at the public hearing. Seven commenters (Exs. 8–6, 8–7, 8–14, 8–16, 8–18, 8–19, and 8–25) disagreed with the ACCSH recommendation, most of them noting that excavations are open to the air or have adequate egress. Testimony at the public hearing (Tr. 4/19/88, pp. 73–74) also opposed this recommendation.

Four other commenters (Exs. 8–21, 8–22, 8–26, and 8–29) objected to excavations four feet or deeper being considered confined spaces, but provided no rationale for their objection.

Based on the comments received, the Agency declines to act on the ACCSH recommendation that all excavations four feet or deeper be considered confined spaces. The Agency believes that testing is only necessary when there is a likelihood of hazardous conditions, and that the requirement for inspection by the competent person provides continuing assurance that hazardous conditions will be recognized and addressed appropriately. In addition, the Agency does not have any other data to support a requirement that "every" excavation be considered a confined space.

Therefore, based on the above discussion, OSHA promulgates § 1926.651(g)(1)(i) as revised.

Section 1926.651(g)(1)(ii) of the Final Rule requires that "Adequate precautions shall be taken to prevent employee exposure to atmospheres containing less than 19.5 percent oxygen and other hazardous atmospheres. These precautions include providing proper respiratory protection or ventilation in accordance with subparts D and E of this part respectively."

This provision is similar to the language of the proposed rule which was added to clarify when protection against exposure to oxygen deficiency is required, and to identify the precautions that are necessary to prevent such exposures. Oxygen deficiency is not specifically defined in the existing excavation standard. However, the existing requirements for air quality for "supplied air" in § 1910.134(d)(1) of the General Industry Standards, have been identified as applicable to the construction industry. § 1910.134(d)(1) states that "Breathing air shall meet at least the requirements of the specification for Grade D breathing air as described in Compressed Gas Association Commodity Specification G–7.1–1966." This specification, as well as § 1910.94, denotes a concentration of 19.5 percent oxygen as the lower limit for synthesized air. Therefore, the 19.5 percent limit for oxygen was specifically identified in the proposed standard in order to be consistent with the existing requirements and to clarify when testing and protection are required.

The existing standard requires that employees subjected to oxygen deficiency be protected with approved respiratory protection as set forth in subpart D. However, the use of increased ventilation can be as effective or more effective in dealing with oxygen deficient atmospheres. Therefore, this type of protection was also identified as acceptable in the proposal.

OSHA received one comment on this provision. The commenter (Ex. 4–30) pointed out that the provision seemed to indicate that implementation of subparts D and E is only to prevent employee exposure to atmospheres containing less than 19.5 percent oxygen. The commenter pointed out that subparts D and E are also intended to prevent employee exposure to materials and substances in the Z–1 tables of § 1910.1000 and other OSHA standards.

OSHA agrees with the observation, but received no other input which indicated confusion as to the intended application of subparts D and E. However, in order to clarify its' regulatory intent, the Agency has editorily revised this provision. The Agency notes that all construction employers must comply with subparts D and E to prevent employee exposure which exceed the prescribed permissible exposure limits.

The Agency, therefore promulgates paragraph § 1926.651(g)(1)(ii) as revised.

Paragraph § 1926.651(g)(1)(iii) of the Final Rule requires that "Adequate precautions shall be taken such as providing ventilation to prevent employee exposure to an atmosphere containing a concentration of a flammable gas in excess of 20 percent of the lower flammable limit of the gas."

This provision is identical to the proposed rule which addressed the hazards posed by the accumulation of flammable gases. The proposed standard required that adequate precautions be taken to prevent employee exposure to atmospheres containing a concentration of flammable gas in excess of 20 percent of its lower flammable limit (LFL). This differs from the existing requirement which states in § 1926.651(v): "When flammable gases are present, adequate ventilation shall be provided or sources of ignition shall be eliminated."

As stated, the existing provision requires that ventilation be provided when a flammable gas exists in any concentration or, as an alternative, that sources of ignition be eliminated. OSHA believes that this requirement is too restrictive at low concentrations of flammable gas in the atmosphere, but not restrictive enough where high concentrations exist. By setting forth a limit for the allowable concentration of flammable gas, the proposal notified employers of the level of performance required to protect employees.

OSHA received a large number of comments on this provision, primarily from employers in the natural gas industry, and input from the ACCSH.

Many commenters (for example, Exs. 4–6, 4–8, 4–14 and 4–61) pointed out that this requirement would, in effect, prevent the repair of damaged or leaking gas pipelines without turning off the gas and disrupting service to customers. Many commenters also noted that the Office of Pipeline Safety (OPS) has regulations which specifically address this type of situation. They requested that OSHA place a specific exclusion to the standard to cover these situations.

It should be noted that the U.S. Court of Appeals for the Third Circuit has determined that under section 4(b)(1) of the OSHA Act, a particular OPS regulation, 49 CFR 192.751, preempts the current requirements in paragraph (v) of OSHA's excavation standard with regard to pipeline repair. (*Columbia Gas of Pennsylvania, Inc.* v. *Marshall*, 636 F.2d 913 (3d Cir. 1980). Since paragraph (g)(1)(iii) of the revised OSHA standard covers the same working condition as existing paragraph (v), OSHA assumes that the new paragraph would also be preempted. However, OSHA declines to place a specific reference to preemption into the standard itself, as noted earlier. Indeed, if OPS were to change or revoke its regulations, pipelines might once again fall within OSHA jurisdiction. The placement of an exemption within the OSHA standard would unduly restrict the standard's coverage in such situations. Therefore, no specific exemption is being incorporated into the standard.

The ACCSH (Tr. 8/5/87, p. 507) recommended adding the words "or explosive gas or vapor" after the word flammable. The Agency declines to make this change because the term "flammable gas" is a generic term which already includes "explosive gas or vapor."

Therefore, based on the above discussion OSHA promulgate § 1926.651(g)(1)(iii), as proposed.

Section 1926.651(g)(1)(iv) of the Final Rule requires that "When controls are used that are intended to reduce the level of atmospheric contaminants to acceptable levels, testing shall be conducted as often as necessary to ensure that the atmosphere remains safe."

This provision is identical to the proposed rule. The proposed paragraph was a new requirement, added to clarify further the intention of the existing requirements for testing. Testing is not an effective method of preventing exposure to hazardous atmospheres if it is used only to detect hazardous conditions initially and then not used again. Therefore, the proposal required the employer to conduct additional testing to ensure that atmospheres remain safe whenever controls are used that are intended to reduce the levels of atmospheric contaminants to acceptable levels.

The Agency received input from the ACCSH (Tr. 8/5/87, p. 508) recommending continuous monitoring when employees are present. No other comments were received on this provision. The Agency has determined that continuous monitoring would not be appropriate in many situations. Further, even in those situations when it might be appropriate, the Agency believes it appropriate to permit the use of alternative monitoring methods which are also effective. For example, in trench situations where work is proceeding rapidly and the trench is being backfilled shortly after the work in a section is completed, installation and calibration of the continuous testing instruments may not be completed before employees move to another section. The provision is written so that adequate monitoring is required, regardless of the situation. This recognizes that in some instances continuous monitoring would be appropriate and would be required, however in other situations periodic monitoring would be more appropriate due to site conditions. Therefore the Agency declines to act on this recommendation, and promulgates § 1926.651(g)(1)(iv), as proposed.

Section 1926.651(g)(2)(i) of the Final Rule requires that "Emergency rescue equipment, such as breathing apparatus, a safety harness and line, or a basket stretcher, shall be readily available where hazardous atmospheric conditions exist or may reasonably be expected to develop during work in an excavation. This equipment shall be attended when in use."

This provision is similar to the proposed rule, which was identical to existing § 1926.651(v) except the requirement for the equipment to be "attended" was deleted in the proposal. The manner in which the word "attended" is used in the current standard implies that personnel must be

with and responsible for the equipment even when the equipment is not in use. This is not the intent of the standard, and this word was dropped in the proposal. However, it is the intent of the existing rule and the proposal that the equipment be attended while in use. Therefore, the Final Rule has been modified to make this intention explicit.

OSHA received a great many comments on this provision, primarily from companies in the natural gas pipeline industry. These commenters (for example, Exs. 4–6, 4–20, 4–66, 4–89, 4–113, and 4–117) pointed out that this regulation was inappropriate for situations involving natural gas pipeline repair or replacement, since these were routine operations performed by trained personnel and not emergencies as understood in normal construction operations. Several of these commenters (for example, Exs. 4–58, 4–112, and 4–116) noted that Office of Pipeline Safety (OPS) regulations already regulated equipment and material needed at the scene of emergencies in the gas industry.

As noted earlier, although OSHA disagrees with the rationale provided in Columbia Gas, we agree that paragraph (g)(2)(i) might well be preempted by OPS regulations, under the holding in that case. However, for reasons which have also been noted above, the Agency declines to add a specific exemption within the standard itself.

OSHA received no other input in this provision and, therefore, promulgates § 1926.651(g)(2)(i), as proposed.

Section 1926.651(g)(2)(ii) of the Final Rule requires that "Employees entering bell-bottom pier holes, or other similar deep and confined footing excavations, shall wear a harness with a life-line securely attached to it. The lifeline shall be separate from any line used to handle materials, and shall be individually attended at all times while the employee wearing the lifeline is in the excavation."

This provision is almost identical to the proposed rule, which was based on existing § 1926.652(f). In the Final Rule, OSHA clarified what was intended by "substantially" similar footing excavations.

The existing requirements in § 1926.652(f) apply only to bell-bottom pier holes. These holes are a special type of footing excavation into which employees descend to inspect the hole configuration. However, similar inspections are also necessary, at times, in similar deep and confined footing excavations that are not belled at the bottom. Employees in these excavations must be protected against the same hazards that can exist in bell-footings. Therefore the language of the proposal was changed to reflect this need.

The purpose of this requirement is to allow rapid rescue of an employee in the limited space of these special types of excavations without exposing other employees to the associated hazards. Because of the configuration and unusual depths of these types of excavations, an oxygen deficient or other hazardous atmosphere could occur very quickly, requiring rapid removal of any exposed employee.

The intent of the requirement that lifelines be "individually attended" is that while the lifeline is actually in use (attached to the employee), personnel be assigned to oversee the individual to whom the lifeline is attached.

The current standard provides that lifelines "shall be individually manned and be separate from any line used to remove materials excavated from the bell footing." The proposal revised this language to require that lifelines "shall be separate from any line used to handle materials * * *." This clarification is to indicate that the lifeline must be separate from any line used to remove or supply or otherwise handle any materials from or to the footing excavation.

OSHA received eight comments on this provision. Seven commenters (Exs. 4–21, 4–23, 4–30, 4–31, 4–40, 4–42, and 4–86) recommended deleting this provision from subpart P because, they asserted, these excavations are confined spaces and should be addressed in a confined space standard.

The Agency disagrees with these commenters concerning deleting this provision from subpart P. OSHA notes that bell-bottom pier holes and similar footing excavation require cave-in protection and other precautions related specifically to work in excavations. Consequently, it is appropriate to address these excavations in subpart P. However, this does not preclude these same excavations from being "confined spaces" which would require compliance with additional OSHA regulations (for example, § 1928.21(a)(6)). The rescue procedures required by this provision apply because of possible excavation hazards and because of possible confined space hazards. They do not apply just because of possible confined space hazards.

OSHA received another comment (Ex. 4–72) that suggested deleting this provision and promulgating another full section specifically to address bell-bottom pier holes. This recommendation is addressed in more detail earlier in this preamble in the discussion of Issue 13. Based on that discussion, the Agency declines to act on this recommendation.

Paragraph (h), "Protection from hazards associated with water accumulation," contains four provisions that address the control and removal of water from excavations. Water is present, or very likely to be present, during the course of work in many excavations. Water accumulation can result from rain or melting snow, or from leaking or damaged utilities such as water or sewer lines. Water creates muddy or slippery surfaces that expose employees to slips and falls. Rapid accumulation, such as from damaged water supply line, has even resulted in drownings (Ex. 2–9). The action of water against the sides of excavations can cause undermining and cave-ins. Accumulated water will saturate the sides of excavations and weaken them to the point where cave-ins are very likely to occur even in very shallow excavations. Further, where protective systems are in place, accumulated water can adversely affect the capacity of the systems.

The existing requirement in § 1926.651(p) states: "Water shall not be allowed to accumulate in a excavation." Taken literally, accumulated water in any amount, in any part of an excavation, violates the existing standard. However, OSHA does not intend that to be the case. At times, such as during sudden rain storms, for example, or when snow melts, OSHA realizes that it is impossible to keep some amount of water from accumulating. Additionally, in excavations which employees do not enter, but where there is accumulated water, there is no exposure to a hazard. Further, there are certain excavations, such as long trenches, where water accumulated in isolated sections would not pose a hazard if employees do not enter those sections.

OSHA proposed to revise the existing requirement to recognize that not all water accumulated in excavations poses a hazard. In addition, it is OSHA's opinion that it is not always necessary to remove all water from an excavation in which employees are expected to work. Paragraph (h)(1), as proposed, allowed employees to work in excavations in which there is accumulated water, or in which water is accumulating, but only under the circumstances where adequate precautions have been taken to protect employees against the hazards posed by water accumulation. The precautions could range from providing dewatering equipment to special cave-in protection.

Work can be conducted safely in excavations when there is accumulated water. For example, the record contains

information on a pipeline contractor who installed several miles of pipe in a trench where the water table was only three to four feet below the surface of the ground (Ex. 2–25). The work required the use of divers to place sections of pipe at depths of up to 18 feet. Employees were protected from cave-ins of the sides of the trench by the use of shields.

Depending on the amount of water, the precautions necessary to protect employees adequately will vary. Employers were alerted to this by the note following proposed paragraph (h)(1). The note identified several examples of the types of protection that might be necessary to provide an adequate level of protection. These include the use of special support or shield systems, dewatering to control the level of water, or the use of a safety harness and lifeline.

Section 1926.651(h)(1) of the final rule requires that "Employees shall not work in excavations in which there is accumulated water, or in excavations in which water is accumulating, unless adequate precautions have been taken to protect employees against the hazards posed by water accumulation. The precautions necessary to protect employees adequately vary with each situation, but could include special support or shield systems to protect employees from cave-ins, water removal to control the level of accumulating water, or use of a safety harness and lifeline."

The final provision is virtually identical to the proposal except the word "and" used in the proposed explanatory note has been changed to "or" at the suggestion of several commenters (Exs. 4–21, 4–23, 4–31, 4–40, 4–42, 4–54, and 4–86). The Agency agrees with these commenters that the word "and" could cause confusion regarding the use of options. OSHA has also reformatted this provision by including the explanatory note in the text of the provision.

The Agency also received input from the ACCSH (Tr. 8/5/87, p. 506), recommending retitling § 1926.651(h) to read: "Protection from hazards associated with water accumulation." Two commenters (Exs. 4–17 and 4–91) also suggested this change. Since the change clarifies the regulatory intent of this paragraph, the Agency has made the recommended revision. The ACCSH also recommended that OSHA require that "waterproof outerwear" be used in these situations. The ACCSH did not explain their rationale for this recommendation, and there is no other support in the record for this type of requirement. Therefore, OSHA declines to act on this suggestion.

Finally, the Agency has dropped the phrase "these conditions have been anticipated and * * *" because it added nothing to the standard. The Agency believes employees should be removed from excavations where water is accumulating unless adequate precautions have been taken, regardless of whether the water accumulation has been anticipated or not.

Based on the above discussion, OSHA promulgates § 1926.651(h)(1) as revised.

Section 1926.651(h)(2) of the final rule requires that "If water is controlled or prevented from accumulating by the use of water removal equipment, the water removal equipment and operations shall be monitored by a competent person to ensure proper operation."

This provision is identical to the proposal, which was intended to address the use of water removal equipment as a means to control the accumulation of water. The proposed rules required that such equipment be monitored by a competent person to ensure proper operation.

Water removal or control is generally undertaken to provide a dry work area. The process can also be used to contribute to improved stability of excavation sides, and it is done in emergencies when sudden inflows of water occur. When the equipment that is used to remove or control the flow of water into excavations malfunctions, hazards that were eliminated when the equipment was working can become significant.

The requirements in paragraph (h)(2) are new. The existing standard does not directly address water removal operations, however, as discussed above, it requires that water not be allowed to accumulate in excavations. The type of water removal equipment needed in any given circumstance will vary depending on the volume of water that must be removed or controlled. In a very large excavation, for example, failure of water removal equipment may affect only a portion of the area within the excavation. Therefore, the precautions to be taken will, of course, also vary in the event failure of the equipment occurs. Such precautions could involve removal of all employees to a safe area if they are all exposed. Where the problem is more isolated, only the employees in the area that are exposed to the added danger would have to be removed.

OSHA received no comment on this provision and, therefore, promulgates paragraph (h)(2) as proposed.

Section 1926.651(h)(3) of the Final Rule requires that "If excavation work interrupts the natural drainage of surface water (such as streams), diversion ditches, dikes, or other suitable means shall be used to prevent surface water from entering the excavation and to provide adequate drainage of the area adjacent to the excavation. Excavations subject to runoff from heavy rains require an inspection by a competent person and compliance with paragraphs (h)(1) and (h)(2) of this Section."

The requirement is virtually identical to the proposal, except that the explanatory note has been added to the text of the provision. The proposal was based on a minor revision of existing § 1926.651(p).

OSHA received no comment on this provision and, therefore, promulgates paragraph (h)(3) as reformatted.

Section 1926.651(i) of the Final Rule, "Stability of adjacent structures," contains three paragraphs that address the hazard of unstable structures adjacent to excavations. The collapse of unstable structures endangers employees in excavations and in the area around excavations. Structures can become unstable when excavation takes place close enough to the structures so as to reduce the ability of the soil to support them. The requirements of paragraph 1926.651(i) are intended to ensure that necessary employee protection, over and above that required by paragraph 1926.652, is provided when necessary.

Paragraph (i)(1) of the Final Rule requires that "Where the stability of adjoining buildings, walls, or other structures is endangered by excavation operations, support systems such as shoring, bracing, or underpinning shall be provided to ensure the stability of such structures for the protection of employees." The three examples of support systems generally used for this purpose—shoring, bracing and underpinning—are unchanged from the current standard. This provision is essentially the same as the proposed rule, which was unchanged from the existing standard in § 1926.651(o). However, the words "support systems" are included so that the provision is consistent with other provisions of the standard.

The Agency received no comment on this provision and, therefore, promulgates § 1926.651(i)(1) as proposed.

Section 1926.651(i)(2) of the Final Rule requires that

Excavation below the level of the base or footing of any foundation or retaining wall

VOL 54 ISS 209 OCT 31 1989 UMI

that could be reasonably expected to pose a hazard to employees shall not be permitted except when:

(i) A support system, such as underpinning, is provided to ensure the safety of employees and the stability of the structure; or

(ii) The excavation is in stable rock; or

(iii) A registered professional engineer has approved the determination that the structure is sufficiently removed from the excavation so as to be unaffected by the excavation activity; or

(iv) A registered professional engineer has approved the determination that such excavation work will not pose a hazard to employees.

The first two exceptions are essentially unchanged from the existing requirements in § 1926.651(n). The third and fourth exceptions are new and were proposed in similar form because the existing standard has been interpreted by some employers to apply only to excavation at and immediately below foundations or retaining walls. However, the loads imposed on the soil from an adjacent structure are not limited to the immediate area of the structure, but also extend some distance from the structure. This distance varies with the depth of the excavation. Generally, this distance can be estimated as being equal to the depth of the excavation. Thus, a critical plane is formed sloping up from the bottom of the excavation toward the structure at an angle of 45 degrees (one horizontal to one vertical or 1H:1V). If the footing or foundation remains completely below this plane, then the conventional assumption is that it probably will not be affected by excavation operations. The possibility remains, however, that the stability of the structure could be affected in some way. Calculating the effect that excavation activity has on the soil supporting a structure is a highly complex procedure involving expertise in soil mechanics, structural analysis, judgement, and experience. While the discussion above is in terms of generalities, each circumstance must be evaluated on the specifics of the situation.

The fourth exception to the prohibition against excavating adjacent to structures recognizes that some excavation activity will not present a hazard to employees. Such a situation could occur, for example, if a building were on a continuous concrete footing, and excavation was undertaken in a very limited area below the footing. Where the footing could safely span the excavation, no instability in the structure would occur. Again, each circumstance must be evaluated on the specifics of the situation.

As discussed under Issue 2 above, the Agency has determined that these types of determinations must be approved by a registered professional engineer.

OSHA also received two comments (Exs. 4–17 and 4–111) and an ACCSH recommendation (Tr. 8/5/87, p. 509) supporting the use of a registered professional engineer. The Agency received no other comments on this provision.

Therefore, based on the above discussion, OSHA promulgates § 1926.651(i)(2) as revised.

Section 1926.651(i)(3) of the Final Rule requires that "sidewalks, pavements, and appurtenant structures shall not be undermined unless a support system or another method of protection is provided to protect employees from the possible collapse of such structures." This provision is similar to the proposed rule except that "appurtenant structures" (that is, structures attached to sidewalks and pavements) have been added because of the danger they pose when undermined.

The proposed requirement revised the existing language of § 1926.650(a) that requires shoring sidewalks to carry a minimum live load of 125 pounds per square foot. The existing requirement does not protect employees adequately because it does not cover all pavements, only "sidewalks." Loads on pavements during construction operations frequently can exceed the minimum load specified. Therefore, the proposal covered pavements as well as sidewalks. In addition, the live load specification has been changed to a more performance-oriented requirement to be consistent with the overall approach taken in this revised standard. OSHA believes that the performance language provides the employer greater flexibility in determining the most effective means of protecting employees. The Agency notes that this provision is intended to apply not only to employees in the excavation, but to employees who may be required to use the sidewalk or pavement area.

OSHA received two comments (Exs. 4–17 and 4–91) and input from the ACCSH (Tr. 8/15/87, p. 518) on this provision. All commenters recommended adding "appurtenant structures" to this provision. OSHA recognizes that "appurtentant structures" must also be supported to protect employees, and that is the Agency's intent. In order to clarify this intent, OSHA is revising the provision to state clearly that any attached structures must also be supported. In addition, one commenter (Ex. 4–17) and the ACCSH suggested moving the words "is provided" to a position after the word "protection" in order to clarify this provision. The Agency agrees and has revised this provision accordingly.

Therefore, based on the above discussion, OSHA promulgates § 1926.651(i)(3) as revised.

Section 1926.651(j)(1) of the proposed rule has been relocated and combined with § 1926.652(a) of the Final Rule because they are related provisions. This change will be discussed in more detail later in this preamble.

Section 1926.651(j) of this Final Rule is entitled "Protection of employees from loose rock or soil." Paragraph (j)(1) of the Final Rule requires that "Adequate protection shall be provided to protect employees from loose rock or soil that could pose a hazard by falling or rolling from an excavation face. Such protection shall consist of scaling to remove loose material; installation of protective barricades at intervals as necessary on the face to stop and contain falling material; or other means that provide equivalent protection."

This is almost identical to proposed paragraph (j)(2), except that the introductory language has been deleted because of the relocation of proposed paragraph (j)(1) mentioned above. In addition, the phrase "protect * * * against" has been changed to "protect * * * from" to be consistent with language suggested by the ACCSH and other commenters related to this requirement and similar requirements in other parts of this standard.

This provision addresses a hazard similar to cave-ins, although it is not of the same magnitude. Loose rock or soil can fall or roll from an excavation face and, if in sufficient volume, endanger an employee even when an adequate cave-in protective system is in place. For example, when a shield is used in conjunction with sloping, the possibility exists for material to loosen and slide down and over the top of the shield, thus endangering employees.

The existing standard, § 1926.651(j), addresses this hazard. It states: "Sides, slopes, and faces of all excavations shall meet accepted engineering requirements by scaling, benching, barricading, rock bolting, wire meshing, or other equally effective means." The proposed standard did not change the requirement other than to revise the language to improve clarity, and to remove the references to rock bolting and benching. Rock-bolting and benching are considered types of primary support systems intended to prevent cave-ins. They are not normally used to prevent material from falling into an excavation after the primary cave-in protective system is in place.

Section 1926.651(j)(2) of the Final Rule requires that "Employees shall be protected from excavated or other materials or equipment that could pose a hazard by falling or rolling into excavations. Protection shall be provided by placing and keeping such materials or equipment at least two feet (.61 m) from the edge of excavations, or by the use of retaining devices that are sufficient to prevent material or equipment from falling or rolling into excavations, or by a combination of both as necessary."

This provision is identical to proposed paragraph (j)(3), which was based on existing § 1926.651(i). The proposal was rewritten from the existing standard in more concise language.

Existing § 1926.651(i)(1) states that "* * * material shall be effectively stored and retained * * *." Similarly, in existing § 1926.651(i)(2), it is stated that "* * * the employer may use effective barriers or other effective retaining devices * * *." Interested persons have expressed concern as to what these provisions require and have indicated that they should be clarified in the proposed revision. Consequently, the proposed language of paragraph (j)(3) was written in performance-oriented language and required "the use of retaining devices that are sufficient to prevent material or equipment from falling or rolling into excavations." The duty to provide protection is clearly stated, but the employer is allowed some discretion in determining the necessary capacity of the retaining devices by use of the word "sufficient." A device is "sufficient" (and "effective") if it can be shown to be able to resist any forces that may reasonably be expected to be applied to it.

The intent of this requirement is to protect employees from materials, equipment, and spoil piles which might fall into excavations. Obviously, materials such as excavated soil and stored construction supplies can superimpose loads on the walls of an excavation. Such loads can be the cause of cave-ins and must be considered when determining what protection is necessary to safeguard employees.

The application of the existing 2-foot setback requirement to trenching has been questioned in the past because the requirement only appears in existing § 1926.651 "Specific Excavation Requirements," and not in § 1926.652 "Specific Trenching Requirements." However, the requirements in § 1926.651 have always applied to all excavations, including trenches. The format changes in the proposal and in the Final Rule are made to clarify this point.

The langdage of the existing requirement in § 1926.651(i) is different from the language that was originally promulgated in 1971. The 1971 requirement originally promulgated under the Construction Safety Act was stated as follows: "Excavated or other material shall not be stored nearer than 4 feet from the edge of any excavation and shall be stored and retained as to prevent its falling back into the excavation" (36 FR 7389, April 17, 1971). Upon the recommendation of the ACCSH, it was proposed to change this provision to require that "In excavations which employees may enter, which are more than 5 feet in depth, excavated or other materials shall be stored and retained 4 feet or more from the edge of the excavation. In excavations which are 5 feet or less in depth, all materials shall be stored and retained at least 2 feet from the edge of the excavation" (36 FR 19088, Sept. 28, 1971).

This amendment was proposed "in order to allow more flexibility in storing and retaining excavated materials adjacent to an excavation, while at the same time ensuring the safety of those employees working in the excavation site" (37 FR 3513, Feb. 17, 1972). The comments in response to the 1972 proposal indicated that the proposed change was too rigid to allow employers digging shallow trenches (less than 5 feet in depth) and having narrow rights-of-way to meet the requirement. Alternative methods of storing and retaining such material were suggested which would provide equivalent employee protection.

The ACCSH considered the comments submitted in response to the proposal, and the suggestions made by the OSHA staff, and, as a result, recommended that the language be changed "to permit all appropriate alternative methods which will protect employees working in excavations from the hazards of falling materials" (37 FR 3515, Feb. 17, 1972). The ACCSH recommendations were adopted and the language was revised to become what is now the existing requirement in § 1926.651(i).

Prior to publication of the 1987 proposal OSHA received comments concerning the existing 2 foot (.61 m) set-back requirement. It was suggested that this requirement be changed to 1 foot (30.5 cm) for excavations 5 feet (1.52 m) or less in depth. No data to support this suggestion was submitted to OSHA other than the comment that such a requirement would be practical and adequate.

OSHA did not make that suggested change in the proposal. However, OSHA did request that specific comments regarding this issue be submitted during the comment period.

OSHA received 10 comments on this provision. Many commmenters (Exs. 4–4, 4–82, 4–88, 4–102, 4–106, 4–109, 4–113, and 4–115) expressed support for reducing the 2 foot clearance to 1 foot for excavations 5 feet or less in depth. Three commenters (Exs. 4–82, 4–102, and 4–109) noted that the practice was successful under CAL–OSHA. However, OSHA notes that comments received from CAL–OSHA (Ex. 4–4), while suggesting that the setback for excavated materials be reduced, provided other input which indicated that this practice was causing problems. This input, addressing proposed § 1926.651(a), is as follows:

> The Division feels that the subsection on surface encumbrances should be expanded by inserting the word "spoil," which is common to the industry to designate the earth removed from the excavation, *because it has been our experience that where a large boulder or a tree on the edge might readily be removed to reduce or eliminate the hazard, the "spoil" is frequently left in a condition where it is almost rolling back into the excavation. For this reason too, we believe the requirement to keep the spoil back at least two feet from the edge of the excavation should be in this section rather than in Subsection (j)(3).* (Emphasis added.)

OSHA concludes from this input that the reduced setback for excavations 5 feet or less in depth may be adequate and practical in theory, but not in actual practice.

Other commenters (Exs. 4–41, 4–88, and 4–113) noted that in some instances, space is limited, and compliance with a 2 foot setback is difficult. One commenter (Ex. 4–41) suggested keeping materials at "sufficient distances" rather than specifying a fixed setback.

The Agency disagrees with this approach because "sufficient distances" is too subjective, and does not provide appropriate employer guidance as to what the regulation requires.

Another commenter (Ex. 4–106) supported changing the setback requirement to one foot for excavations less than five feet deep, stating that the change is valid as far as the hazard from falling materials is concerned.

Another commenter (Ex. 4–46) supported the 2 foot setback for excavated materials, and recommended that equipment and materials be kept at least 10 feet from the edge of the excavation.

One commenter (Ex. 4–115) supported the reduced setback, but provided no rationale, and the ACCSH (Tr. 8/5/87, pp. 535–538) recommended increasing

VOL 54 ISS 209 OCT 31 1989 UMI

the spoil pile setback to 3 feet, but also gave no rationale.

After careful consideration of the record, OSHA concludes that the spoil pile setback distance should not be changed. The current requirement for a 2 foot setback has provided adequate protection for employees. The record contains no convincing evidence that increasing the setback to 3 feet or more is necessary, nor does it indicate that decreasing the setback to 1 foot for excavation 5 feet or less in depth, would maintain employee protection at the current level. The Agency also notes that employers who encounter site conditions that do not permit a 2 foot set-back must use retaining devices to prevent materials or equipment from falling into the excavation.

Therefore, based on the above discussion, OSHA promulgates paragraph (j)(2) as proposed and renumbered.

Section 1926.651(k) of the final rule sets out provisions for inspections and requires that:

(1) Daily inspections of excavations, the adjacent areas, and protective systems shall be made by a competent person for evidence of a situation that could result in possible cave-ins, indications of failure of protective systems, hazardous atmospheres, or other hazardous conditions. An inspection shall be conducted by the competent person prior to the start of work and as needed throughout the shift. Inspections shall also be made after every rainstorm or other hazard increasing occurrence. These inspections are only required when employee exposure can be reasonably anticipated.

(2) Where the competent person finds evidence of a situation that could result in possible cave-ins, indication of failure of protective systems, hazardous atmospheres, or other hazardous conditions, exposed employees shall be removed from the hazardous areas until the necessary precautions have been taken to ensure their safety.

These provisions are similar to the proposed rule, which consolidated requirements in existing §§ 1926.650(i) and 1926.651 (d) and (o).

The existing requirement in § 1926.650(i) states: "If evidence of possible cave-ins or slides is apparent, all work in the excavation shall cease until the necessary precautions have been taken to safeguard employees." This is the only requirement that specifically identifies what is necessary if a hazardous condition is identified, and it only applies to evidence of cave-ins or slides. It is OSHA's opinion that during the course of work in excavations, other hazardous conditions can develop, and that the object of daily inspections must be to identify these conditions as well as to take precautions to protect employees. Therefore, the proposed requirement was written with this intent.

The existing provision also requires that "all work in the excavation shall cease * * *." OSHA recognizes that in many instances a hazardous condition may be limited to only a small area of the excavation. For example, inspection might reveal a weakness in the support system which increases the possibility of a cave-in in a small area of a very large excavation. In such a situation, OSHA does not believe it is necessary to require that "all work" throughout the entire excavation cease until this isolated problem is repaired. Therefore, OSHA proposed to change the requirement to require that "exposed employees shall be removed from the hazardous areas until the necessary precautions have been taken to ensure their safety."

OSHA received three comments and ACCSH input on this provision. These commenters (Exs. 4–53, 4–88, and 4–91) agreed with the proposed requirement, but two commenters (Exs. 4–53 and 4–88) objected to any additional requirement for a written inspection log as suggested in Issue 8 in the preamble of the proposal (52 FR 12295). The ACCSH (Tr. 8/5/87, p. 519) supported creating an inspection certification to verify that the inspection was done. However, based on the discussion of Issue 8 above, the Agency will not require the keeping of a written inspection log.

OSHA, however, agrees with the ACCSH recommendation that the excavation should be inspected prior to the start of the work shift. This suggestion expresses the Agency's original regulatory intent more clearly, and therefore, OSHA has revised the standard to reflect this input.

Therefore, OSHA promulgates § 1926.651(k) as revised.

Section 1926.651 (l) and (l)(2) provide interim fall protection requirements for excavations. These provisions are unchanged from § 1926.651(w), and § 1926.651(t), respectively, in the existing standard. In the proposal, OSHA intended to redesignate these provisions into the fall protection requirements in revised subpart M. However, the revisions to subpart M are not yet completed. Therefore, for the time being, these provisions will be retained in subpart P. When the revised subpart M is issued, § 1926.651(l)(2) of this Final Rule will be revoked. The fall protection requirements contained therein will be covered in subpart M, and § 1926.652(e)(1)(vi) of this Final Rule addresses the requirement for backfilling excavations. Additionally, at the same time, § 1926.651(l)(1) of this Final Rule will be revised by the new subpart M to remove the fall protection requirements (51 FR 42735).

Section 1926.652 of this Final Rule details the requirements for protective systems. Paragraph (a)(1) of this Final Rule requires that "Each employee in an excavation shall be protected from cave-ins by an adequate protective system designed in accordance with paragraph (b) or (c) of this section except when:

"(i) Excavations are made entirely in stable rock; or

"(ii) Excavations are less than 5 feet (1.52 m) in depth and examination of the ground by a competent person provides no indication of a potential cave-in."

This provision is essentially identical to proposed § 1926.651(j)(1) except for editorial changes. This provision was moved from its location in proposed § 1926.651(a)(1) based on comments (Exs. 4–82, 4–102, 4–106 and 4–109) that it was more appropriate in § 1926.652, which specifically addresses employee protection in excavations.

Proposed paragraph (j)(1) required that employees in excavations be protected from cave-ins by the installation or use of an adequate protective system which meets the requirements of proposed § 1926.652, "Requirements of protective systems." This requirement was written in performance-oriented language, consistent with the approach of the overall proposed standard. This proposed paragraph consolidated and replaced several existing requirements and paragraphs. The existing paragraphs affected include §§ 1926.651 (c), (m), and (q), and 1926.652 (a), (b), (c), (e), (f), and (k).

The existing standard is arranged in a format consisting of § 1926.651, "Specific Excavation Requirements," and § 1926.652, "Specific Trenching Requirements." Each of these sections contains provisions designed to protect employees against cave-ins. The substantive requirements for "excavations" often overlap those for "trenches." Thus, an excavation employer may not always be sure which of the existing standards apply to a particular situation.

Some of the current requirements indicate when cave-in protection is required but provide little direct guidance as to how it is to be provided. For example, existing § 1926.651(c) states: "The walls and faces of all excavations in which employees are exposed to danger from moving ground shall be guarded by a shoring system, sloping of the ground, or some other equivalent means."

On the other hand, some provisions set forth specific means of compliance. For example, existing § 1926.652(f) states: "Employees entering bell-bottom pier holes shall be protected by the installation of removable-type casing of sufficient strength to resist shifting of the surrounding earth."

Some of the current requirements specify the earth conditions in which cave-in protection is required. For example, existing § 1926.652(b) states: "Sides of trenches in unstable or soft material, 5 feet or more in depth, shall be shored, sheeted, braced, sloped, or otherwise supported by means of sufficient strength to protect the employees working within them. (See Tables P–1, P–2 * * *.)"

In Table P–1, terms such as "compacted angular gravels," "compacted sharp sand," and "average soils" are used to describe the earth conditions. In Table P–2, terms such as "hard, compact," "likely to crack," and "soft, sandy, or filled" are used to describe the earth conditions.

Other existing requirements specify when special or additional precautions are necessary. For example, existing § 1926.651(m) states: "Special precautions shall be taken in sloping or shoring the sides of excavations adjacent to a previously backfilled excavation or a fill, particularly when the separation is less than the depth of the excavation. Particular attention also shall be paid to joints and seams of material comprising a face and the slope of such seams and joints."

The existing requirements do not appear in any specific order. In addition, it is not always clear when provisions apply to a given situation. However, the one common feature of all the existing requirements is that cave-in protection is required. Therefore, based on this central requirement, OSHA proposed to revise its existing standards to allow any of several types of protective systems to be used, provided that the system will provide protection against cave-ins. OSHA intended this revision to be more performance-oriented than the current standard, while providing greater clarity and guidance as to what steps the employer must take to protect employees from cave-ins.

OSHA believes that there is a potential for a cave-in in virtually all excavations. However, experience has shown that the probability of a cave-in depends upon the combined effects of many factors (Ex. 2–5). These factors include the depth of the excavation, the type of soil involved, the ability of the soil to resist stress imposed on the soil from the weight of the soil itself and from static and dynamic surcharge loads, and from changes in the ability of the soil to resist stress due to exposure to environmental conditions over a period of time. In recognition of the low probability of a cave-in occurring in certain circumstances, the proposal, as does the current standard, sets forth two exceptions to the requirement to provide cave-in protection.

Proposed paragraph (j)(1)(i) stated that excavations in stable rock are exempt from cave-in protection requirements. This proposed exception was consistent with the existing standard which states in Note (1) to Table P–2 that "shoring is not required in solid rock, hard shale, or hard slag." The term "stable rock" was used in the proposed standard instead of the above terms and was defined in § 1926.650(b)(20) of the proposal.

The second exception, which was stated in proposed paragraph (j)(1)(ii), allowed the suspension of the requirement to provide cave-in protection in excavations less than 5 feet (1.5 m) in depth, but only if a competent person first examined the ground and found no indication that a cave-in should be expected.

The exception in proposed paragraph (j)(1)(ii) continued the existing exception which applied to excavations less than 5 feet in depth. In addition, it clarified that cave-in protection would not be required for such excavations only after a competent person first examined the ground and found no evidence of a potential cave-in.

The existing standard in § 1926.652(a) states: "Trenches less than five feet in depth *shall also be effectively protected when examination of the ground* indicates hazardous ground movement is expected" (emphasis added). On its face this requirement does not seem to require that an examination first be conducted, or who must conduct it. However, existing § 1926.650(i) states: "Daily inspections of excavations shall be made by a competent person * * *." The proposal clarified that inspections must first be conducted before an employer could use the exception of not providing cave-in protection in excavations less than 5 feet in depth. There would be a presumption that excavations less than 5 feet deep need to be protected unless there is a determination by a competent person that such protection is not needed.

OSHA received four other comments on proposed § 1926.651(j)(1). One commenter (Ex. 4–28) recommended deleting the reference to the more specific § 1926.652 because it was inappropriate. Moving this provision to § 1926.652(a) of the Final Rule, as discussed above, adequately responds to the concern.

Another commenter (Ex. 4–46) suggested revising paragraph (j)(1)(ii) to specify that if there is evidence of moving ground in excavations 5 feet or less in depth, the excavation should be shored or sloped. The Agency believes this is not needed because § 1926.652(a) of this final rule requires a protective system unless the conditions of the exception are met.

An additional commenter (Ex. 4–30) recommended that OSHA allow a vertical 5 foot section at the bottom of all trenches since trenches with depths of 5 feet or less do not normally require shoring or sloping. This issue is discussed in detail later in the preamble under the discussion of Appendix B. One other commenter (Ex. 4–4) recommended requiring cave-in protection for excavations 5 feet or more deep, regardless of soil type (even stable rock), however, no supporting information was provided. Consequently, OSHA is not convinced that this recommendation is appropriate. As discussed above, experience has shown that there is such a very low probability of cave-in in stable rock that OSHA does not believe it warrants the use of cave-in protection.

Therefore based on the above discussion, OSHA promulgates § 1926.652(a)(1) as revised editorially and renumbered.

Section 1926.652(a)(2) of the Final Rule requires that "Protective systems shall have the capacity to resist without failure all loads that are intended or could reasonably be expected to be applied or transmitted to the system." This provision is virtually identical to proposed § 1926.652(a), but has been revised editorially and has been renumbered to accommodate format revisions as discussed above.

The existing standard does not contain a requirement directly addressing the capacity of protective systems. Such a requirement is necessary in order to clarify the design goal. However, consistent with the approach taken in the proposal, this requirement is written in performance-oriented language. As discussed earlier, proposed § 1926.651(j)(1) (§ 1926.652(a)(1) of this Final Rule) sets forth those situations requiring cave-in protection, and identifies the hazards from which employees are to be protected. Therefore, the employer must first select a protective system for these conditions and hazards. Once a protective system has been selected, this paragraph sets forth performance criteria that must be met by that system.

VOL 54 ISS 209 OCT 31 1989 UMI

The paragraphs immediately following this paragraph address different methods and approaches that can be used to provide the required level of protection.

OSHA received no comment on this provision and therefore promulgates paragraph (a)(2) as proposed and renumbered.

The introductory text of § 1926.652(b) of this Final Rule requires that "The slopes and configurations of sloping and benching systems shall be selected and constructed by the employer or his designee and shall be in accordance with the requirements of paragraph (b)(1); or, in the alternative, paragraph (b)(2); or, in the alternative, paragraph (b)(3); or, in the alternative, paragraph (b)(4), as follows". The provision is virtually identical to the proposed rule except that an option for sloping in accordance with tabulated data is provided as is discussed under Issue 10 above.

Paragraph (b) provides four alternative methods of protecting employees from cave-in, arranged in order of increasing degree of performance required, based upon the degree to which the employer performs soil classification analysis needed to do the alternative. Design of other types of cave-in protection is addressed in § 1926.652(c).

OSHA received no comments specifically directed to this provision. However, many commenters provided general input concerning all provisions under this paragraph (b), or input supporting incorporation of a fourth option for sloping as addressed by Issue 10. For example, several commenters (Exs. 4–21, 4–23, 4–31, 4–40, 4–42, 4–54, and 4–86) suggested that OSHA use the terms "steeper than or flatter than" rather than "greater than or lesser than," with reference to slope angles in order to avoid confusion. OSHA agrees that the suggested wording would express the Agency's regulatory intent more clearly and has amended the language accordingly.

Other commenters (Exs. 4–21, 4–23, 4–31, 4–40, 4–42, 4–78, and 4–86) supported the addition of a fourth option for sloping (See the discussion of Issue 10 above).

Based on the above discussion, OSHA promulgates the introductory text to paragraph (b) as revised.

Section 1926.652(b)(1) (i) and (ii) of this Final Rule provide requirements for sloping Option (1). These requirements state:

(1) *Option (1)—Allowable configurations and slopes.* (i) Excavations shall be sloped at an angle not steeper than one and one-half horizontal to one vertical (34 degrees measured from the horizontal), unless the employer uses one of the other options listed below.

(ii) The slopes specified in paragraph (b)(1)(i) of this section shall be excavated to form configurations that are in accordance with the slopes shown for Type C soil in Appendix B to this Subpart.

This requirement is very different than the proposal. In addition to removing the element of short term/long term excavations, as discussed in Issue 4 above, "greater" has been replaced by "steeper" for clarity, as discussed above; and the reference to Figures B–1 through B–1.5 has been deleted because of another revision discussed below.

In this first option, employers who do not make any effort to classify the soil are required to cut excavation sides to an angle that is not steeper than one and one-half horizontal to one vertical (34 degrees measured from the horizontal), as specified in paragraph (b)(1)(i).

In OSHA's opinion, the slope required by this paragraph is safe for virtually all soils. Since, under this option, the employer is not required to make any attempt to differentiate between more stable and less stable soil types, the slope required is conservative to ensure that employees will be protected adequately in those instances where poor soil conditions are encountered.

The required slope angle specified is identical to the slope angle that is required for the worst soil condition determined under Option (2) below. As will be explained below, the employer is required, under the second option, to differentiate between more stable and less stable soil types. Steeper slopes are allowed in soils determined to be more stable. By requiring a slope in Option (1) that is the same as the worst case under Option (2), a necessary level of consistency in the requirements is maintained. If a steeper slope were allowed under Option (1), the situation could arise where an employee might be required to slope an excavation to a greater degree after making an effort to determine the soil type than would be required if no soil classification had been made at all. Sloping is set at a worst case angle in Option (1) to assure that protection is provided even where the employer makes no determination of soil type or stability.

In paragraph (b)(1)(ii), the requirements state that the configurations of slopes excavated under Option (1) must conform to the configuration illustrated for Type C soils shown in appendix B to subpart P. This is to assure that slopes permitted under Option (1) are at least as protective as those set forth under the second design option in § 1926.652(b)(2).

OSHA received seven comments on the proposed provision and input from the ACCSH. One commenter (Ex. 4–17) suggested decreasing the short term/long term time from 72 hours to 24 hours, while another (Ex. 4–91) strongly supported the proposed 72 hours. Another commenter (Ex. 4–37) endorsed this provision as "fail safe" and further noted that it can be employed by anyone with a minimum of experience. Other commenters (Exs. 4–4, 4–28, and 4–53) objected for various reasons, including opposition to the short term/long term concept (Ex. 4–28); opposition to the title of this section, which the commenter implied required all trenches to be sloped (Ex. 4–53); and objection to the standard permitting compound slopes in referenced figure B–1.5 (Ex. 4–4). One commenter (Ex. 4–53) also recommended adding weather conditions to the criteria in determining configuration and slope.

Based on a review of the entire record on this subject (including specifically Issue 4), the Agency promulgates § 1926.652(b)(1) as revised.

Section 1926.652(b)(2) of this Final Rule provides the requirement for sloping Option (2), determination of slopes and configurations using Appendices A and B, which requires that "Maximum allowable slopes, and allowable configurations for sloping and benching systems, shall be determined in accordance with the conditions and requirements set forth in Appendices A and B to this Subpart." This provision is identical to the proposed rule.

In this second option, designs must be in accordance with the conditions and requirements set forth in appendices A and B to subpart P. In brief, Appendix A is a method of classifying soil and rock conditions, taking into account soil, environmental, and load conditions. Appendix A divides all soils into four classifications: Stable Rock, Type A, Type B and Type C. (See discussion for appendix A below.) Appendix B contains requirements specifying the maximum allowable slopes for each of the four classifications. In stable rock, vertical sides are allowed. For Types A, B, and C the maximum allowable slopes vary, with steeper slopes allowed for Type A. Appendix B also contains illustrations of sloping and benching configurations that are acceptable. (See discussion for appendix B below.)

OSHA received three comments on this provision. Two commenters (Exs. 4–28 and 4–84) opposed allowing the employer or the competent person to classify soil and choose a protective system. The other commenter (Ex. 4–37) supported this provision and considered

this option to be the "rule of thumb," which is based on site conditions as determined by the competent person. The Agency disagrees with the two commenters who oppose letting the competent person or the employer use Appendices A and B, noting that these appendices are actually intended for use by non-engineers. OSHA further notes that these appendices provide much more guidance than the current standard, which permits the competent person to determine the degree of protection necessary.

Therefore, based on the above discussion, OSHA promulgates § 1926.652(b)(2) as proposed.

New § 1926.652(b)(3) of the Final Rule adds another option for sloping, *Option (3)—Designs using other tabulated data* which requires that:

(i) Designs of sloping or benching systems shall be selected from and be in accordance with tabulated data, such as tables and charts.

(ii) The tabulated data shall be in written form and include all of the following:

(A) Identification of the parameters that affect the selection of a sloping or benching system drawn from such data;

(B) Identification of the limits of use of the data to include the magnitude and configuration of slopes determined to be safe;

(C) Explanatory information as may be necessary to aid the user in making a correct selection of a protective system from the data.

(iii) At least one copy of the tabulated data, which identifies the registered professional engineer who approved the data, shall be maintained at the jobsite during construction of the protective system. After that time the data may be stored off the jobsite, but a copy of the data shall be made available to the Secretary upon request.

This paragraph is new, and is based on input received on Issues 10 and 14 of the proposal. These issues are discussed in detail earlier in this preamble.

Section 1926.652(b)(4) of this Final Rule, *Option (4)—Design by a registered professional engineer*, requires that:

(i) Sloping and benching systems not utilizing Option (1), Option (2), or Option (3) under paragraph (b) of this section shall be approved by a registered professional engineer.

(ii) Designs shall be in written form and shall include at least the following:

(A) The magnitude of the slopes that were determined to be safe for the particular project;

(B) The configurations that were determined to be safe for the particular project; and,

(C) The identity of the registered professional engineer approving the design.

(iii) At least one copy of the design shall be maintained at the jobsite while the slope is being constructed. After that time the design need not be at the jobsite, but a copy shall be made available to the Secretary upon request.

These provisions are essentially the same as those in proposed paragraph (b)(3), except that "qualified person" has been deleted, and "qualified engineer" has been changed to "registered professional engineer" as discussed under Issue 2 above. In addition, the requirement that the design be made available to the Secretary has been revised slightly, as discussed below, and the explanatory note has been dropped from the language of paragraph (b)(4)(iii) of this Final Rule.

In this option, paragraph (b)(4) sets forth three requirements. The first, paragraph (b)(4)(i), requires that sloping and benching systems be approved by a registered professional engineer. However, a person under the direction of a registered professional engineer is also allowed to design sloping and benching systems under this option, because in this relationship, the registered professional engineer would still be responsible for and approve the design. This approval need be no more than a stamp indicating the identity of the registered professional engineer approving the design.

A second requirement under this option, paragraph (b)(4)(ii), is that designs be in written form and include, as a minimum, the following information: (a) The magnitude of the slopes that were determined to be safe for the particular project; (b) The configurations that were determined to be safe for the particular project; and, (c) The identity of the individual approving the design.

The third requirement, set forth in paragraph (b)(4)(iii), is that at least one copy of the design be maintained at the jobsite while the slope is being constructed. After that, the design need not be kept on the jobsite, but a copy must be made available to the Secretary upon request. In OSHA's opinion, these requirements are necessary to insure that adequate designs will be prepared. Under this option, the employer is allowed a wide range of discretion to determine the degree of the hazard and to determine the necessary level of protection against the hazard. It provides no specific restrictions as to maximum allowed slopes or configurations that a registered professional engineer might design or approve. Therefore, under the option, slopes steeper than those allowed under the other options could be used. Configurations different from those allowed under the other options could also be used. This fourth option is the most performance-oriented of the options provided; and relies heavily on the prudence, competence and expertise of the person selected by the employer to design the system.

The proposed requirements that original engineering design, and tabulated data (including manufacturer's data) be made available to the Secretary have been modified slightly. After a protective system is constructed, such data or designs need not be kept at the jobsite, but need only be made available to the Secretary on request. The proposal indicated that such data or designs must be made available only so long as an excavation is open or only during an inspection. In the Final Rule the requirement is more simply stated that such documentation must be provided upon request to the Secretary. This will insure that such data is also available when an excavation is no longer open, and after a physical inspection is concluded. If there is any issue as to what designs or data were utilized after the physical inspection of the worksite is concluded or after a cave-in, the Secretary must be able to obtain such information.

OSHA solicited opinion on whether or not additional information should be required on any design. The input received concerning this matter is addressed below at the end of the discussion of paragraph (b)(4) of this Final Rule.

Because of the wide discretion allowed, OSHA believes that stricter requirements are needed to verify that design requirements have been met. Therefore, OSHA is requiring that designs be in written form, and that they be made readily available to the Secretary upon request.

In OSHA's opinion, requiring that designs be in written form will not impose a significant burden upon employers. When an employer utilizes an individual to design a sloping and benching system, the results of the design effort must be communicated to the employer, and to those responsible for implementing the design, in some manner. Under current industry practice, this is not done orally, but by the preparation of a written plan.

OSHA is revising the portions of Subpart P relating to sloping for several reasons. The existing standard allows only one approach to be used to determine the degree of slope required to protect employees against cave-ins. This approach requires that excavations be sloped to the "angle of repose." As noted earlier, this term, as currently defined, does not conform to its use in civil engineering and has resulted in considerable confusion in the field. In

addition, the existing approach is not consistent with OSHA's desire to place greater emphasis on the use of

In the current § 1926.652, reference to sloping appears in existing § 1926.652 (b), (c), and (k). These requirements, in

imposed due to dynamic forces such as vibration from equipment, blasting, traffic, or other sources.

to OSHA during the inspection. The Agency disagrees with the position of these commenters because the design contains the information necessary for

conditions for which their various products could be used.

A trend in the construction industry has been to rely more and more on

VOL 54 ISS 209 OCT 31 1989 UMI

addition, the existing approach is not consistent with OSHA's desire to place greater emphasis on the use of performance-oriented standards. More flexibility is possible by allowing the employer the choice to use any of several acceptable approaches to provide the required level of safety for employees.

OSHA is also revising the standard so as to provide greater clarity as to what is required of the employer. Interviews with contractors have indicated that some provisions in the existing standard relating to sloping are difficult to understand (Ex. 2–3).

This difficulty is due apparently to the present format in which specific requirements relating to sloping appear in various places in the standard but in no apparent order. It also results from the fact that the soil types currently specified in Table P–1 (compacted sharp sand, average soil, etc.) are not defined. The use and application of the terms "hard, compact soil" and "unstable or soft material" in the current standard have been the source of considerable confusion and have resulted in considerable litigation. In addition, there are other related format problems that have been discussed previously in this preamble.

It was stated earlier that the existing Subpart P is divided into two sections containing specific requirements. Section 1926.651 is titled "Specific Excavation Requirements;" and § 1926.652 is titled "Specific Trenching Requirements." In § 1926.651 there are several references to sloping. These references appear in existing § 1926.651 (c), (d), (g), (h), (j), and (m), and specify that sloping can be used as a method of protection against cave-ins. They require that when sloping is used "all slopes be excavated to at least the angle of repose * * *." In addition, it is required that adjustments be made to the angle of repose, i.e., flattening, when certain conditions are present. These requirements are not presented in a concise, logical order and there is no guidance given to the employer in existing § 1926.651 indicating either what the "angle of repose" is or to what degree it must be adjusted for the specific conditions mentioned. Although Table P–1 does give an indication of certain "angles of repose," this Table is located in existing § 1926.652; and no direct reference to the Table is made in § 1926.651. Further, as discussed earlier, there are technical problems with the use of the term "angle of repose." (See discussion above for § 1926.650—"Scope, Application, and Definitions Applicable to this Subpart.")

In the current § 1926.652, reference to sloping appears in existing § 1926.652 (b), (c), and (k). These requirements, in general, are intended to give more specific guidance to employers as to the degree of sloping required. Table P–1 is referenced in both existing § 1926.652 (a) and (b), but the language of the existing standard regarding the use of Table P–1 apparently has not been clear to some employers. For example, existing § 1926.652(a) states: "Refer to Table P–1 as a *guide* in sloping of banks." (Emphasis added.) Some employers have contended that the table is, therefore, not mandatory. However, existing § 1926.652(b) is phrased in a manner more consistent with its intended mandatory nature.

Other difficulties are noted that relate to specific terms used in the current standard. For example, 45 degrees is indicated in Table P–1 as the appropriate angle for sloping "average soils." "Average soil" is not defined in the existing standard, nor are the other terms used in Table P–1. Further, only two terms used in the standard itself to describe soils are presently defined. These terms are "hard compact soil" and "unstable soil." Neither term appears in Table P–1, and existing § 1926.652 (b) and (c) use the terms "unstable *or* soft" and "hard *or* compact." (Emphasis added.)

OSHA has concluded that these difficulties can be eliminated, and at the same time a more effective standard for sloping can be created, by revising the language and format of the current standard.

OSHA proposed a format allowing employers to choose from several design alternatives discussed above. These alternatives allow the employer flexibility to determine the degree to which excavation sides must be sloped to protect employees against cave-ins.

The calculation of the degree to which excavation sides must be sloped to protect employees against cave-ins can be a difficult task. This is because of the many factors that must be taken into account which can affect the stability of sloped excavation sides. These factors include: The soil type and its ability to resist stress; changes in the ability of the soil to resist stress due to the effects of exposure to environmental conditions such as freezing, thawing, or rain; loads imposed due to the particular configuration of the excavation; and loads imposed due to the presence of water, and the variation of the water content in the soil. Other factors include: Loads imposed by the presence of structures, equipment, overlying material or stored equipment; and loads imposed due to dynamic forces such as vibration from equipment, blasting, traffic, or other sources.

Soil is a difficult material to work with because there is no control over its structural quality. In addition, its properties vary from place to place, and they change with the passage of time due to environmental exposure. There is an infinite number of combinations of conditions and factors that can affect soil stability. Because of these variables, a great degree of caution must be exercised when relying on its strength in order to design and provide a sloping system with a desired level of protection.

There are practices that are accepted by the engineering community that can be followed to determine safe slopes for most situations. These practices include analyzing soil samples to determine properties of the soil; evaluating intended or expected load conditions and sequences; and considering the possible effects of environmental exposure. Soil analysis can be accomplished in the field, using simple field testing techniques. More extensive and accurate soil analysis can also be done in the laboratory. In addition, slope stability analysis is often used to predict the behavior of a slope. Full scale models have also been used to predict expected behavior.

In OSHA's opinion, however, it is not feasible or necessary to require a rigid soil exploration and analysis program, or a slope stability analysis, for every trench or other excavation that is made. To avoid such specifications in the standard, OSHA is allowing two options in which the required slope angles are specified. In the opinion of the Agency, these two approaches will serve the needs of the industry and provide safe working conditions for employees. OSHA also recognizes that the first two options could be unnecessarily restrictive in some situations. Thus, OSHA is permitting other design alternatives as discussed below, to allow the employer to determine the degree of protection required for any particular circumstance.

OSHA received 10 comments on proposed paragraph (b)(3) and input from the ACCSH. Several commenters (Exs. 4–4, 4–17, 4–28, and 4–37) and the ACCSH supported limiting this responsibility to at least "qualified engineers," or registered civil engineers. This is in line with the determination made on Issue 2 discussed above.

Other commenters (Exs. 4–82, 4–102, 4–106, 4–109, and 4–113) objected to the requirement that a copy of the design be maintained on site and made available

to OSHA during the inspection. The Agency disagrees with the position of these commenters because the design contains the information necessary for the construction and safe use of these protective system and should therefore, be available at all times. The ACCSH recommended maintaining at least one copy of the design at the excavation location and making it available to employees, employee representatives, or the Secretary upon request. OSHA believes the revised provision provides adequate assurance that the design will be available when necessary. OSHA notes that § 1926.21 requires that employees be trained in hazard recognition and avoidance, which means that they are to be informed as to how they are being protected against cave-ins.

Another commenter (Ex. 4–11) suggested the design should include other criteria such as limitations due to rain or groundwater or surcharge loads, and should indicate the means of access and egress. The Agency recognizes the significance of these concerns and notes that other specific provisions of the standard will adequately address these concerns.

The ACCSH (Tr. 8/5/87, pp. 520–521) recommended limiting design to a registered professional engineer, which the Agency has done, based on the input received on Issue 2. Additionally, the ACCSH recommended deleting "an indication of" from proposed § 1926.652(b)(3)(ii) (A) and (B) because the phrase is superfluous. The Agency agrees and has revised these provisions accordingly.

Section 1926.652(c) of the Final rule, "Design of support systems, shield systems, and other protective systems," states that "Designs of support systems, shield systems, and other protective systems shall be selected and constructed by the employer or his designee and shall be in accordance with the requirements of paragraph (c)(1); or, in the alternative, paragraph (c)(2); or, in the alternative, paragraph (c)(3); or, in the alternative, paragraph (c)(4) as follows." This introductory provision is identical to the proposed rule.

OSHA received no public input on this provision. However, the ACCSH (Tr. 8/5/87, p. 522) recommended that OSHA delete the reference to the "designee" because it is standard practice to consider the management representative to be the employer. The Agency believes the proposed language makes this point clear to those who may not follow the standard practice, and declines to act on this recommendation.

Section 1926.652(c) (1) through (4) list the options allowed for design of support systems, shield systems, and other protective systems.

Section 1926.652(c)(1) of the Final Rule sets out Option (1)—Designs using Appendices A, C and D, and requires that "Designs for timber shoring in trenches shall be determined in accordance with the conditions and requirements set forth in appendices A and C to this subpart. Design for aluminum hydraulic shoring shall be in accordance with § 1926.652(c)(2) below, but if manufacturer's tabulated data cannot be utilized, designs shall be in accordance with appendix D." This provision is identical to the proposal except for the inclusion of the requirements for the use of the new appendix D, which is dicussed in detail below.

The Agency received only one comment on this provision. That commenter (Ex. 4–28) pointed out that it appears that this provision in the proposal applied only to trenches. This is OSHA's regulatory intent, and, therefore, the Agency has not revised this provision.

Paragraph (c)(2) (i) through (iii) or § 1926.652 of the Final Rule set out Option (2)—*Designs using manufacturer's tabulated data*, and require that:

(i) Designs of support systems, shield systems, or other protective systems that are drawn from manufacturer's tabulated data shall be in accordance with all specifications, recommendations, and limitations issued or made by the manufacturer.

(ii) Deviation from the specifications, recommendations, and limitations issued or made by the manufacturer shall only be allowed after the manufacturer issues specific written approval.

(iii) Manufacturer's specifications, recommendations, and limitations, and manufacturer's approval to deviate from the specifications, recommendations, and limitations, shall be in written form at the jobsite, during construction of the protective system. After that time this data may be stored off the jobsite, but a copy shall be made available to the Secretary upon request.

These provisions are virtually identical to the proposed rule, except for the minor revision of the requirement to provide the data to the Secretary. The rationale for this change is discussed above under § 1926.652(b)(4).

This second option allows the use of designs based on or drawn from a manufacturer's tabulated data. The manufactured systems generally addressed by the paragraph include metal hydraulic shoring and shields. In the past, manufacturers have developed tabulated data that indicated the conditions for which their various products could be used.

A trend in the construction industry has been to rely more and more on protection systems that are manufactured products. The design of a particular product, such as a trench shield, can be highly complex and the final design can often be adapted to a variety of situations, but not to all situations. It is, therefore, incumbent on the employer to ascertain all criteria and limitations that the manufacturer specifies or recommends regarding the use of a particular product, and then to use the product accordingly.

An employer, then, is allowed a degree of discretion as far as choosing a particular product for use. OSHA believes the likelihood that manufactured products will be used in the manner intended will be enhanced if the specifications and recommendations that the employer uses to select such products, including the limitations set by the manufacturer on their use, are required to be at the jobsite while the system is being constructed, and made available to the Agency upon request.

OSHA received one comment on these provisions and input from the ACCSH. The commenter (Ex. 4–106) objected to the requirement for retention of the manufacturer's specifications at the jobsite. The Agency disagrees with this commenter for several reasons. First, OSHA is not convinced that these manufactured systems can be installed safely from memory. Second, OSHA believes this data must be available in a reasonable amount of time to the competent person if site conditions change. Finally, OSHA compliance staff cannot be familiar with every manufactured system that is on the market, and must have some readily available means to verify that the system is being used properly if such a question arises during an inspection.

The ACCSH (Tr. 8/5/87, pp. 522–523) recommended that these manufacturer's specifications be on site at all times while the excavation is open and be made available to employees, and employee representatives in addition to the Secretary. The Agency is not convinced that it is necessary for these specifications to be kept on-site at all times. OSHA believes that as long as a protective system is constructed in accordance with the specifications, and site conditions do not change, the specifications can be stored or used at another nearby site without decreasing employee safety.

Paragraphs (c)(3) (i) through (iii) of § 1926.652 of the final rule set out option

(3)—*Designs using other tabulated data* and require that:

(i) Designs of support systems, shield systems, or other protective systems shall be selected from and be in accordance with tabulated data, such as tables and charts.

(ii) The tabulated data shall be in written form and include all of the following:

(A) Identification of the parameters that affect the selection of a protective system drawn from such data;

(B) Identification of the limits of use of the data;

(C) Explanatory information as may be necessary to aid the user in making a correct selection of a protective system from the data.

(iii) At least one copy of the tabulated data, which identifies the registered professional engineer who approved the data, shall be maintained at the jobsite during construction of the protective system. After that time the data may be stored off the jobsite, but a copy of the data shall be made available to the Secretary upon request.

These provisions are essentially the same as those in the proposal except that "qualified person" has been deleted, "qualified engineer" has been replaced with "registered professional engineer," and the requirement to make the data available to the Secretary has been modified. The reasons for these changes are discussed under Issue 2 above or under § 1926.652(b)(4).

In this option, it is specified that designs can be selected from other tabulated data, such as tables and charts, that have been approved by a registered professional engineer. This paragraph is intended to allow employers to develop and use general designs that can be used repetitively and that meet the needs of their particular circumstances. OSHA recognizes that the design of protective systems can be a highly complex engineering procedure that involves elements of soil mechanics and structural engineering. Each excavation is unique. Therefore, repetitive use of a general design must be done with caution. Designs for general applications have limits that must not be exceeded, or else employees will be endangered. Tabulated data, therefore, can only be used safely when the necessary information is provided that explains the limitations of the data and demonstrates that the system is safe under prevailing soil, load, and environmental conditions.

OSHA has determined that the requirements for documentation are necessary to balance the wide discretion that is allowed employers when they provide a system of protection, and to assure that employees are adequately protected.

OSHA received nine comments and input from the ACCSH on these provisions. The ACCSH (Tr. 8/5/87, p. 523) and two commenters (Exs. 4–4 and 4–17) supported the use of a "registered professional engineer" as discussed under Issue 2 above.

Four commenters (Exs. 4–82, 4–102, 4–108 and 4–109) objected to the requirement that the tabulated data be retained on-site during the construction of the system and that it be provided during an inspection. OSHA again disagrees with these four commenters for the same reasons discussed above.

Paragraphs (c)(4) (i) through (iv) of § 1926.652 of the final rule require that:

(i) Support systems, shield systems, and other protective systems not utilizing Option (1), Option (2), or Option (3), above, shall be approved by a registered professional engineer.

(ii) Designs shall be in written form and shall include the following:

(A) A plan indicating the sizes, types, and configurations of the materials to be used in the protective system; and

(B) The identity of the registered professional engineer approving the design.

(iii) At least one copy of the design shall be maintained at the jobsite during construction of the protective system. After that time, the design may be stored off the jobsite, but a copy of the design shall be made available to the Secretary upon request.

These requirements are essentially the same as those of the proposal except that "qualified person" has been deleted, "qualified engineer" has been replaced with "registered professional engineer" (as discussed under Issue 2, above), and the explanatory note, defining OSHA's intended meaning for readily available, has been incorporated into the text of paragraph (c)(4)(iii) as a result of format changes.

This paragraph (c)(4) gives employers the flexibility to design protective systems for unique applications. There are no specific restrictions or limitations regarding the application of designs allowed under this option. The employer, through the registered professional engineer, is thus given wide latitude to judge the degree of the hazard present and to determine the degree of protection required.

OSHA recognizes, because such a wide latitude exists under this provision, that there is a possibility the intended goal will be missed. OSHA is, therefore, promulgating two requirements that are intended to increase the likelihood that the protective systems designed under this option will be adequate to protect employees. The first of these requirements, stated in paragraph (c)(4)(ii), requires that "Designs shall be in written form," and must, at a minimum, include "a plan indicating the sizes, types, and configurations of the materials to be used in the protective system," and "the identity of the registered professional engineer approving the design." The second requirement, stated in paragraph (c)(4)(iii), requires that "At least one copy of the design shall be maintained at the jobsite during the construction of the system, and the design shall be made available to the Secretary upon request."

These requirements are similar to those in § 1926.652(b)(4) for sloping and benching. The discussion of those requirements is equally applicable for the requirements proposed under this paragraph.

There are many paragraphs distributed throughout the existing standard that set forth requirements pertaining to the use of shoring and other protective systems. Existing paragraphs (c), (m), (o), and (q) of § 1926.651, and paragraphs (b), (c), (e), and (f) of § 1926.652 state when use of a protective system is required. Other existing paragraphs contain requirements pertaining to the design of such systems. These include paragraphs (e), (f), and (k) of § 1926.651; and paragraphs (d), (g), and (k) of § 1926.652. These existing requirements have been revised and reorganized to make the standard easier to follow and understand.

Some of the shoring requirements in the current standards have been criticized as being either too inflexible or too difficult to understand. For example, existing table P–2, "Trench Shoring—Minimum Requirements," has been criticized by contractors as too inflexible (Ex. 2–3). Table P–2 specifies timber sizes of shoring members, but generally only specifies one configuration of members for any particular case. Each case is defined by three parameters: Soil condition, trench depth, and width of trench. OSHA notes that interpreting the table as not allowing any deviation from the specified configurations is an inaccurate and overly restrictive reading of table P–2. The table only indicates certain configurations that will provide the required minimum protection. Other configurations that provide equivalent or greater protection are acceptable.

Another problem with existing table P–2 is that selection of a configuration is based on soil classifications and soil conditions that are not defined in the existing standard. The terms are not used in a manner that is consistent with the way other similar terms relating to soil conditions are used in the standard.

The current standard has also been criticized with regard to its coverage of protective systems other than timber shoring. Several such protective systems are in fact mentioned in the existing standard. These include shoring, sloping, use of shields, support systems, bracing, and sheet piling. In a footnote to table P–2, trench jacks and steel sheet piling are specifically indicated as being acceptable substitutes for wood members. However, the failure to mention other systems, particularly metal hydraulic shoring, has led to the mistaken impression among some interested persons that such systems are not allowed by the standard. OSHA emphasizes that this is not the case, either with the current standard or in this revision.

OSHA received eight comments and input from the ACCSH on these provisions. Four commenters (Exs. 4–4, 4–17, 4–28, and 4–30) and the ACCSH (Tr. 8/5/87, pp. 523–524) supported a "qualified engineer" or "registered professional engineer" to perform this original design work. These commenters also voiced their support in response to Issue 2.

Four other commenters (Exs. 4–82, 4–102, 4–108, and 4–109) objected to the requirement that the design be maintained on the site during construction of the protective system and that it be provided during an inspection. OSHA disagrees with these commmenters for the same reasons set forth in discussions above.

The ACCSH again recommended that this information be maintained on-site at all times and be available to employees and employee representatives as well as to the Secretary. OSHA believes it sufficient if designs are on site during construction and available upon request afterwards.

Therefore, based on the record, OSHA promulgates § 1926.652(c)(4) (i) through (iv) as revised.

Paragraphs (d) (1) through (3) of § 1926.652 of the Final Rule address materials and equipment and require that:

(1) Materials and equipment used for protective systems shall be free from damage or defects that might impair their proper function.

(2) Manufactured materials and equipment used for protective systems shall be used and maintained in a manner that is consistent with the recommendations of the manufacturer, and in a manner that will prevent employee exposure to hazards.

(3) When material or equipment that is used for protective systems is damaged, a competent person shall examine the material or equipment and evaluate its suitability for continued use. If the competent person cannot assure that the material or equipment is able to support the intended loads or is otherwise suitable for safe use, then such material or equipment shall be removed from service, and shall be evaluated and approved by a registered professional engineer before being returned to service.

These provisions are essentially the same as those in the proposal, except that paragraph (d)(3) has been revised to address a concern raised by the ACCSH which is discussed below.

The provisions in paragraph (d) address the hazard to employees resulting from the use of damaged or defective components of protective systems. The materials and equipment used for employee protection must be structurally sound. The loss of structural capability due to defects or damage can result in the failure of a protective system.

The existing requirements in §§ 1926.651(l) and 1926.652(d) address the condition of materials used for support structures and systems. These requirements have been consolidated into paragraph (d)(1), which covers all elements of protective systems and extends to other types of protective systems, such as shields.

The existing standard does not refer specifically to manufactured items. However, manufactured equipment such as shields and metal hydraulic shoring is used extensively in the industry today. However, to assure their safe use, these items must be used in strict accordance with the manufacturer's recommendations and instructions. In addition, the existing standard does not clearly address the problem of such items becoming damaged while in use. Often material and equipment used in temporary protective systems are designed with only a small factor of safety. If the equipment is damaged, there may be no margin of safety and employees could be in immediate danger. Paragraphs (d) (2) and (3) of the Final Rule address the need for employees to be protected in these circumstances.

OSHA received no public comment on these provisions. However, the ACCSH (Tr. 8/5/87, pp. 524–528) recommended that OSHA require a registered professional engineer to make the determinations required by paragraph (d)(3). The ACCSH argued that the competent person does not have the expertise to make these determinations.

The Agency agrees, in part, with the ACCSH. However, OSHA believes the competent person can be relied upon to make some determinations, especially when wooden shoring is used or when there is only superficial damage to manufactured systems. In situations where damage to manufactured systems is extensive, or where the competent person cannot assure the safe use of the system in the field, OSHA believes the prudent course of action is to require the equipment to be evaluated and approved by a registered professional engineer before the equipment is returned to service.

Section 1926.652(e)(1) of the Final Rule sets out the general provisions for the installation and removal of support system, and reads as follows:

(i) Members of support systems shall be securely connected together to prevent sliding, falling, kickouts, or other predictable failure.

(ii) Support systems shall be installed and removed in a manner that protects employees from cave-ins, structural collapses, or from being struck by members of the support system.

(iii) Individual members of support systems shall not be subjected to loads exceeding those which those members were designed to withstand.

(iv) Before temporary removal of individual members begins, additional precautions shall be taken to ensure the safety of employees, such as installing other structural members to carry the loads imposed on the support system.

(v) Removal shall begin at, and progress from, the bottom of the excavation. Members shall be released slowly so as to note any indication of possible failure of the remaining members of the structure or possible cave-in of the sides of the excavation.

(vi) Backfilling shall progress together with the removal of support systems from excavations.

This provision is virtually identical to the proposal except for some editorial changes to clarify the Agency's intent.

Installation and removal of support systems, which can involve significant material-handling activity, are particularly hazardous periods in excavation work. Additionally, partially completed support systems will not react to loads in the same manner as completed structures. Individual members can become overloaded and fail, leading to a general failure of other portions of the support system. Therefore, employees can be exposed to cave-ins, the collapse of adjacent structures, or collapse of the support system if the employees are not properly protected during installation and removal.

Paragraph (e)(1) contains six requirements that address these hazards. Four of these requirements (Final (e)(1) (i), (iv), (v) and (vi)) are based on existing requirements found in three existing §§ 1926.651(f), and 1926.652 (j) and (l). In the proposal and in the Final Rule, the existing provisions have been grouped into a more logical, easier-to-follow format under one

VOL 54 ISS 209 OCT 31 1989 UMI

VOL 54 ISS 209 OCT 31 1989 UMI

paragraph heading. The requirements in existing § 1926.652 that currently apply only to specific trenching situations will be extended to cover all excavations because the hazard addressed by those requirements exist whenever and wherever support systems are being installed or removed.

The other two proposed requirements, (e)(1)(ii) and (e)(1)(iii) were new. These specifically require protection for employees from cave-ins, the collapse of structures, or from being struck by members of the support system. The proposal required, in addition, that individual members of support systems not be subjected to loads exceeding the design loads of those members.

OSHA received ten comments and input from the ACCSH on these provisions. Many commenters (Exs. 4–21, 4–23, 4–31, 4–40, 4–42, 4–54, and 4–86) recommended adding the word "predictable" between "other" and "failures" to indicate that the design and installation of support systems take into account factors that can be reasonably anticipated. The Agency agrees that the word "predictable" should be inserted as recommended, and has revised the standard reformatting these provisions. However, the Agency sees no merit in the suggested reformatting, and declines to act on that recommendation.

The ACCSH (Tr. 8/5/87, pp. 528–529) recommended that OSHA revise the heading of paragraph (e) to read "Installation, modification, and temporary or permanent removal of support system." Additionally, the ACCSH recommended requiring that all installation, modification, changes, or removal be done in accordance with a plan supplied by a registered professional engineer or be done under the direct supervision of a registered professional engineer. The Agency has determined that the language requested in the first ACCSH suggestion is not necessary, and notes that these provisions are not intended to address modifications of the support system (see § 1926.652(c)).

OSHA also notes that there is no other evidence in the record to support the suggested requirement to have a registered professional engineer either plan or supervise the installation or removal of support systems. OSHA believes that it would be both impractical and unnecessary to have an engineer involved in installation and removal of support systems for every excavation.

The ACCSH also suggested language to clarify the intent of paragraphs (e)(1), (iv), and (v). The Agency has incorporated these suggestions.

OSHA received three other comments (Exs. 4–17, 4–91, and 4–111) basically agreeing with these provisions or suggesting clarifications that were already addressed by OSHA's incorporation of the ACCSH's suggested revisions.

Paragraph § 1926.652(e)(2) of the Final Rule, *Additional requirements for support systems for trench excavations,* requires that:

(i) Excavation of material to a level not greater than 2 feet (.61m) below the bottom of the members of a support system shall be permitted, but only if the system is designed to resist the forces calculated for the full depth of the trench, and there are no indications while the trench is open of a possible loss of soil from behind or below the bottom of the support system.

(ii) Installation of a support system shall be closely coordinated with the excavation of trenches.

These requirements are virtually identical to the proposal, except paragraph (e)(2)(i) contains language that allows excavation to a level not greater than 2 feet (.61 m) below the bottom of the members of a support system of a trench. It applies only to trenches. This provision, based upon recommendations made to OSHA by NBS (Ex. 2–6), helps to clarify what was meant by the phrase "installed so as to be effective to the bottom of the excavation" found in existing § 1926.652(d) of the current trenching standards. The revised provision recognizes that trench support systems in some instances need not always be installed to the bottom of the excavation. If designed to resist the forces calculated for the full depth of the excavation, the system can be fully effective, even if it does not extend to the bottom.

Paragraph (e)(2)(ii) requires that installation of support systems be closely coordinated with the excavation of trenches. This is a revision of existing § 1926.652(i). The ACCSH suggested that the existing and proposed requirements be dropped (Ex. 2–8, p. 400) because they seemed to apply to all trenches, even where there would be no employee exposure to cave-in hazards (i.e., where no employees enter the trenches). However, this paragraph is intended to apply only where employees are exposed to cave-in hazards. As with all OSHA standards, these provisions apply only where there is exposure of employees to hazards or potential hazards.

Coordination of installation of the support system with the excavation of the trench will reduce the possibility that a cave-in will occur. The longer a trench is open, the more likely it is to cave-in. Essentially, where employees will be expected to enter a trench, it is a safe work practice to install the support system as soon as possible after excavation. OSHA believes that this proposed requirement is necessary to assure employee safety in trenches.

OSHA received 10 comments and additional input from the ACCSH on these provisions. Several commenters (Exs. 4–21, 4–23, 4–31, 4–40, 4–42, 4–78, 4–86, and 4–91) suggested that excavation more than 2 feet below the support system should be permitted if approved by a qualified person. The Agency notes that this 2-foot depth has support from NBS, as discussed above. However, the commenters who want to be able to dig deeper than 2 feet below the support system have not presented evidence to support their position for an "across the board" relaxation of this requirement.

Employers wishing to excavate deeper than 2 feet below the support system must comply with § 1926.652(c)(4), which requires design by a registered professional engineer. OSHA believes that while deviations from the two foot rule could be safe in some situations, in order to ensure employee safety, employers who dig deeper than 2 feet below a support system must have a protective system designed by a registered professional engineer.

Another commenter (Ex. 4–17) pointed out that the definition of "cave-in" is not quite appropriate, as used in this provision. OSHA agrees and has revised this requirement accordingly. An additional commenter (Ex. 4–111) merely noted that when sloping, a four-foot bench is allowed.

The ACCSH (Tr. 8/5/87, pp. 529–530) recommended eliminating the 2-foot depth, noting that OSHA should not allow excavation below the support system unless the system is so designed. Also, the ACCSH recommended eliminating "of trenches" in paragraph (e)(2)(ii) because trenches are excavations.

The Agency believes that the 2-foot limit, as proposed, provides adequate employee protection, and is supported by NBS. However, as discussed above, excavation deeper than 2 feet below a support system must be designed by a registered professional engineer. In addition, OSHA notes that paragraph (e)(2)(ii) is directed at trenches because prompt installation of the support system is more critical in trenches than in excavations in general.

Therefore, based on the record, OSHA promulgates § 1926.652(e)(2) as revised.

Section 1926.652(f) of the Final Rule requires that "Employees shall not be

permitted to work on the faces of sloped or benched excavations at levels above other employees except when the employees at the lower levels are adequately protected from the hazard of falling, rolling, or sliding material or equipment." This provision is identical to the proposal. OSHA received no comment on this requirement.

Paragraphs (g)(1), (i) through (iv) of § 1926.652 of the Final Rule set out the general provisions for shield systems and require that:

(i) Shield systems shall not be subjected to loads exceeding those which the system was designed to withstand.

(ii) Shields shall be installed in a manner to restrict lateral or other hazardous movement of the shield in the event of the application of sudden lateral loads.

(iii) Employees shall be protected from the hazard of cave-ins when entering or exiting the areas protected by shields.

(iv) Employees shall not be allowed in shields when shields are being installed, removed, or moved vertically.

These provisions are virtually identical to the proposal except that paragraph (g)(1)(iv) has been revised to permit employees to remain inside shields being moved horizontally. This revision is based on input received on Issue 11, discussed above. OSHA received 16 comments and ACCSH input on proposed paragraph (g)(1)(iv), all of which supported this decision.

Section 1926.652(g)(2) of the Final Rule requires that "Excavations of earth material to a level not greater than 2 feet (.61 m) below the bottom of a shield shall be permitted, but only if the shield is designed to resist the forces calculated for the full depth of the trench, and there are no indications while the trench is open of a possible loss of soil from behind or below the bottom of the shield."

This provision is virtually identical to the proposal except for editorial changes suggested by commenters to clarify the intent.

This provision allows excavation of earth material in certain circumstances to a level not greater than 2 feet (.61 m) below the bottom of shields. The reasoning behind this is identical to that discussed in paragraph (e)(2)(i) above.

OSHA received two comments (Exs. 4–17 and 4–111) and input from the ACCSH [Tr. 8/5/87, p. 530] on this provision. All input was of an editorial nature and was substantially the same as the input received on paragraph (e)(2)(i), discussed above.

Relocated and Deleted Paragraphs

The fall protection requirements in existing § 1926.651 (t) and (w) are retained in the revision of subpart P until the revised subpart M is issued. These provisions, which require fall protection at remotely located excavations and on walkways or bridges crossing over excavations, respectively, will be incorporated into subpart M—Fall Protection. This action is consistent with OSHA's intention to locate most of the provisions relating to fall protection in construction together under one subpart.

OSHA published a proposed revision of its fall protection standards in subpart M. (See 51 FR 42718, Nov. 25, 1986.) When this proposal is published as a Final Rule, the excavation fall protection provisions will be incorporated into new subpart M.

OSHA is deleting the following existing paragraphs: § 1926.650(e), which requires personal protective equipment as set forth in subpart E; § 1926.651(r), which requires that blasting be performed in accordance with subpart U; and § 1926.651(y), which requires that ladders be in accordance with the requirements of subpart L. These references are redundant in that they require nothing different or in addition to the requirements set forth in the respective subparts. In addition, they might mislead an employer into assuming that other subparts not referenced do not apply to excavations. The requirements of subparts E, U, and L remain applicable to employees working in and around excavations, as do the other subparts of part 1926.

OSHA is also deleting existing § 1926.652(g). This paragraph presently states: "Minimum requirements for trench timbering shall be in accordance with Table P–2." It also requires that compressive stresses in timber braces and diagonal shores not be in excess of certain allowable values as computed using the given formula. The requirements of this paragraph are not consistent with the approach taken in the Final Rule, which does allow the employer to select trench timbering from tables, but does not make the tables minimum requirements for all trench shoring.

In addition, OSHA believes that the equation set out in existing § 1926.652(g)(2), which is intended to be used for determining the maximum allowable compressive stress in braces and diagonal shores in a wood shoring system, is not appropriate for continuation in the standard. OSHA has determined that the equation is outdated and should not be carried forward. The use of the specified equation, in a slightly different form, was originally contained in the USA Standard A10.2—1944, "Safety Code for Building Construction." Since that time, new equations for determining allowable compressive loads have been developed. These newer equations are described in the "Timber Construction Manual" published by the American Institute of Timber Construction (Second edition, 1974.) The more modern equations take into account the shape of the member (i.e., square or round), and the kind of wood used to produce the member. Allowable stresses (i.e., the maximum stresses to which a member should be subjected) vary depending upon the species of wood being considered. The equation given in existing § 1926.652(g)(2) does not account for either of these factors.

However, OSHA does not believe that the newer improved equations should be specified in the revised standard. First, in OSHA's opinion, these equations do not need to be specified in the standard itself. As pointed out above, a particular equation is used only to determine the maximum allowable stress to which a certain structural member should be subjected. Today, such information generally is available in tabulated form for most species and grades of wood. Therefore, it is not necessary to use an equation in the standard to calculate maximum allowable stresses. Furthermore, knowing the maximum allowable stress alone is of little value. The actual stress to which a member is subjected or expected to be subjected must also be known and a comparison made between the actual and allowed stresses. If the actual stress were to exceed the maximum allowable, then the particular member could not be used.

Another reason why equations are not required to be used in the Final Rule is that they address only one type of load situation. For example, the current equation is only intended to be used to calculate the maximum allowable compressive stress for wood members acting as columns under axial compressive loads. However, members are often subject to eccentric loads or lateral loads that create bending stresses in them. These other stresses, alone or in combination with axial compressive forces, can be critical. Therefore, the maximum allowable and actual stresses for various load conditions need to be considered in addition to the one load condition currently specified in the standard.

A final reason why use of the existing equation is no longer required is that it applies only to wood members. Much less wood is used today than in 1944 when use of the equation was recommended. Other materials, primarily steel and aluminum, are used

VOL 54 ISS 209 OCT 31 1989 UMI

more frequently today, and different equations are used to calculate allowable stresses in members made of these materials.

In OSHA's opinion, the alternatives set forth in the appendices of the Final Rule for design of protective systems will provide added flexibility for the employer while increasing the degree of safety afforded the employees, thus eliminating the need for the existing equation.

OSHA is also deleting other existing regulations currently in subpart P. Two tables which are part of the present standard have been deleted and will be replaced by material contained in the Appendices to the standard. The contents of these Appendices are discussed in detail below. Existing Table P–1, "Approximate Angle of Repose for Sloping of Sides of Excavations," would, in effect, be replaced by appendices A and B, which provide a detailed soil classification scheme and sloping requirements for the employer who selects the second option for designing sloping system protection.

Similarly, existing Table P–2, "Trench Shoring-Minimum Requirements," will be replaced by material in appendices A and C.

Appendix A—Soil Classification

Appendix A details a method of classifying earth deposits, taking into account various environmental conditions, site-specific conditions, and soil-specific conditions. The results of the categorization of soils in accordance with this method would then be subsequently used to determine the level of protection from cave-ins that is required to protect employees.

It is not required in every instance that employers use this Appendix as the basis of classifying earth conditions. The standard provides two options for designing protective systems which involve the use of appendix A. First, § 1926.652(b)(2) provides for the use of appendix A to determine the requirements for sloping and benching. The second option, in § 1926.652(c)(2), uses appendix A to determine the requirements for timber shoring. This Appendix may also be necessary to determine the requirements for aluminum hydraulic shoring in accordance with appendix D. OSHA, however, prefers employer to use manufacturer's data (in accordance with § 1926.652(c)(2)) where possible, when using aluminum hydraulic shoring. Appendix D is intended for use in the absence of manufacturers data. It should be noted again that the employer is required to select one of the options set forth in paragraph § 1926.652(b) if using a sloping system, or in § 1926.652(c) if using shoring, shields, or another system. When an employer chooses an option where this appendix is to be used, the employer must then adhere faithfully to the requirements and provisions of the appendix. The appendix then becomes mandatory.

Appendix A may also be used in conjunction with appendix D to determine requirements for the use of aluminum hydraulic shoring in the absence of manufacturer's tabulated data permitted in § 1926.652(c)(2).

Appendix A is arranged into four major paragraphs. These are: (a) Scope and Application; (b) Definitions; (c) Requirements; and (d) Acceptable Visual and Manual Tests.

The first paragraph states the scope of the appendix and when it is applicable. Terms used throughout the appendix are defined in the second paragraph. The requirements for making soil classifications are set forth in the third paragraph and basically state that the classifications, as defined in the previous paragraph, shall be determined based on the results of visual and manual analyses. Acceptable visual and manual analyses are described in the fourth paragraph.

OSHA recognizes that all or none of the particular analyses described in the fourth paragraph may apply at any one time, and that other tests could be developed or used which would meet the intent of the standard. Therefore, these analyses are recommended, but not mandatory.

This soil classification system, as with all soil classification systems, is not intended for universal application. OSHA does not intend that the system be used to replace analysis and testing for engineering design. OSHA does not require sampling and testing for engineering design in the current standard, and for reasons discussed below is not requiring specific soil testing procedures in this Final Rule. The decision to conduct a more sophisticated soil sampling and testing program, as under the current standard, would be left to the employer's discretion. When an engineering analysis is desired, OSHA recommends that other presently accepted methods of soil sampling and testing be used. Methods, such as those adopted by the American Society for Testing and Materials (ASTM), are accepted methods.

This soil classification system is intended to address a deficiency in the existing standard. The existing standard does not rely on a consistent method of classifying soils, but relies on terms that cannot be easily quantified, such as "hard and compact" and "soft and unstable." Further, there is an inconsistency in the terminology currently found in subpart P. For example, one set of terms is used in Table P–1 which indicates recommended slopes in certain primarily granular materials. A different set of terms to describe soils is used as the basis of the divisions of Table P–2, which specifies minimum requirements for timber shoring in trenches.

This soil classification system is intended to eliminate this deficiency. It is intended to provide construction personnel and OSHA Compliance Officers with a common language that can be used to assess the requirements and adequacy of sloping and shoring systems used to prevent cave-ins.

The soil classification system that was proposed was developed by the National Bureau of Standards (NBS). The background of the system is explained in more detail in Exhibit 2–5. OSHA incorporated this classification system in the proposal based on the recommendations of NBS, after consultation with the ACCSH, and after a review by interested parties at the five industry-sponsored workshops. In addition, OSHA used several American Society for Testing and Materials (ASTM) Standards, as well as other sources, to obtain information that, in OSHA's opinion, was needed to supplement and clarify the NBS recommendations. The ASTM Standards included:

(1) Designation: D653–67 (Reapproved 1973)—"Standard Definitions of Terms and Symbols Relating to Soil and Rock Mechanics," (Ex. 2–27);

(2) Designation: D2487–69—"Standard Method for Classification of Soils for Engineering Purposes," (Ex. 2–28); and,

(3) Designation: D2488–69—Standard Recommended Practice for Description of Soils (Visual—Manual Procedure)," (Ex. 2–29).

OSHA used these sources to clarify and provide additional information in paragraph (b) of the appendix, "Definitions," and in paragraph (d), "Recommended Visual and Manual Tests."

One example of the use of supplemental information involved the development of the definition of "cemented soil." NBS made reference to cemented soil in its recommended definition of Type A soil, but provided no discussion as to what constitutes cemented soil other than to suggest that soils referred to as "hardpan" or "till" are examples of cemented soil.

Cemented soils are most commonly composed of granular, or coarse-grained particles. Carbonate salts—calcium carbonate being the most common—are the primary chemical agents that provide the cementation of the particles of soil. The action of the cementing agents adds to the strength of the soil by binding the particles together so that the soil can resist a greater degree of stress.

The quantity of the cementing agent in a soil sample can be estimated by subjecting a soil sample to a solution of dilute hydrochloric acid and visually noting the intensity of the reaction. Unfortunately, this test does not give a good indication of the strength of the cemented soil. However, a satisfactory estimate of the relative strength of a cemented soil can be made by conducting a dry strength test. This is a test that is conducted by crushing dry soil samples between the fingers. The dry strength test is used primarily for estimating the strength of fine-grained soils, i.e., clays which have cohesive qualities. Conducting this test on cemented coarse-grained soils, however, can give good estimates of relative strength that are equivalent to the strength estimates of fine-grained soils.

ASTM D2488 (Ex. 2–29) states, in a description of the dry strength test, that: "The presence of high-strength water soluble cementing materials, such as calcium carbonate, may cause exceptionally high dry strength * * *." In the dry strength test, "high" strengths are indicated if "the sample cannot be crushed to powder by finger pressure, even though the sample may be broken." "Very high" strength is indicated "if the sample cannot be broken between the thumb and a hard surface." In another reference ("Handbook of Soil Mechanics", Volume I, p. 98, by Arpad Kezdi) under a discussion of the dry strength test, it is stated: "If the sample resists crushing by finger pressure altogether, the soil is an inorganic clay of high plasticity, or a coarse-grained soil aggregate cemented by some high-strength binder (e.g., calcium carbonate or iron oxide)."

Based on the discussions of cemented soils in this literature, OSHA supplemented the NBS recommendations by developing a proposed definition of "cemented soil" with the intent of clarifying the NBS recommendations. The definition of "cemented soil" is intended to include those soils that exhibit strengths at least equivalent to the strengths required for Type A cohesive soil. The result of this was that some soils containing a slight amount of a cementing agent would not be considered as cemented soil, as such soil will not exhibit sufficient strength.

The soil classification system proposed had not been widely used in practice. However, in OSHA's opinion, use of this system will be a major improvement over the terminology and practices used in the existing standard.

The Agency received a great amount of comment on the proposed soil classification system and has revised this Appendix substantially, as discussed below.

Paragraph (a)(1), *Scope*, of appendix A of the Final Rule states "This Appendix describes a method of classifying soil and rock deposits based on site and environmental conditions, and on the structure and composition of the earth deposits. The Appendix contains definitions, sets forth requirements, and describes acceptable visual and manual tests for use in classifying soils."

The paragraph is nearly identical to the proposal except that "recommended" has been changed to "acceptable" for reasons discussed below.

The Agency received comment and testimony from the Associated General Contractors (AGC) of California (Ex. 8–18 and Tr. 4/19/88 p. 114) suggesting that "recommended" be changed to "acceptable" because they felt that "recommended" implied these tests were mandatory. OSHA is revising the Final Rule accordingly, noting that it was never the Agency intent that any of these tests be mandatory. (See 52 FR 12315.) The Agency is requiring only that one acceptable visual test and one acceptable manual test be performed in classifying soil in accordance with appendix A. These tests may include those listed in the Appendix or may include other generally recognized visual or manual tests.

Paragraph (a)(2), *Application*, of appendix A of the Final Rule states:

> This appendix applies when a sloping or benching system is designed in accordance with the requirements set forth in § 1926.652(b)(2) as a method of protection for employees from cave-ins. This appendix also applies when timber shoring for excavations is designed as a method of protection from cave-ins in accordance with appendix C to subpart P of part 1926 and when aluminum hydraulic shoring is designed in accordance with appendix D. This Appendix also applies if other protective systems are designed and selected for use from data prepared in accordance with the requirements set forth in § 1926.652(c), and the use of the data is predicated on the use of the soil classification system set forth in this Appendix.

The ACCSH (Tr. 8/5/87 p. 530–531) recommended changing "against cave-ins" to "from cave-ins" and changing "trenches" to "excavations." The Agency recognizes that for consistency and accuracy, the first change was appropriate, and has incorporated it into the Final Rule. However, as discussed above, the Agency declines to blur the distinction between trenches and excavations. OSHA has also clarified the reference to § 1926.652(b) by citing § 1926.652(b)(2) to be more specific, as recommended by NIOSH (Ex. 4–30). The Final Rule reflects these changes. OSHA received no other comments on this paragraph.

Paragraph (b) of appendix A of the Final Rule defines terms used in this appendix for soil classification. The Agency has added an introductory statement to this paragraph to identify and reference source documents so users of this appendix will know where to look if further clarification is needed. This revision is in line with suggestions made by the ACCSH (Tr. 8/5/87 p. 531), the Building and Construction Trades Department (BCTD) of the AFL–CIO (Ex. 4–17), and the National Utility Contractors Association (NUCA) (Ex. 4–91). In addition, the commenters demonstrated a clearer understanding of the proposed definitions which included examples of soils given in readily recognizable terms. Therefore, OSHA has modified several definitions by providing such examples.

Paragraph (b) defines "cemented soil" as "a soil in which the particles are held together by a chemical agent, such as calcium carbonate, such that a hand-size sample cannot be crushed into powder or individual soil particles by finger pressures."

This definition is identical to the proposal. OSHA received no comment on this provision and therefore promulgates this definition, as proposed.

Paragraph (b) of appendix A defines "cohesive soil"-as "clay (fine grained soil), or soil with a high clay content which has cohesive strength. Cohesive soil does not crumble, can be excavated with vertical sideslopes, and is plastic when moist. Cohesive soil is hard to break when dry and exhibits significant cohesion when submerged. Cohesive soils include clayey silt, sandy clay, silty clay, clay and organic clay."

This definition is identical to the proposal. OSHA received one specific comment on this definition from the BCTD (Ex. 4–17), which suggested that the ASTM definition might be of more value. OSHA notes that the proposed definition incorporated the ASTM definition and provided further guidance as to examples of cohesive soils. Therefore, the Agency has decided to keep the definition as proposed.

Paragraph (b) of appendix A defines "Dry soil" as "soil that does not exhibit visible signs of moisture content."

This definition is identical to the proposal. OSHA received no comment on this provision, and, therefore, carries the definition to the Final Rule

molded without cracking, or appreciable volume change."

This definition is almost identical to the proposal, except that the word

these two conditions and has revised the definition of "saturated soil" as discussed above. Additionally, the Agency is defining "submerged soil" as

provided they have an unconfined compressive strength of at least four tons per square foot (4 T/ft² or 8000 lbs/ft²).

OSHA recognizes that hardpan and

Paragraph (b) of appendix A of the Final Rule also defines the soil classifications used in this appendix.

OSHA has revised these definitions

Cohesive soils with an unconfined compressive strength of 1.5 tons per square foot (tsf) (144kPa) or greater. Examples of cohesive soils are: clay, silty clay, sandy clay, clay loam and, in some cases silty clay loam

VOL 54 ISS 209 OCT 31 1989 UMI

This definition is identical to the proposal. OSHA received no comment on this provision, and, therefore, carries the definition to the Final Rule unchanged.

Paragraph (b) of appendix A defines "Fissured" as "a soil material that has a tendency to break along definite planes of fracture with little resistance, or a material that exhibits open cracks, such as tension cracks, in an exposed surface."

This definition is identical to the proposal. OSHA received no comment on this definition, and, therefore promulgates it unchanged.

Paragraph (b) of appendix A defines "granular soil" as "gravel, sand, or silt, (coarse grained soil) with little or no clay content. Granular soil has no cohesive strength. Some moist granular soils exhibit apparent cohesion. Granular soil cannot be molded when moist and crumbles easily when dry."

This definition is similar to the proposal except that the phrase "and temporarily stand on a vertical slope but normally cannot be excavated with vertical sideslopes" has been deleted as suggested by the ACCSH (Tr. 8/5/87 p. 531) and the BCTD (Ex. 4–17). Both commenters believed that the phrase is misleading and confusing. OSHA recognizes that the phrase is subject to misinterpretation, and has deleted the phrase from the Final Rule.

Paragraph (b) of appendix A defines "layered system" as "two or more distinctly different soil or rock types arranged in layers. Micaceous seams or weakened planes in rock or shale are considered layered."

This definition is similar to the proposal, except the Agency has clarified that the definition does, indeed, include shale, and weakened planes in both shale and rock. This revision is in response to a question raised by the sole commenter on this provision (Ex. 4–111). The Agency feels that this revision is necessary in order to clarify its regulatory intent.

Paragraph (b) of appendix A defines "Moist soil" as "a condition in which a soil looks and feels damp. Moist cohesive soil can easily be shaped into a ball and rolled into small diameter threads before crumbling. Moist granular soil that contains some cohesive material will exhibit signs of cohesion between particles." This provision is identical to the proposal. OSHA received no comment on this definition, and therefore carries it forward in the Final Rule.

Paragraph (b) of appendix A defines "Plastic" as "a property of a soil which allows the soil to be deformed or molded without cracking, or appreciable volume change."

This definition is almost identical to the proposal, except that the word "crumbling" has been deleted. This deletion was suggested by the BCTD (Ex. 4–17) because the proposed definition was the ASTM definition with the word crumbling added. This commenter and others (Ex. 4–91, and the ACCSH) all recommended OSHA be consistent with existing soil classification systems. Therefore, OSHA is revising this definition because the word "crumbling" added nothing to the definition, and to be consistent with ASTM. OSHA received no other comment on this definition.

Paragraph (b) of appendix A defines "saturated soil" as "a soil in which the voids are filled with water." Saturation does not require flow. Saturation, or near saturation, is necessary for the proper use of instruments such as a pocket penetrometer or sheer vane."

This definition is substantially different from the proposal which defined "saturated soil" as:

> Submerged soil that is below the ground water table, and very wet soil such as soil that forms the sides of an excavation from which water can be seen seeping; soil that forms the sides of an excavation that has been flooded to more than one-half its depth and has not been drained for a least one day; and soil in which water is retained by a shoring system.

This change is based on the comments of the BCTD (Ex. 4–17) and is in line with current ASTM usage. The Agency notes that, while ASTM D–653–85 (Ex. 4–17 attachment) defines neither "saturated soil" nor "submerged soil" it does, in fact, differentiate between these two conditions under the definition of "unit weight."

OSHA has determined that the proposed definition could lead to confusion in that soil conditions at or near saturation, as defined in the Final Rule, are necessary for proper use of mechanical instruments sometimes used to measure soil strength. On the other hand, soils that are submerged, namely, actually underwater or seeping, present a different set of soil conditions and must be treated differently from "saturated soils." For example, beach sand that is saturated or nearly saturated, can be shaped to form sand castles, or other shapes and will hold those shapes until the sand dries out or is submerged by the incoming tide. At that time, the sand will return to its natural angle of repose (as used in current engineering practice) for the site conditions.

Therefore, OSHA has determined that it is appropriate to differentiate between these two conditions and has revised the definition of "saturated soil" as discussed above. Additionally, the Agency is defining "submerged soil" as "soil which is underwater or free seeping," and has added this new definition to appendix A of the Final Rule.

Paragraph (b) of appendix A defines "soil classification system" as follows:

> For the purpose of this Subpart, a method of categorizing soil and rock deposits in a hierarchy of Stable Rock, Type A, Type B, and Type C, in decreasing order of stability. The categories are determined based on an analysis of the properties and performance characteristics of the deposits and the environmental conditions of exposure.

The definition is virtually identical to the proposal except that the Agency notes that this definition is for the purpose of this subpart only. This revision was suggested by the BCTD (Ex. 4–17) to clarify that not all soil classification systems use the soil types used in this appendix. The Agency recognizes this distinction and has revised the Final Rule to incorporate this input.

Paragraph (b) of appendix A defines "stable rock" as "natural solid mineral matter that can be excavated with vertical sides and remain intact while exposed."

This definition is very similar to the proposed definition except that the ASTM definition for "rock" has been substituted in the proposed definition replacing the word "rock."

This change was made to address the concerns of Granite Construction Company (Ex. 4–28), which pointed out that the proposed definition could be misinterpreted by the competent person to include some other types of soils.

OSHA received other comments and hearing testimony arguing that hardpan and caliche soil should be included in the stable rock category.

Four commenters (Exs. 4–82, 4–102, 4–108 and 4–109) objected to the exclusion of hardpan and caliche from the stable rock classification. These commenters provided the same qualified recommendations, for allowing these soils to be excavated with vertical sides, as they presented under Issue 12, discussed above. In addition, these commenters were represented by the Associated General Contractors (AGC) of California at the informal public hearing (Tr. 4/19/88 pp. 108–165) and provided similar arguments at that forum. Mr. Richard Frankian, a consultant for the AGC of California, testified at the hearing (Tr. 4/19/88 p. 118) that hardpan and caliche could be included in the stable rock group

provided they have an unconfined compressive strength of at least four tons per square foot (4 T/ft² or 8000 lbs/ft²).

OSHA recognizes that hardpan and caliche can be excavated with vertical sides under some site conditions. However, as pointed out even by the advocates of this practice, there are many restrictions (see discussion of Issue 12) which must apply. Therefore, the Agency declines to include hardpan and caliche in the stable rock classification in all circumstances for the purpose of this appendix. OSHA wishes to restate and reiterate that even though appendix A does not allow for it, the employer has the option of using this practice if approved by a registered professional engineer, or if it is in accordance with tabulated data prepared by a registered professional engineer.

Finally, OSHA recognizes that soil with an unconfined compressive strength over four tons per square foot is, indeed, very stable. However, this measure of strength is only one factor that must be considered when classifying soils. (Other factors are discussed under Issue 12.)

Hardpan is defined in Exhibit 2–27 as "a layer of extremely dense *soil*" (emphasis added), and in ASTM D653–85 (Attachment to Ex. 4–17) as "a hard impervious layer, composed chiefly of clay, cemented by relatively insoluble materials, that does not become plastic when mixed with water and definitely limits the downward movement of water and roots." Caliche is defined in the New College Edition of the American Heritage Dictionary as "a hard *soil* layer cemented by calcium carbonate" (emphasis added). OSHA notes that all of these definitions recognize hardpan and caliche as a soil (clay is fine grained soil by definition), not as rock.

Exhibit 2–27 defines soil as "sediment or other *unconsolidated* accumulations of *solid particles* produced by physical and chemical disintegration of rocks, and may or may not contain organic matter" (emphasis added). Rock is defined in the same exhibit as "natural solid mineral matter occurring in large masses or fragments." These definitions also appear in the updated version of ASTM D653–85, attached to Exhibit 4–17.

Therefore, by definition, hardpan and caliche are not rock, and for the purpose of this Appendix are considered Type A soils.

The definition of "Submerged Soil" is new. "Submerged soil" is defined as "soil which is underwater or is free seeping." The rationale for this new definition is discussed above.

Paragraph (b) of appendix A of the Final Rule also defines the soil classifications used in this appendix.

OSHA has revised these definitions somewhat, based on the record, but has not added additional types of soil as requested by the AGC of California (Ex. 24 which was revised by Exs. 28B and 30), and at the public hearings (Tr. 4/19/88 p. 117).

OSHA believes that the additional soil types recommended by the AGC of California, while they appear to be valid, would complicate this soil classification and would require a degree of accuracy in soil type determination beyond the capabilities and limitations of this Appendix. OSHA notes that even the use of objective test procedures, such as the pocket penetrameter suggested by the commenter at the informal public hearing (Tr. 4/19/88 p. 117), or the torvane shear device, are still only estimates which are subject to error. One commenter (Ex. 42) points out that Spangler and Hardy, in their book "Soil Engineering," Harper and Row, pp. 101–3, 1982, estimate the pocket penetrometer has a ±20 to ±40 percent error, and the authors also discuss some limitations of the torvane shear device.

OSHA recognizes the limitations of these methods, as well as those methods described in appendix A. The Agency believes that any field estimated soil type must, by necessity, be based on a simple, conservative soil classification system. The A–B–C soil classification scheme given in this Appendix meets that need. A more complex system would require far more accurate methods of determining soil classification to provide sufficient employee protection.

OSHA also notes that two commenters (Exs. 36, and 37) and a late submission by Mr. William Winans of Allied Steel and Tractor Products, Inc. supported the use of the A–B–C soil classification, as proposed in appendix A.

OSHA emphasizes that the use of this appendix is only required in two of the eight options allowed by the Final Rule. In these options (§ 1926.652 (b)(2) and (c)(1)) the employer cannot substitute other soil classification systems. Employers wishing to use other legitimate soil classification schemes, in conjunction with tabulated data that is in accordance with the standard, or who wish to use the services of a registered professional engineer and laboratory testing, can do so under the other permissible options.

Paragraph (b) of appendix A defines "Type A" as:

> Cohesive soils with an unconfined compressive strength of 1.5 tons per square foot (tsf) (144kPa) or greater. Examples of cohesive soils are: clay, silty clay, sandy clay, clay loam and, in some cases silty clay loam and sandy clay loam. Cemented soils such as caliche and hardpan are also considered Type A.
>
> However, no soil is Type A if:
>
> (i) The soil is fissured; or
>
> (ii) The soil is subject to vibration from heavy traffic, pile driving, or similar effects; or
>
> (iii) The soil has been previously disturbed; or
>
> (iv) The soil is part of a sloped, layered system where the layers dip into the excavation on a slope of four horizontal to one vertical (4H:1V) or greater; or
>
> (v) The material is subject to other factors that would require it to be classified as a less stable material.

This definition is very similar to proposed paragraph (b)(12). However, as discussed above, the Agency has provided additional specific examples of soils that are considered Type A, to help the user. Additionally, OSHA has dropped the word "till" from the definition, because, as pointed out by one commenter (Ex. 4–17), its use in the proposal was inconsistent with the ASTM definition.

Paragraph (b) of appendix A defines "Type B" as:

> (i) Cohesive soil with an unconfined compressive strength greater than 0.5 tsf (48kPa) but less than 1.5 tsf (144kPa); or
>
> (ii) Granular cohesionless soils including: angular gravel (similar to crushed rock), silt, silt loam, sandy loam, and in some cases, silty clay loam and sandy clay loam.
>
> (iii) Previously disturbed soils except those which would otherwise be classed as Type C soil.
>
> (iv) Soil that meets the unconfined compressive strength or cementation requirements for Type A, but is fissured or subject to vibration; or
>
> (v) Dry rock that is not stable; or
>
> (vi) Material that is part of a sloped, layered system where the layers dip into the excavation on a slope less steep than four horizontal to one vertical (4H:1V), but only if the material would otherwise be classified as Type B.

This definition is very similar to proposed paragraph (b)(13), except that the Agency has added specific examples to this definition to assist the user, as discussed, and has clarified that most disturbed soils are Type B.

OSHA received comments from the AGC of California (Exs. 4–106, 24, 28B and 30) and testimony at the hearing (Tr. 4/19/88 p. 113) recommending at least one more intermediate soil classification between Type A and Type C. The Agency declines to act on this suggestion because, as discussed above, OSHA believes that this appendix does

not have the capabilities to determine soil type with the degree of accuracy that the addition of one or more soil types would require. Additionally, the

R. T. Frankian (Ex. 33), a consultant for the AGC of California, recommending that the only prudent course for Type C soil would be to require shoring with

not have the capabilities to determine soil type with the degree of accuracy that the addition of one or more soil types would require. Additionally, the Agency feels that incorporating a more complex system into this appendix would make the system less likely to be used properly. Again, OSHA reiterates that employers are allowed to use alternative soil classification systems in accordance with other options provided by this Final Rule.

The ACCSH (Tr. 8/5/87 handout) and the BCTD (Ex. 4–17) pointed out that some parts of the proposed definitions for both Type B and Type C soils were inconsistent with proposed table B–1. In particular they noted that the definition of Type B included "granular soil that can stand on a slope of three horizontal to one vertical," while table B–1 allowed a slope of 3/4:1 short term or 1:1 long term.

OSHA now recognizes that this criteria, although used in the NBS document (Ex. 2–5 p. 39), is inconsistent with the rest of this appendix and introduces ambiguity into this definition and other places in this Appendix. OSHA has therefore dropped this evaluation criteria and instead is providing examples of granular cohesionless soils.

Another commenter (Ex. 4–30) noted that the 4:1 ratio of sloped, layered systems discussed in proposed paragraph (b)(12)(iv) was somewhat restrictive. The Agency is of the opinion that, while restrictive, this degree of caution is necessary, because of the limits of this appendix, and declines to revise this provision.

Paragraph (b) of appendix A defines "Type C" as:

(1) Cohesive soil with an unconfined compressive strength of 0.5 tsf (48 kPa) or less; or
(ii) Granular soils including: gravel, sand, and loamy sand, or
(iii) Submerged soil or soil from which water is freely seeping; or
(iv) Submerged rock that is not stable; or
(v) Material in a sloped, layered system where the layers dip into the excavation or a slope of four horizontal to one vertical (4H:1V) or steeper.

This definition is very similar to proposed paragraph (b)(14) except that the criteria relating to the slope of three horizontal to one vertical has been replaced with examples of this type of soil, and "saturated" has been removed from proposed paragraph (b)(14)(iii). These changes have been made to be consistent with similar changes discussed above.

In addition to input from the ACCSH and the BCTD, discussed above under Type B, OSHA received a comment from R. T. Frankian (Ex. 33), a consultant for the AGC of California, recommending that the only prudent course for Type C soil would be to require shoring with solid sheeting or require an engineer to evaluate the situation and make recommendations. OSHA believes this is not necessary and notes that NBS (Ex. 2–5) felt that Type C soil, as defined, could be sloped safely to a maximum of 1½ horizontal to 1 vertical. OSHA also notes that no other commenters made similar recommendations to those of the AGC of California concerning Type C soils.

Paragraph (b) of appendix A defines "unconfined compressive strength" as "the load per unit area at which a soil will fail in compression. It can be determined by laboratory testing, or estimated in the field using a pocket penetrometer, by thumb penetration tests, and other methods."

This definition is identical to proposed paragraph (b)(15). OSHA received no comment on this definition and carries it forward in the Final Rule.

Paragraph (b) of this appendix defines "wet soil" as "soil that contains significantly more moisture than moist soil, but in such a range of values that cohesive material will slump or begin to flow when vibrated. Granular material that would exhibit cohesive properties when moist will lose those cohesive properties when wet."

This definition is identical to proposed paragraph (b)(16). OSHA received no comment on this definition and carries it forward in the Final Rule.

Paragraph (c)(1) of appendix A provides the requirements for classification of soil and rock deposits using this appendix. This paragraph states: "Each soil and rock deposit shall be classified by a competent person as Stable Rock, Type A, Type B, or Type C in accordance with the definitions set forth in paragraph (b) of this appendix."

This provision is identical to the proposal. OSHA received no comment on this provision and therefore carries it forward in the Final Rule.

Paragraph (c)(2) of appendix A details the basis for soil classification using this appendix. This paragraph states: "The classification of the deposits shall be made based on the results of at least one visual and at least one manual analysis. Such analyses shall be conducted by a competent person using tests described in paragraph (d) below, or in other recognized methods of soil classification and testing such as those adopted by the American Society for Testing Materials, or the U.S. Department of Agriculture textural classification system."

This paragraph is essentially the same as the proposal except that the Agency has clarified that the tests in paragraph (d) are not mandatory and that other recognized tests and classification are acceptable.

OSHA received four comments (Exs. 4–82, 4–102, 4–106, and 4–109) objecting to a requirement for any specific tests, and also objecting to the requirement for at least one visual and at least one manual analysis. These commenters argued that specific tests would be impractical because of the variety and subjectivity of such methods and the changing nature of soil conditions. One commenter, the AGC of California (Ex. 4–106), suggested that soil classification be based on an evaluation of soil condition and visible factors. OSHA recognizes that evaluation of soil condition is necessary, and has determined that this evaluation must include manual testing as well as visual analysis. Visual analyses alone are not sufficient to classify soil properly. Manual analyses are needed to confirm the findings of visual analyses and to provide additional information necessary for more accurate soil classification.

OSHA notes that neither the proposal nor the Final Rule requires specific tests/methods. Requiring at least one visual and at least one manual test leaves the employer a great deal of latitude as to which tests are used. In order to clarify this latitude the Agency has revised this provision to state specifically that other recognized method of analyses are acceptable, and gives examples of some of these other acceptable methods.

This revision is in line with the suggestion made at the public hearing by the AGC of California [Tr. 4/19/88 p. 114]. However OSHA has not deleted the requirement for at least one visual and at least one manual test, for reasons discussed above.

The only other commenter (Ex. 4–111) supported OSHA's requirement for both a visual and a manual test.

Paragraphs (c)(3) through (c)(5) of appendix A discuss visual and manual analyses, layered systems, and reclassification of soils using this appendix. These provisons state:

(3) *Visual and manual analyses.* The visual and manual analyses, such as those noted as being acceptable in paragraph (d) of this Appendix, shall be designed and conducted to provide sufficient quantitative and qualitative information as may be necessary to identify properly the properties, factors, and conditions affecting the classification of the deposits.

(4) *Layered systems.* In a layered system, the system shall be classified in accordance with its weakest layer. However, each layer may be classified individually where a more stable layer lies under a less stable layer.

(5) *Reclassification.* If after classifying a deposit, the properties, factors, or conditions affecting its classification change in any way, the changes shall be evaluated by a competent person. The deposit shall be reclassified as necessary to reflect the changed circumstances.

These provisions are virtually identical to the proposal except for an editorial change in paragraph (c)(3). That change, based on input from the AGC of California, revises the word "recommended" to "noted as being acceptable." The input from the AGC of California (Tr. 4/19/88 p. 114) was directed to another reference to "recommended" test, however, the Agency has also made the change here in order to be consistent.

OSHA received no other comments on these provisions and carries them forward in the Final Rule.

Paragraph (d) of appendix A lists some acceptable visual and manual tests. The title of this paragraph has been revised to read "Acceptable" rather than "Recommended" at the request of the AGC of California (Tr. 4/19/88 p. 114), who noted that "recommended" implied these were the only tests allowed. This was not OSHA's regulatory intent and therefore the Agency has made the requested change.

Paragraph (d)(1) of appendix A discusses and lists visual tests which are acceptable when using this appendix. This list is not intended to be all-inclusive and other recognized visual test are also acceptable. Paragraph (d)(1) reads as follows:

(d) *Acceptable visual and manual tests.* (1) *Visual tests.* Visual analysis is conducted to determine qualitative information regarding the excavation site in general, the soil adjacent to the excavation, the soil forming the sides of the opened excavation, and the soil taken as samples for excavated material.

(i) Observe samples of soil that are excavated and soil on the sides of the excavation. Estimate the range of particle sizes and the relative amounts of the particle sizes. Soil that is primarily composed of fine-grained material is cohesive material. Soil composed primarily of coarse-grained sand or gravel is granular material.

(ii) Observe soil as it is excavated. Soil that remains in clumps when excavated is cohesive. Soil that breaks up easily and does not stay in clumps is granular.

(iii) Observe the side of the opened excavation and the surface area adjacent to the excavation. Crack-like openings such as tension cracks could indicate fissured material. If chunks of soil spall off a vertical side, the soil could be fissured. Small spalls are evidence of moving ground and are indications of potentially hazardous situations.

(iv) Observe the area adjacent to the excavation and the excavation itself for evidence of existing utility and other underground structures, and to identify perviously disturbed soil.

(v) Observe the opened side of the excavation to identify layered systems. Examine layered systems to identify if the layers slope toward the excavation. Estimate the degree of slope of the layers.

(vi) Observe the area adjacent to the excavation and the sides of the opened excavation for evidence of surface water, water seeping from the sides of the excavation, or the location of the level of the water table.

(vii) Observe the area adjacent to the excavation and the area within the excavation for sources of vibration that may affect the stability of the excavation face.

These provisions are virtually identical to the proposal except as follows. Paragraph (d)(1)(i) has been revised to read "composed of fine-grained material." This change drops the word "clay" from the proposed language, which reads "fine-grained clay material." This change was made because two commenters, the ACCSH (Tr. 8/5/87 p. 533) and the BCTD (Ex. 4–17), pointed out that other fine-grained materials such as silt should be included. Based on these comments OSHA is deleting the word "clay" and thereby including all finegrained materials.

Paragraph (d)(1)(iii) of the proposal has been revised to indicate that tension cracks and small soil spalls do not necessarily mean the soil is fissured. This revision is based on input from the BCTD (Ex. 4–17). Additionally, another sentence has been added to alert the users of this Appendix that small spalls are miniature cave-ins and are indications of potentially hazardous situations.

Paragraph (d)(1)(vii) of the proposal which recommended one type of visual test, is being deleted. Several commenters (Exs. 4–17, 4–30, 4–91 and 4–111) and the ACCSH (Tr. 8/5/87 pp. 533–534) all recommended deleting this provision because it was vague, and therefore could be very misleading to the users of this appendix. OSHA agrees and is therefore deleting this provision, and renumbering proposed paragraph (d)(1)(viii) as paragraph (d)(1)(vii) of the Final Rule.

Paragraph (d)(2) of appendix A discusses and lists manual tests which are acceptable when using this appendix. This list is not intended to be all-inclusive and other recognized manual tests are also acceptable. Paragraph (d)(2) states:

(2) *Manual test.* Manual analysis of soil samples is conducted to determine quantitative as well as qualitative properties of soil and to provide more information in order to classify soil properly.

(i) *Plasticity.* Mold a moist or wet sample of soil into a ball and attempt to roll it into threads as thin as ⅛ inch in diameter. Cohesive material can be successfully rolled into threads without crumbling. For example, if at least a two inch (50 mm) length of ⅛ inch thread can be held on one end without tearing, the soil is cohesive.

(ii) *Dry strength.* If the soil is dry and crumbles on its own, or with moderate pressure into individual grains or fine powder, it is granular (any combination of gravel, sand or silt). If the soil is dry and falls into clumps which break up into smaller clumps, but the smaller clumps can only be broken up with difficulty, it may be clay in any combination with gravel, sand or silt. If the dry soil breaks into clumps which do not break up into small clumps, and which can only be broken with difficulty, and there is no visual indication the soil is fissured, the soil may be considered unfissured.

(iii) *Thumb penetration.* The thumb penetration test can be used to estimate the unconfined compressive strength of cohesive soils. (This test is based on the thumb penetration test described in American Society for Testing and Materials (ASTM) Standard designation D2488—"Standard Recommended Practice for Description of Soils (Visual—Manual Procedure).") Type A soils with an unconfined compressive strength of 1.5 tsf can be readily indented by the thumb, however, they can be penetrated by the thumb only with very great effort. Type C soils with an unconfined compressive strength of 0.5 tsf can be easily penetrated several inches by the thumb, and can be molded by light finger pressure. This test should be conducted on an undisturbed soil sample, such as a large clump of spoil, as soon as practicable after excavation to keep to a minimum the effects of exposure to drying influences. If the excavation is later exposed to wetting influences (rain, flooding), the classification of the soil must be changed accordingly.

(iv) *Other strength tests.* Estimates of unconfined compressive strength of soils can also be obtained by use of a pocket penetrometer or by using a hand-operated shearvane.

(v) *Drying test.* The basic purpose of the drying test is to differentiate between cohesive material with fissures, unfissured cohesive material, and granular material. The procedure for the drying test involves drying a sample of soil that is approximately one inch thick (2.54 cm) and six inches (15.24 cm) in diameter until it is thoroughly dry:

(A) If the sample develops cracks as it dries, significant fissures are indicated.

(B) Samples that dry without cracking are to be broken by hand. If considerable force is necessary to break a sample, the soil has significant cohesive material content. The soil can be classified as a unfissured cohesive material and the unconfined compressive strength should be determined.

(C) If a sample breaks easily by hand, it is either a fissured cohesive material or a granular material. To distinguish between the

BEST COPY AVAILABLE

VOL 54 ISS 209 OCT 31 1989 UMI

two, pulverize the dried clumps of the sample by hand or by stepping on them. If the clumps do not pulverize easily, the material is cohesive with fissures. If they pulverize easily into very small fragments, the material is granular.

These provisions are virtually identical to the proposal except for some clarifications suggested by the ACCSH (Tr. 8/5/87 p. 534) and the BCTD (Ex. 4–17).

OSHA received several other comments (Exs. 4–21, 4–23, 4–31, 4–40, 4–42, 4–54 and 4–86) suggesting that this section be deleted. All these commenters indicated that this type of analysis can only be done accurately in the laboratory, and not in the field. These commenters, however, did not indicate whether they supported a requirement for laboratory testing for all soil analysis or whether they merely opposed a manual testing requirement for use in the field.

OSHA has determined not to follow these suggestions, since all the acceptable tests listed and other accepted tests not discussed in the standard appear in published literature, and are recognized as methods of providing reasonable estimates of soil properties. OSHA does not believe it is feasible or necessary to require laboratory analysis of soils for every excavation where Appendix A is used, nor is it realistic to believe that visual analyses alone can provide sufficient information to classify soils.

OSHA recognizes the limitations of each of these testing methods, and has taken them into account in developing this Final Rule. The Agency stresses that the results of these tests must be closely tied to a simple, conservative soil classification system, the A–B–C system which OSHA has provided in this Appendix.

OSHA notes that with regard to manual analyses, that Mr. R.T. Frankian, a consultant for the AGC of California, testified at the public hearing (Tr. 4/19/88 pp. 145–146):

> • • • I think if you stick with A, B and C, you could probably do this only with a finger test. I think that would be perfectly okay.

In addition, with regard to appendix A, in general, a report by Mr. Frankian, submitted as an attachment to the AGC of California comments (Ex. 4–106) noted:

> The methods used to identify various soil groups include both visual and test parameters and include assessment based on performance characteristics. In general the methods appear to offer sound and readily understood instructions which should lead an experienced person to properly assess the engineering characteristics of earth materials. (p. 2–3)

And:

> The intent of the classification system is to provide a reasonably accurate and easily understood method of permitting an experienced person, who may not necessarily be an engineer, to assess the ability of the soil to stand at gradients specified in Table B–1. It is concluded that, in general, the proposed standards would serve that function. (p. 4)

OSHA believes that revised appendix A provides more guidance to the user and, therefore, will provide effective employee protection.

Appendix B—Sloping and Benching

Appendix B sets forth the requirements for sloping and benching when those methods are used for protecting employees against cave-ins.

Employers are not required in every instance to use this Appendix. Therefore, in this respect, it is not mandatory. This appendix is provided as one option that employers can use to meet the requirement to provide cave-in protection for employees. The option to use this appendix is stated in § 1926.652(b)(2). It is the second option employers may choose to follow to determine the requirements for sloping and benching protective systems. When this option is chosen by the employer, the provisions of this Appendix become mandatory.

The slopes required by this appendix vary, and are dependent upon the type of soil in which the excavation is made. To use this appendix, soils must first be classified in accordance with the provisions of appendix A to this Subpart—"Soil Classification."

Paragraph (a) of the appendix is a scope and application statement.

Paragraph (b) sets forth applicable definitions.

In this appendix, slopes are expressed as maximum allowable slopes. The maximum allowable slope is the steepest incline from the horizontal that will be acceptable under the most favorable site conditions for a particular type of soil. These slopes vary with the soil type in which the excavation is made. In addition, the depth of the excavation and the length of time that the excavation is open are specifically taken into account in only one instance. In Type A soils, the maximum allowable slope for the short-term (less than 24 hours) can may be used in excavations less than 12 feet (3.6 m) in depth.

The allowable slopes given for all other exposures in this appendix (in table B–1), coupled with the allowable configurations shown in figure B–1, should provide a greater level of protection to employees than is now provided by the existing standard.

Paragraph (c) of this appendix states the requirements for sloping and benching. Primarily, it is required that soil types be determined in accordance with appendix A; that the maximum allowable slopes be in accordance with table B–1 of this appendix B; and that the configurations of the sloping and benching systems be in accordance with the illustrations in figure B–1. Other requirements state when slopes less than the maximum allowable slope must be used.

This appendix is intended to replace table P–1 found in the existing standard. The difficulties associated with the use of table P–1, such as a lack of definitions of terms, are a major reason for replacing the table. Another reason for replacing the table is to provide a new set of provisions that are correlated with the soil classification system described in appendix A. The reasons for providing a new soil classification system have been addressed earlier in this preamble.

This new system is broader than the current standard in that more parameters must be considered when determining allowable slopes, and in that various allowable configurations of sloping and benching are illustrated. The system is based primarily on the recommendations made to OSHA by NBS (Ex. 2–6).

OSHA believes that this appendix will provide employers with a realistic and flexible approach to sloping and benching. In OSHA's opinion, the maximum allowable slopes will provide a safe work area for employees in excavations when the soils are properly classified and the slopes properly made.

OSHA received a great volume of comment on this appendix. However the vast majority of the comment was directed to proposed table B–1 and figures Bl.1 through Bl.5. Very little comment was received on paragraphs (a), (b) and (c) of this appendix.

Paragraphs (a), (b) and (c) of appendix B read as follows:

Sloping and Benching

(a) *Scope and application.* This appendix contains specifications for sloping and benching when used as methods of protecting employees working in excavations from cave-ins. The requirements of this appendix apply when the design of sloping and benching protective systems is to be performed in accordance with the requirements set forth in § 1926.652(b)(2).

(b) *Definitions.*

"Actual slope" means the slope to which an excavation face is excavated.

"Distress" means that the soil is in a condition where a cave-in is imminent or is likely to occur. Distress is evidenced by such phenomena as the development of fissures in

the face of or adjacent to an open excavation; the subsidence of the edge of an excavation; the slumping of material from the face or the bulging or heaving of material from the bottom of an excavation; the spalling of material from the face of an excavation; and ravelling, i.e., small amounts of material such as pebbles or little clumps of material suddenly separating from the face of an excavation and trickling or rolling down into the excavation.

"Maximum allowable slope" means the steepest incline of an excavation face that is acceptable for the most favorable site conditions as protection against cave-ins, and is expressed as the ratio of horizontal distance to vertical rise (H:V).

"Short term exposure" means a period of time less than or equal to 24 hours that an excavation is open.

(c) *Requirements.* (1) *Soil classification.* Soil and rock deposits shall be classified in accordance with appendix A to subpart P of part 1926.

(2) *Maximum allowable slope.* The maximum allowable slope for a soil or rock deposit shall be determined from Table B–1 of this appendix.

(3) *Actual slope.* (i) The actual slope shall not be steeper than the maximum allowable slope.

(ii) The actual slope shall be less steep than the maximum allowable slope when there are signs of distress. If that situation occurs, the slope shall be cut back to an actual slope which is at least ½ horizontal to one vertical (½H:1 V) less steep than the maximum allowable slope.

(iii) When surcharge loads from stored material or equipment, operating equipment, or traffic are present, a competent person shall determine the degree to which the actual slope must be reduced below the maximum allowable slope, and shall assure that such reduction is achieved. Surcharge loads from adjacent structures shall be evaluated in accordance with § 1926.651(i).

(4) *Configurations.* Configurations of sloping and benching systems shall be in accordance with Figure B–1.

These provisions are very similar to the proposal except that proposed paragraph (b)(3) "long term exposure" has been deleted, as discussed in Issue 4, above; proposed paragraph (b)(4) and (b)(5) have been renumbered (b)(3) and (b)(4), respectively, to accommodate the above discussed deletion; and, "short term exposure" has been redefined to mean 24 hours or less, as discussed under Issue 4.

In addition, OSHA received input from the ACCSH (Tr. 8/5/87 Attached handout), the BCTD (Ex. 4–17), and NIOSH (Ex. 4–30) recommending replacing competent person in paragraph (c)(3)(iii) of appendix B with registered professional engineer, particularly in regard to surcharge loads from adjacent structure. OSHA recognizes the potential hazards (collapse of structures or cave-ins) pointed out by the commenters and has revised this provision to direct the user to § 1926.651(i) in situations involving surcharge loads from adjacent structures.

Table B–1 of appendix B has been revised to eliminate, in most cases, different slopes for short term and long term excavations. (See Issue 4 for more discussion.) Table B–1 now requires:

Soil or rock type	Maximum allowable slopes (H:V) [1] for excavations less than 20 feet deep [3]
Stable rock	Vertical (90°).
Type A [2]	¾:1 (53°).
Type B	1:1 (45°).
Type C	1½:1 (34°).

Notes:

[1] Numbers shown in parentheses next to maximum allowable slopes are angles expressed in degrees from the horizontal. Angles have been rounded off.

[2] A short-term maximum allowable slope of ½ H:1 V (63°) is allowed in excavations in Type A soil that are 12 feet (3.67 m) or less in depth. Short-term maximum allowable slopes for excavations greater than 12 feet (3.67 m) in depth shall be ¾ H:1 V (53°).

[3] Sloping or benching for excavations greater than 20 feet deep shall be designed by a registered professional engineer.

This table is similar to proposed table B–1 except that in most cases "short term" slopes have been deleted. However, the maximum allowable slope for Type C soil has been changed to 1½ H to 1V which is in line with the slope suggested by NBS (Ex. 2–5 p. 39). An additional note has also been added limiting the use of this table to 20' as suggested by the AGC of California. This is discussed further below.

Several commenters (Ex. 4–28, 4–82, 4–102, 4–106, and 4–109) objected to different requirements for short term and long term excavations. One commenter, the AGC of California (Ex. 4–106), recommended that the reference to short term exposures be deleted and that the table be limited to a maximum depth of twenty feet, with deeper excavations planned by an engineer.

OSHA agrees with the suggestion to limit this table to excavations with a maximum depth of twenty feet. This was OSHA's original intent, as evidenced by the limitations on the shoring tables presented in appendix C, but was inadvertently left out of the proposal. The issue of short term versus long term excavations is discussed under Issue 4 above.

The AGC of California also introduced information concerning additional soil types which they felt should be added to appendix A. This suggestion is discussed earlier in the summary and explanation of appendix A.

Three of these commenters (Exs. 4–82, 4–102 and 4–109) objected to the permitted slopes and table B–1 as being too conservative, arguing that less conservative slopes were permitted in California. However, in this regard OSHA notes that Title 8 of the Construction Safety Orders of California requires at least a ¾ horizontal to 1 vertical slope in hard compact soil, the same as OSHA proposed for long term excavations in Type A soils which is comparable to hard compact soil. Short term excavations in Type A soils were proposed to allow a ½ horizontal to 1 vertical slope. The Title 8 Standards do not address short term exposures, rather they require a flatter slope if the soil is not stable, but provide no guidance as to what that slope should be.

OSHA received comment from Granite Construction (Ex. 428), and the AGC of California (Exs. 4–106 and 28) recommending that OSHA revise appendix B, based on a report by R.T. Frankian (Ex. 30). This recommended system, based primarily on a determination of unconfined compressive strength, would add a new soil Type, "AB", but would not address soils defined in the proposal as Type C (less than .5 TSF unconfined compressive strength). Mr. Frankian, in a separate comment (Ex. 33), recommended that Type C soil should be required to have shoring with solid sheeting or be evaluated by an engineer. The slopes and configurations suggested in this report are less conservative than those proposed by OSHA, and, indeed, are less conservative than those permitted under the California regulations (Title 8, Construction Safety Order) or under the Construction Safety Standards of the State of Michigan (Ex. 4–46). Appendix B of the final rule is more in line with these two proven systems.

The Agency sees merit in Mr. Frankian's suggested system, but not as a replacement for appendix B. The system is limited to use with cohesive soils, assumes a uniform soil strength for the full depth of the excavation, and would require a greater degree of accuracy in soil type determination than OSHA's appendices A and B. The Agency believes that the suggested system would be more appropriate for use under the new third option for sloping (§ 1926.652(b)(3)) or design by a registered professional engineer (§ 1926.652(b)(4)), provided it meets the requirements of these provisions. The slopes in final table B–1 based on the A–B–C system are more conservative in most cases than the suggested system. However, OSHA believes this is

VOL 54 ISS 209 OCT 31 1989 UMI

necessary in order to account for the limitations of soil testing methods and potential errors in soil classification which may result.

The slopes in table B–1 are not based on any one safety factor, as was suggested by Mr. Frankian at the public hearing (Tr. 4/19/88, p. 123). Instead, the slopes in table B–1 have varying safety factors, with higher factors for steeper slopes and lower factors for flatter slopes, because flatter slopes do not pose as much danger of a cave-in as steeper slopes. For example, a cave-in of a bank sloped at 34° (1½H:1 V) from the horizontal contains much less soil and will be less likely to entrap workers than a cave-in of a bank sloped at 54° (¾H:1 V). The Agency does not intend to spell out factors of safety either in this appendix or in the options requiring design by a registered professional engineer. The Agency believes that site conditions vary to such a degree that specifying a safety factor is inappropriate either for use of the appendices or for any of the other options requiring approval by a registered professional engineer. In particular, the Agency believes specifying safety factors would restrict the registered professional engineer from using his or her best judgement to design tabulated data or a sloping or benching system to provide adequate employee protection for given site conditions.

OSHA also notes that no slope is an absolute value. For example, use of appendices A and B, while taking into account many factors affecting soil stability and providing "maximum allowable slopes," also requires additional sloping when the soil shows signs of distress (appendix B paragraph (c)(3)(ii)). The same principle could also apply to slopes designed under the other options with a safety factor. If OSHA did specify a safety factor, designers might not accurately assess soil stability, the factors affecting that stability, and might assume that the safety factor would take care of the difference. On the other hand, OSHA believes it would be inappropriate to require a safety factor of two, for example, if a registered professional engineer determines that a safety factor of 1.2 is sufficient for the particular site conditions. In either case OSHA feels that safety factor designed into the system should be determined by the registered professional engineer. By not requiring a specific safety factor, the Agency believes the designer will accurately assess the site conditions and will provide a safety factor appropriate for those site conditions.

OSHA received a large volume of comment on the configuration in Figures B 1.2 and B 1.4, which were intended to clarify the Agency interpretation of existing § 1926.652(c).

The current standard, § 1926.652(c), has been interpreted by some individuals as permitting a trench dug in hard or compact soil to be vertical for the first five feet [1.52 m] level. However, OSHA has always interpreted and enforced this provision to require shoring or a trench shield in the unsloped vertical sided portion of the trench. The proposed rule, in appendix B, Figure B 1.4 was intended to clarify OSHA's intent. The Agency made special efforts to draw public attention and comment to this interpretation in the preamble of the proposed rule (52 FR 12291) and again in the notice of public hearing (53 FR 5281).

Many commenters (Ex. 4–5, 4–13, 4–25, 4–28, 4–57, 4–82, 4–102, 4–106, and 4–10) objected to Figures B–1.2 and B–1.4. All of these commenters noted that California permitted excavations to have an unshored vertical section of 3.5 feet, with the slope starting at the top of the vertical portion with no bench. OSHA recognizes that in some instances this configuration would be desirable in order to limit loading on pipes or other structures being installed. However, OSHA also notes that the California regulations limit the depth to which this configuration can be used, specify the slope depending on the prescribed depth limitations, and limit the use of the practice to hard, compact soil which is equivalent to Type A soil as defined in the proposal.

The responses to the hearing notice indicated that some commenters found the configuration proposed in Figure B–1 to be too complex to use (Ex. 8–6), or suggested allowing a 3.5 foot vertical portion as in California (Ex. 8–7). The AGC of California on the other hand supported deleting the requirement for shoring or shielding the vertical sided portion of the excavation. However, other commenters ((Ex. 8–14 (Milwaukee Construction Industry Safety Council) and 8–16, (AGC of America)) endorsed a requirement for the bottom portion of the trench in Figure B–1.4 to be supported unless the slope is figured from the toe of the entire excavation, and benched (Figure B–1.2), noting that not following this procedure increases the risk of collapses.

On the other hand, the State of Texas, and Southern California Gas (Exs. 8–25 and 8–27) also supported maintaining the requirement to support the vertical sided portion of the excavation, as proposed.

The suggested AGC of California revisions which were developed by R.T. Frankian (Ex. 30), would allow for unsupported vertical sided portions of excavations, ranging in depth from 5 feet in Type A soil, to 4 feet in Type AB soil and to 3 feet in Type B soil, based on the suggested revised soil classification system, and varying excavation depths.

OSHA has determined based on the whole record, that some modification to appendix B is appropriate. However, the revision does not go as far as suggested by the AGC of California.

The Agency is revising appendix B of the final rule to allow for certain excavations to have vertical sided bottom portions, with sloping starting at the top of the vertical sided portion. This Appendix will permit this configuration only in the same context as the Title 8, Construction Safety Orders of the State of California. OSHA has chosen this course because, unlike the suggested Frankian revision, the California standard has actually been in use successfully for several years. The Agency is not denigrating the suggested revision, and believes that its use may well be appropriate under § 1926.652(b)(3) of the Final Rule. The Agency feels that the slopes permitted under the suggested revision would require a more precise soil determination, and that any errors based on the suggested system could be more hazardous because that system would permit steeper slopes in most instances.

The slope depicted in proposed Figure B–1.2 is being retained in the Final Rule, because, as noted by several commenter (Ex. 8–25 and 8–27) it is a viable alternative method of sloping when a vertical sided portion of a trench is needed. However the format of all of Figure B–1 is being revised to provide more specific examples of acceptable configurations based on soil type, as suggested by the ACCSH and other commenters.

Finally, OSHA has determined that the required two foot set back for spoils will not be revised (See § 1926.651(j)(2).) The ACCSH (Tr. 8/5/87 p. 535) and the BCTD (Ex. 4–17) both recommended a minimum 3 foot setback, while NUCA (Ex. 4–91) supported the proposed 2 foot setback. OSHA has no data to support revising the setback as suggested by ACCSH and BCTD.

Therefore, based on the above discussion, OSHA promulgates appendix B, as revised.

Appendix C—Timber Shoring for Trenches

Appendix C contains information that can be used to provide timber shoring in trenches. Timber shoring is one of several methods that can be used to provide protection for employees against cave-in hazards.

Employers are not required in every instance to use the appendix. Therefore, in this respect, it is not mandatory. The appendix is provided as one option that employers can use the provide cave-in protection. The option to use this appendix is stated in § 1926.652(c)(1). When this option is chosen by the employer, the Appendix becomes mandatory.

The appendix is structured as follows:

Paragraph (a) discusses the scope of the appendix and its interrelationship with the requirements for protective systems in § 1926.652(b) or § 1926.652(c).

Paragraph (b) notes that the provisions of appendix A to subpart P must be followed for the purposes of soil classification. The configurations of timber shoring that can be selected using this Appendix are directly tied to the soil classifications described in appendix A.

Paragraph (c) describes the information is contained within appendix C.

Paragraph (d) describes the basis and limitations of the data contained in appendix C.

Paragraph (e) is a description of how to use the tables. Paragraph (f) contains examples to illustrate use of tables, and paragraph (g) contains notes that apply when using the tables.

Paragraph (g) is followed by six tables of data. There are two tables for each of the three soil types. Stable rock is exempt from shoring requirements. One table for each soil type provides shoring requirements in actual lumber size, while the other does so in nominal lumber size.

This appendix is intended to replace Table P–2, "Trench Shoring—Minimum Requirements," which is found in existing subpart P. This new approach is intended to address the problems detailed earlier in this Preamble concerning soil classification. It provides a shoring system that is correlated with the new soil classification system detailed in appendix A. This appendix, however, also provides a greater degree of flexibility than the current standard in that the tables can be used to select a greater number of configurations than is currently possible with Table P–2.

The tables in this appendix have been developed based primarily on recommendations and data provided to OSHA from NBS (Ex. 2–6), and public comment received during the rulemaking. Data in the tables not specifically recommended by NBS or by substantive comment are based on traditional practice. NBS could find no evidence that traditional timber practice, if properly executed, is unsafe (Ex. 2–6, p. 65).

OSHA received 15 comments and input from the ACCSH on appendix C. Most of these comments were directed at the proposed tables.

The text of appendix C is very similar to the proposal, except for minor explanatory and editorial changes suggested by the ACCSH (Tr. 8/5/87 pp. 539 and 540) and the BCTD (Ex. 4–17), and a revision of the text to incorporate the addition of shoring tables based on nominal size lumber as suggested by the AGC of California (Ex. 4–106).

The ACCSH and the BCTD questioned OSHA's use of a surcharge load of 20,000 pounds resulting from equipment used near excavations in paragraph (d)(2)(ii)(c) of appendix C. The Agency points out that the 20,000 pound weight limit is equivalent to a two foot spoil pile surcharge, and notes that shoring in accordance with the tables will withstand such a surcharge.

Several commenters (Exs. 4–21, 4–23, 4–31, 4–40, 4–42, 4–54 and 4–86) recommended that the Agency change the reference in the tables from "Width of trench" to "Length of Cross Brace," citing that this is the actual structural dimension that is of concern.

OSHA recognizes that the length of cross braces is the actual structural dimension, but notes that the current Table P–2 and the NBS recommendation are both designed using "width of trench." This, in fact, shortens the length of the cross brace because of the placement of other members of the shoring system, and therefore increases the amount of pressure necessary to cause significant deflection of the cross brace. This increases the strength of the shoring system. Therefore, OSHA declines to make the suggested change.

Several other commenters (Exs. 4–82, 4–102, 4–106 and 4–109) argued that the use of full size lumber was impractical and excessively expensive.

OSHA notes that these commenters are all from the West Coast and recognizes that standard practice in that area is to use nominal size lumber for shoring, while on the East Coast, full size lumber is normally used for shoring. OSHA also notes that other tables, such as those issued by the Corps of Engineers, Bureau of Reclamation, and the State of Wisconsin all use nominal size lumber. Therefore, OSHA has decided to incorporate the nominal tables recommended by the AGC of California (Ex. 32) in order to recognize that nominal size lumber is indeed an acceptable alternative to full size lumber under the Final Rule.

These commenters (Exs. 4–82, 4–102, 4–106, and 4–109) also argued that, based on their experience with the California Table, OSHA's proposed tables would result in overdesign of the system in some cases, and underdesign in others. However, OSHA notes that the California tables refer to the use of nominal size, Douglas fir lumber, which has a very high bending strength, about 1500 psi. OSHA, on the other hand, proposed tables based on the NBS data for the use of full size white oak or mixed oak, which has a bending strength in the 850 to 875 psi range. This difference accounts for the preceived "overdesign" or "underdesign" as addressed by the commenters.

At the public hearing (Tr. 4/19/88 p. 130–133), the AGC of California, suggested various revisions to the proposed timber shoring tables directed primarily at increasing the timber dimension of the uprights. OSHA has decided not to make these changes in the Final Rule. The Agency notes that the sizes of the uprights in the proposed tables in appendix C were based on the recommendations presented by NBS, and were reviewed by a series of workshops prior to the rulemaking. The criteria in the tables are comparable to existing Table P 2 in the OSHA standard and section 601 of the Wisconsin Administrative Code covering trenching and excavation, both of which have been used succcessfully for many years.

Several other commenters (Ex. 4–28, 4–106 and 4–114) suggested that OSHA expand the standard to address more specifically, hydraulic shoring and other forms of shoring which are in common use throughout the country. OSHA has decided to provide critera for use of hydraulic shoring systems in a new appendix D, discussed below. The Agency has also added statements to Appendix C noting that other forms of shoring (for example, hydraulic shoring, trench jacks, and pneumatic shores) are acceptable and may be substituted for wood if they possess equivalent strength.

Appendices D, E and F are new. Appendix D, "Aluminum Hydraulic Shoring for Trenches," contains criteria that can be used when aluminum hydraulic shoring is used as a method of protection in trenches that do not exceed 20 feet (6.1 m) in depth, in the absence of manufacturers' tabulated data. This appendix D is provided for

VOL 54 ISS 209 OCT 31 1989 UMI

those situations where manufacturers data, as permitted under § 1926.652(c)(2), has been lost or is otherwise not available. It must be used in conjunction with appendix A, Soil Classification. Additionally, when this appendix is selected, the user must also comply with the basis and limitations of this data as provided in paragraph (d) of appendix D.

These data were provided by the Trench Shoring and Shielding Association of America (Ex. 36) and are being incorporated by OSHA in response to several comments recommending that the Agency provide this type of data. OSHA notes that the State of California also provides very similar data.

OSHA received no similar information from this Association concerning trench jacks, pneumatic shores or shields. However, the Agency notes that air shore and trench jacks can be substituted for timber shoring members if they are of equivalent strength or as specified by the manufacturer. This would make generic tables for trench jacks or air shores unnecessary.

Shields, on the other hands, are usually designed for specific conditions and, as noted at the public hearing (Tr. 4/19/88 p. 77–79), the manufacturers provide data as to shield capacity, how to use the shield safely, and the soil conditions where the shield can be used. For this reason, the Agency believes that it would be impractical to provide "generic" tables for shield use.

Appendix E gives examples of acceptable alternatives to timber shoring, displayed graphically, to provide guidance to employers and to recognize explicitly that alternatives to timber shoring are acceptable means of complying with the requirements of this regulation.

This appendix provides illustrations of pneumatic shores, aluminum hydraulic shoring, trench jacks and trench shields. This appendix does not limit the use of other alternatives which may be developed, because any new alternative based on new technology can be used in accordance with § 1926.652(c)(2) of this Final Rule.

Appendix F of this Final Rule provide a "decision chart" for selection of protective systems. This chart is intended to assist the employer in choosing appropriate employee protection by showing all available options and giving accompanying references to appropriate sections of the standard.

Although the current standards for excavations and trenches require employers to implement protective measures such as sloping or shoring, most of the 90 cave-in fatalities occurring each year have happened because the employer did not provide any protection. In these instances, compliance with the current rules would have prevented the accidents. Similarly, the revised final rule published here today will provide protection only if employers comply with its requirements. OSHA anticipates that the increased clarity and flexibility of the revised standards will provide incentives for employers to provide the necessary protection rather than ignore them completely.

However, assuming that many accidents have been caused by employers who have consciously violated OSHA trenching and excavation rules, these and other employers may continue to put their workers at risk despite this revised final rule. If this assumption is correct, OSHA needs to examine ways of improving the rate of compliance with these regulations.

One way of improving compliance may include additional reporting requirements for excavation cave-ins. For example, OSHA could require that employers report all excavation cave-ins to OSHA within a limited time period. This reported information would enable OSHA to evaluate the so-called "near-misses" to determine whether the employer made an effort to comply with the standard. Such information should allow OSHA to identify those employers who routinely failed to shore or shield their trenches and excavations when it is needed.

However, a reporting requirement is only one way to increase the rate of compliance with these regulations. OSHA solicits comment on whether there are other means of increasing compliance. In addition, OSHA seeks comment on whether a cave-in reporting requirement should be proposed, and what elements should be contained in such a requirement. Comments should be sent to the Docket Officer, Docket S–204, U.S. Department of Labor, Occupational Safety and Health Administration, Room N–2634, Frances Perkins Building, Washington, DC 20210.

IV. Final Regulatory Impact Assessment

Introduction

The Occupational Safety and Health Administration (OSHA) has prepared this Final Regulatory Impact Assessment (RIA) in compliance with Executive Order 12291 and the Regulatory Flexibility Act of 1980 (Pub. L. 96–353, 94 Stat. 1164 [5 U.S.C. 60 et seq.]). In this assessment, OSHA has determined that the revised excavation standard (29 CFR part 1926, subpart P) is technologically and economically feasible and that the environmental impacts of the amendments are not significant.

The amendments are estimated to reduce the annual rate of worker fatalities by one and of lost workday injuries by 1,107, relative to the current standard. Further, they are estimated to reduce compliance costs by at least $36.0 million per year, relative to the current standard. These cost savings will arise principally by allowing firms the flexibility to select less costly methods of providing a safe workplace and therefore are consistent with the Administration's program to reduce unnecessary burdens on industry. As the net effect of the Subpart P amendment is less than $100 million, this regulatory action does not constitute a "major rule."

Regulatory History

The Construction Safety Act of 1969 (Pub. L. 91–54) amended the Contract Work Hours Standards Act (40 U.S.C. 333) by adding section 107. This section provided for occupational safety and health standards for construction employees working on federal, federally-financed, or federally-assisted projects. In 1971, pursuant to section 107, the Secretary of Labor issued safety and health regulations for construction in 29 CFR part 1518. The Occupational Safety and Health (OSH) Act (29 U.S.C. 650 et seq.), which was passed by Congress on December 29, 1970, and became effective 4 months later, ordered the Secretary of Labor to adopt established federal standards that were issued under other statutes. In accordance with section 6(a) of the OSH Act, in May 1971, the Secretary adopted the construction standards that had been issued under the Construction Safety Act in 29 CFR part 1518. Later in 1971, these standards were redesignated as part 1926. As part of this process, the regulations covering excavation (subpart P, §§ 1926.650–1926.653) were adopted as OSHA standards.

Need for Revision

The need to revise subpart P has been recognized since it was first incorporated as an OSHA standard. Consequently, after review by the Advisory Committee on Construction Safety and Health (ACCSH) and issuance of a Notice of Proposed Rulemaking (NPRM, 36 FR 19083, September 28, 1971), several

amendments were made to the standard in 1972 (37 FR 3512, February 17, 1972). After another NPRM in 1972 (37 FR 15317, July 29, 1972), the standard was further amended (37 FR 24345, November 16, 1972).

Complaints and controversy, however, continued to surround the standard. As a result, in 1976, OSHA commissioned the National Bureau of Standards (NBS) to study the standard's compatibility with actual construction practices and to recommend modifications that could improve the standard's effectiveness. The results of the NBS study were published in several reports during 1979 and 1980.

These studies, other OSHA and state data, and private sources of information revealed the need to modify the standard. Surveys of firms involved in excavation indicated widespread confusion regarding requirements of the standard. Many contractors were critical of the standard, claiming that it was confusing, sometimes inadequate, and often irrelevant. The tables on sloping and shoring procedures were described as confusing and inadequate. Contractors were also unsure about the acceptability of new safety techniques, such as freezing the ground rather than shoring. Morever, they generally believed that the standard was too rigid and was insufficiently performance oriented. In response, OSHA has revised the current standard to clarify and revise the regulatory language, and expects that these changes will facilitate compliance.

Industry Profile

Background

Excavation* projects vary in complexity. For example, a trench may be only a few feet deep and may be dug in less than one hour by one person using a backhoe. A small excavation may simply be a hole scooped out by a bulldozer. Alternatively, the construction of a stable 30-foot-deep trench requires a knowledge of engineering, geology, and soil mechanics.

The major occupational hazards of excavation work result from cave-ins, from exposure to underground utilities, and from material or equipment falling into the excavation. Precautions to protect against cave-ins include bracing, sloping, benching, using shields, or freezing. However, the proper use of these techniques requires an understanding of the importance of such factors as excavation depth and width, soil type, hydraulic pressure, and other specific conditions present at the worksite. In addition, some new technologies may result in fewer accidents by reducing the amount of time that workers are physically exposed to the hazards of trenching. Such equipment includes trenching machines that dig and lay cable, remote-controlled equipment that compacts the soil in the trench, and systems of "no dig" trenching, where equipment burrows to lay pipe without an open cut.

Trenching is performed primarily by utility contractors who construct gas, sewer, water, and utility lines. Much of this work is performed as a result of competitive bids from state and local governments or local utilities. Surveys indicate that 70 percent of utility contractors receive about 90 percent of their business through competitive bidding. Minimizing costs, including safety-related costs, is therefore very important to these contractors. Larger excavation work is performed for many kinds of construction, including buildings, bridges, towers, swimming pools, and port facilities.

A number of important economic and technical characteristics separate trenching from other excavation work and make trenching the more hazardous activity. For example, other excavations tend to be adjacent to buildings that would collapse if the excavation were not shored. The probability that damage suits would result from the collapse of these buildings provides a strong economic incentive to shore these excavations. Even where other structures are not adjacent, large excavations are typically so deep that the risk of incurring the expense of reexcavating following the collapse of an unbraced wall, gives sufficient incentive to contractors to brace the walls. In contrast, such incentives are greatly diminished for trenching work. Trenches are less likely to be in close proximity to other structures, structures adjacent to trenches are less likely to collapse, and the cost of redigging a collapsed trench is far lower than of reexcavating the foundation of a large building.

Industries and Economic Activity

Trenching and other excavation occur chiefly in the following 13 four-digit Standard Industrial Classifications (SIC):

SIC 1521 General Contractors—Single Family Houses.
SIC 1522 General Contractors—Residential Buildings Other than Single Family Houses
SIC 1541 General Contractors—Industrial Buildings and Warehouses.
SIC 1542 General Contractors—Non-Residential Buildings Other than Industrial Buildings and Warehouses.
SIC 1611 Highway and Street Construction Contractors.
SIC 1622 Bridge, Tunnel, and Elevated Highway Construction.
SIC 1623 Water, Sewer, Pipeline, Communication and Power Line Construction Contractors.
SIC 1629 Heavy Construction Contractors, Not Elsewhere Classified (NEC).
SIC 1711 Plumbing, Heating (Except Electrical) and Air Conditioning.
SIC 1771 Concrete Work.
SIC 1781 Water Well Drilling.
SIC 1794 Excavation and Foundation Work.
SIC 1799 Specialty Trade Contractors, NEC.

No published data exist that allow the estimation of either the total value of excavation work or the number of establishments and workers involved and no additional data has been submitted to the record on this point. Bureau of the Census data [1], however, do exist on the amount of contracted non-trenching excavation work by four-digit SIC code. The data demonstrate that most of such work occurs in SIC 1794 and that most contract work in SIC 1794 is non-trenching excavation work. Excavation work performed under another contract (e.g., as part of a high-rise apartment) would be included in another category. Thus, although most contracted non-trenching excavation work is performed in SIC 1794, it cannot be assumed that most non-trenching excavation work occurs in SIC 1794. Moreover, the Bureau of the Census publishes no data that specifically identify trenching as a category of business. For these reasons, OSHA has estimated trenching and other excavation activity in the following manner.

The Associated General Contractors of America (AGC) [2] conducted a survey of contractors whose work closely corresponded to that in SIC 1623. The results of this survey were used to estimate the percentage of revenues from excavation in SIC 1623. The 96 responding firms indicated that 38 percent of their revenues were from trenching. Another survey also conducted by AGC [3] on the practices of contractors engaged in excavation

* The term "excavation" includes trenches.

found that of the 22 firms responding, an average of 36.5 percent of their revenues were derived from excavation. The majority of these firms would probably

TABLE 1.—ESTIMATES OF EXCAVATION REVENUES BY INDUSTRY, 1987

			Trench-ing and

clarify the requirements and the applicability of the various provisions and appendices, and increase the use of some form of protective system.

general changes are those specifying alternative acceptable ways for contractors to comply with the requirements for protective systems. Although most of the existing standard's

statement that support systems must be designed by a qualified person according to accepted engineering

language, with respect to support systems, on timber shoring. Numerous commentors noted that hydraulic shoring is now more common than

VOL 54 ISS 209 OCT 31 1989 UMI

found that of the 22 firms responding, an average of 36.5 percent of their revenues were derived from excavation. The majority of these firms would probably be classified in SIC 1623, as most of their trenching work was for the construction of sewer and water lines. Based on these surveys, OSHA assumes that no more than 45 percent of the revenues in SIC 1623 are derived from excavation.

It becomes more difficult, however, to develop similar estimates for the other affected SIC categories, and their revenues are derived at a more aggregate level. For example, most of the excavation activity classified within SIC 15 involves the excavation of foundations for houses, offices, and warehouses. Foundation work for these types of structures ranges from 2 percent of the total costs for single-family houses to 12 percent for industrial buildings [4]. Because the foundation phase also includes all of the concrete costs not related to excavation, it is assumed that roughly 5 percent of the activity in SIC 15 would be affected by subpart P. For SIC 16, the major affected activity, other than that in SIC 1623, would be highway, bridge, and other heavy construction. To estimate the excavation activities for this SIC code, a number of bids for these types of jobs were examined [5]. The excavation component of these bids was in the range of 1–5 percent of the total project costs. Based on this information, 5 percent has been used as a conservative estimate of the percent of revenues in SIC 16 that are affected by subpart P. In SIC 17, the two main classifications affected are SIC 1711 (plumbing, heating and air conditioning) and SIC 1794 (excavation and foundation work). A best estimate of 1 percent of revenues was used for SIC 1711 based on average plumbing estimates from a construction estimation manual [6], where trenching and backfilling represented 0.7 percent of the total time required for the job. For SIC 1794, it was assumed that 45 percent of revenues are affected by subpart P. This was based on the assumption that although SIC 1794 almost exclusively represents firms doing excavations and foundation work, the actual excavation activity affected by subpart P is only one phase of the project. Once the walls are supported, laying the foundation, stripping, etc. are the other major cost factors. In sum, this approach results in a total industry revenue estimate of $20.07 billion for excavation work (see Table 1).

TABLE 1.—ESTIMATES OF EXCAVATION REVENUES BY INDUSTRY, 1987

Industry	Net revenues (dollars billions)	Proportion subpart P related	Trenching and excavation revenues (dollar billions)
SIC 15 (Except 1531)	78.5	.05	3.92
SIC 16 (Except 1623)	71.5	.05	3.57
SIC 1623	17.0	.40	6.79
SIC 1711	46.6	.01	.47
SIC 1794	11.8	.45	5.31

The Revisions to the Standard

Introduction

This section discusses the revisions to OSHA's current excavation standard. The revisions are intended both to clarify and explain the requirements of the standard, and to eliminate discrepancies between requirements and current practices where there is no evidence that current practices pose a hazard to workers.

The following paragraphs describe only those changes that may have significant economic impacts.

Changes in Format

The current standard consists of four main sections: General Protection Requirements, Specific Excavation Requirements, Specific Trenching Requirements, and Definitions. The General Protection Requirements also apply to each section of the standard. The use and application of these provisions, however, are not clearly identified in the current standard and some users did not understand their intent [2, appendix D]. Consequently, the presentation and format of the standard have been revised in order to clarify the language and requirements of subpart P. The amended standard includes a section on Scope, Application and Definitions, followed by General Requirements, and then by the Requirements for Protective Systems. The existing standard contains two tables on sloping and shoring, whereas the revised standard contains six nonmandatory appendices that provide a soil classification system, describe tests for determining soil type, and provide designs for sloping, benching, timber shoring, aluminum hydraulic shoring, a pictorial representation of nontimber shoring methods, and a flow chart of compliance options. OSHA expects that this reorganization will clarify the requirements and the applicability of the various provisions and appendices, and increase the use of some form of protective system.

Changes in Provisions

Numerous changes have been made to specific provisions of the standard. In the following discussion, the changes are presented in broad groupings according to their expected effects, and important examples of these groupings are examined.

Specific Changes. The first group of changes are called specific changes because, individually, they affect specific requirements of the standard. A number of these specific changes are designed to bring the requirements of the standard into conformity with current industry practices when doing so would not compromise safe work practices. Some of the specific changes are simply definitional in nature. For example, the existing standard defines "belled excavations," and the revised standard defines and refers to "belled-bottom pier holes." Because belled excavations are actually called belled-bottom pier holes, the change simply brings the terminology of the standard into conformity with current usage.

The specific changes, however, involve more than just changes in wording; many change the actual requirements of the standard. For example, one change alters the definition of a trench shield by stating that it must protect employees from the hazards of cave-ins, but need not protect against the occurrence of cave-ins. In another case, the existing definition specifies that shields must be composed of steel plates and braces, whereas the revised standard allows shields to be made of wood or other materials.

Many of the specific changes that OSHA is implementing will lower costs of compliance without increasing worker risk. For example, the existing standard requires that work must be discontinued in excavations where water has accumulated. The revision would allow work to continue under some circumstances of water accumulation if proper precautions have been taken to protect employees. Another example of potential cost-savings results from modifying the existing provision for the use of emergency rescue equipment where adverse atmospheric conditions exist. The revised standard no longer requires the equipment to be physically "attended" by a worker.

General Changes. The general changes affect several provisions of the standard. Perhaps the most important general changes are those specifying alternative acceptable ways for contractors to comply with the requirements for protective systems. Although most of the existing standard's provisions allow the use of alternative means of protection, the availability of these options or alternatives was not generally appreciated. Michael Plank, of the Speed Shore Corporation observed:

> Everyday today if you read the current table P–2, you go to the bottom lines and read the footnotes, there's two footnotes that specifically leave you an option to use materials other than timber. But I'll promise you today, if I take hydraulics in a new part of the country where it's not currently being used, I will fight for weeks on end trying to get them convinced that aluminum is an accepted standard as an equivalent to this timber [8, p. 203].

In addition, there is some confusion about the minimum standards contractors must meet in order to be in compliance. The revisions to the requirements for protective systems clarify such requirements. Contractors who choose to use a support system, must follow one of four basic options: (1) They can slope the excavation at no more than 1½ horizontal to 1 vertical (34 degrees), (2) they may use OSHA's Appendices A and B for soil classification and supports, shields, or other systems prepared in accordance, (3) they can use other tabulated data prepared by or approved by a registered professional engineer, or (4) they can have the system designed by or approved by a registered professional engineer.

These requirements represent a substantial change to the existing standard. The existing standard does not clearly specify the function of Table P–1 on sloping and Table P–2 on timber shoring or indicate who may design sloping or support systems. For example, Table P–1 is required as "a guide" for trenches, which appears to imply that it is nonmandatory. Elsewhere, the standard states that trench banks are required to be "laid back to a stable slope," while excavations, which are defined to include trenches, are to be dug to the "angle of repose." In addition, there has been much ambiguity regarding what is the "angle of repose". These requirements are exceedingly vague. The existing Table P–2 on timber shoring is described as containing "minimum requirements," but it is unclear whether such requirements are to be interpreted as minimum performance requirements or as exact specifications. Similarly, although the standard defines a trench as a form of excavation, the section on "Specific Excavation Requirements" contains the statement that support systems must be designed by a qualified person according to accepted engineering practices. However, it is unclear if these requirements would allow a qualified person to design a different timber shoring system than that contained in Table P–2.

Changes in Tables. The final type of amendment that distinguishes the revised standard from the existing standard will clarify and broaden the applicability of the material contained in Tables P–1 and P–2 of the current standard. The set of tables in the existing standard not only are confusing (as noted above), but also lead to inflexibility in application. For example, they contain no information about benching, or the combined use of sloping and benching practices. Table P–1 on sloping contains the note that "clays, silts, loams or nonhomogeneous soils require shoring or bracing," thus apparently implying that sloping is inappropriate in such situations. In addition, although Table P–1 notes the importance of both soil type and environmental conditions in determining proper sloping, it contains no method for determining either soil type or environmental conditions. Finally, Table P–2 on timber shoring for trenches contains only one set of specifications for a given soil type and depth. The specifications in Table P–2 would be cost-effective only incidently because the relative prices of types and grades of lumber vary sharply both over time and geographic region.

In contrast, the new appendices are designed to elminate these problems. For example, the revised standard's appendix A on soil and environmental classification is applicable to field use. Appendix B on sloping clearly applies to all excavations including trenches, and sloping is allowed for clays, silts, and other soils. In the current standard these applications were not clearly identified. Benching and the combined use of sloping and benching are also discussed in this appendix. Appendix C on timber shoring is also more flexible than the requirements shown in Table P–2 of the current standard. This appendix contains as many as four sets of timber shoring procedures for a given soil classification and trench depth. Appendices E & F provide further clarification through visual displays and flowcharts. Finally, in the revised standard, the use of these appendices are nonmandatory, unless they are being employed as a compliance option.

In addition, while a nonmandatory appendix provides instruction on the proper assembly of timber shoring, the standard no longer centers its regulatory language, with respect to support systems, on timber shoring. Numerous commentors noted that hydraulic shoring is now more common than timber shoring, primarily because it is frequently more practical and is typically safer [7, 8]. OSHA has accordingly added nonmandatory Appendix D, which provides guidance for hydraulic shoring.

OSHA believes that, overall, these changes will significantly reduce the burden of compliance by increasing the flexibility, clarity, and usefulness of the standard.

Worker Risk

The hazardous nature of construction work, especially that related to excavation work, is well documented. The fatality rate in SIC 1623, which is dominated by trenching, was estimated by OSHA at 50.8 deaths per 100,000 workers per year for 1984–88, whereas for construction work generally, it was estimated at 24.8 deaths per 100,000 employees per year during 1982–86 [1, 9, 12]. Similarly, trenching cave-in fatalities have been estimated by NIOSH at 75 per year, and lost workday injuries due to cave-ins at 1000 per year [11]. The incidence rate for injury among construction workers, including those doing excavation work, is about two times the all industry average (i.e., 15.1 injuries per 100 workers in construction compared with 7.7 injuries per 100 workers in all industries [12]).

Both industry and labor representatives, as well as insurance firms, agree that shoring, shielding, and sloping to a sufficient angle eliminate or substantially diminish the risk of cave-ins. Yet, analysis of data from OSHA's case files indicate that about 78 percent of all fatalities in excavation came from cave-ins [10, 16, 36]. A central provision of subpart P is the requirement to provide protection against death or injuries resulting from cave-ins by using methods that are now in use in the industry and that were prompted by the original consensus standards.

A study by Johns Hopkins University of 306 trenching cave-in fatalities between 1974 and 1986 determined that 85 percent of them occurred in trenches that did not have shoring of the walls or in which the sides were not adequately sloped to prevent soil from sliding in [13]. In addition, NIOSH's National Occupational Fatality study found an average of 73 deaths per year from cave-ins [14]. The measures required to prevent deaths from excavation cave-ins have been known for more than 75 years, since the first English-language

study of this problem was commissioned by Winston Churchill in 1912 [14].

Recently, several states and localities have made significant progress in lowering cave-in deaths. California has activity in recent years. These states are also distinguished by their large geographic size, which increases the likelihood of encountering varied soil

asphyxiated or fatally injured by falling soil or rock.

The balance of preventable fatalities are associated with a variety of factors.

VOL 54 ISS 209 OCT 31 1989 UMI

study of this problem was commissioned by Winston Churchill in 1912 [14].

Recently, several states and localities have made significant progress in lowering cave-in deaths. California has been able to cut its number of cave-in fatalities by more than half [14]. Between 1974 and July 1979, the Milwaukee area had 20 fatalities associated with trench cave-ins, the highest in the region. With the cooperation of local contractors, they have managed since 1979 to avoid all cave-in fatalities [1*]. In the Dallas area, there has been a significant reduction in cave-in accidents since mid-1985 [15]. Clearly, there is significant room for progress in decreasing worker risk in excavation projects.

The primary purpose of the revisions is to clarify the requirements and to add flexibility so that firms can tailor their protective measures to their particular situations. Descriptions of 163 excavation fatalities were reviewed by Eastern Research Group (ERG) [10] in order to identify those which would have been prevented through compliance with the existing or revised standards. The analysis is based on accidents as they were described in accident inspection abstracts. As a preliminary indication of the types of accidents which occur, ERG summarized some of the basic characteristics of the sample of accident narratives. The data indicate that the majority of fatalities resulted from cave-ins. The effectiveness of the subpart P standards therefore largely depends on its effectiveness in preventing this type of accident. The other categories with more than one fatality include (1) "struck by" accidents, which typically resulted when workers were struck by pipe or other materials, (2) gas-related accidents (explosions and asphyxiations), (3) falls, and (4) electrocutions.

The pattern of injury incidence was quite similar to that for fatalities. This finding, however, reflects the fact that a large proportion of injuries in this sample was due to cave-ins because OSHA primarily investigates fatalities or catastrophes, and includes only the associated injuries in its data base. Thus, these data may not be representative of all injuries related to excavation activities.

Fatalities

Baseline Incidence Rates. ERG employed two separate approaches toward estimating the annual number of fatalities in excavations. The first approach relied on fatality data from California [17] and Texas [32]. Data from these two states account for a large proportion of national construction activity in recent years. These states are also distinguished by their large geographic size, which increases the likelihood of encountering varied soil types.

California and Texas reported annual averages for fatalities due to cave-ins of 5.3 and 9.3 respectively. The two states combined generate 23 percent, or nearly one-fourth, of national construction receipts as measured in the 1982 Census of Construction [1].

The cave-in fatalities in these states were extrapolated to the total fatalities from excavation work using a sample of excavation fatalities reported in the OSHA fatality/catastrophe reports. ERG reviewed a sample of accident reports to determine their preventability under the existing and proposed standards (this sample is described more fully below). The sample was judged to be a reliable indicator of the relative portion of fatalities in excavation work due to cave-ins and other causes. Using this sample, it was calculated that 78 percent of the fatalities were due to cave-ins. The average cave-in related fatalities for the California and Texas data were then increased by a factor of 1.3 (1.0 divided by 0.78) so that they would represent the total fatalities for trenching and excavation work. The combined state average for California and Texas was thus calculated at 19.0 (5.3 plus 9.3 times 1.3). Extrapolating to the national level with California and Texas representing 23 percent of national construction receipts in 1982, gives a national total of 83 fatalities.

The second estimation procedure was based on the number of fatalities recorded in the OSHA fatality/catastrophe reports. The data used in this study were derived from the years 1978 to 1980 (the most recent complete years for which IMIS data related to excavation activity could be retrieved when ERG did their analysis). The total number of fatalities for this time interval was 138 (39, 50 and 49). The more recent Johns Hopkins' analysis of OSHA's IMIS abstracts covering the period 1984 to 1986 found 52, 85 and 75 cave-in related fatalities annually for all states with the exception of California, Michigan and Washington [13].

Recent studies, however, have indicated that underreporting of accidents is significant in many areas [33, 34]. Companies sometimes choose not to report fatal accidents or are unaware of the requirement to do so, and OSHA personnel sometimes learn of accidents through news reports and other unofficial sources. Nevertheless, the extent of underreporting is not known with certainty and no adjustment to the data was attempted.

The fatality/catastrophe reports used by ERG are not a comprehensive sample of accident records for the years represented since the reports were filed only in states with federally operated safety and health programs. These states represent about one-half of all states. Assuming that the fatality/catastrophe reports represent half of all fatalities for the years covered, the numerical average for 1978–1980 was 92 deaths per year. The growth in construction employment over that period was calculated at 5 percent [35]. Applying a simple growth factor of 5 percent to the fatality estimate produces a revised figure of 97 fatalities per year.

ERG based their best estimate on an average of the two approaches. OSHA agrees and concludes that 90 fatalities per year represents a best estimate of the current baseline risk in excavation work.

Injuries

Cave-In Injuries. A National estimate of cave-in-related injuries was derived using data from a special study of California cave-ins [17]. Over a 22-year period, the California researchers identified 2,229 lost workday injuries and 193 fatalities due to cave-ins. The data indicate a ratio of 11.5 lost workday injuries for every cave-in fatality. This estimate was assumed to be representative of the relationship for the nation as a whole. An OSHA analysis of 221 trenching fatalities [10] has indicated that 78 percent of excavation fatalities are due to cave-ins. Therefore, given the projection of 90 excavation fatalities annually, OSHA estimated that there are 70 fatalities annually due to cave-ins. Extrapolating from the California incidence rates, OSHA estimates that there are 805 cave-in related lost-workday injuries annually in the United States.

The approximate range for this estimate was independently confirmed in a separate study by the National Institute for Occupational Safety and Health (NIOSH) [17]. These researchers reviewed accident reports of the Supplementary Data System of the Bureau of Labor Statistics for 1976 to 1981. The NIOSH researchers derived an estimate of approximately 1,000 lost workday injuries per year due to cave-ins, including 75 fatalities.

An estimate of the noncave-in related lost workday injuries occurring in excavation activities was developed using a special study of injuries to construction laborers prepared by the Bureau of Labor Statistics [18]. That study reviewed survey responses from 658 injured construction laborers.

Construction laborers are estimated to constitute one-fifth of the total construction workforce.

The BLS survey of construction workers provided two main indicators of the share of construction injuries occurring in excavation work. Specifically, the injured workers were asked questions on (1) the type of work being performed and (2) the location of the worker at the time of the accident. Numerous other questions were included but none allowed an accurate depiction of excavation work. The survey results indicated that for 6 percent of the injured workers, the type of work was identified as "laying sewer lines or other pipelines". (Other types of work included construction of homes, buildings, or other structures and roadways. Some of these, in turn, could have included excavation work. Workers may have selected these other activity categories even if they were actually doing excavation work related to them.) Further, 7 percent of workers reported their location at the time of injury as "in trench". None of the other categories allowed a worker to state that he was in an excavation.

Thus, the survey results suggest that at least 7 percent of injuries occurred during trenching work. Although it is possible that some injuries occurring in excavations have been reported in other categories that do not allow them to be identified, OSHA has relied on the 7 percent estimate, based on the location of workers, as the best indication of the proportion of injuries occurring during excavation work. Coincidentally, ERG's estimate of the value of excavation work as a share of the value of construction put in place is also approximately 7 percent. Thus the 7 percent estimate was judged to be a reasonably accurate estimate of the share of all construction injuries occurring in excavation work.

The number of lost workday injuries occurring among construction workers in 1986 was estimated at 326,800 based on incidence rates and employment data provided by the Bureau of Labor Statistics [12]. This estimate was derived using an employment level for construction workers in 1986 of 3,890,000 workers and a derived incidence rate for lost workday cases of 8.4 per 100 full-time workers. Applying the 7 percent estimate, the total lost workday injuries in excavation work was calculated at 22,876. Since 805 injuries have been identified as occurring during cave-ins, the remaining number of lost workday cases is calculated to be 22,071.

Prevention Rates. ERG reviewed a sample of 163 fatalities from 1979 to 1985 (115 fatalities from OSHA fatality/catastrophe inspection reports from 1979–1981 and 48 fatalities from OSHA's Integrated Management Information System (IMIS) abstracts from 1983–1985) for preventability under the existing and revised standards. Fifteen fatalities had to be eliminated because the accident narratives were incomplete or otherwise insufficient to allow classification. The remaining 148 fatalities were classified as either preventable or not preventable assuming full compliance with either the existing or revised standards.

These reports and abstracts had certain limitations as data sources because the amount and specificity of narrative information are inconsistent from report to report. For example, in some cases, information on trench or excavation dimensions, type of soil, and various contributing factors (e.g., water accumulation, digging in a backfilled area, lack or positioning of ladders) may be suggestive of rule violations, but may not be detailed enough to allow a firm judgment. This was particularly problematic in the analysis of cave-ins. ERG assumed that, where there was no support system, the cave-in was likely due to the lack of such a system, and that any support system in place at the time of a cave-in was by definition inadequate. In some of these cases, it is possible that the most likely cause of the cave-in was some other factor (such as water accumulation) that was not adequately described. ERG's assumption therefore may have biased their preventability assessment in favor of the sections of Subpart P that pertain to support systems, and against other sections of Subpart P.

Some of the accident narratives included a listing of the OSHA citations that were issued. In a number of cases, however, the relevance of the citation could not be unambiguously interpreted because the narratives did not correlate very well with the citation noted. For this reason, the listed citations were considered, but not totally relied upon, in making preventability judgments.

Fatalities that were judged by ERG as preventable accounted for 81.1 percent of the sample under the existing standard and 82.4 percent under the revised standard [16]. Cave-ins accounted for the largest percentage of preventable fatalities (72.3 percent under the existing standard and 73.0 percent under the revised standard). The relevant provisions deal with the lack of or inadequacies in support systems (e.g., sloping, shoring, trench jacks, boxes, and shields), and to a much smaller extent, with problems in installing or removing such systems. In these cases, workers were generally either asphyxiated or fatally injured by falling soil or rock.

The balance of preventable fatalities are associated with a variety of factors. For example, 2.7 percent of the fatalities that were judged preventable by compliance with the existing standard and 3.4 percent with the revised standard are associated with inadequate attempts to locate or support underground installations, such as water, fuel, and electric lines. These fatalities mainly occurred from drowning as a result of a water main breakage, from electrocution, or from inhalation of toxic fumes from broken gas mains.

Two percent of preventable fatalities under each standard were associated with failure to test (or adequately test) or provide adequate ventilation, or eliminate sources of ignition where there are dangerous gaseous conditions (lack of oxygen or presence of toxic gases). In these cases, workers were either asphyxiated or fatally injured as a result of explosions.

In 1.4 percent of the preventable fatalities under each standard, the stability of structures (generally building walls) adjoining the trench or excavation was not properly assured by appropriate support systems. In these cases, the walls gave way and fell on the workers.

Inadequate protection from unintended movement by mobile equipment accounted for a single preventable fatality under both the existing and revised standards. In this case, a piece of equipment struck and fatally injured the worker. Various other hazards accounted for the balance of the preventable fatalities.

Overall, ERG found both the existing and revised standards to be potentially effective for the prevention of most fatalities. The high rate of prevention is due primarily to the effectiveness of these requirements in preventing the most common type of fatality, those due to a cave-in. The revised standard was found to offer a slightly higher rate of accident prevention because it is more effective against fatalities resulting from the failure to locate underground installations and to safely install cave-in protection systems.

Using the earlier estimate of 90 fatalities and applying ERG's preventability estimates of 81.1 percent for the existing standard and 82.4 percent for the revised standard results in 73 fatalities avoided per year under the existing standard and 74 per year under the revised standard.

To estimate the preventability of nonfatal injuries, ERG reviewed 103

VOL 54 ISS 209 OCT 31 1989 UMI

injuries from OSHA fatality/catastrophe inspection reports from 1979–1981. They found a similar pattern to that of fatalities, with cave-ins accounting for most injuries under both standards. As noted previously, this sample of injury data includes primarily those injuries caused by cave-ins. Few accidents of other types have been included.

ERG found 74 of the injuries were due to cave-ins. For each standard, all but 3 of these injuries (96 percent) were preventable. For the three injuries not preventable, a cave-in occurred despite apparently correct sloping of a trench as described in the accident report. For all other classifiable injuries, 23 in total, the existing and revised standards would prevent 6 (26 percent) and 11 (48 percent) respectively. These injuries may not be representative of all noncave-in injuries since only the more serious accidents are investigated by OSHA. These more serious accidents are also more likely to be addressed by both the existing and revised standards. ERG therefore estimated that the existing standard would reduce all non-cave-in accidents by five percent and that the revised standard would reduce them by ten percent.

Based on the earlier baseline cave-in injury estimate of 805 annually and applying the 96 percent preventability estimate results in 773 preventable lost workday injuries per year due to cave-ins under either standard. For noncave-in related injuries it was estimated that the existing standard would prevent 1,104 (.05×22,071) and that the revised standard would prevent 2,207 (.1×22,071) lost workday injuries annually. The combined total is 1,909 lost workday injuries prevented per year or an overall injury prevention rate for the existing standard of 8.3 percent (based on a total of 22,676 injuries). Under the revised standard, the total reduction in lost workday injuries is 3,012 per year, or 13.2 percent.

Quantitative Estimation of Employee Benefits Due to Accident Reductions

The accident reductions attributable to a standard have a monetary value to the employee who would otherwise bear the occupational risk. This report uses estimates based on the willingness-to-pay approach to represent the dollar amount that employees would be willing to pay to reduce the statistical probability of a lost workday injury. Economic studies projecting these values show a high variability, but most estimates range between $23,000 and $64,000 [20]. OSHA has chosen $33,000 as a reasonable value for a lost workday injury [21, p. VI–10]. Based on the above injury preventability estimates the value of these lost workdays prevented would be approximately $33.0 million under full compliance with the existing standard and $99.4 million under full compliance with the revised standard.

Employer Benefits Due to Cost Savings from Accident Prevention

The elimination of a fatality or injury generates additional social benefits through the restoration of all productivity losses associated with an accident. These benefits are represented by the cost savings which occur to the firm which avoids the accident. The cost savings (or prevented losses) include the value of lost production time due to job interruption and delay, administrative, paperwork, and investigative costs associated with an accident, rehiring and retraining costs to replace a seriously injured or killed worker, medical costs, and costs of re-excavation (in the case of a cave-in) or other property loss. Estimates of these costs are presented in this section.

Several previous safety studies have examined the costs of work disruptions and other direct losses due to accidents. ERG selected one such study which is based on accident investigations in the construction industry. These research findings were used in estimating the cumulative benefits of the indirect benefits from accident reduction. The study selected was performed at The Construction Institute, Department of Civil Engineering, Stanford University (Levitt et al.) [31]. The authors studied 49 reports of lost workday and non-lost workday injuries. Only results for the former category are used here. Data were assembled on the following items:

1. Insurance company claims handling and administrative fees.
2. Cost of transporting the injured worker to a medical facility.
3. Wages paid to the injured worker for the time not worked.
4. Wages paid to other workers for the time not worked (work interrupted).
5. Cost of scheduling and funding overtime necessitated by the accident.
6. Cost of loss of crew efficiency.
7. Cost to train and orient a replacement worker.
8. Extra wage cost to rehabilitate the returning worker at a reduced capacity.
9. Costs to clean up, repair, or replace damage from the accident.
10. Cost of wages for supervision associated with the accident.
11. Costs for safety and clerical personnel to record and investigate the accident.

Costs of pain and suffering or other non-quantifiable elements were not included.

The work disruption costs and other losses were found to range from $90 to $24,900 for lost workday accidents. The mean losses for the lost workday injuries studied (25 of the sample of 49) was $5,380. Identical cost savings were assumed to apply to avoided fatalities. (It should be noted that even non-lost workday injuries, which have not been added to the totals here, have notable work disruption costs. The mean estimate of work disruption costs for a non-lost workday injury was $1,450.)

The cost savings attributable to the existing standard under an assumption of full compliance were estimated at $5,380 times 1,932 (the sum of 73 fatalities and 1,909 lost workday injuries), or $10.7 million. The cost savings for the revised standard were calculated at $5,380 times 3,086 (74 fatalities and 3,012 lost workday injuries), or $16.6 million.

Incremental Benefits of the Amended Standard

The benefits generated under the existing or revised standard consist of avoided fatalities, avoided lost workday injuries, and cost savings from avoided work disruptions due to accidents. Full compliance with the revised standard will prevent more fatalities (estimated at 1 per year), will prevent more lost workday injuries (estimated at 1,103 more per year) and will generate larger cost savings due to accident avoidance (estimated at $5.9 million in cost savings per year).

Incremental Costs

Preliminary Estimates

The changes to the current subpart P represent numerous clarifications and amendments that in most cases will increase the flexibility of and reduce the regulatory burden on private enterprise without impairing worker protection. On average, the amendment is expected to result in a net reduction in costs. However, particular provisions may result in cost increases for some firms.

There are few available published data on the safety costs related to excavation projects. Thus, for its Preliminary Regulatory Impact Assessment (PRIA) of the proposed standard, OSHA relied heavily upon the judgement of those people in the contracting business, since they would be in the best position to know the costs imposed by an OSHA regulation. These individuals clearly had no incentive to underestimate such costs. Cost questions were posed to the Associated General Contractors (AGC), who in turn queried a sample of its members (about two dozen contractors). None were able to provide precise estimates of either the absolute or relative costs of particular subpart P requirements. Similarly, a number of representatives of firms were contacted directly by OSHA and asked if they could estimate the percent of their excavating costs that stemmed directly from OSHA requirements; or conversely, how their costs would be affected were this particular regulation to disappear tomorrow. Once again, none could provide precise estimates, owing in part to the variety of jobs and circumstances. Only after further probing did industry representatives indicate that only under the most extreme circumstances would subpart P requirements account for 5 percent of total job costs.

In a further attempt to isolate these costs, all of the major publishers of construction industry cost indexes, as found in "Engineering News Record" [22], were contacted in an attempt to determine if either subpart P or safety costs generally were calculated separately in the compilation of costs. Of the 15 firms contacted, all stated that labor and materials costs were considered individually, but that all safety costs were absorbed within overhead costs and could not be separately identified. Items such as offsite wages, fringe benefits, financing costs, inventory, other administrative expenses, and profit are included in overhead costs. In addition, bids on major construction projects that had been published over several years in "Engineering News Record" [5] were examined to determine whether safety costs were a line item in the specifications. None were found. Based upon the above information, OSHA assumed that all safety costs do not exceed that portion of the costs represented by overhead. Moreover, the costs associated with subpart P are only one factor contributing to the total safety costs of an excavation job.

The most recent Deparment of Labor studies [23] of the distribution of construction contract costs for various types of construction projects found that for sewer line construction, overhead and profit accounted for 23.3 percent of the total contract costs. Before-tax profit alone accounts for over 10 percent of the total; all other overhead items account for the remaining 13 plus percent. From this remainder it was assumed that no more than 5 percent of the total project cost can be attributed to all safety items, only a portion of which is a direct result of complying with subpart P requirements.

There were approximately $12.42 billion in annual excavating revenues in 1982. OSHA assumed that 5 percent of this total represents costs imposed by the existing standard. Thus, OSHA's PRIA estimated that the cost of the existing standard was $621 million annually. Based on discussions with contractors and their representatives, OSHA's preliminary analysis estimated that the amendments would save between 2 and 7 percent of the current cost of subpart P. The estimated savings arising from the amendments therefore ranged between $12.42 million and $43.47 million to the economy as a whole.

Final Estimates

Under contract to OSHA, Eastern Research Group (ERG) [16] developed revised estimates of the cost of the existing and amended excavation standards based upon model projects. They examined sewer line installation trenching, utility hook-up trenching, foundation excavation for suburban office buildings and residential building excavation. They estimated the likely means of compliance under the two standards, and the soil types of these projects.

ERG estimated, based on Commerce Department data, that the total value of construction affected by the standard is $15.8 billion, the majority of which ($9.2 billion) is in sewer and highway trenches. Based upon OSHA inspection data, sewer and highway trenches were found to have the highest non-compliance rate with the existing standard. As shown in Table 2, they were estimated to have a 24 percent non-compliance rate, followed by utility hook-up trenches at 21 percent. ERG estimated that the greatest cost impact on non-complying firms would fall on suburban commercial and industrial building excavations, where a 26.5 percent cost increase would occur after complying with either the existing or the revised standard. After accounting for non-compliance rates, utility hook-ups as a group (complying firms included) were estimated to have the highest average percent increase in cost, at just under 3 percent. Costs in this sector were attributed to the relative inability to use sloping as a means of compliance with the standard, along with relatively little current usage of hydraulic shoring or trench boxes. Given the relative size of the sewer and highway trench sector, over half the costs of compliance for cave-in protection ($149 million per year) were expected to fall in this sector (see Table 3). Again, the majority of these costs were attributed to the added use of trench boxes, which reduce productivity. Suburban commercial and industrial building excavations were estimated to incur $79 million per year and utility hook-up projects $52 million per year in compliance costs to avoid cave-ins. In total, ERG estimated that cave-in protection would cost $332.0 million under the existing standard, and $289.0 under the revised standard.

TABLE 2.—AVERAGE PERCENTAGE COST INCREASES FOR ALL TRENCHING AND EXCAVATION PROJECTS

	Estimated non-compliance rate	Percentage cost increase for non-complying model projects		Average percentage increases for all projects	
		Existing standard	Revised standard	Existing standard	Revised standard
Sewer and highway trenches	0.24	8.7	6.7	2.0	1.5
Utility hook-ups	0.21	15.6	14.4	2.9	2.7
Suburban commercial and industrial building excavations and "other" excavations	0.10	26.5	26.5	2.1	2.1
Residential building excavations	0.05	21.3	21.3	0.9	0.9

Source: ERG estimates. The categories of urban building excavations, gas and other pipeline trenches, and shallow water line trenches were assumed to be in compliance.

VOL 54 ISS 209 OCT 31 1989 UMI

TABLE 3.—TOTAL COMPLIANCE COSTS FOR THE GENERAL CAVE-IN PROTECTION REQUIREMENTS

[$millions per year]

Project category	Estimated total value	Total cave-in protection compliance costs	
		Existing standard	Revised standard
Sewer and highway trenches [1]	9,200	[1] 188	[1] 149
Utility hook-ups	1,900	56	52
Suburban commercial and industrial building excavations and "other" excavations	3,700	79	79
Residential building excavations	1,000	9	9
Total	[2] 15,800	332	289

[1] Includes trenches for water systems greater than 5 ft. deep. Also includes $8 million in cave-in protection costs incurred due to soil compaction problems.

[2] The estimated total value shown here does not include the value of excavations for urban building projects, all of which were assumed to be in compliance.

Source: ERG estimates. The categories of urban building excavations, gas and other pipeline trenches, and shallow water line trenches were assumed to be in compliance.

ERG also estimated costs for the other provisions of the standard, including those related to inspections, hazardous atmospheres, warning systems for mobile equipment, traffic vests and means of access and egress from trenches. They estimated that these would cost $12.0 million to comply with the existing standard, and $17.0 million for the revised standard. Thus, as shown in table 4, ERG estimated that the total annual cost of compliance, figuring in current non-compliance, would be $344.0 million for the existing standard, and $306.0 million for the revised standard. ERG therefore estimated that the revised standard would save $38.0 million.

TABLE 4.—SUMMARY OF COMPLIANCE COSTS UNDER FULL COMPLIANCE WITH THE EXISTING AND PROPOSED STANDARD

[Dollar million per year]

Topic	Existing standard paragraphs(s) of part 1926	Annual cost [1]	Proposed standard paragraph(s) of part 1926	Annual costs [1]
Cave-in protection [2]	Various	332.0	Various	289.0
Access and egress; means of egress from trenches	652(u)	0.4	651(c)(2)	Neg.
Traffic vests	650(f)	0.1	651(d)	0.1
Exposure to suspended loads	650(u)	Neg	651(e)	Neg.
Warning system for mobile equipment	651(e)	1.1	651(f)	Neg.
Hazardous atmospheres	650(g), 651(v)	4.1	651(g)(1)	4.1
Store excavated materials 2 feet from edge	651(i)	Neg	651(j)(3)	Neg.
Inspections	650(f), 650(d)	6.3	651(a)	6.3
Paperwork	NA	0.0	Various	6.5
Total		344.0		306.0

[1] Includes some annualized equipment costs as derived for the general paragraph requirements.
[2] Includes incremental soil compaction costs.
Neg. = Negligible.
Source: ERG estimates.

In short, using a model, or 'micro' approach of estimating costs of compliance under both the existing and proposed standards, ERG projected a cost savings from the amendments to subpart P of approximately the same magnitude as the "high" preliminary estimate OSHA produced using an aggregate approach.

It should be noted, however, that ERG's analysis examined only the impact on firms that are out of compliance with the current and revised standards. It did not examine the potential for cost savings under the revised standard in firms already in compliance with the current standard. It is possible, therefore, that the revised standard may save more than $38.0 million.

In addition to these provisions, there was some concern expressed about the need to hire a certified engineer [24, 25, 26, 27]. The final standard, however, does not require the use of an engineer, but simply allows their participation as an alternative to using the tables provided in the standard. The rule therefore will impose no additional cost and will in fact generate cost savings for those firms that now use engineers.

Cost Effectiveness

Based on the cost estimates developed by ERG, the monetized savings of the revised standard to employers from less work disruption are estimated at $16.6 million, and the monetized benefits to employees from fewer non-fatal accidents are estimated at $99.4 million. To derive a cost-effectiveness ratio, these monetized benefits were subtracted from the total annualized costs of $306.0 million, and this total divided by the expected number of lives to be saved by the standard. Since full compliance with the revised standard is expected to save 74 lives per year, OSHA estimates that the net cost per life saved is about $2.6 million.

Feasibility

The above analysis indicates that compliance with the revised standard is easier and less expensive than compliance with the existing standard. Since the analysis also indicates that most firms are currently in compliance with the existing standard, OSHA concludes that compliance with the revised standard is both economically and technologically feasible for these firms.

OSHA indicates that additional contractors will comply with the revised standard for excavation work because of its increased flexibility and clarity as compared to the existing standard. Based upon the following analysis, OSHA also concludes that the aggregate economic impacts of achieving full compliance starting from a baseline of current industry practice are small, as are the impacts to representative excavation firms, and differential impacts on small firms.

Aggregate Economic Impacts

The aggregate economic impacts of enforcing full compliance with the subpart P regulations depend on the extent to which price hikes based on compliance cost increases would cause a decline in the demand for excavation services. Since excavation is an input in the production of construction activities, the demand for excavation services depends ultimately on the demand for construction output. Thus, unless cost-based price increases would result in a reduction in demand for construction outputs, no significant economic impacts will be borne by the affected industry.

Methodology. Increasing the price of excavation has two potential effects on the demand for such services. First, increasing the price of excavation relative to the price of other inputs may result in factor substitution away from excavation. The extent to which this would occur depends on the substitutability between excavation and other input factors used in the construction process. Second, an increase in excavation prices would result in an increase in the marginal costs of construction output and, therefore, an upward shift in the construction supply curve. This in turn would result in a higher equilibrium market price and, in general, a reduction in the market equilibrium level of output. Such a reduction in construction output would not result in a decline in the demand for excavation services.

It can be shown, in general, that the price elasticity of demand for excavation services depends directly on (1) the price elasticity of demand for construction output and (2) the share of the value of construction output accounted for by excavation; and varies inversely with the elasticity of substitution between excavation and other factors of production.

The degree of substitutability between inputs depends on the nature of the production function. In construction, the substitutability between excavation and other factors is quite low and, therefore, its impact on the demand elasticity for excavation is of a second order in magnitude. If the elasticity of substitution is assumed to be zero, the price elasticity of demand for excavation is equal to the price elasticity of demand for construction multiplied by the share of construction output accounted for by excavation activities.

This derived demand relationship is used to assess the economic impact of the estimated compliance cost increases. If the demand elasticity were zero, there would be no effect on output and industry revenues would increase in an amount equal to the cost increase projected in section 3. If the demand elasticity were greater than zero (in absolute value), output would decline and revenues would increase by less than the amount of the projected cost increases. The difference between those two levels represents the aggregate economic impact of full compliance. It represents the loss in revenues from that which would be necessary to support excavation work in a full compliance state at the existing level of activity.

Demand for construction. ERG [16] judged that several categories of excavation projects would be impacted by the subpart P regulations. These include work related to sewers, highways, and water supply systems, work associated with non-residential building construction and other non-building construction, and work associated with residential building construction. This category includes building excavations for basements and foundations and trenching for utility hook-ups. The demand characteristics of each of these three construction categories is considered below.

Highway, sewer, and water system construction. Expenditures for construction projects in this category are, as a rule, publicly financed. For this reason, decisions regarding the appropriate level of such investments are not made in the private marketplace. Any relationship between the price (cost) of such investments and the level of demand depends, therefore, more on political considerations than on the factors that determine demand for privately produced goods and services.

In the case of highways, no output price exists. Thus, no simple relationship can be specified between the level of construction expenditures and the price of such investments. The cost of sewers and water systems investments is often embodied in a sewer or water charge, which is in effect a "price". In the absence of a perfect political system, decisions regarding the level of water and sewer investments will not reflect a price influence in accordance with demand theory constraints.

These considerations imply that the effect of small cost changes on the level of construction investments in this category would not be significant, a conclusion reinforced by econometric analyses of expenditures for these types of construction. For example, the Brookings Econometric Model of the United States does not include any price or cost variables in its equations forecasting public expenditures for highways or sewer and water systems. For the purposes of their study on excavating, therefore, ERG concluded that the price elasticity of demand for these construction categories is not significantly different from zero.

Non-Residential Building Construction and Other Non-Building Construction. Included in this category are commercial and industrial building construction and "other" non-building construction (highways, sewer systems, water supply facilities, gas and other pipelines). In this case, the outputs of construction activity (e.g., commercial buildings) are themselves inputs into the production of other services (e.g., services that require commercial building space). Thus the elasticity of demand for the construction output is related to (1) the price elasticity of demand for the final service and (2) the importance of the costs of buildings or other construction in the total costs of the final service. Since the cost of the building is likely a small factor in affecting the demand for the service, the price elasticity of demand for these types of construction is likely to be small. For similar reasons, the derived demand for excavation activities will be another order of magnitude smaller. Thus, ERG concluded that changes in costs of excavation activities in the ranges projected in the cost analysis will not have significant impacts on the expenditures for construction projects falling within this category.

Residential Construction. Expenditures for this category of construction activities represent investments in the stock of single and multi-family housing. A number of studies have examined the price sensitivity of the demand for housing services. Depending on the data source and estimation methodology, these studies have estimated the price elasticity of demand for housing services at values ranging from −0.4 to −1.0 [28].

In the long run, it is reasonable to expect the demand for the stock of housing to reflect similar levels of price

VOL 54 ISS 209 OCT 31 1989 UMI

sensitivity. Depending on the rate of market adjustment, short-run price sensitivity should be lower. It is also important to consider that housing investments include modifications, renovation, and depreciation (negative investment) to the existing stock as well as new housing construction. For this reason, the elasticity of demand for new residential construction is likely to be lower than that for residential construction as a whole. Thus, for purposes of the economic impact analysis, ERG assumed a price elasticity of −0.5, which is at the lower end of the spectrum of estimated price elasticities.

Aggregate Economic Impacts. Based on the magnitude of the elasticity developed above, and the small portion of each construction activity composed of excavation work, ERG concluded that no significant impacts should be expected from compliance-related cost increases for trenches for sewers, highways, and water supply systems and for excavations for commercial and industrial buildings and other non-building excavations.

Only in the case of housing construction does the possibility of a significant impact exist for excavation work for basements and foundations and trench work for residential utility hook-ups. Excavation is estimated to represent 0.5 percent of residential construction and utility hook-ups are estimated to account for 1.0 percent of residential construction. Combining these shares with the estimated construction price elasticity of −0.5 suggests an elasticity of demand with respect to price of −.003 for residential construction excavations and −.005 for utility trenches.

Economic impacts on excavation contractors will occur to the extent that cost increases exceed revenue increases. The estimated changes in average project costs due to compliance are 0.9 percent for residential foundation excavations and 2.9 percent for utility hook-ups under the more costly existing standard. The revenues from residential foundation excavations and utility hook-up trenches are $1 billion and $1.35 billion, respectively. The project cost increases (at current levels of activity) will generate aggregate cost increases of $9.0 million and $39.2 million in these two sectors.

Revenue increases are derived by applying the revenue elasticity (which is equal to one plus the price elasticity) to the cost increases. This calculation indicates that the revenue increases fall short of the cost increases by approximately $27,000 in residential excavations and $198,000 in utility hook-up trenches.

Given the magnitude of these estimates in comparison to total industry revenues, OSHA believes that no significant impacts on the construction industry will result from enforcing full compliance with either version of the Subpart P standard. Only in residential construction does the possibility of measurable impacts exist. Even in this case, however, the estimated aggregate impacts are less than the value of the construction work performed by one typical excavation contractor. As a result, OSHA concludes that full compliance with the revised standard is economically feasible.

Regulatory Flexibility Certification

Pursuant to the Regulatory Flexibility Act of 1980 (Pub. L. 95–353, 94 Stat. 1164 (5 U.S.C. 60 et seq.)), OSHA has assessed the impact of the revisions and concludes that they would not adversely affect a significant number of small entities.

As is generally known, the burden of regulation, especially the legal and paperwork burdens, can fall disproportionately on small enterprises. This occurs primarily because larger firms often have the legal and clerical support in place to handle the burdens imposed by government regulation. ERG concluded that the sector most likely to incur some revenue loss is residential construction. Firms providing excavation services for this sector are among the smallest firms in the construction industry. Nevertheless, ERG concluded that the impacts from revenue loss will be minor.

In general, the amended standard will not generate differential impacts on small firms, but there may be instances in which full compliance will be more difficult for smaller firms. Full compliance with the Subpart P standards will sometimes require contractors to utilize trench boxes or more expensive means of cave-in protection. This occurs when there is not sufficient space for sloping of the trench sides, or where uneven trench sides may make the use of hydraulic shores unwieldy. For the smallest contractors, compliance through these methods may be difficult because they lack adequate equipment capabilities, such as a backhoe of sufficient size to pull a trench box. These inequities among firms are ameliorated to the extent that firms are able to rent the necessary equipment. Technological impacts (e.g., light-weight trench boxes) also help. Rental costs may cut into profit margins, however, and as a result small firms may prefer not to participate in some excavation jobs. Overall, OSHA believes that these disadvantages are minor and will be less evident under full compliance with the revised standard than with the existing standard because of the additional flexibility permitted under the former.

The primary point of concern registered by smaller contractors dealt with the possibility of having to have a qualified engineer design cave-in protection. OSHA's **Federal Register** notice on June 16, 1987 asked "Should OSHA limit all design responsibility to a "qualified engineer?" In reponse, several commentors suggested this would place a disproportionate impact on small contractors. The Underground Contractors Association of Northern California stated that:

> We feel that the most severe impact of this requirement would be on small, minority and disadvantaged businesses. From a competitive standpoint, larger firms would hire someone in-house and would integrate the cost into their overhead more effectively than the small business who would be required to retain a consultant on a very expensive hourly contract rate [29, p. 3].

As stated earlier, however, employers have several options to choose from in selecting cave-in protection. The Washington Metropolitan Area Construction Safety Association correctly stated, "With all the options provided, the use of a [registered professional] engineer should seldom if ever be required" [30].

Other impacts of the revised standard will not create unusual compliance problems for small firms. The revised standard does not explicitly or implicitly require that small firms have substantial organizational infrastructure for providing training or other safety-oriented administrative controls. Nearly all compliance can be achieved without a change in normal operating procedures. The major compliance issue, cave-in protection, can clearly be provided by small firms in normal operating circumstances.

Similarly, it may be true that the larger excavating firms are less affected by the requirements than their smaller rivals because the very size of the larger firms may have prompted the adoption of companywide construction practices that meet or exceed the minimum requirements. It is therefore likely that the amendments, which serve principally to reduce the cost of compliance by increasing the flexibility of the regulations and clarifying their intent, will also benefit smaller firms. Thus, clarifying the standard and explicitly stating the flexibility and choice available to firms will reduce compliance costs to both small and large firms.

Some portion of these savings will pass through to the consumers or to the state and local governments that often are the purchasers of excavation projects. In sum, economy-wide savings from the revision are estimated to be $38.0 million. Thus, the overall effect on prices, output, and employment in the U.S. economy will be small, but favorable. For these reasons, OSHA concludes that the revised standard is unlikely to have an adverse impact on a significant number of small excavation companies.

Additional Impact Measures

Impacts on State and Local Governments. The value of new construction financed by state and local governments totaled approximately $55 billion in 1985 [27, Table S–7]. ERG estimated the incremental compliance cost expenditure on sewer and highway projects at $188 million under the existing standard. It will be slightly less under the revised standard. This equals 0.34 percent of state and local construction investments.

Employment. The employment impacts of achieving compliance with the existing or revised standard are dependent upon the general economic impacts discussed in previous sections. OSHA does not expect significant impacts for such firms and believes the employment impacts will be negligible.

Foreign Trade. Changes to the excavation standard or enforcement of full compliance with this standard will not impact U.S. foreign trade. The OSHA standard is applicable to excavation work performed in the U.S. and there is no possibility of substitution to lower cost foreign excavation services.

Environmental Impacts

The revisions to subpart P have been reviewed in accordance with the requirements of the National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4231 et seq.), the Regulations of the Council on Environmental Quality (CEQ) (40 CFR part 1500), and OSHA's DOL NEPA Procedures (29 CFR part 11). As a result of this review, the Assistant Secretary for OSHA has determined that the amended standard would have no significant environmental impact.

Although safety standards rarely influence air, water, or soil quality, plant or animal life, or the use of land or other aspects of the environment, it is appropriate to examine whether the revisions to the OSHA standard on excavation (29 CFR part 1926, subpart P) will alter the environment external to the workplace. Excavation can have significant effects upon local environments. For example, erosion, runoff, and similar actions can result in environmental degradation. These potential impacts can be more or less severe depending upon how and where the excavation is dug, how long it is left open, the disposition of the earth that is removed, etc. OSHA has determined, however, that the revisions to subpart P consist primarily of clarifications in work practices and procedures and are unlikely to have significant impacts on any of these activities; therefore, these revisions will have no significant environmental effects.

V. OMB Approval Under the Paperwork Reduction Act

This subpart contains a collection of information in § 1926.652(b) (3) and (4), and (c) (2), (3) and (4). These provisions require employers to maintain a copy of protective systems designs, including tabulated data and manufacturers data at the worksite and to make these designs or data available to the Secretary. OMB has reviewed these collections and approved them through September 30, 1992. The approval number is 1218–0137.

Public reporting burden for this collection of information is estimated to average .5 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Office of Information Management, Department of Labor, Room N–1301, 200 Constitution Avenue, NW., Washington, DC 20210; and to the Office of Management and Budget Paperwork Reduction Project (1218–0137), Washington, DC 20503.

VI. State Plan Standards

The 25 states with their own OSHA-approved occupational safety and health plans must adopt a comparable standard within six months of the publication date of the final rule or show OSHA why there is no need for action, e.g. because an existing standard covering this area is already "at least as effective" as the revised federal standard. These states are: Alaska, Arizona, California, Connecticut (for state and local government employees only), Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, New York (for state and local government employees only), North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Virgin Islands, Washington and Wyoming.

VII. Federalism

The Final Rule has been reviewed in accordance with Executive Order 12612 (52 FR 41685; October 30, 1987) regarding Federalism. This Order requires that agencies, to the extent possible, refrain from limiting state policy options, consult with states prior to taking any actions that would restrict state policy options, and take such actions only when there is clear constitutional authority and the presence of a problem of national scope. The Order provides for preemption of state law only if there is a clear Congressional intent for the agency to do so. Any such preemption is to be limited to the extent possible.

Section 18 of the Occupational Safety and Health Act (OSH Act), expresses Congress' clear intent to preempt state laws relating to issues with respect to which Federal OSHA has promulgated occupational safety or health standards. Under the OSH Act; a state can avoid preemption only if it submits, and obtains Federal approval of, a plan for the development of such standards and their enforcement. Occupational safety and health standards developed by such Plan States must, among other things, be at least as effective in providing safe and healthful employment and places of employment as the Federal standards. Where such standards are applicable to products distributed or used in interstate commerce, they may not unduly burden commerce and must be justified by compelling local conditions, *see* section 18(c)(2).

The Federal standard on excavations addresses hazards which are not unique to any one state or region of the country. Nonetheless, states with occupational safety and health plans approved under section 18 of the OSH Act will be able to develop their own state standards to deal with any special problems which might be encountered in a particular state. Moreover, because this standard is written in general, performance-oriented terms, there is considerable flexibility for state plans to require, and for affect employers to use, methods of compliance which are appropriate to the working conditions covered by the standard.

In brief, this Final Rule addresses a clear national problem related to occupational safety and health in the construction industry. Those states which have elected to participate under section 18 of the OSH Act are not preempted this standard, and will be able to address any special conditions within the framework of the Federal Act while ensuring that the state standards are at least as effective as that standard.

VIII. Authority

This document was prepared under the direction of Gerard F. Scannell, Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210.

Accordingly, pursuant to sections 4, 6(b) and 8(c) of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657), section 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C. 333), Secretary of Labor's Order No. 9–83 (48 FR 35736), and 29 CFR part 1911, part 1926 to title 29 of the Code of Federal Regulations is amended as set forth below.

List of Subjects in 29 CFR Part 1926

Construction safety, Construction industry, Excavations, Occupational safety and health, Protective equipment, Safety.

Signed at Washington, DC, this 20th day of October, 1989.

Gerard F. Scannell,

Assistant Secretary of Labor.

Part 1926 of 29 CFR is amended as follows:

PART 1926—[AMENDED]

Subpart M—[Amended]

1. By revising the authority citation for subpart M of part 1926 to read as follows:

Authority: Sec. 107, Contract Work Hours and Safety Standards Act (Construction Safety Act) (40 U.S.C. 333); Secs. 4, 6, 8, Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657); Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), or 9–83 (48 FR 35736), as applicable, and 29 CFR part 1911.

2. By revising subpart P of part 1926 to read as follows:

Subpart P—Excavations

Sec.

1926.650 Scope, application, and definitions applicable to this subpart.
1926.651 General requirements.
1926.652 Requirements for protective systems.

Appendix A to Subpart P—Soil Classification

Appendix B to Subpart P—Sloping and Benching

Appendix C to Subpart P—Timber Shoring for Trenches

Appendix D to Subpart P—Aluminum Hydraulic Shoring for Trenches

Appendix E to Subpart P—Alternatives to Timber Shoring

Appendix F to Subpart P—Selection of Protective Systems

Subpart P—Excavations

Authority: Sec. 107, Contract Worker Hours and Safety Standards Act (Construction Safety Act) (40 U.S.C. 333); Secs. 4, 6, 8, Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657); Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), or 9–83 (48 FR 35736), as applicable, and 29 CFR part 1911.

§ 1926.650 Scope, application, and definitions applicable to this subpart.

(a) *Scope and application.* This subpart applies to all open excavations made in the earth's surface. Excavations are defined to include trenches.

(b) *Definitions applicable to this subpart.*

Accepted engineering practices means those requirements which are compatible with standards of practice required by a registered professional engineer.

Aluminum Hydraulic Shoring means a pre-engineered shoring system comprised of aluminum hydraulic cylinders (crossbraces) used in conjunction with vertical rails (uprights) or horizontal rails (walers). Such system is designed, specifically to support the sidewalls of an excavation and prevent cave-ins.

Bell-bottom pier hole means a type of shaft or footing excavation, the bottom of which is made larger than the cross section above to form a belled shape.

Benching (Benching system) means a method of protecting employees from cave-ins by excavating the sides of an excavation to form one or a series of horizontal levels or steps, usually with vertical or near-vertical surfaces between levels.

Cave-in means the separation of a mass of soil or rock material from the side of an excavation, or the loss of soil from under a trench shield or support system, and its sudden movement into the excavation, either by falling or sliding, in sufficient quantity so that it could entrap, bury, or otherwise injure and immobilize a person.

Competent person means one who is capable of identifying existing and predictable hazards in the surroundings, or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate them.

Cross braces mean the horizontal members of a shoring system installed perpendicular to the sides of the excavation, the ends of which bear against either uprights or wales.

Excavation means any man-made cut, cavity, trench, or depression in an earth surface, formed by earth removal.

Faces or *sides* means the vertical or inclined earth surfaces formed as a result of excavation work.

Failure means the breakage, displacement, or permanent deformation of a structural member or connection so as to reduce its structural integrity and its supportive capabilities.

Hazardous atmosphere means an atmosphere which by reason of being explosive, flammable, poisonous, corrosive, oxidizing, irritating, oxygen deficient, toxic, or otherwise harmful, may cause death, illness, or injury.

Kickout means the accidental release or failure of a cross brace.

Protective system means a method of protecting employees from cave-ins, from material that could fall or roll from an excavation face or into an excavation, or from the collapse of adjacent structures. Protective systems include support systems, sloping and benching systems, shield systems, and other systems that provide the necessary protection.

Ramp means an inclined walking or working surface that is used to gain access to one point from another, and is constructed from earth or from structural materials such as steel or wood.

Registered Professional Engineer means a person who is registered as a professional engineer in the state where the work is to be performed. However, a professional engineer, registered in any state is deemed to be a "registered professional engineer" within the meaning of this standard when approving designs for "manufactured protective systems" or "tabulated data" to be used in interstate commerce.

Sheeting means the members of a shoring system that retain the earth in position and in turn are supported by other members of the shoring system.

Shield (Shield system) means a structure that is able to withstand the forces imposed on it by a cave-in and thereby protect employees within the structure. Shields can be permanent structures or can be designed to be portable and moved along as work progresses. Additionally, shields can be either premanufactured or job-built in accordance with § 1926.652 (c)(3) or (c)(4). Shields used in trenches are usually referred to as "trench boxes" or "trench shields."

Shoring (Shoring system) means a structure such as a metal hydraulic, mechanical or timber shoring system that supports the sides of an excavation and which is designed to prevent cave-ins.

Sides. See "Faces."

Sloping (Sloping system) means a method of protecting employees from cave-ins by excavating to form sides of an excavation that are inclined away from the excavation so as to prevent cave-ins. The angle of incline required to prevent a cave-in varies with differences in such factors as the soil type, environmental conditions of exposure, and application of surcharge loads.

Stable rock means natural solid mineral material that can be excavated with vertical sides and will remain intact while exposed. Unstable rock is considered to be stable when the rock material on the side or sides of the excavation is secured against caving-in or movement by rock bolts or by another protective system that has been designed by a registered professional engineer.

Structural ramp means a ramp built of steel or wood, usually used for vehicle access. Ramps made of soil or rock are not considered structural ramps.

Support system means a structure such as underpinning, bracing, or shoring, which provides support to an adjacent structure, underground

VOL 54 ISS 209 OCT 31 1989 UMI

installation, or the sides of an excavation.

Tabulated data means tables and charts approved by a registered professional engineer and used to design and construct a protective system.

Trench (Trench excavation) means a narrow excavation (in relation to its length) made below the surface of the ground. In general, the depth is greater than the width, but the width of a trench (measured at the bottom) is not greater than 15 feet (4.6 m). If forms or other structures are installed or constructed in an excavation so as to reduce the dimension measured from the forms or structure to the side of the excavation to 15 feet (4.6 m) or less (measured at the bottom of the excavation), the excavation is also considered to be a trench.

Trench box. See "Shield."

Trench shield. See "Shield."

Uprights means the vertical members of a trench shoring system placed in contact with the earth and usually positioned so that individual members do not contact each other. Uprights placed so that individual members are closely spaced, in contact with or interconnected to each other, are often called "sheeting."

Wales means horizontal members of a shoring system placed parallel to the excavation face whose sides bear against the vertical members of the shoring system or earth.

§ 1926.651 General requirements.

(a) *Surface encumbrances.* All surface encumbrances that are located so as to create a hazard to employees shall be removed or supported, as necessary, to safeguard employees.

(b) *Underground installations.* (1) The estimated location of utility installations, such as sewer, telephone, fuel, electric, water lines, or any other underground installations that reasonably may be expected to be encountered during excavation work, shall be determined prior to opening an excavation.

(2) Utility companies or owners shall be contacted within established or customary local response times, advised of the proposed work, and asked to establish the location of the utility underground installations prior to the start of actual excavation. When utility companies or owners cannot respond to a request to locate underground utility installations within 24 hours (unless a longer period is required by state or local law), or cannot establish the exact location of these installations, the employer may proceed, provided the employer does so with caution, and provided detection equipment or other acceptable means to locate utility installations are used.

(3) When excavation operations approach the estimated location of underground installations, the exact location of the installations shall be determined by safe and acceptable means.

(4) While the excavation is open, underground installations shall be protected, supported or removed as necessary to safeguard employees.

(c) *Access and egress*—(1) *Structural ramps.* (i) Structural ramps that are used solely by employees as a means of access or egress from excavations shall be designed by a competent person. Structural ramps used for access or egress of equipment shall be designed by a competent person qualified in structural design, and shall be constructed in accordance with the design.

(ii) Ramps and runways constructed of two or more structural members shall have the structural members connected together to prevent displacement.

(iii) Structural members used for ramps and runways shall be of uniform thickness.

(iv) Cleats or other appropriate means used to connect runway structural members shall be attached to the bottom of the runway or shall be attached in a manner to prevent tripping.

(v) Structural ramps used in lieu of steps shall be provided with cleats or other surface treatments on the top surface to prevent slipping.

(2) *Means of egress from trench excavations.* A stairway, ladder, ramp or other safe means of egress shall be located in trench excavations that are 4 feet (1.22 m) or more in depth so as to require no more than 25 feet (7.62 m) of lateral travel for employees.

(d) *Exposure to vehicular traffic.* Employees exposed to public vehicular traffic shall be provided with, and shall wear, warning vests or other suitable garments marked with or made of reflectorized or high-visibility material.

(e) *Exposure to falling loads.* No employee shall be permitted underneath loads handled by lifting or digging equipment. Employees shall be required to stand away from any vehicle being loaded or unloaded to avoid being struck by any spillage or falling materials. Operators may remain in the cabs of vehicles being loaded or unloaded when the vehicles are equipped, in accordance with § 1926.601(b)(6), to provide adequate protection for the operator during loading and unloading operations.

(f) *Warning system for mobile equipment.* When mobile equipment is operated adjacent to an excavation, or when such equipment is required to approach the edge of an excavation, and the operator does not have a clear and direct view of the edge of the excavation, a warning system shall be utilized such as barricades, hand or mechanical signals, or stop logs. If possible, the grade should be away from the excavation.

(g) *Hazardous atmospheres*—(1) *Testing and controls.* In addition to the requirements set forth in subparts D and E of this part (29 CFR 1926.50–1926.107) to prevent exposure to harmful levels of atmospheric contaminants and to assure acceptable atmospheric conditions, the following requirements shall apply:

(i) Where oxygen deficiency (atmospheres containing less than 19.5 percent oxygen) or a hazardous atmosphere exists or could reasonably be expected to exist, such as in excavations in landfill areas or excavations in areas where hazardous substances are stored nearby, the atmospheres in the excavation shall be tested before employees enter excavations greater than 4 feet (1.22 m) in depth.

(ii) Adequate precautions shall be taken to prevent employee exposure to atmospheres containing less than 19.5 percent oxygen and other hazardous atmospheres. These precautions include providing proper respiratory protection or ventilation in accordance with subparts D and E of this part respectively.

(iii) Adequate precaution shall be taken such as providing ventilation, to prevent employee exposure to an atmosphere containing a concentration of a flammable gas in excess of 20 percent of the lower flammable limit of the gas.

(iv) When controls are used that are intended to reduce the level of atmospheric contaminants to acceptable levels, testing shall be conducted as often as necessary to ensure that the atmosphere remains safe.

(2) *Emergency rescue equipment.* (i) Emergency rescue equipment, such as breathing apparatus, a safety harness and line, or a basket stretcher, shall be readily available where hazardous atmospheric conditions exist or may reasonably be expected to develop during work in an excavation. This equipment shall be attended when in use.

(ii) Employees entering bell-bottom pier holes, or other similar deep and confined footing excavations, shall wear a harness with a life-line securely attached to it. The lifeline shall be separate from any line used to handle materials, and shall be individually attended at all times while the employee wearing the lifeline is in the excavation.

(h) *Protection from hazards associated with water accumulation.* (1) Employees shall not work in excavations in which there is accumulated water, or in excavations in which water is accumulating, unless adequate precautions have been taken to protect employees against the hazards posed by water accumulation. The precautions necessary to protect employees adequately vary with each situation, but could include special support or shield systems to protect from cave-ins, water removal to control the level of accumulating water, or use of a safety harness and lifeline.

(2) If water is controlled or prevented from accumulating by the use of water removal equipment, the water removal equipment and operations shall be monitored by a competent person to ensure proper operation.

(3) If excavation work interrupts the natural drainage of surface water (such as streams), diversion ditches, dikes, or other suitable means shall be used to prevent surface water from entering the excavation and to provide adequate drainage of the area adjacent to the excavation. Excavations subject to runoff from heavy rains will require an inspection by a competent person and compliance with paragraphs (h)(1) and (h)(2) of this section.

(i) *Stability of adjacent structures.* (1) Where the stability of adjoining buildings, walls, or other structures is endangered by excavation operations, support systems such as shoring, bracing, or underpinning shall be provided to ensure the stability of such structures for the protection of employees.

(2) Excavation below the level of the base or footing of any foundation or retaining wall that could be reasonably expected to pose a hazard to employees shall not be permitted except when:

(i) A support system, such as underpinning, is provided to ensure the safety of employees and the stability of the structure; or

(ii) The excavation is in stable rock; or

(iii) A registered professional engineer has approved the determination that the structure is sufficently removed from the excavation so as to be unaffected by the excavation activity; or

(iv) A registered professional engineer has approved the determination that such excavation work will not pose a hazard to employees.

(3) Sidewalks, pavements, and appurtenant structure shall not be undermined unless a support system or another method of protection is provided to protect employees from the possible collapse of such structures.

(j) *Protection of employees from loose rock or soil.* (1) Adequate protection shall be provided to protect employees from loose rock or soil that could pose a hazard by falling or rolling from an excavation face. Such protection shall consist of scaling to remove loose material; installation of protective barricades at intervals as necessary on the face to stop and contain falling material; or other means that provide equivalent protection.

(2) Employees shall be protected from excavated or other materials or equipment that could pose a hazard by falling or rolling into excavations. Protection shall be provided by placing and keeping such materials or equipment at least 2 feet (.61 m) from the edge of excavations, or by the use of retaining devices that are sufficient to prevent materials or equipment from falling or rolling into excavations, or by a combination of both if necessary.

(k) *Inspections.* (1) Daily inspections of excavations, the adjacent areas, and protective systems shall be made by a competent person for evidence of a situation that could result in possible cave-ins, indications of failure of protective systems, hazardous atmospheres, or other hazardous conditions. An inspection shall be conducted by the competent person prior to the start of work and as needed throughout the shift. Inspections shall also be made after every rainstorm or other hazard increasing occurrence. These inspections are only required when employee exposure can be reasonably anticipated.

(2) Where the competent person finds evidence of a situation that could result in a possible cave-in, indications of failure of protective systems, hazardous atmospheres, or other hazardous conditions, exposed employees shall be removed from the hazardous area until the necessary precautions have been taken to ensure their safety.

(l) *Fall protection.* (1) Where employees or equipment are required or permitted to cross over excavations, walkways or bridges with standard guardrails shall be provided.

(2) Adequate barrier physical protection shall be provided at all remotely located excavations. All wells, pits, shafts, etc., shall be barricaded or covered. Upon completion of exploration and similar operations, temporary wells, pits, shafts, etc., shall be backfilled.

§ 1926.652 Requirements for protective systems.

(a) *Protection of employees in excavations.* (1) Each employee in an excavation shall be protected from cave-ins by an adequate protective system designed in accordance with paragraph (b) or (c) of this section except when:

(i) Excavations are made entirely in stable rock; or

(ii) Excavations are less than 5 feet (1.52m) in depth and examination of the ground by a competent person provides no indication of a potential cave-in.

(2) Protective systems shall have the capacity to resist without failure all loads that are intended or could reasonably be expected to be applied or transmitted to the system.

(b) *Design of sloping and benching systems.* The slopes and configurations of sloping and benching systems shall be selected and constructed by the employer or his designee and shall be in accordance with the requirements of paragraph (b)(1); or, in the alternative, paragraph (b)(2); or, in the alternative, paragraph (b)(3), or, in the alternative, paragraph (b)(4), as follows:

(1) *Option (1)—Allowable configurations and slopes.* (i) Excavations shall be sloped at an angle not steeper than one and one-half horizontal to one vertical (34 degrees measured from the horizontal), unless the employer uses one of the other options listed below.

(ii) Slopes specified in paragraph (b)(1)(i) of this section, shall be excavated to form configurations that are in accordance with the slopes shown for Type C soil in Appendix B to this subpart.

(2) *Option (2)—Determination of slopes and configurations using Appendices A and B.* Maximum allowable slopes, and allowable configurations for sloping and benching systems, shall be determined in accordance with the conditions and requirements set forth in appendices A and B to this subpart.

(3) *Option (3)—Designs using other tabulated data.* (i) Designs of sloping or benching systems shall be selected from and be in accordance with tabulated data, such as tables and charts.

(ii) The tabulated data shall be in written form and shall include all of the following:

(A) Identification of the parameters that affect the selection of a sloping or benching system drawn from such data;

(B) Identification of the limits of use of the data, to include the magnitude and configuration of slopes determined to be safe;

BEST COPY AVAILABLE

VOL 54 ISS 209 OCT 31 1989 UMI

(C) Explanatory information as may be necessary to aid the user in making a correct selection of a protective system from the data.

(iii) At least one copy of the tabulated data which identifies the registered professional engineer who approved the data, shall be maintained at the jobsite during construction of the protective system. After that time the data may be stored off the jobsite, but a copy of the data shall be made available to the Secretary upon request.

(4) *Option (4)—Design by a registered professional engineer.* (i) Sloping and benching systems not utilizing Option (1) or Option (2) or Option (3) under paragraph (b) of this section shall be approved by a registered professional engineer.

(ii) Designs shall be in written form and shall include at least the following:

(A) The magnitude of the slopes that were determined to be safe for the particular project;

(B) The configurations that were determined to be safe for the particular project; and

(C) The identity of the registered professional engineer approving the design.

(iii) At least one copy of the design shall be maintained at the jobsite while the slope is being constructed. After that time the design need not be at the jobsite, but a copy shall be made available to the Secretary upon request.

(c) *Design of support systems, shield systems, and other protective systems.* Designs of support systems shield systems, and other protective systems shall be selected and constructed by the employer or his designee and shall be in accordance with the requirements of paragraph (c)(1); or, in the alternative, paragraph (c)(2); or, in the alternative, paragraph (c)(3); or, in the alternative, paragraph (c)(4) as follows:

(1) *Option (1)—Designs using appendices A, C and D.* Designs for timber shoring in trenches shall be determined in accordance with the conditions and requirements set forth in appendices A and C to this subpart. Designs for aluminum hydraulic shoring shall be in accordance with paragraph (c)(2) of this section, but if manufacturer's tabulated data cannot be utilized, designs shall be in accordance with appendix D.

(2) *Option (2)—Designs Using Manufacturer's Tabulated Data.* (i) Design of support systems, shield systems, or other protective systems that are drawn from manufacturer's tabulated data shall be in accordance with all specifications, recommendations, and limitations issued or made by the manufacturer.

(ii) Deviation from the specifications, recommendations, and limitations issued or made by the manufacturer shall only be allowed after the manufacturer issues specific written approval.

(iii) Manufacturer's specifications, recommendations, and limitations, and manufacturer's approval to deviate from the specifications, recommendations, and limitations shall be in written form at the jobsite during construction of the protective system. After that time this data may be stored off the jobsite, but a copy shall be made available to the Secretary upon request.

(3) *Option (3)—Designs using other tabulated data.* (i) Designs of support systems, shield systems, or other protective systems shall be selected from and be in accordance with tabulated data, such as tables and charts.

(ii) The tabulated data shall be in written form and include all of the following:

(A) Identification of the parameters that affect the selection of a protective system drawn from such data;

(B) Identification of the limits of use of the data;

(C) Explanatory information as may be necessary to aid the user in making a correct selection of a protective system from the data.

(iii) At least one copy of the tabulated data, which identifies the registered professional engineer who approved the data, shall be maintained at the jobsite during construction of the protective system. After that time the data may be stored off the jobsite, but a copy of the data shall be made available to the Secretary upon request.

(4) *Option (4)—Design by a registered professional engineer.* (i) Support systems, shield systems, and other protective systems not utilizing Option 1, Option 2 or Option 3, above, shall be approved by a registered professional engineer.

(ii) Designs shall be in written form and shall include the following:

(A) A plan indicating the sizes, types, and configurations of the materials to be used in the protective system; and

(B) The identity of the registered professional engineer approving the design.

(iii) At least one copy of the design shall be maintained at the jobsite during construction of the protective system. After that time, the design may be stored off the jobsite, but a copy of the design shall be made available to the Secretary upon request.

(d) *Materials and equipment.* (1) Materials and equipment used for protective systems shall be free from damage or defects that might impair their proper function.

(2) Manufactured materials and equipment used for protective systems shall be used and maintained in a manner that is consistent with the recommendations of the manufacturer, and in a manner that will prevent employee exposure to hazards.

(3) When material or equipment that is used for protective systems is damaged, a competent person shall examine the material or equipment and evaluate its suitability for continued use. If the competent person cannot assure the material or equipment is able to support the intended loads or is otherwise suitable for safe use, then such material or equipment shall be removed from service, and shall be evaluated and approved by a registered professional engineer before being returned to service.

(e) *Installation and removal of support*—(1) *General.* (i) Members of support systems shall be securely connected together to prevent sliding, falling, kickouts, or other predictable failure.

(ii) Support systems shall be installed and removed in a manner that protects employees from cave-ins, structural collapses, or from being struck by members of the support system.

(iii) Individual members of support systems shall not be subjected to loads exceeding those which those members were designed to withstand.

(iv) Before temporary removal of individual members begins, additional precautions shall be taken to ensure the safety of employees, such as installing other structural members to carry the loads imposed on the support system.

(v) Removal shall begin at, and progress from, the bottom of the excavation. Members shall be released slowly so as to note any indication of possible failure of the remaining members of the structure or possible cave-in of the sides of the excavation.

(vi) Backfilling shall progress together with the removal of support systems from excavations.

(2) *Additional requirements for support systems for trench excavations.* (i) Excavation of material to a level no greater than 2 feet (.61 m) below the bottom of the members of a support system shall be permitted, but only if the system is designed to resist the forces calculated for the full depth of the trench, and there are no indications while the trench is open of a possible loss of soil from behind or below the bottom of the support system.

(ii) Installation of a support system shall be closely coordinated with the excavation of trenches.

(f) *Sloping and benching systems.* Employees shall not be permitted to work on the faces of sloped or benched excavations at levels above other employees except when employees at the lower levels are adequately protected from the hazard of falling, rolling, or sliding material or equipment.

(g) *Shield systems*—(1) *General.* (i) Shield systems shall not be subjected to loads exceeding those which the system was designed to withstand.

(ii) Shields shall be installed in a manner to restrict lateral or other hazardous movement of the shield in the event of the application of sudden lateral loads.

(iii) Employees shall be protected from the hazard of cave-ins when entering or exiting the areas protected by shields.

(iv) Employees shall not be allowed in shields when shields are being installed, removed, or moved vertically.

(2) *Additional requirement for shield systems used in trench excavations.* Excavations of earth material to a level not greater than 2 feet (.61 m) below the bottom of a shield shall be permitted, but only if the shield is designed to resist the forces calculated for the full depth of the trench, and there are no indications while the trench is open of a possible loss of soil from behind or below the bottom of the shield.

Appendix A to Subpart P

Soil Classification

(a) *Scope and application*—(1) *Scope.* This appendix describes a method of classifying soil and rock deposits based on site and environmental conditions, and on the structure and composition of the earth deposits. The appendix contains definitions, sets forth requirements, and describes acceptable visual and manual tests for use in classifying soils.

(2) *Application.* This appendix applies when a sloping or benching system is designed in accordance with the requirements set forth in § 1926.652(b)(2) as a method of protection for employees from cave-ins. This appendix also applies when timber shoring for excavations is designed as a method of protection from cave-ins in accordance with appendix C to subpart P of part 1926, and when aluminum hydraulic shoring is designed in accordance with appendix D. This Appendix also applies if other protective systems are designed and selected for use from data prepared in accordance with the requirements set forth in § 1926.652(c), and the use of the data is predicated on the use of the soil classification system set forth in this appendix.

(b) *Definitions.* The definitions and examples given below are based on, in whole or in part, the following: American Society for Testing Materials (ASTM) Standards D653-85 and D2488; The Unified Soils Classification System, The U.S. Department of Agriculture (USDA) Textural Classification Scheme; and The National Bureau of Standards Report BSS-121.

Cemented soil means a soil in which the particles are held together by a chemical agent, such as calcium carbonate, such that a hand-size sample cannot be crushed into powder or individual soil particles by finger pressure.

Cohesive soil means clay (fine grained soil), or soil with a high clay content, which has cohesive strength. Cohesive soil does not crumble, can be excavated with vertical sideslopes, and is plastic when moist. Cohesive soil is hard to break up when dry, and exhibits significant cohesion when submerged. Cohesive soils include clayey silt, sandy clay, silty clay, clay and organic clay.

Dry soil means soil that does not exhibit visible signs of moisture content.

Fissured means a soil material that has a tendency to break along definite planes of fracture with little resistance, or a material that exhibits open cracks, such as tension cracks, in an exposed surface.

Granular soil means gravel, sand, or silt, (coarse grained soil) with little or no clay content. Granular soil has no cohesive strength. Some moist granular soils exhibit apparent cohesion. Granular soil cannot be molded when moist and crumbles easily when dry.

Layered system means two or more distinctly different soil or rock types arranged in layers. Micaceous seams or weakened planes in rock or shale are considered layered.

Moist soil means a condition in which a soil looks and feels damp. Moist cohesive soil can easily be shaped into a ball and rolled into small diameter threads before crumbling. Moist granular soil that contains some cohesive material will exhibit signs of cohesion between particles.

Plastic means a property of a soil which allows the soil to be deformed or molded without cracking, or appreciable volume change.

Saturated soil means a soil in which the voids are filled with water. Saturation does not require flow. Saturation, or near saturation, is necessary for the proper use of instruments such as a pocket penetrometer or sheer vane.

Soil classification system means, for the purpose of this subpart, a method of categorizing soil and rock deposits in a hierarchy of Stable Rock, Type A, Type B, and Type C, in decreasing order of stability. The categories are determined based on an analysis of the properties and performance characteristics of the deposits and the environmental conditions of exposure.

Stable rock means natural solid mineral matter that can be excavated with vertical sides and remain intact while exposed.

Submerged soil means soil which is underwater or is free seeping.

Type A means cohesive soils with an unconfined compressive strength of 1.5 tsf per square foot (tsf) (144 kPa) or greater. Examples of cohesive soils are: clay, silty clay, sandy clay, clay loam and, in some cases, silty clay loam and sandy clay loam. Cemented soils such as caliche and hardpan are also considered Type A. However, no soil is Type A if:

(i) The soil is fissured; or

(ii) The soil is subject to vibration from heavy traffic, pile driving, or similar effects; or

(iii) The soil has been previously disturbed; or

(iv) The soil is part of a sloped, layered system where the layers dip into the excavation on a slope of four horizontal to one vertical (4H:1V) or greater; or

(v) The material is subject to other factors that would require it to be classified as a less stable material.

Type B means:

(i) Cohesive soil with an unconfined compressive strength greater than 0.5 tsf (48 kPa) but less than 1.5 tsf (144 kPa); or

(ii) Granular cohesionless soils including: angular gravel (similar to crushed rock), silt, silt loam, sandy loam and, in some cases, silty clay loam and sandy clay loam.

(iii) Previously disturbed soils except those which would otherwise be classed as Type C soil.

(iv) Soil that meets the unconfined compressive strength or cementation requirements for Type A, but is fissured or subject to vibration; or

(v) Dry rock that is not stable; or

(vi) Material that is part of a sloped, layered system where the layers dip into the excavation on a slope less steep than four horizontal to one vertical (4H:1V), but only if the material would otherwise be classified as Type B.

Type C means:

(i) Cohesive soil with an unconfined compressive strength of 0.5 tsf (48 kPa) or less; or

(ii) Granular soils including gravel, sand, and loamy sand; or

(iii) Submerged soil or soil from which water is freely seeping; or

(iv) Submerged rock that is not stable, or

(v) Material in a sloped, layered system where the layers dip into the excavation or a slope of four horizontal to one vertical (4H:1V) or steeper.

Unconfined compressive strength means the load per unit area at which a soil will fail in compression. It can be determined by laboratory testing, or estimated in the field using a pocket penetrometer, by thumb penetration tests, and other methods.

Wet soil means soil that contains significantly more moisture than moist soil, but in such a range of values that cohesive material will slump or begin to flow when vibrated. Granular material that would exhibit cohesive properties when moist will lose those cohesive properties when wet.

(c) *Requirements*—(1) *Classification of soil and rock deposits.* Each soil and rock deposit shall be classified by a competent person as Stable Rock, Type A, Type B, or Type C in accordance with the definitions set forth in paragraph (b) of this appendix.

(2) *Basis of classification.* The classification of the deposits shall be made based on the results of at least one visual and at least one manual analysis. Such analyses

VOL 54 ISS 209 OCT 31 1989 UMI

shall be conducted by a competent person using tests described in paragraph (d) below, or in other recognized methods of soil classification and testing such as those adopted by the America Society for Testing Materials, or the U.S. Department of Agriculture textural classification system.

(3) *Visual and manual analyses.* The visual and manual analyses, such as those noted as being acceptable in paragraph (d) of this appendix, shall be designed and conducted to provide sufficient quantitative and qualitative information as may be necessary to identify properly the properties, factors, and conditions affecting the classification of the deposits.

(4) *Layered systems.* In a layered system, the system shall be classified in accordance with its weakest layer. However, each layer may be classified individually where a more stable layer lies under a less stable layer.

(5) *Reclassification.* If, after classifying a deposit, the properties, factors, or conditions affecting its classification change in any way, the changes shall be evaluated by a competent person. The deposit shall be reclassified as necessary to reflect the changed circumstances.

(d) *Acceptable visual and manual tests.*—(1) *Visual tests.* Visual analysis is conducted to determine qualitative information regarding the excavation site in general, the soil adjacent to the excavation, the soil forming the sides of the open excavation, and the soil taken as samples from excavated material.

(i) Observe samples of soil that are excavated and soil in the sides of the excavation. Estimate the range of particle sizes and the relative amounts of the particle sizes. Soil that is primarily composed of fine-grained material is cohesive material. Soil composed primarily of coarse-grained sand or gravel is granular material.

(ii) Observe soil as it is excavated. Soil that remains in clumps when excavated is cohesive. Soil that breaks up easily and does not stay in clumps is granular.

(iii) Observe the side of the opened excavation and the surface area adjacent to the excavation. Crack-like openings such as tension cracks could indicate fissured material. If chunks of soil spall off a vertical side, the soil could be fissured. Small spalls are evidence of moving ground and are indications of potentially hazardous situations.

(iv) Observe the area adjacent to the excavation and the excavation itself for evidence of existing utility and other underground structures, and to identify previously disturbed soil.

(v) Observe the opened side of the excavation to identify layered systems. Examine layered systems to identify if the layers slope toward the excavation. Estimate the degree of slope of the layers.

(vi) Observe the area adjacent to the excavation and the sides of the opened excavation for evidence of surface water, water seeping from the sides of the excavation, or the location of the level of the water table.

(vii) Observe the area adjacent to the excavation and the area within the excavation for sources of vibration that may affect the stability of the excavation face.

(2) *Manual tests.* Manual analysis of soil samples is conducted to determine quantitative as well as qualitative properties of soil and to provide more information in order to classify soil properly.

(i) *Plasticity.* Mold a moist or wet sample of soil into a ball and attempt to roll it into threads as thin as ⅛-inch in diameter. Cohesive material can be successfully rolled into threads without crumbling. For example, if at least a two inch (50 mm) length of ⅛-inch thread can be held on one end without tearing, the soil is cohesive.

(ii) *Dry strength.* If the soil is dry and crumbles on its own or with moderate pressure into individual grains or fine powder, it is granular (any combination of gravel, sand, or silt). If the soil is dry and falls into clumps which break up into smaller clumps, but the smaller clumps can only be broken up with difficulty, it may be clay in any combination with gravel, sand or silt. If the dry soil breaks into clumps which do not break up into small clumps and which can only be broken with difficulty, and there is no visual indication the soil is fissured, the soil may be considered unfissured.

(iii) *Thumb penetration.* The thumb penetration test can be used to estimate the unconfined compressive strength of cohesive soils. (This test is based on the thumb penetration test described in American Society for Testing and Materials (ASTM) Standard designation D2488—"Standard Recommended Practice for Description of Soils (Visual—Manual Procedure).") Type A soils with an unconfined compressive strength of 1.5 tsf can be readily indented by the thumb; however, they can be penetrated by the thumb only with very great effort. Type C soils with an unconfined compressive strength of 0.5 tsf can be easily penetrated several inches by the thumb, and can be molded by light finger pressure. This test should be conducted on an undisturbed soil sample, such as a large clump of spoil, as soon as practicable after excavation to keep to a miminum the effects of exposure to drying influences. If the excavation is later exposed to wetting influences (rain, flooding), the classification of the soil must be changed accordingly.

(iv) *Other strength tests.* Estimates of unconfined compressive strength of soils can also be obtained by use of a pocket penetrometer or by using a hand-operated shearvane.

(v) *Drying test.* The basic purpose of the drying test is to differentiate between cohesive material with fissures, unfissured cohesive material, and granular material. The procedure for the drying test involves drying a sample of soil that is approximately one inch thick (2.54 cm) and six inches (15.24 cm) in diameter until it is thoroughly dry:

(A) If the sample develops cracks as it dries, significant fissures are indicated.

(B) Samples that dry without cracking are to be broken by hand. If considerable force is necessary to break a sample, the soil has significant cohesive material content. The soil can be classified as a unfissured cohesive material and the unconfined compressive strength should be determined.

(C) If a sample breaks easily by hand, it is either a fissured cohesive material or a granular material. To distinguish between the two, pulverize the dried clumps of the sample by hand or by stepping on them. If the clumps do not pulverize easily, the material is cohesive with fissures. If they pulverize easily into very small fragments, the material is granular.

Appendix B to Subpart P

Sloping and Benching

(a) *Scope and application.* This appendix contains specifications for sloping and benching when used as methods of protecting employees working in excavations from cave-ins. The requirements of this appendix apply when the design of sloping and benching protective systems is to be performed in accordance with the requirements set forth in § 1926.652(b)(2).

(b) *Definitions.*

Actual slope means the slope to which an excavation face is excavated.

Distress means that the soil is in a condition where a cave-in is imminent or is likely to occur. Distress is evidenced by such phenomena as the development of fissures in the face of or adjacent to an open excavation; the subsidence of the edge of an excavation; the slumping of material from the face or the bulging or heaving of material from the bottom of an excavation; the spalling of material from the face of an excavation; and ravelling, i.e., small amounts of material such as pebbles or little clumps of material suddenly separating from the face of an excavation and trickling or rolling down into the excavation.

Maximum allowable slope means the steepest incline of an excavation face that is acceptable for the most favorable site conditions as protection against cave-ins, and is expressed as the ratio of horizontal distance to vertical rise (H:V).

Short term exposure means a period of time less than or equal to 24 hours that an excavation is open.

(c) *Requirements*—(1) *Soil classification.* Soil and rock deposits shall be classified in accordance with appendix A to subpart P of part 1926.

(2) *Maximum allowable slope.* The maximum allowable slope for a soil or rock deposit shall be determined from Table B–1 of this appendix.

(3) *Actual slope.* (i) The actual slope shall not be steeper than the maximum allowable slope.

(ii) The actual slope shall be less steep than the maximum allowable slope, when there are signs of distress. If that situation occurs, the slope shall be cut back to an actual slope which is at least ½ horizontal to one vertical (½H:1V) less steep than the maximum allowable slope.

(iii) When surcharge loads from stored material or equipment, operating equipment, or traffic are present, a competent person shall determine the degree to which the actual slope must be reduced below the maximum allowable slope, and shall assure that such reduction is achieved. Surcharge loads from adjacent structures shall be evaluated in accordance with § 1926.651(i).

(4) *Configurations.* Configurations of sloping and benching systems shall be in accordance with Figure B–1.

TABLE B-1

MAXIMUM ALLOWABLE SLOPES

SOIL OR ROCK TYPE	MAXIMUM ALLOWABLE SLOPES (H:V) [1] FOR EXCAVATIONS LESS THAN 20 FEET DEEP [3]
STABLE ROCK TYPE A [2] TYPE B TYPE C	VERTICAL (90°) 3/4 : 1 (53°) 1:1 (45°) 1½: 1 (34°)

NOTES:

1. Numbers shown in parentheses next to maximum allowable slopes are angles expressed in degrees from the horizontal. Angles have been rounded off.
2. A short-term maximum allowable slope of 1/2H:1V (63°) is allowed in excavations in Type A soil that are 12 feet (3.67 m) or less in depth. Short-term maximum allowable slopes for excavations greater than 12 feet (3.67 m) in depth shall be 3/4H:1V (53°).
3. Sloping or benching for excavations greater than 20 feet deep shall be designed by a registered professional engineer.

Figure B–1

Slope Configurations

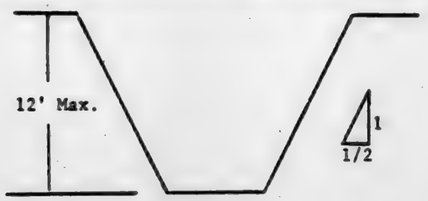
(All slopes stated below are in the horizontal to vertical ratio)

B–1.1 Excavations made in Type A soil.

1. All simple slope excavation 20 feet or less in depth shall have a maximum allowable slope of ¾:1.

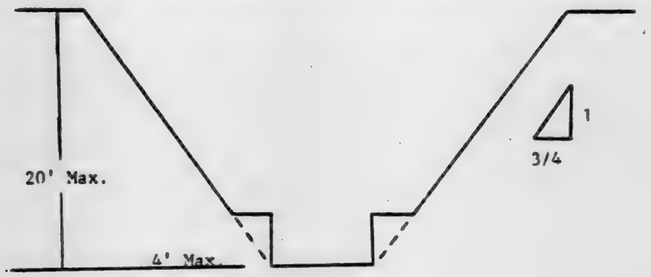
Simple Slope—General

Exception: Simple slope excavations which are open 24 hours or less (short term) and which are 12 feet or less in depth shall have a maximum allowable slope of ½:1.

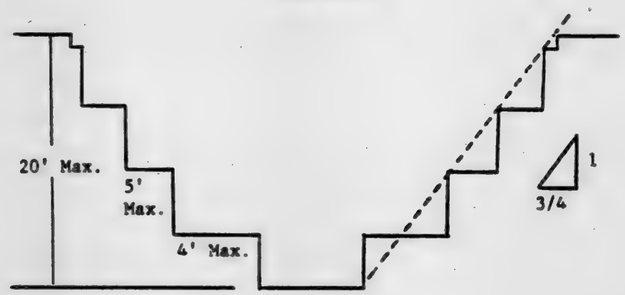


Simple Slope—Short Term

2. All benched excavations 20 feet or less in depth shall have a maximum allowable slope of ¾ to 1 and maximum bench dimensions as follows:

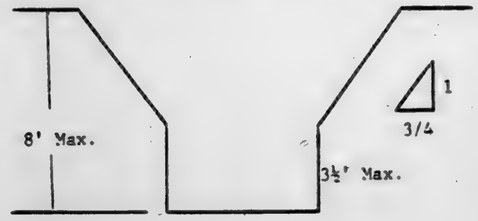


Simple Bench



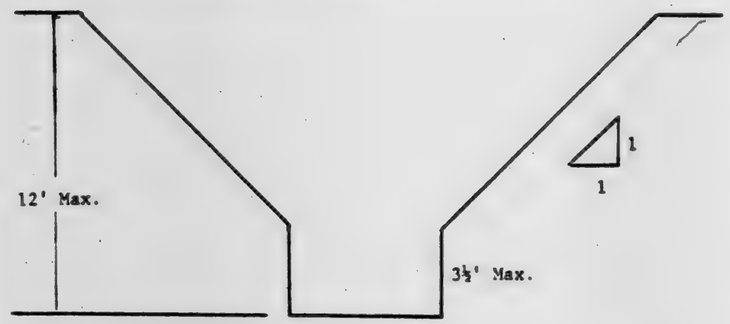
Multiple Bench

3. All excavations 8 feet or less in depth which have unsupported vertically sided lower portions shall have a maximum vertical side of 3½ feet.



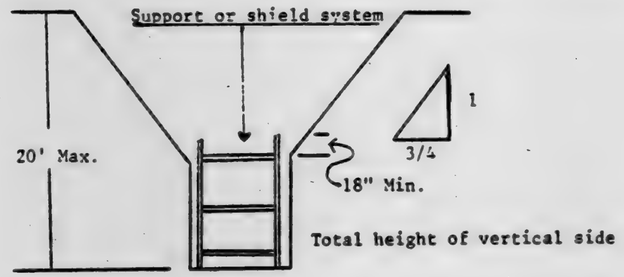
Unsupported Vertically Sided Lower Portion—Maximum 8 Feet in Depth

All excavations more than 8 feet but not more than 12 feet in depth which unsupported vertically sided lower portions shall have a maximum allowable slope of 1:1 and a maximum vertical side of 3½ feet.



Unsupported Vertically Sided Lower Portion—Maximum 12 Feet in Depth

All excavations 20 feet or less in depth which have vertically sided lower portions that are supported or shielded shall have a maximum allowable slope of ¾:1. The support or shield system must extend at least 18 inches above the top of the vertical side.

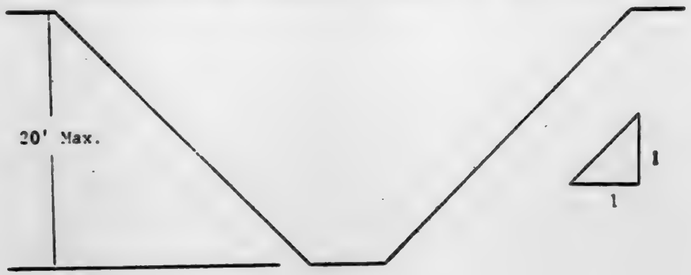


Suported or Shielded Vertically Sided Lower Portion

4. All other simple slope, compound slope, and vertically sided lower portion excavations shall be in accordance with the other options permitted under § 1926.652(b).

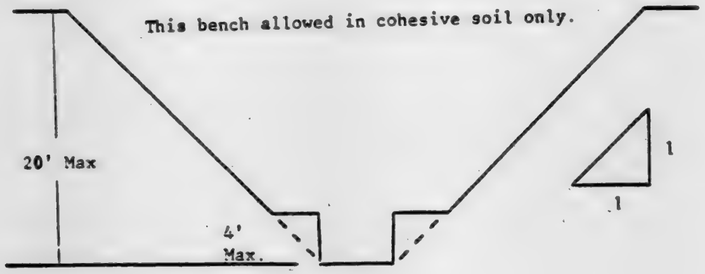
B–1.2 Excavations Made in Type B Soil

1. All simple slope excavations 20 feet or less in depth shall have a maximum allowable slope of 1:1.

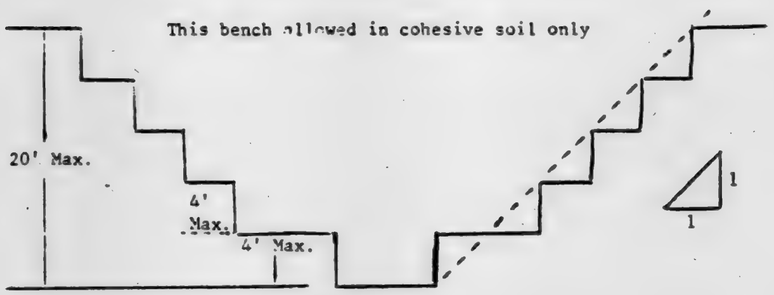


Simple Slope

2. All benched excavations 20 feet or less in depth shall have a maximum allowable slope of 1:1 and maximum bench dimensions as follows:

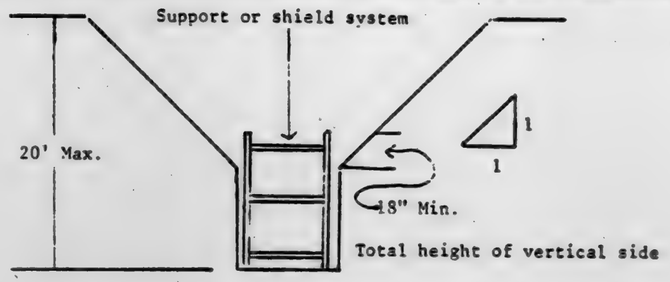


Single Bench



Multiple Bench

3. All excavations 20 feet or less in depth which have vertically sided lower portions shall be shielded or supported to a height at least 18 inches above the top of the vertical side. All such excavations shall have a maximum allowable slope of 1:1.



Vertically Sided Lower Portion

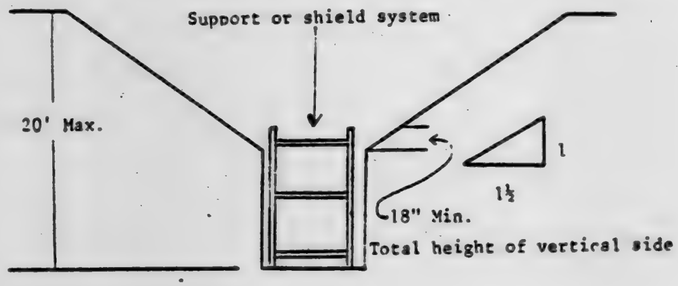
4. All other sloped excavations shall be in accordance with the other options permitted in § 1926.652(b).

B-1.3 Excavations Made in Type C Soil

1. All simple slope excavations 20 feet or less in depth shall have a maximum allowable slope of 1½:1.

Simple Slope

2. All excavations 20 feet or less in depth which have vertically sided lower portions shall be shielded or supported to a height at least 18 inches above the top of the vertical side. All such excavations shall have a maximum allowable slope of 1½:1.



Vertical Sided Lower Portion

3. All other sloped excavations shall be in accordance with the other options permitted in § 1926.652(b).

B-1.4 Excavations Made in Layered Soils

1. All excavations 20 feet or less in depth made in layered soils shall have a maximum allowable slope for each layer as set forth below.

Appendix C to Subpart P

Timber Shoring for Trenches

(a) *Scope.* This appendix contains information that can be used timber shoring is provided as a method of protection from cave-ins in trenches that do not exceed 20 feet (6.1 m) in depth. This appendix must be used when design of timber shoring protective systems is to be performed in accordance with § 1926.652(c)(1). Other timber shoring configurations; other systems of support such as hydraulic and pneumatic systems; and other protective systems such as sloping, benching, shielding, and freezing systems must be designed in accordance with the requirements set forth in § 1926.652(b) and § 1926.652(c).

(b) *Soil Classification.* In order to use the data presented in this appendix, the soil type or types in which the excavation is made must first be determined using the soil

classification method set forth in appendix A of subpart P of this part.

(c) *Presentation of Information.* Information is presented in several forms as follows:

(1) Information is presented in tabular form in Tables C–1.1, C–1.2, and C–1.3, and Tables C–2.1, C–2.2 and C–2.3 following paragraph (g) of the appendix. Each table presents the minimum sizes of timber members to use in a shoring system, and each table contains data only for the particular soil type in which the excavation or portion of the excavation is made. The data are arranged to allow the user the flexibility to select from among several acceptable configurations of members based on varying the horizontal spacing of the crossbraces. Stable rock is exempt from shoring requirements and therefore, no data are presented for this condition.

(2) Information concerning the basis of the tabular data and the limitations of the data is presented in paragraph (d) of this appendix, and on the tables themselves.

(3) Information explaining the use of the tabular data is presented in paragraph (e) of this appendix.

(4) Information illustrating the use of the tabular data is presented in paragraph (f) of this appendix.

(5) Miscellaneous notations regarding Tables C–1.1 through C–1.3 and Tables C–2.1 through C–2.3 are presented in paragraph (g) of this Appendix.

(d) *Basis and limitations of the data.*—(1) *Dimensions of timber members.* (i) The sizes of the timber members listed in Tables C–1.1 through C–1.3 are taken from the National Bureau of Standards (NBS) report, "Recommended Technical Provisions for Construction Practice in Shoring and Sloping of Trenches and Excavations." In addition, where NBS did not recommend specific sizes of members, member sizes are based on an analysis of the sizes required for use by existing codes and on empirical practice.

(ii) The required dimensions of the members listed in Tables C–1.1 through C–1.3 refer to actual dimensions and not nominal dimensions of the timber. Employers wanting to use nominal size shoring are directed to Tables C–2.1 through C–2.3, or have this choice under § 1926.652(c)(3), and are referred to The Corps of Engineers, The Bureau of Reclamation or data from other acceptable sources.

(2) *Limitation of application.* (i) It is not intended that the timber shoring specification apply to every situation that may be experienced in the field. These data were developed to apply to the situations that are most commonly experienced in current trenching practice. Shoring systems for use in situations that are not covered by the data in this appendix must be designed as specified in § 1926.652(c).

(ii) When any of the following conditions are present, the members specified in the tables are not considered adequate. Either an alternate timber shoring system must be designed or another type of protective system designed in accordance with § 1926.652.

(A) When loads imposed by structures or by stored material adjacent to the trench weigh in excess of the load imposed by a two-foot soil surcharge. The term "adjacent" as used here means the area within a horizontal distance from the edge of the trench equal to the depth of the trench.

(B) When vertical loads imposed on cross braces exceed a 240-pound gravity load distributed on a one-foot section of the center of the crossbrace.

(C) When surcharge loads are present from equipment weighing in excess of 20,000 pounds.

(D) When only the lower portion of a trench is shored and the remaining portion of the trench is sloped or benched unless: The sloped portion is sloped at an angle less steep than three horizontal to one vertical; or the members are selected from the tables for use at a depth which is determined from the top of the overall trench, and not from the toe of the sloped portion.

(e) *Use of Tables.* The members of the shoring system that are to be selected using this information are the cross braces, the uprights, and the wales, where wales are required. Minimum sizes of members are specified for use in different types of soil. There are six tables of information, two for each soil type. The soil type must first be determined in accordance with the soil classification system described in appendix A to subpart P of part 1926. Using the appropriate table, the selection of the size and spacing of the members is then made. The selection is based on the depth and width of the trench where the members are to be installed and, in most instances, the selection is also based on the horizontal spacing of the crossbraces. Instances where a choice of horizontal spacing of crossbracing is available, the horizontal spacing of the crossbraces must be chosen by the user before the size of any member can be determined. When the soil type, the width and depth of the trench, and the horizontal spacing of the crossbraces are known, the size and vertical spacing of the crossbraces, the size and vertical spacing of the wales, and the size and horizontal spacing of the uprights can be read from the appropriate table.

(f) *Examples to Illustrate the Use of Tables C–1.1 through C–1.3.*

(1) *Example 1.*

A trench dug in Type A soil is 13 feet deep and five feet wide.

From *Table C–1.1,* for acceptable arrangements of timber can be used.

Arrangement #1

Space 4×4 crossbraces at six feet horizontally and four feet vertically.
Wales are not required.
Space 3×8 uprights at six feet horizontally. This arrangement is commonly called "skip shoring."

Arrangement #2

Space 4×6 crossbraces at eight feet horizontally and four feet vertically.
Space 8×8 wales at four feet vertically.
Space 2×6 uprights at four feet horizontally.

Arrangement #3

Space 6×6 crossbraces at 10 feet horizontally and four feet vertically.
Space 8×10 wales at four feet vertically.
Space 2×6 uprights at five feet horizontally.

Arrangement #4

Space 6×6 crossbraces at 12 feet horizontally and four feet vertically.
Space 10×10 wales at four feet vertically.
Spaces 3×8 uprights at six feet horizontally.

(2) *Example 2.*

A trench dug in Type B soil in 13 feet deep and five feet wide. From Table C–1.2 three acceptable arrangements of members are listed.

Arrangement #1

Space 6×6 crossbraces at six feet horizontally and five feet vertically.
Space 8×8 wales at five feet vertically.
Space 2×6 uprights at two feet horizontally.

Arrangement #2

Space 6×8 crossbraces at eight feet horizontally and five feet vertically.
Space 10×10 wales at five feet vertically.
Space 2×6 uprights at two feet horizontally.

Arrangement #3

Space 8×8 crossbraces at 10 feet horizontally and five feet vertically.
Space 10×12 wales at five feet vertically.
Space 2×6 uprights at two feet vertically.

(3) *Example 3.*

A trench dug in Type C soil is 13 feet deep and five feet wide.

From Table C–1.3 two acceptable arrangements of members can be used.

Arrangement #1

Space 8×8 crossbraces at six feet horizontally and five feet vertically.
Space 10×12 wales at five feet vertically.
Position 2×6 uprights as closely together as possible.

If water must be retained use special tongue and groove uprights to form tight sheeting.

Arrangement #2

Space 8×10 crossbraces at eight feet horizontally and five feet vertically.
Space 12×12 wales at five feet vertically.
Position 2×6 uprights in a close sheeting configuration unless water pressure must be resisted. Tight sheeting must be used where water must be retained.

(4) *Example 4.*

A trench dug in Type C soil is 20 feet deep and 11 feet wide. The size and spacing of members for the section of trench that is over 15 feet in depth is determined using Table C–1.3. Only one arrangement of members is provided.

Space 8×10 crossbraces at six feet horizontally and five feet vertically.
Space 12×12 wales at five feet vertically.
Use 3×6 tight sheeting.

Use of Tables C–2.1 through C–2.3 would follow the same procedures.

(g) *Notes for all Tables.*

1. Member sizes at spacings other than indicated are to be determined as specified in § 1926.652(c), "Design of Protective Systems."

2. When conditions are saturated or submerged use Tight Sheeting. Tight Sheeting refers to the use of specially-edged timber planks (e.g., tongue and groove) at least three inches thick, steel sheet piling, or similar construction that when driven or placed in position provide a tight wall to resist the lateral pressure of water and to prevent the loss of backfill material. Close Sheeting refers to the placement of planks side-by-side allowing as little space as possible between them.

3. All spacing indicated is measured center to center.

4. Wales to be installed with greater dimension horizontal.

5. If the vertical distance from the center of the lowest crossbrace to the bottom of the trench exceeds two and one-half feet, uprights shall be firmly embedded or a mudsill shall be used. Where uprights are embedded, the vertical distance from the center of the lowest crossbrace to the bottom of the trench shall not exceed 36 inches. When mudsills are used, the vertical distance shall not exceed 42 inches. Mudsills are wales that are installed at the toe of the trench side.

6. Trench jacks may be used in lieu of or in combination with timber crossbraces.

7. Placement of crossbraces. When the vertical spacing of crossbraces is four feet, place the top crossbrace no more than two feet below the top of the trench. When the vertical spacing of crossbraces is five feet, place the top crossbrace no more than 2.5 feet below the top of the trench.

BILLING CODE 4510-26-C

Appendix D to Subpart P

Aluminum Hydraulic Shoring for Trenches

(a) *Scope.* This appendix contains information that can be used when aluminum hydraulic shoring is provided as a method of protection against cave-ins in trenches that do not exceed 20 feet (6.1m) in depth. This appendix must be used when design of the aluminum hydraulic protective system cannot be performed in accordance with § 1926.652(c)(2).

(b) *Soil Classification.* In order to use data presented in this appendix, the soil type or types in which the excavation is made must first be determined using the soil classification method set forth in appendix A of subpart P of part 1926.

(c) *Presentation of Information.* Information is presented in several forms as follows:

(1) Information is presented in tabular form in Tables D–1.1, D–1.2, D–1.3 and E–1.4. Each table presents the maximum vertical and horizontal spacings that may be used with various aluminum member sizes and various hydraulic cylinder sizes. Each table contains data only for the particular soil type in which the excavation or portion of the excavation is made. Tables D–1.1 and D–1.2 are for vertical shores in Types A and B soil. Tables D–1.3 and D1.4 are for horizontal waler systems in Types B and C soil.

(2) Information concerning the basis of the tabular data and the limitations of the data is presented in paragraph (d) of this appendix.

(3) Information explaining the use of the tabular data is presented in paragraph (e) of this appendix.

(4) Information illustrating the use of the tabular data is presented in paragraph (f) of this appendix.

(5) Miscellaneous notations (footnotes) regarding Table D–1.1 through D–1.4 are presented in paragraph (g) of this appendix.

(6) Figures, illustrating typical installations of hydraulic shoring, are included just prior to the Tables. The illustrations page is entitled "Aluminum Hydraulic Shoring; Typical Installations."

(d) *Basis and limitations of the data.*

(1) Vertical shore rails and horizontal wales are those that meet the Section Modulus requirements in the D–1 Tables. Aluminum material is 6061–T6 or material of equivalent strength and properties.

(2) Hydraulic cylinders specifications. (i) 2-inch cylinders shall be a minimum 2-inch inside diameter with a minimum safe working capacity of no less than 18,000 pounds axial compressive load at maximum extension. Maximum extension is to include full range of cylinder extensions as recommended by product manufaturer.

(ii) 3-inch cylinders shall be a minimum 3-inch inside diameter with a safe working capacity of not less than 30,000 pounds axial compressive load at extensions as recommended by product manufacturer.

(3) Limitation of application.

(i) It is not intended that the aluminum hydraulic specification apply to every situation that may be experienced in the field. These data were developed to apply to the situations that are most commonly experienced in current trenching practice. Shoring systems for use in situations that are not covered by the data in this appendix must be otherwise designed as specified in § 1926.652(c).

(ii) When any of the following conditions are present, the members specified in the Tables are not considered adequate. In this case, an alternative aluminum hydraulic shoring system or other type of protective system must be designed in accordance with § 1926.652.

(A) When vertical loads imposed on cross braces exceed a 100 Pound gravity load distributed on a one foot section of the center of the hydraulic cylinder.

(B) When surcharge loads are present from equipment weighing in excess of 20,000 pounds.

(C) When only the lower portion or a trench is shored and the remaining portion of the trench is sloped or benched unless: The sloped portion is sloped at an angle less steep than three horizontal to one vertical; or the members are selected from the tables for use at a depth which is determined from the top of the overall trench, and not from the toe of the sloped portion.

(e) *Use of Tables D–1.1, D–1.2, D–1.3 and D–1.4.* The members of the shoring system that are to be selected using this information are the hydraulic cylinders, and either the vertical shores or the horizontal wales. When a waler system is used the vertical timber sheeting to be used is also selected from these tables. The Tables D–1.1 and D–1.2 for vertical shores are used in Type A and B soils that do not require sheeting. Type B soils that may require sheeting, and Type C soils that always require sheeting are found in the horizontal wale Tables D–1.3 and D–1.4. The soil type must first be determined in accordance with the soil classification system described in appendix A to subpart P of part 1926. Using the appropriate table, the selection of the size and spacing of the members is made. The selection is based on the depth and width of the trench where the members are to be installed. In these tables the vertical spacing is held constant at four feet on center. The tables show the maximum horizontal spacing of cylinders allowed for each size of wale in the waler system tables, and in the vertical shore tables, the hydraulic cylinder horizontal spacing is the same as the vertical shore spacing.

(f) *Example to Illustrate the Use of the Tables:*

(1) Example 1:

A trench dug in Type A soil is 6 feet deep and 3 feet wide. From Table D–1.1: Find vertical shores and 2 inch diameter cylinders spaced 8 feet on center (o.c.) horizontally and 4 feet on center (o.c.) vertically. (See Figures 1 & 3 for typical installations.)

(2) Example 2:

A trench is dug in Type B soil that does not require sheeting, 13 feet deep and 5 feet wide. From Table D–1.2: Find vertical shores and 2 inch diameter cylinders spaced 6.5 feet o.c. horizontally and 4 feet o.c. vertically. (See Figures 1 & 3 for typical installations.)

(3) A trench is dug in Type B soil that does not require sheeting, but does experience some minor raveling of the trench face. The trench is 16 feet deep and 9 feet wide. From Table D–1.2: Find vertical shores and 2 inch diameter cylinder (with special oversleeves as designated by footnote #2) spaced 5.5 feet o.c. horizontally and 4 feet o.c. vertically, plywood (per footnote (g)(7) to the D–1 Table) should be used behind the shores. (See Figures 2 & 3 for typical installations.)

(4) Example 4: A trench is dug in previously disturbed Type B soil, with characteristics of a Type C soil, and will require sheeting. The trench is 18 feet deep and 12 feet wide. 8 foot horizontal spacing between cylinders is desired for working space. From Table D–1.3: Find horizontal wale with a section modulus of 14.0 spaced at 4 feet o.c. vertically and 3 inch diameter cylinder spaced at 9 feet maximum o.c. horizontally. 3×12 timber sheeting is required at close spacing vertically. (See Figure 4 for typical installation.)

(5) Example 5: A trench is dug in Type C soil, 9 feet deep and 4 feet wide. Horizontal cylinder spacing in excess of 6 feet is desired for working space. From Table D–1.4: Find horizontal wale with a section modulus of 7.0 and 2 inch diameter cylinders spaced at 6.5 feet o.c. horizontally. Or, find horizontal wale with a 14.0 section modulus and 3 inch diameter cylinder spaced at 10 feet o.c. horizontally. Both wales are spaced 4 feet o.c. vertically. 3×12 timber sheeting is required at close spacing vertically. (See Figure 4 for typical installation.)

(g) *Footnotes, and general notes, for Tables D–1.1, D–1.2, D–1.3, and D–1.4.*

(1) For applications other than those listed in the tables, refer to § 1926.652(c)(2) for use of manufacturer's tabulated data. For trench depths in excess of 20 feet, refer to § 1926.652(c)(2) and § 1926.652(c)(3).

(2) 2 inch diameter cylinders, at this width, shall have structural steel tube (3.5×3.5×0.1875) oversleeves, or structural oversleeves of manufacturer's specification, extending the full, collapsed length.

(3) Hydraulic cylinders capacities. (i) 2 inch cylinders shall be a minimum 2-inch inside diameter with a safe working capacity of not less than 18,000 pounds axial compressive load at maximum extension. Maximum extension is to include full range of cylinder extensions as recommended by product manufacturer.

(ii) 3-inch cylinders shall be a minimum 3-inch inside diameter with a safe work capacity of not less than 30,000 pounds axial compressive load at maximum extension. Maximum extension is to include full range of cylinder extensions as recommended by product manufacturer.

(4) All spacing indicated is measured center to center.

(5) Vertical shoring rails shall have a minimum section modulus of 0.40 inch.

(6) When vertical shores are used, there must be a minimum of three shores spaced equally, horizontally, in a group.

(7) Plywood shall be 1.125 in. thick softwood or 0.75 inch. thick, 14 ply, arctic white birch (Finland form). Please note that plywood is not intended as a structural member, but only for prevention of local raveling (sloughing of the trench face) between shores.

(8) See appendix C for timber specifications.

(9) Wales are calculated for simple span conditions.

(10) See appendix D, item (d), for basis and limitations of the data.

Student Assistance General Provisions;
Notice of Proposed Rulemaking

VOL 54 ISS 209 OCT 31 1989 UMI

DEPARTMENT OF EDUCATION

34 CFR Part 668

RIN 1840-AB07

Student Assistance General Provisions

AGENCY: Department of Education.

ACTION: Notice of Proposed Rulemaking.

SUMMARY: The Secretary proposes to amend the verification regulations contained in Subpart E of the Student Assistance General Provisions Regulations, 34 CFR Part 668, to conform them to certain new provisions in the Tax Reform Act of 1986 (Pub. L. 99–514), the Higher Education Amendments of 1986 (Pub. L. 99–498), the Higher Education Technical Amendments Act of 1987 (Pub. L. 100–50), Public Law 100–369, and the Compact of Free Association (Pub. L. 99–239), and to update data reporting requirements to reduce the administrative burden associated with verification requirements on applicants and schools. The verification regulations require institutions to have a system for verifying student aid application information reported by applicants for use in calculating expected family contributions (EFCs) for the Pell Grant, campus-based (Perkins Loan [National Defense/Direct Student Loan], College Work-Study (CWS), Supplemental Educational Opportunity Grant (SEOG)), need-based Income Contingent Loan (ICL), and Guaranteed Student Loan (GSL) programs.

DATE: Comments must be received on or before January 2, 1990.

ADDRESSES: All comments concerning these proposed regulations should be addressed to Paula Husselmann, Chief, Verification Development Section, Student Verification Branch, Division of Policy and Program Development, U.S. Department of Education, 400 Maryland Avenue SW., [Regional Office Building 3, Room 4613] Washington, DC 20202. A copy of any comments that concern information collection requirements should also be sent to the Office of Management and Budget at the address listed in the Paperwork Reduction Act section of this preamble.

FOR FURTHER INFORMATION CONTACT: Lorraine Kennedy, Program Analyst, Telephone (202) 732–5579.

SUPPLEMENTARY INFORMATION: The Secretary is proposing these revised regulations to conform to certain new provisions in the Tax Reform Act of 1986, the Higher Education Act of 1965, as amended by the Higher Education Amendments of 1986, the Higher Education Amendments of 1987, and Public Law 100–369, and the Compact of Free Association. Each applicant's information, which is subject to the verification regulations, is used to calculate an EFC. The EFC is the amount that an applicant and the applicant's family can reasonably be expected to contribute toward the cost of attendance at an institution of higher education and is used to determine the applicant's financial need for assistance. The applicant's financial need is defined as the difference between the applicant's cost of attendance and the EFC. The applicant may receive assistance under most Title IV Higher Education Act programs upon demonstrating financial need for such assistance.

The Secretary proposes to amend Section s668.53(a)(3) to reduce burden placed on institutions to notify each applicant that completes the verification process of the results of verification. Instead, institutions would be required to notify verified applicants of the results of verification only if the applicant's expected family contribution and award or loan amount changes as a result of verification. An applicant's award letter may serve as this notification.

The Secretary proposes to amend § 668.54(a) to provide that an institution is not required to verify the information from more than 30 percent of its applicants for assistance under the Pell Grant, campus-based, need-based ICL, and GSL Programs in any award year. This proposed change is required by section 484(f) of the Higher Education Act of 1965, as amended.

Currently, the regulations give an institution the authority to require an applicant, selected for verification, to provide documentation to verify any data element it specifies. The Secretary proposes to amend § 668.54 and § 668.60 to require an applicant to provide the necessary documentation to verify any data element required by an institution or the Secretary.

Previously, citizens of the Trust Territory of the Pacific Islands were excluded from verification requirements, unless an institution had information conflicting with information reported by an applicant or otherwise had reason to believe information reported by an applicant to be incorrect. The Compact of Free Association (Pub. L. 99–239) conferred independent nation status on certain entities, formerly trust territories of the United States; these entities are now known as the Federated States of Micronesia and the Republic of the Marshall Islands. Therefore, the Secretary proposes to amend § 668.54 to update the references to these entities so that eligible Title IV aid applicants from these entities continue to be excluded from verification requirements. In anticipation of the enactment of a similar compact to create the Republic of Palau, these provisions are prospectively extended to eligible students of that Republic.

Section 668.54(b)(2)(vii) currently provides that under certain conditions a student transferring from one institution to another may be excluded from verifying data at the second school. The Secretary requests comment on how to notify the second school that it is not required to verify the student's data. The purpose of this notification is to relieve burden and improve delivery of aid. The Secretary requests comments on the use of the Electronic Student Aid Report (ESAR) to achieve this goal.

Section 668.55 is being amended to simplify and clarify the updating requirements. Currently, applicants must update or verify information as to the number of household members and the number of household members enrolled in postsecondary institutions, except for changes in marital status.

Currently, the regulations require an applicant to update information as to dependency status, except for changes in marital status, throughout the year. Also, an applicant is not permitted to update dependency status on a GSL application, if the institution has previously certified that application. To simplify the regulations and to make the updating requirements more consistent, the Secretary proposes to eliminate the marital status exception and require all applicants to update dependency status, including applicants for whom a loan has been certified. In the proposed regulations, applicants would be required to update information as to their household size, number of family members enrolled in a postsecondary educational institution, and dependency status throughout the year regardless of the reason for a change in the applicant's dependency status, for all Title IV programs. Household size, number of family members enrolled in a postsecondary educational institution, and dependency status, under these proposed regulations, must be updated as a result of an actual change in an applicant's marital status and may not be updated or changed because of a projected change in marital status.

Title IV Quality Control Studies indicate that there is significant misreporting by applicants of the number of family members enrolled in postsecondary educational institutions. These errors have resulted in incorrect awards and loans to students. Therefore, the Secretary proposes to

amend § 668.56 to provide that an institution must require an applicant selected for verification to verify the number of family members enrolled in postsecondary educational institutions, even though there was no change from information verified in the previous award year.

Section 668.56(a)(5) (formerly § 668.56(a)(6)) would be amended to delete data elements, listed in the verification regulations, that are no longer considered untaxed income as a result of the Tax Reform Act of 1986. Untaxed income is income that is excluded from Federal taxation by provisions of the Internal Revenue Code.

For the purpose of Title IV student financial assistance, untaxed income is considered in the formula used to determine the EFC toward the costs of postsecondary education. Except for Social Security benefits and child support, the Secretary relies on the information applicants, their spouses, and their parents report on their Federal tax returns to verify the receipt of untaxed income that is subject to the verification requirements. The Secretary intends to maintain untaxed income verification requirements that are consistent with Federal income tax reporting requirements for untaxed income items listed on the Federal tax return, except for Social Security benefits and child support.

To avoid publishing new regulations each time Federal income tax reporting requirements for untaxed income change, the Secretary proposes to follow Federal income tax reporting requirements in determining elements of untaxed income subject to verification. The Secretary, in § 668.56(a)(5)(vii), would require verification of all elements of untaxed income listed on the tax return without the use of additional schedules or attachments, beginning with the 1990–91 award year. The Secretary would publish in the Federal Register a list of categories of untaxed income subject to verification whenever Internal Revenue Service reporting requirements for untaxed income change.

Because of recent changes in Federal tax reporting requirements, § 668.56(a)(5) would be amended to delete references to unemployment compensation, which is now fully taxable, and to delete references to the married couple deduction and dividend exclusion, which have been discontinued. Similarly, references to capital gains would be deleted since these are now treated as taxable income and therefore no longer require a separate verification requirement. This section would also be amended to require interest on tax-free bonds to be verified as a part of untaxed income. Prior to 1987, taxpayers were not required to report interest on tax-free bonds on the 1040 and 1040A tax forms. The new IRS Forms 1040 and 1040A include these data as a line item.

Section 668.56(c) of the current Verification Regulations provides an exclusion for the verification of a dependent Pell applicant's base year income because, under the previous Student Aid Index (SAI) formula, estimated year earnings were often used to calculate the applicant's EFC, instead of base year adjusted gross income. The Higher Education Act of 1965, as amended, now requires the use of the dependent Pell applicant's base year income as a fixed data element in the current SAI formula used in calculating an applicant's EFC, unless the dependent student is classified as a dislocated worker by the appropriate State agency in accordance with Title III of the Job Training Partnership Act. Consequently, the Secretary is proposing to delete § 668.56(c) to, in effect, require verification of dependent student base year income. This change does not result in significant additional burden to financial aid administrators because dependent student base year income must already be verified beginning with the 1988–89 award year for the campus-based and Guaranteed Student Loan programs.

Public Law 100–369 requires income tax returns filed with the Commonwealth of Puerto Rico, the government of another U.S. territory or commonwealth, or the central government of a foreign country to be treated the same as U.S. income tax returns. Therefore, § 668.57 would be amended to consider an income tax return filed with a government of a U.S. territory or commonwealth, the Commonwealth of Puerto Rico, or a foreign government in the same manner as a U.S. income tax return.

Section 668.57(d), independent student status, would be deleted. The Higher Education Act requires that, for independent students within certain categories, no disbursal of an award may be made without documentation of independent student status. The Secretary has previously issued guidance on this subject in a "Dear Colleague Letter" and will not prescribe requirements to document independent student status in these regulations.

Section 668.59 is being amended to change the amount of the dollar tolerance option for the GSL and campus-based programs and also to delete one of the Pell Grant specific tolerance options: SAI Recalculation Option. A tolerance option is a dollar error level allowed on an applicant's application for which the recalculation of an applicant's EFC or SAI will not be required.

A $200 tolerance option would be proposed for all Title IV programs in place of the current $200 Pell and $600 GSL/campus-based programs tolerance options. It is appropriate to apply the tolerance previously used only for the Pell Grant Program to the campus-based, need-based ICL, and GSL programs because the Higher Education Act now provides a single formula for establishing need for campus-based and need-based ICL aid and Guaranteed Student Loans, similar to the formula for the Pell Grant Program. Previously, under the Uniform Methodology, allowable variances in calculating the EFC warranted a more liberal tolerance. Additionally, the use of a single tolerance amount will increase consistency among the Title IV programs. Therefore, the Secretary proposes to use the Pell Grant $200 tolerance figure to make all Title IV programs consistent.

Because changes in the Pell Grant formula made the Zero SAI Charts too complex, reference to the Zero SAI Charts would be deleted. An institution may continue to process the application of any applicant with a reported SAI of zero on his or her SAR without submitting that SAR to the Secretary for recalculation, if the institution determines that the applicant's SAI remains at zero on the basis of the verified information.

Section 668.58 is being amended to specify that a CWS recipient may be employed for the first sixty (60) consecutive days of the award year, prior to verification being completed, provided the institution has no information indicating that the aid application is inaccurate.

Several other minor changes have been made to the verification regulations to reflect changes in verification requirements resulting from the Higher Education Amendments of 1986.

Executive Order 12291

These proposed regulations have been reviewed in accordance with Executive Order 12291. They are not classified as major because they do not meet the criteria for major regulations established in the order.

Regulatory Flexibility Act Certification

The Secretary certifies that these proposed regulations would not have a significant economic impact on a

VOL 54 ISS 209 OCT 31 1989 UMI

substantial number of small entities. Small entities affected by these regulations are small institutions of higher education. The proposed regulations revise the verification items used to calculate an applicant's financial need. These changes are required by statutory amendments. There are several other minor changes in the regulations to update present policy.

Paperwork Reduction Act of 1980

Sections 668.53, 668.54, 668.55, 668.56, 668.57, and 668.59 contain information collection requirements. As required by the Paperwork Reduction Act of 1980, the Department of Education will submit a copy of these sections to the Office of Management and Budget (OMB) for its review.

Organizations and individuals desiring to submit comments on the information collection requirements should direct them to the Office of Information and Regulatory Affairs, Room 3002, New Executive Office Building, Washington, DC 20503; Attention: James D. Houser.

Invitation to Comment

Interested persons are invited to submit comments and recommendations regarding these proposed regulations.

All comments submitted in response to these proposed regulations will be available for public inspection, during and after the comment period, in Room 4613, ROB-3, 7th and D Streets, SW., Washington, DC 20202, between the hours of 8:30 a.m. and 4:00 p.m., Monday through Friday of each week except Federal holidays.

To assist the Department in complying with the specific requirements of Executive Order 12291 and the Paperwork Reduction Act of 1980 and their overall requirement of reducing regulatory burden, the Secretary invites comment on whether there may be further opportunities to reduce any regulatory burdens found in these proposed regulations.

Assessment of Educational Impact

The Secretary particularly requests comments on whether the proposed regulations in this document would require transmission of information that is being gathered by or is available from any other agency or authority of the United States.

List of Subjects in 34 CFR Part 668

Administrative practice and procedure, Colleges and universities, Consumer protection, Education loan programs—education, Grant programs—education, Report and recordkeeping requirements, Student aid.

Dated: October 23, 1989.

Lauro F. Cavazos,

Secretary of Education.

The Secretary proposes to amend part 668 of title 34 of the Code of Federal Regulations as follows:

PART 668—STUDENT ASSISTANCE GENERAL PROVISIONS

1. The authority citation for part 668 continues to read as follows:

Authority: 20 U.S.C. 1085, 1088, 1091, 1092, 1094, and 1141, unless otherwise noted.

2. Subpart E of part 668 is revised to read as follows:

Subpart E—Verification of Student Aid Application Information

Sec.

668.51 General.
668.52 Definitions.
668.53 Policies and procedures.
668.54 Selection of applications for verification.
668.55 Updating information.
668.56 Items to be verified.
668.57 Acceptable documentation.
668.58 Interim disbursements.
668.59 Consequences of a change in application information.
668.60 Deadlines for submitting documentation and the consequences of failing to provide documentation.
668.61 Recovery of funds.

Subpart E—Verification of Student Aid Application Information

§ 668.51 General.

(a) *Scope and purpose.* The regulations in this subpart govern the verification by institutions of information submitted by applicants for student financial assistance in connection with the calculation of their expected family contributions (EFC) for the Pell Grant, campus-based, need-based Income Contingent Loan (ICL) and Guaranteed Student Loan (GSL) programs.

(b) *Applicant responsibility.* If the Secretary or the institution requests documents or information from an applicant under this subpart, the applicant shall provide the specified documents or information.

(c) *Institutional Quality Control Pilot Project.* (1) For the 1988–89, 1989–90, and 1990–91 award years, the Secretary exempts institutions selected to participate in the institutional Quality Control Pilot Project from the requirements contained in the following sections:

(i) Section 668.53(a) (1) through (4).
(ii) Section 668.54(a) (2), (3), and (5).
(iii) Section 668.56.
(iv) Section 668.57, except that an institution shall require an applicant that it has selected for verification to submit to it a copy of the income tax return, if filed, of the applicant, his or her spouse, and his or her parents, if the income reported on the income tax return was used in determining the expected family contribution.
(v) Section 668.60(a).

(2) For the purpose of this section, the Institutional Quality Control Pilot Project is an experiment under which a participating institution develops and implements a quality control system in connection with its administration of the title IV, HEA programs. Under such a quality control system, the institution must evaluate its current procedures for administering the title IV, HEA programs ("management assessment component"), identify the errors that result from its current procedures ("error measurement process component") and design corrections to its procedures that will enable it to eliminate or significantly reduce those errors ("corrective actions process component").

(d) *Foreign schools.* The Secretary exempts from the provisions of this subpart institutions participating in the GSL Program that are not located in a State.

(Authority: 20 U.S.C. 1094)

§ 668.52 Definitions.

The following definitions apply to this subpart:

"Base year" means the calendar year preceding the first calendar year of an award year.

"Edits" means a set of pre-established factors for identifying—

(a) Student aid applications that may contain incorrect, missing, illogical, or inconsistent information; and

(b) Randomly selected student aid applications.

"Expected family contribution (EFC)" means the amount an applicant and his or her spouse and family are expected to contribute toward the applicant's cost of attendance.

"Need analysis servicer" means an agency or organization who has had its system for determining EFCs under the campus-based, GSL and need-based ICL programs certified by the Secretary for the applicable award year.

"Student aid application" means an application submitted by a person to have his or her EFC determined under the Pell Grant, campus-based, need-based ICL, or GSL programs.

(Authority: 20 U.S.C. 1094)

§ 668.53 Policies and procedures.

(a) An institution shall establish and use written policies and procedures for verifying information contained in a student aid application in accordance with the provisions of this subpart. These policies and procedures must include—

(1) The time period within which an applicant shall provide the documentation;

(2) The consequences of an applicant's failure to provide required documentation within the specified time period;

(3) The method by which the institution notifies an applicant of the results of verification if, as a result of verification, the applicant's EFC changes and results in a change in the applicant's award or loan;

(4) The procedures the institution requires an applicant to follow to correct application information determined to be in error; and

(5) The procedures for making referrals under § 668.14(g).

(b) The institution's procedures must provide that it furnish, in a timely manner, to each applicant selected for verification a clear explanation of—

(1) The documentation needed to satisfy the verification requirements; and

(2) The applicant's responsibilities with respect to the verification of application information, including the deadlines for completing any actions required under this subpart and the consequences of failing to complete any required action.

(Authority: 20 U.S.C. 1094)

§ 668.54 Selection of applications for verification.

(a) *General requirements.* (1) Except as provided in paragraph (b) of this section, an institution shall require an applicant to verify application information as specified in this paragraph.

(2) An institution shall require each applicant whose application is selected for verification on the basis of edits specified by the Secretary, to verify all of the applicable items specified in § 668.56, except that no institution is required to verify the applications of more than thirty (30) percent of its applicants for assistance under the Pell Grant, campus-based, need-based ICL, and GSL Programs in an award year. The Secretary may enter into agreements with need analysis servicers under which the Secretary provides the edits to the servicer and the servicer, once certified by the Secretary, indicates to institutions the applications selected for verification.

(3) The institution shall require each applicant to verify the applicable items specified in § 668.56 (except that no eligible institution is required to verify more than thirty (30) percent of the applications submitted in any award year), if—

(i) The applicant is selected by the institution to receive an award under the campus-based programs or requests the institution to certify his or her application for a GSL or need-based ICL loan; and

(ii) The institution does not receive—

(A) A Student Aid Report (SAR) for the applicant; or

(B) The output document generated on behalf of the applicant submitting an application to a certified need analysis servicer that has an agreement with the Secretary as described under paragraph (a)(2) of this section.

(4) If an institution has reason to believe that any information on an application used to calculate an EFC is inaccurate, it shall require that the applicant verify the information that it has reason to believe is inaccurate.

(5) If an applicant is selected to verify the information on his or her application under paragraph (a)(2) of this section, the institution shall require the applicant to verify the information as specified in § 668.56 on each additional application he or she submits for that award year, except for information already verified under a previous application submitted for the applicable award year.

(6) An institution or the Secretary may require an applicant to verify any data elements that the institution or the Secretary specifies.

(b) *Exclusions from verification.* (1) An institution need not verify an application submitted for an award year if the applicant dies during the award year.

(2) Unless the institution has reason to believe that the information reported by the applicant may be incorrect, it need not verify applications of the following applicants:

(i) An applicant who is—

(A) A legal resident of and, in the case of a dependent student, whose parents are also legal residents of the Commonwealth of the Northern Mariana Islands, Guam, or American Samoa; or

(B) A citizen of and, in the case of a dependent student, whose parents are also citizens of the Republic of the Marshall Islands, the Federated States of Micronesia, or the Republic of Palau.

(ii) An applicant who is incarcerated at the time at which verification would occur.

(iii) An applicant who is a dependent student, whose parents are residing in a country other than the United States and cannot be contacted by normal means of communication.

(iv) An applicant who is an immigrant and who arrived in the United States during either calendar year of the award year.

(v) An applicant who is a dependent student, both of whose parents are deceased or are physically or mentally incapacitated, or whose parents' address is unknown.

(vi) An applicant who does not receive assistance for reasons other than his or her failure to verify the information on the application.

(vii) An applicant who transfers to the institution, had previously completed the verification process at the institution from which he or she transferred, and applies for assistance on the same application used at the previous institution, if the current institution obtains—

(A) A letter from the previous institution stating that it has verified the applicant's information and, if relevant, the provision used in § 668.59 for not recalculating the applicant's EFC; and

(B) A copy of the verified application and, if the applicant applied for a Pell Grant, pages 1 and 3 of the applicant's SAR.

(3) An institution need not require an applicant to document spouse information or provide a spouse's signature if—

(i) The spouse is deceased;

(ii) The spouse is mentally or physically incapacitated;

(iii) The spouse is residing in a country other than the United States and cannot be contacted by normal means of communication; or

(iv) The spouse cannot be located because his or her address is unknown and cannot be obtained by the applicant.

(Authority: 20 U.S.C. 1091, 1094)

§ 668.55 Updating information.

(a) (1) Unless the provisions of paragraph (a)(2) of this section apply, an applicant is required to update the information contained in his or her application for assistance in an award year to reflect the applicant's current circumstances regarding—

(i) The number of family members in the applicant's household and the number of those household members attending postsecondary educational institutions, in accordance with provisions of paragraph (b) of this section; and

(ii) His or her dependency status in accordance with the provisions of paragraph (d) of this section.

VOL 54 ISS 209 OCT 31 1989 UMI

(2) An institution need not require an applicant to verify the information contained in his or her application for assistance in an award year if—

(i) The applicant previously submitted an application for assistance for that award year;

(ii) The applicant updated and verified the information contained in that application; and

(iii) No change in the information to be updated has taken place since the last update.

(b) If the number of family members in the applicant's household or the number of such household members attending postsecondary educational institutions changes—

(1) An applicant who is selected for verification shall update the information contained in his or her application regarding those factors so that the information is correct as of the day the applicant verifies the information; and

(2) An applicant for a Pell Grant who is not selected for verification shall update the information contained in his or her application regarding those factors and shall certify that the information is correct as of the day that the applicant submits his or her first SAR to the institution.

(c) If an applicant has received Pell Grant, campus-based, need-based ICL, or GSL program assistance for an award year, the applicant subsequently submits another application for assistance under any of those programs for that award year, and the applicant is required to update household size and number attending postsecondary educational institutions on the subsequent application, the institution—

(1) Is required to take that newly updated information into account when awarding for that award year further Pell Grant, campus-based, or need-based ICL program assistance or certifying a GSL loan application; and

(2) Is not required to adjust the Pell Grant, campus-based or need-based ICL program assistance previously awarded to the applicant for that award year, or any previously certified GSL loan application for that award year, to reflect the newly updated information unless the applicant would otherwise receive an overaward.

(d) If an applicant's dependency status changes after the applicant applies to have his or her EFC calculated for an award year, the applicant shall file a new application for that award year reflecting the applicant's new dependency status regardless of whether the applicant is selected for verification.

(Authority: 20 U.S.C. 1094)

§ 668.56 Items to be verified.

(a) Except as provided in paragraphs (b), (c), (d), and (e) of this section, an institution shall require an applicant selected for verification under § 668.54 (a) (1) or (2) to submit acceptable documentation described in § 668.57 that will verify or update the following information used to determine the applicant's EFC:

(1) Adjusted gross income (AGI) for the base year if base year data was used in determining eligibility, or income earned from work if a non-tax filer.

(2) U.S. income tax paid for the base year.

(3)(i) For an applicant who is a dependent student, the aggregate number of family members in the household or households of the applicant's parents if—

(A) The applicant's parent is single, divorced, separated or widowed and the aggregate number of family members is greater than two; or

(B) The applicant's parents are married and the aggregate number of family members is greater than three.

(ii) For an applicant who is an independent student, the number of family members in the household of the applicant if—

(A) The applicant is single, divorced, separated, or widowed and the number of family members is greater than one; or

(B) The applicant is married and the number of family members is greater than two.

(4) The number of family members in the household who are enrolled as at least half-time students in postsecondary educational institutions if that number is greater than one.

(5) The following untaxed income and benefits for the base year—

(i) Social security benefits if—

(A) Verification is required by a comment on the applicant's SAR; or

(B) The applicant does not receive an SAR and the institution has reason to believe that those benefits were received;

(ii) Child support if the institution has reason to believe that child support was received;

(iii) U.S. income tax deduction for a payment made to an individual retirement account (IRA) or Keogh account;

(iv) Interest on tax-free bonds;

(v) Foreign income excluded from U.S. income taxation if the institution has reason to believe that foreign income was received;

(vi) The earned income credit taken on the applicant's tax return.

(vii) All other untaxed income subject to U.S. income tax reporting requirements in the base year which are included on the tax return form without the use of additional schedules or attachments.

(b) If an applicant selected for verification submits a SAR to the institution, or the institution receives an output document as described in § 668.54(a)(3)(ii)(B) within 90 days of the date the applicant signed his or her application, or if an applicant is selected for verification under § 668.54(a)(2), the institution need not require the applicant to verify—

(1) The number of family members in the household; or

(2) The number of family members in the household who are enrolled as at least half-time students in postsecondary educational institutions.

(c) If the number of family members in the household, the independent student status, or the amount of child support reported by an applicant selected for verification is the same as that verified by the institution in the previous award year, the institution need not require the applicant to verify that information.

(d) If the family members who are enrolled as at least half-time students in postsecondary educational institutions are enrolled at the same institution as the applicant, and the institution verifies their enrollment from its own records, the institution need not require the applicant to verify this information.

(e) If the applicant or the applicant's spouse, or in the case of a dependent student, the applicant's parents receive untaxed income or benefits from a Federal, State, or local government agency determining their eligibility for that income or benefits by means of a financial needs test, the institution need not require the untaxed income and benefits to be verified.

(Authority: 20 U.S.C. 1094, 1095)

§ 668.57 Acceptable documentation.

(a) *Adjusted Gross Income (AGI) and U.S. income tax paid.* (1) Except as provided in paragraphs (a)(2), (a)(3), and (a)(4) of this section, an institution shall require an applicant selected for verification to verify AGI and U.S. income tax paid by submitting to it, if relevant—

(i) A copy of the income tax return of the applicant, his or her spouse, and his or her parents. The copy of the return must be signed by the filer of the return or by one of the filers of a joint return;

(ii) For a dependent student, a copy of each Internal Revenue Service (IRS) Form W–2 received by the parent whose income is being taken into account if—

(A) The parents filed a joint return; and

(B) The parents are divorced or separated or one of the parents has died; and

(iii) For an independent student, a copy of each IRS Form W–2 he or she received if the independent student—

(A) Filed a joint return; and

(B) Is a widow or widower, or is divorced or separated.

(2) If an individual who filed a U.S. tax return and who is required by paragraph (a)(1) of this section to provide a copy of his or her tax return does not have a copy of that return, the institution may require that individual to submit, in lieu of a copy of the tax return, a copy of the "IRS Listing of Tax Account Information."

(3) An institution shall accept, in lieu of an income tax return or an IRS Listing of Tax Account Information of a relevant individual, the documentation set forth in paragraph (a)(4) of this section if the relevant individual for the base year—

(i) Has not filed and is not required to file an income tax return;

(ii) Is required to file a U.S. tax return and has been granted a filing extension by the IRS; or

(iii) Has requested a copy of the tax return or a Listing of Tax Account Information and the IRS or a government of a U.S. territory or commonwealth or a foreign central government cannot locate the return or provide a Listing of Tax Account Information.

(4) An institution shall accept—

(i) For an individual described in paragraph (a)(3)(i) of this section, a statement signed by that individual certifying that he or she has not filed nor is required to file an income tax return for the base year and certifying for that year that individual's—

(A) Sources of income earned from work as stated on the application; and

(B) Amounts of income from each source;

(ii) For an individual described in paragraph (a)(3)(ii) of this section—

(A) A copy of the IRS Form 4868, "Application for Automatic Extension of Time to File U.S. Individual Income Tax Return," that the individual filed with the IRS for the base year, or a copy of the IRS's approval of an extension beyond the automatic four-month extension if the individual requested an additional extension of the filing time; and

(B) A copy of each IRS Form W–2 that the individual received for the base year, or for a self-employed individual, a statement signed by the individual certifying the amount of adjusted gross income for the base year; and

(iii) For an individual described in paragraph (a)(3)(iii) of this section—

(A) A copy of each IRS Form W–2 that the individual received for the base year; or

(B) For an individual who is self-employed or has filed an income tax return with a government of a U.S. territory or commonwealth, or a foreign central government, a statement signed by the individual certifying the amount of adjusted gross income for the base year.

(5) An institution shall require an individual described in paragraph (a)(3)(ii) of this section to provide to it a copy of his or her completed income tax return when filed. When an institution receives the copy of the return, it may re-verify the adjusted gross income and taxes paid by the applicant and his or her spouse or parents.

(6) If an individual who is required to submit an IRS Form W–2 under this paragraph is unable to obtain one in a timely manner, the institution may permit that individual to set forth, in a statement signed by the individual, the amount of income earned from work as stated on the application, the source of that income, and the reason that the IRS Form W–2 is not available in a timely manner.

(7) For the purpose of this section, an institution may accept in lieu of a copy of an income tax return signed by the filer of the return or one of the filers of a joint return, a copy of the filer's return that has been signed by the preparer of the return or stamped with the name and address of the preparer of the return.

(b) *Number of family members in household.* An institution shall require an applicant selected for verification to verify the number of family members in the household by submitting to it a statement signed by the applicant and the applicant's parent if the applicant is a dependent student, or the applicant and the applicant's spouse if the applicant is an independent student, listing the name and age of each family member in the household and the relationship of each household member to the applicant.

(c) *Number of family household members enrolled in postsecondary institutions.* (1) Unless the institution has reason to believe that the information included on the application regarding the number of household members in the applicant's family enrolled on at least half-time basis in postsecondary institutions is inaccurate, the institution shall require an applicant selected for verification to verify that information by submitting to it a statement signed by the applicant and the applicant's parents if the applicant is a dependent student, or by the applicant and the applicant's spouse if the applicant is an independent student, listing—

(i) The name of each family member who is or will be attending a postsecondary educational institution as at least a half-time student in the award year;

(ii) The age of each student; and

(iii) The name of the institution attended by each student.

(2) If the institution has reason to believe that the information included on the application regarding the number of family household members enrolled in postsecondary institutions is inaccurate, the institution shall require—

(i) The statement required in paragraph (c)(1) of this section from the individuals described in paragraph (c)(1) of this section; and

(ii) A statement from each institution named by the applicant in response to the requirement of paragraph (c)(1)(iii) of this section that the household member in question is or will be attending the institution on at least a half-time basis, unless the institution the student is attending determines that such a statement is not available because the household member in question has not yet registered at the institution he or she plans to attend.

(d) *Untaxed income and benefits.* An institution shall require an applicant selected for verification to verify—

(1) Untaxed income and benefits described in § 668.56(a)(5) (iii), (iv), (v), and (vi) by submitting to it—

(i) A copy of the U.S. income tax return signed by the filer or one of the filers if a joint return, if collected under paragraph (a) of this section, or the IRS listing of tax account information if collected by the institution to verify adjusted gross income; or

(ii) If no tax return was filed or is required to be filed, a statement signed by the relevant individuals certifying that no tax return was filed or is required to be filed and providing the sources and amount of untaxed income and benefits specified in § 668.56(a)(5) (iii), (iv), (v), and (vi);

(2) Social security benefits—

(i) If an edit comment appears on the applicant's SAR indicating incorrect Social Security benefits, the applicant shall verify Social Security benefits, by submitting a document from the Social Security Administration showing the amount of benefits received in the appropriate calendar year by the applicant, applicant's parents, and any other children of the applicant's parents who are members of the applicant's

VOL 54 ISS 209 OCT 31 1989 UMI

household, in the case of a dependent student, or by the applicant, the applicant's spouse, and the applicant's children in the case of an independent student; or

(ii) If the applicant does not receive an SAR and the institution has reason to believe that the applicant has incorrectly reported Social Security benefits received by the applicant or any individual described in paragraph (d)(2)(I), the applicant shall verify Social Security benefits by submitting either the document described in paragraph (d)(2)(i) or, at the institution's option, a statement signed by both the applicant and the applicant's parent in the case of a dependent student or by the applicant in the case of an independent student certifying that the amount listed on the applicant's aid application is correct; and

(3) Child support received by submitting to it—

(i) A written statement signed by the applicant and the applicant's parent in the case of a dependent student, or by the applicant and the applicant's spouse in the case of an independent student, certifying the amount of child support received; and

(ii) If the institution has reason to believe that the information provided is inaccurate, the applicant must verify the amount of child support received by providing a document such as—

(A) A copy of the separation agreement or divorce decree showing the amount of child support to be provided;

(B) A statement from the parent providing the child support showing the amount provided; or

(C) Copies of the child support checks or money order receipts.

(Authority: 20 U.S.C. 1094)

§ 668.58 Interim disbursements.

(a)(1) If an institution has reason to believe that the information included on the application is inaccurate, until the applicant verifies or corrects the information included on his or her application, the institution may not—

(i) Disburse any Pell Grant or campus-based program funds to the applicant;

(ii) Employ the applicant in its CWS Program; or

(iii) Certify the applicant's GSL application or process GSL proceeds for any previously certified GSL application.

(2) If an institution does not have reason to believe that the information included on an application is inaccurate prior to verification, the institution—

(i) May withhold payment of Pell Grant, campus-based, and need-based ICL funds; or

(ii)(A) May make one disbursement of any combination of Pell Grant, Perkins Loan, NDSL, SEOG or need-based ICL funds for the applicant's first payment period; and

(B) May employ or allow an employer to employ an eligible student under the CWS Program for the first sixty (60) consecutive days of the award year in any award year; and

(iii)(A) May withhold certification of the applicant's GSL application; or

(B) May certify the GSL application provided that the institution does not process GSL proceeds.

(b) If an institution chooses to make disbursement under paragraph (a)(2)(ii)(A) or (B) of this section, it is liable for any overpayment discovered as a result of the verification process.

(c) An institution may not withhold any GSL proceeds from a student under paragraph (a)(2) of this section for more than forty-five (45) days. If the applicant does not complete the verification process within the forty-five day period, the institution shall return the proceeds to the lender.

(d) (1) If the institution receives GSL proceeds in an amount which exceeds the student's need for the loan based upon the verified information and the excess funds can be eliminated by reducing subsequent disbursements for the applicable loan period, the institution shall process the proceeds and advise the lender to reduce the subsequent disbursements.

(2) If the institution receives GSL proceeds in an amount which exceed the student's need for the loan based upon the verified information and the excess funds cannot be eliminated in subsequent disbursements for the applicable loan period, the institution shall return the excess proceeds to the lender.

(Authority: 20 U.S.C. 1094)

§ 668.59 Consequences of a change in application information.

(a) Except as provided in paragraph (b) of this section, if the information on an application used to determine Pell Grant eligibility changes as a result of the verification process, the institution shall require the applicant to resubmit his or her SAR to the Secretary if—

(1) The institution recalculates the applicant's SAI (student aid index), determines that the applicant's EFC changes, and determines that the change in the EFC changes the applicant's Pell Grant award; or

(2) The institution does not recalculate the applicant's EFC.

(b) An institution need not require an applicant to resubmit his or her SAR to the Secretary, need not recalculate his or her EFC, and need not adjust his or her Title IV award if, as a result of the verification process, the institution finds no errors in dollar items or finds errors reflecting a cumulative change in dollar items of $200 or less.

(c) If the applicant has received funds based on information that may be incorrect and the institution has made a reasonable effort to resolve the alleged discrepancy, but cannot, the institution shall forward the applicant's name, Social Security number, and other relevant information to the Secretary.

(Authority: 20 U.S.C. 1094)

§ 668.60 Deadlines for submitting documentation and the consequences of failing to provide documentation.

(a) An institution shall require an applicant selected for verification to submit to it, within the period of time it or the Secretary specifies, the documents set forth in § 668.57 that are requested by the institution or the Secretary.

(b) For purposes of the campus-based, GSL and need-based ICL programs—

(1) If an applicant fails to provide the requested documentation within a reasonable time period established by the institution or by the Secretary—

(i) The institution may not—

(A) Disburse any additional Perkins Loan, NDSL, SEOG or need-based ICL funds to the applicant;

(B) Continue to employ or allow an employer to employ the applicant under CWS;

(C) Certify the applicant's GSL application; or

(D) Process GSL proceeds for the applicant;

(ii) The institution shall return to the lender any GSL proceeds payable to the applicant; and

(iii) The applicant shall repay to the institution any Perkins Loan, NDSL, or SEOG, or need-based ICL payments received for that award year;

(2) If the applicant provides the requested documentation after the time period established by the institution, the institution may, at its option, award aid to the applicant notwithstanding the guidelines listed in paragraph (b)(1)(i) of this section; and

(3) An institution may not withhold any GSL proceeds from a student under paragraph (b)(1)(i)(D) of this section for more than forty-five (45) days. If the applicant does not complete verification within the forty-five (45) day period, the institution shall return the GSL proceeds to the lender.

(c) For purposes of the Pell Grant Program—

(1) An applicant may submit a verified SAR to the institution after the applicable deadline specified in 34 CFR 690.61 but within an established additional time period set by the Secretary through publication of a notice in the Federal Register. If a verified SAR is submitted to the institution during the established additional time period, and the SAIs on the two SARs are different, payment must be based on the higher of the two SAIs.

(2) If the applicant does not provide the requested documentation, and if necessary, a reprocessed verified SAR, within the additional time period referenced in paragraph (c)(1) of this section, the applicant—

(i) Forfeits the Pell Grant for the award year; and

(ii) Shall return any Pell Grant payments previously received for that award year to the Secretary.

(d) The Secretary may determine not to process any subsequent Pell Grant application, and an institution, if directed by the Secretary, may not process any subsequent application for campus-based, need-based ICL or GSL program assistance of an applicant who has been requested to provide information until the applicant provides the documentation or the Secretary decides that there is no longer a need for the documentation.

(e) If an applicant selected for verification for an award year dies before the deadline for completing the verification process without completing that process, and the deadline is in the subsequent award year, the institution may not—

(1) Make any further disbursements on behalf of that applicant;

(2) Certify that applicant's GSL loan application or process that applicant's GSL proceeds; or

(3) Consider any funds it disbursed to that applicant under § 668.58(a)(2) as an overpayment.

(Authority: 20 U.S.C. 1094)

§ 668.61 Recovery of funds.

(a) If an institution discovers, as a result of the verification process, that an applicant received under § 668.58(a)(2)(ii)(A) more than he or she was eligible to receive, the institution shall eliminate the overpayment by—

(1) Adjusting subsequent financial aid payments in the award year in which the overpayment occurred; or

(2) Reimbursing the appropriate program account by—

(i) Requiring the applicant to return the overpayment to the institution if the institution cannot correct the overpayment under paragraph (a)(1) of this section; or

(ii) Making restitution from its own funds, if the applicant does not return the overpayment, by the earlier of the following dates:

(A) Sixty days after the applicant's last day of enrollment.

(B) The last day of the award year in which the institution disbursed Pell Grant, Perkins Loan, NDSL, SEOG or need-based ICL funds to the applicant.

(b) If the institution determines as a result of the verification process that an applicant received for an award year a GSL of $200 or more in excess of the student's financial need for the loan, the institution shall notify the student and the lender of the excess amount within thirty (30) days of the institution's determination that the borrower is ineligible for the excess amounts.

Federal Acquisition Regulation (FAR); Competitive Thresholds

AGENCIES: Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Final rule.

SUMMARY: Federal Acquisition Circular (FAC) 84-52 amends Federal Acquisition Regulation (FAR) Parts 5, 6, 19, and 52 to implement sections 303(b) and 303(d) of the Business Opportunity Development Reform Act of 1988, Pub. L. 100-656.

EFFECTIVE DATE: November 30, 1989.

FOR FURTHER INFORMATION CONTACT: Margaret A. Willis, FAR Secretariat, Room 4041, GS Building, Washington, DC 20405, (202) 523-4755. Please cite FAC 84-52.

SUPPLEMENTARY INFORMATION:

A. Background

Section 303(b) of the Business Opportunity Development Reform Act of 1988 requires that acquisitions offered for award pursuant to section 8(a) of the Small Business Act be awarded on the basis of competition restricted to eligible program participants if (a) there is a reasonable expectation that at least two eligible program participants will submit offers and that award can be made at a fair market price, and (b) the anticipated award price of the contract (including options) will exceed $5,000,000 in the case of a contract opportunity assigned a standard industrial classification code for manufacturing and $3,000,000 (including options) in the case of all other contract opportunities.

Section 303(d) amends the current appeal authority of the Small Business Administration to permit appeals as to whether a requirement should be offered to the section 8(a) Program and as to whether the estimated fair market price as determined by the contracting agency is correct.

B. Regulatory Flexibility Act

The requirements of the Act were addressed by the Small Business Administration in the development of its regulations implementing the Business Opportunity Development Reform Act of 1988, Pub. L. 100-656, published in the **Federal Register** on August 21, 1989 (54 FR 34692).

C. Paperwork Reduction Act

The Paperwork Reduction Act (Pub. L. 96-511) does not apply because this rule does not impose any reporting or recordkeeping requirements or collection of information from offerors, contractors, or members of the public which require the approval of OMB under 44 U.S.C. 3501, et seq.

D. Public Comments

On June 28, 1989, a proposed rule was published in the **Federal Register** (54 FR 27310). Comments received were considered by the Councils in the development of this final rule.

Director, Office of Federal Acquisition Policy.

Federal Acquisition Circular

[Number 84-52]

Unless otherwise specified, all Federal Acquisition Regulation (FAR) and other directive material contained in FAC 84-52 is effective October 31, 1989.

Richard H. Hopf III,

Associate Director for Acquisition Policy

S.J. Evans,

Associate Administrator for Procurement, National Aeronautics and Space Administration.

Eleanor Spector,

Assistant Secretary of Defense for Procurement, Department of Defense.

Federal Acquisition Circular (FAC) 84-52 amends the Federal Acquisition Regulation as specified below:

Item-Competitive Thresholds

FAR parts 5, 6, subparts 19.2 and 19.8, and part 52 are amended to implement subsection 303(b) of the Business Opportunity Development Reform Act of 1988, Pub. L. 100-656, which requires that acquisitions offered for award pursuant to section 8(a) of the Small Business Act be awarded on the basis of competition restricted to eligible program participants if (a) there is a reasonable expectation that at least two eligible program participants will submit offers and that award can be made at a fair market price, and (b) anticipated award price of the contract (including options) will exceed $5,000,000 in the case of a contract opportunity assigned a standard industrial classification code for manufacturing and $3,000,000 (including options) in the case of all other contract opportunities. In addition, Part 19 is revised to implement subsection 303(d) of Pub. L. 100-656 to permit appeals by SBA as to whether a requirement should be offered to the section 8(a) Program and as to whether the estimated fair market price as determined by the contracting agency is correct.

Therefore, 48 CFR Parts 5, 6, 19, and 52 are amended as set forth below:

1. The authority citation for 48 CFR Parts 5, 6, 19, and 52 continues to read as follows:

Authority: 40 U.S.C. 486(c); 10 U.S.C. Chapter 137; and 42 U.S.C. 2473(c).

PART 5—PUBLICIZING CONTRACT ACTIONS

2. Section 5.202 is amended by revising paragraph (a)(4) to read as follows:

5.202 Exceptions.

(a) * * *

(4) The contract action is expressly authorized or required by a statute to be made through another Government agency, including acquisitions from the Small Business Administration (SBA) using the authority of section 8(a) of the Small Business Act (but see 5.205(e)), or from a specific source such as a workshop for the blind under the rules of the Committee for the Purchase from the Blind and Other Severely Handicapped;

* * * * *

3. Section 5.205 is admended by adding paragraph (e) to read as follows:

5.205 Special situations.

* * * * *

(e) *Section 8(a) competitive acquisition.* When a national buy requirement is being considered for competitive acquisition limited to eligible 8(a) concerns under Supart 19.8, the contracting officer shall transmit a synopsis of the proposed contract action to the CBD in accordance with 5.207. The synopsis may be transmitted to the CDB concurrent with submission of the agency offering (see 19.804-2) to the Small Business Administration (SBA). The synopsis should also include information—

(1) Advising that the acquisition is being offered for competition limited to eligible 8(a) concerns;

(2) Specifying the Standard Industrial Classification (SIC) code;

(3) Advising that eligibility to participate may be restricted to firms in either the developmental or transitional stage; and

(4) Encouraging interested 8(a) firms to request a copy of the solicitation as expeditiously as possible since the solicitation will be issued without further notice upon SBA acceptance of the requirement for the section 8(a) Program.

PART 6—COMPETITION REQUIREMENTS

4. Section 6.204 is added to read as follows:

6.204 Section 8(a) competition.

(a) To fulfill statutory requirements relating to section 8(a) of the Small Business Act, as amended by Pub. L. 100-656, contracting officers may limit competition to eligible 8(a) contractors (see Subpart 19.8).

(b) No separate justification or determination and findings is required under this part to limit competition to eligible 8(a) contractors.

5. Section 6.302-5 is amended by revising paragraph (b)(4) to read as follows:

6.302-5 Authorized or required by statute.

(b) * * *

(4) Sole source awards under the 8(a) Program—15 U.S.C. 637 (see subpart 19.8).

* * * * *

PART 19—SMALL BUSINESS AND SMALL DISADVANTAGED BUSINESS CONCERNS

6. Section 19.202-6 is amended by revising paragraph (b) to read as follows:

19.202-6 Determination of fair market price.

* * * * *

(b) For 8(a) contracts, both with respect to meeting the requirement at 19.806(b) and in order to accurately estimate the current fair market price, contracting officers shall follow the procedures at 19.807.

7. Subpart 19.8 is revised to read as follows:

Subpart 19.8—Contracting With the Small Business Administration (The 8(a) Program)

Sec.

19.811 Preparing the contracts.
19.811-1 Sole source.
19.811-2 Competitive.
19.811-3 Contract clauses.
19.812 Contract administration.

19.800 General.

(a) Section 8(a) of the Small Busines Act (15 U.S.C. 637(a)) established a program that authorizes the Small Business Administration (SBA) to enter into all types of contracts with other agencies and let subcontracts for performing those contracts to firms eligible for program participation. The SBA's subcontractors are referred to as "8(a) contractors."

(b) Contracts may be awarded to the SBA for performance by eligible 8(a) firms on either a sole source or competitive basis.

(c) When, acting under the authority of the program, the SBA certifies to an agency that the SBA is competent and responsible to perform a specific contract, the contracting officer is authorized, in the contracting officer's discretion, to award the contract to the SBA based upon mutually agreeable terms and conditions.

19.801 Definitions.

Local buy requirement, as used in this subpart, means a supply or service purchased to meet the specific needs of one user in one location.

National buy requirement, as used in this subpart, means a supply or service purchased to meet the needs of one or more locations where supply control, inventory management, or acquisition responsibility have been assigned to a central contracting activity.

19.802 Selecting concerns for the 8(a) Program.

Selecting concerns for the 8(a) Program is the responsibility of the SBA and is based on the criteria established in 13 CFR 124.101-113.

19.803 Selecting acquisitions for the 8(a) Program.

Through their cooperative efforts, the SBA and an agency match the agency's requirements with the capabilities of 8(a) concerns to establish a basis for the agency to contract with the SBA under the program. Selection is initiated in one of three ways—

(a) The SBA advises an agency contracting activity through a search letter of an 8(a) firm's capabilities and asks the agency to identify acquisitions to support the firm's business plans. In these instances, the SBA will provide at least the following information in order to enable the agency to match an acquisition to the firm's capabilities.

(1) Identification of the concern and its owners.

(2) Background information on the concern, including any and all information pertaining to the concern's technical ability and capacity to perform.

(3) The firm's present production capacity and related facilities.

(4) The extent to which contracting assistance is needed in the present and the future, described in terms that will enable the agency to relate the concern's plans to present and future agency requirements.

(5) If construction is involved, the request shall also include the following:

(i) The concern's capabilities in and qualifications for accomplishing various categories of maintenance, repair, alteration, and construction work in specific categories such as mechanical, electrical, heating and air conditioning, demolition, building, painting, paving, earth work, waterfront work, and general construction work.

(ii) The concern's capacity in each construction category in terms of estimated dollar value (e.g., electrical, up to $100,000).

(b) The SBA identifies a specific requirement for a particular 8(a) firm or firms and asks the agency contracting activity to offer the acquisition to the 8(a) Program for the firm(s). In these instances, in addition to the information in paragraph (a) of this section, the SBA will provide—

(1) A clear identification of the acquisition sought; e.g., project name or number;

(2) A statement as to how any additional needed facilities will be provided in order to ensure that the firm will be fully capable of satisfying the agency's requirements;

(3) If construction, information as to the bonding capability of the firm(s); and

(4) Either—

(i) If sole source request—

(A) The reasons why the firm is considered suitable for this particular acquisition; e.g., previous contracts for the same or similar supply or service;

independent review of the factors in 19.803(a) and other aspects of the firms' capabilities which would ensure the satisfactory performance of the requirement being considered for

(12) Identification of all known 8(a) concerns which have expressed an interest in this specific requirement as a result of self-marketing, response to sources sought, or publication of

19.804-4 Repetitive acquisitions.

In order for repetitive acquisitions to be awarded through the 8(a) Program, there must be separate offers and

upon whether the acquisition is a local or national buy requirement.

19.805-2 Procedures.

solicitation or proposed contract award. Any party with information concerning the eligibility of an 8(a) firm to continue participation in the 8(a) Program may

VOL 54 ISS 209 OCT 31 1989 UMI

(i) If sole source request—

(A) The reasons why the firm is considered suitable for this particular acquisition; e.g., previous contracts for the same or similar supply or service; and

(B) A statement that the firm is eligible in terms of SIC code, business support levels, and business activity targets; or,

(ii) If competitive, a statement that at least two 8(a) firms are considered capable of satisfying the agency's requirements and a statement that the firms are also eligible in terms of the SIC code, business support levels, and business activity targets. If requested by the contracting activity, SBA will identify at least two such firms and provide information concerning the firms' capabilities.

(c) Agencies may also review other proposed acquisitions for the purpose of identifying requirements which may be offered to the SBA. Where agencies independently, or through the self marketing efforts of an 8(a) firm, identify a requirement for the 8(a) Program, they may offer on behalf of a specific 8(a) firm, for the 8(a) Program in general, or for 8(a) competition.

19.804 Evaluation, offering, and acceptance.

19.804-1 Agency evaluation.

In determining the extent to which a requirement should be offered in support of the 8(a) Program, the agency should evaluate—

(a) Its current and future plans to acquire the specific items or work that 8(a) contractors are seeking to provide, identified in terms of—

(1) Quantities required or the number of construction projects planned; and

(2) Performance or delivery requirements, including required monthly production rates, when applicable.

(b) Its current and future plans to acquire items or work similar in nature and complexity to that specified in the business plan;

(c) Problems encountered in previous acquisitions of the items or work from the 8(a) contractors and/or other contractors;

(d) The impact of any delay in delivery;

(e) Whether the items or work have previously been acquired using small business set-asides; and

(f) Any other pertinent information about known 8(a) contractors, the items, or the work. This includes any information concerning the firms' capabilities. When necessary, the contracting agency shall make an independent review of the factors in 19.803(a) and other aspects of the firms' capabilities which would ensure the satisfactory performance of the requirement being considered for commitment to the 8(a) Program.

19.804-2 Agency offering.

(a) After completing its evaluation, the agency shall notify the SBA of the extent of its plans to place 8(a) contracts with the SBA for specific quantities of items or work. The notification must identify the timeframes within which prime contract and subcontract actions must be completed in order for the agency to meet its responsibilities. The notification must also contain the following information applicable to each prospective contract:

(1) A description of the work to be performed or items to be delivered, and a copy of the statement of work, if available.

(2) The estimated period of performance.

(3) The SIC code that applies to the principal nature of the acquisition.

(4) The anticipated dollar value of the requirement, including options, if any.

(5) Any special restrictions or geographical limitations on the requirement (for construction and services include the location of the work to be performed).

(6) Any special capabilities or disciplines needed for contract performance.

(7) The type of contract anticipated.

(8) The acquisition history, if any, of the requirement, including the names and addresses of any small business contractors which have performed this requirement during the previous 24 months.

(9) A statement that no solicitation for this specific acquisition has been issued as a small business set-aside or a small disadvantaged business set-aside, and that no other public communication (such as a notice in the Commerce Business Daily) has been made evidencing the contracting agency's clear intention to set aside the acquisition for small business or small disadvantaged business.

(10) Identification of any particular 8(a) concern designated for consideration, including a brief justification, such as—

(i) The 8(a) concern, through its own efforts, marketed the requirement and caused it to be reserved for the 8(a) Program; or

(ii) The acquisition is a follow-on or renewal contract and the nominated concern is the incumbent.

(11) Bonding requirements, if applicable.

(12) Identification of all known 8(a) concerns which have expressed an interest in this specific requirement as a result of self-marketing, response to sources sought, or publication of advanced acquisition requirements.

(13) Identification of all SBA district or regional offices which have asked for the acquisition for the 8(a) Program.

(14) A recommendation, if appropriate, as to whether the acquisition should be competitive or sole source; and

(15) Any other pertinent and reasonably available data.

(b) An agency offering a local buy requirement should submit it to the SBA Regional Office for the geographical area where the user is located. An agency offering a national buy requirement should submit it to the Office of Program Development, Office of Minority Small Business and Capital Ownership Development, Small Business Administration, 1441 L Street, NW., Washington, DC 20416.

19.804-3 SBA acceptance.

(a) Upon receipt of the contracting agency's offer, the SBA will determine whether to accept the requirement for the 8(a) Program. The SBA's decision whether to accept the requirement will be transmitted to the contracting agency in writing within 15 working days of receipt of the offer, unless the SBA requests, and the contracting agency grants, an extension.

(b) If the acquisition is accepted as a sole source, the SBA will advise the contracting activity of the 8(a) firm selected for negotiation. Generally, the SBA will accept a contracting activity's recommended source.

(c) If the acquisition is accepted for competition—(1) as a local buy requirement, the SBA will advise as to which of the SBA districts or regions the competition is restricted and provide the list of the 8(a) firms in those districts or regions which are eligible for the designated SIC code; or (2) as a national buy requirement, the SBA, if requested by the contracting activity, will identify at least two eligible sources and the contracting officer, in coordination with the small business specialist, will augment the source list based on results of the synopsis (see 5.205(e)) and other available information. The SBA will advise of any program participation stage restrictions. The SBA may limit competition to 8(a) concerns in the developmental stage of program participation; may limit competition to 8(a) concerns in the transitional stage; or may permit competition among firms in either stage.

19.804-4 Repetitive acquisitions.

In order for repetitive acquisitions to be awarded through the 8(a) Program, there must be separate offers and acceptances. This allows the SBA to revalidate a firm's eligibility, to evaluate the suitability of each acquisition as a competitive 8(a), and to determine whether the requirement should continue under the 8(a) Program.

19.805 Competitive 8(a).

19.805-1 General.

(a) Except as provided in paragraph (b) of this subsection, an acquisition offered to the SBA under the 8(a) Program shall be awarded on the basis of competition limited to eligible 8(a) firms if—

(1) There is a reasonable expectation that at least two eligible and responsible 8(a) firms will submit offers and that award can be made at a fair market price; and

(2) The anticipated award price of the contract, including options, will exceed $5,000,000 for acquisitions assigned manufacturing standard industrial classification (SIC) codes and $3,000,000 for all other acquisitions.

(b) Where an acquisition exceeds the competitive threshold, the SBA may accept the requirement for a sole source 8(a) award if—

(1) There is not a reasonable expectation that at least two eligible and responsible 8(a) firms will submit offers at a fair market price; or

(2) The SBA determines that an 8(a) concern owned and controlled by an economically disadvantaged Indian tribe is eligible and responsible and needs the acquisition for its business development.

(c) The SBA Association Administrator for Minority Small Business and Capital Ownership Development (AA/MSB&COD) may approve an agency recommendation for a competitive 8(a) award below the competitive thresholds. Such recommendations will be approved only on a limited basis and will be primarily granted where technical competitions are appropriate or where a large number of responsible 8(a) firms are available for competition. In determining whether a recommendation to compete below the threshold will be approved, AA/MSB&COD will, in part, consider the extent to which the requesting agency is supporting the 8(a) Program on a noncompetitive basis. Agency recommendations for competition below the threshold may be included in the offering letter or may be submitted by separate correspondence through the SBA region or headquarters, depending upon whether the acquisition is a local or national buy requirement.

19.805-2 Procedures.

(a) Competitive 8(a) acquisitions shall be conducted by contracting agencies by using sealed bids (see Part 14) or competitive proposals (see Part 15).

(b) Offers shall be solicited from those sources identified in accordance with the SBA instructions provided under 19.804-3.

(c) The SBA will determine the eligibility of the firms for award of the contract. Eligibility will be determined by the SBA as of the time of submission of initial offers which include price. Eligibility is based on section 8(a) Program criteria, e.g., whether the firm has the SIC code for the acquisition in its approved business plan, whether the firm is currently a small business under the SIC code, whether the firm is in the developmental or transitional stage (if the acquisition is restricted by stage), whether the firm is in conformance with the 8(a) support limitation set forth in its business plan, and whether the firm is in conformance with its 8(a) business activity targets.

(1) In sealed bid acquisitions, upon receipt of offers, the contracting officer will provide the SBA a copy of the solicitation, the estimated fair market price, and a list of offerors ranked in the order of their standing for award (i.e., first low, second low, etc.) with the total evaluated price for each offer, differentiating between basic requirements and any options. The SBA will consider the eligibility of the first low offeror. If the first low offeror is not determined to be eligible, the SBA will consider the eligibility of the next low offeror until an eligible offeror is identified. The SBA will determine the eligibility of the firms and advise the contracting officer within 5 working days after its receipt of the list of bidders. Once eligibility has been established by the SBA, the successful offeror will be determined by the contracting activity in accordance with normal contracting procedures.

(2) In negotiated acquisition, the SBA will determine eligibility when the successful offeror has been established by the agency and the contract transmitted for signature unless a referral has been made under 19.809, in which case the SBA will determine eligibility at that point.

(d) In any case in which a firm is determined to be ineligible, the SBA will notify the firm of that determination.

(e) The eligibility of an 8(a) firm for a competitive 8(a) award may not be challenged or protested by another 8(a) firm or any other party as part of a solicitation or proposed contract award. Any party with information concerning the eligibility of an 8(a) firm to continue participation in the 8(a) Program may submit such information to the SBA in accordance with 13 CFR 124.111(c).

19.806 Pricing the 8(a) contract.

(a) The contracting officer shall price the 8(a) contract in accordance with Subpart 15.8. If required by Subpart 15.8, the SBA shall obtain certified cost or pricing data from the 8(a) contractor. If the SBA requests audit assistance to determine the reasonableness of the proposed price in a sole source acquisition, the contracting activity shall furnish it to the extent it is available.

(b) An 8(a) contract, sole source or competitive, may not be awarded if the price of the contract results in a cost to the contracting agency which exceeds a fair market price.

(c) If requested by the SBA, the contracting officer shall make available the data used to estimate the fair market price.

(d) The negotiated contract price and the estimated fair market price are subject to the concurrence of the SBA. In the event of a disagreement between the contracting officer and the SBA, the SBA may appeal in accordance with 19.810.

19.807 Estimating fair market price.

(a) The contracting officer shall estimate the fair market price of the work to be performed by the 8(a) contractor.

(b) In estimating the fair market price for an acquisition other than those covered in paragraph (c) of this section, the contracting officer shall use cost or price analysis and consider commercial prices for similar products and services, available in-house cost estimates, data (including cost or pricing data) submitted by the SBA or the 8(a) contractor, and data obtained from any other Government agency.

(c) In estimating a fair market price for a repeat purchase, the contracting officer shall consider recent award prices for the same items or work if there is comparability in quantities, conditions, terms, and performance times. The estimated price should be adjusted to reflect differences in specifications, plans, transportation costs, packaging and packing costs, and other circumstances. Price indices may be used as guides to determine the changes in labor and material costs. Comparison of commercial prices for similar items may also be used.

VOL 54 ISS 209 OCT 31 1989 UMI

19.808 Contract negotiation.

19.808–1 Sole source.

(a) The SBA is responsible for initiating negotiations with the agency within the time established by the agency. If the SBA does not initiate negotiations within the agreed time and the agency cannot allow additional time, the agency may, after notifying the SBA, proceed with the acquisition from other sources.

(b) The 8(a) contractor should participate, whenever practicable, in negotiating the contract terms. When mutually agreeable, the SBA may authorize the contracting activity to negotiate directly with the 8(a) contractor. Whether or not direct negotiations take place, the SBA is responsible for approving the resulting contract before award and determining whether the 8(a) contractor shall be required to provide a performance bond.

19.808–2 Competitive.

In competitive 8(a) acquisitions subject to Part 15, the contracting officer conducts negotiations directly with the competing 8(a) firms.

19.809 Preaward considerations.

The contracting officer should request a preaward survey of the 8(a) contractor whenever considered useful. If the results of the preaward survey or other information available to the contracting officer raise substantial doubt as to the firm's ability to perform, the contracting officer should refer the matter to the SBA for its consideration in deciding whether SBA should certify that it is competent and responsible to perform. This is not a referral for Certificate of Competency consideration under Subpart 19.6. Within 15 working days of the receipt of the referral or a longer period agreed to by the SBA and the contracting activity, the SBA Assistant Regional Administrator for Minority Small Business and Capital Ownership Development in the regional office which services the 8(a) firm will advise the contracting officer as to the SBA's willingness to certify its competency to perform the contract using the 8(a) concern in question as its subcontractor. The contracting officer shall proceed with the acquisition and award the contract to another appropriately selected 8(a) offeror if the SBA has not certified its competency within 15 working days (or a longer mutually agreeable period.)

19.810 SBA appeals.

(a) The following matters may be submitted by the SBA Administrator for determination to the agency head if the SBA and the contracting officer fail to agree on them:

(1) The decision not to make a particular acquisition available for award under the 8(a) Program.

(2) The terms and conditions of a particular sole source acquisition to be awarded under the 8(a) Program.

(3) The estimated fair market price.

(b) Notification of a proposed referral to the agency head by the SBA must be received by the contracting officer within 5 working days after the SBA is formally notified of the contracting officer's decision. The SBA shall provide the agency Director for Small and Disadvantaged Business Utilization a copy of this notification. The SBA must provide the request for determination to the agency head within 20 working days of the SBA's receipt of the adverse decision. Pending issuance of a decision by the agency head, the contracting officer shall suspend action on the acquisition. Action on the acquisition need not be suspended if the contracting officer makes a written determination that urgent and compelling circumstances which significantly affect the interests of the United States will not permit waiting for a decision.

(c) If the SBA appeal is denied, the decision of the agency head shall specify the reasons for the denial, including the reasons why the selected firm was determined incapable of performance, if appropriate. The decision shall be made a part of the contract file.

19.811 Preparing the contracts.

19.811–1 Sole source.

(a) The contract to be awarded by the agency to the SBA shall be prepared in accordance with agency procedures and in the same detail as would be required in a contract with a business concern. The contracting officer shall use the Standard Form 26 as the award form, except for construction contracts, in which case the Standard Form 1442 shall be used as required in 36.701(b).

(b) The agency shall prepare the contract that the SBA will award to the 8(a) contractor in accordance with agency procedures, as if the agency were awarding the contract directly to the 8(a) contractor, except for the following.

(1) The award form shall cite 41 U.S.C. 253(c)(5) or 10 U.S.C. 2304(c)(5) (as appropriate) as the authority for use of other than full and open competition.

(2) Appropriate clauses shall be included, as necessary, to reflect that the contract is between the SBA and the 8(a) contractor.

(3) The following items shall be inserted by the SBA—

(i) The SBA contract number.

(ii) The effective date.

(iii) The typed name of the SBA's contracting officer.

(iv) The signature of the SBA's contracting officer.

(v) The date signed.

(4) The SBA will obtain the signature of the 8(a) contractor prior to signing and returning the prime contract to the contracting officer for signature. The SBA will make every effort to obtain signatures and return the contract, and any subsequent bilateral modification, to the contracting officer within a maximum of 10 working days.

(5) If the contract is for construction work, it shall include requirements of the Miller Act with respect to performance and payment bonds (see part 28).

(c) Except in procurements where the SBA will make advance payments to its 8(a) contractor, the agency contracting officer may, as an alternative to the procedures in 19.811–1(a) and (b), use a single contract document for both the prime contract between the agency and the SBA and its 8(a) contractor. The single contract document shall contain the information in 19.811–1(b) (1), (2), (3), and (5). Appropriate blocks on the Standard Form (SF) 26 or 1442 will be asterisked and a continuation sheet appended which includes the following:

(1) Agency acquisition office, prime contract number, name of agency contracting officer and lines for signature, date signed, and effective date.

(2) The SBA office, the SBA contract number, name of the SBA contracting officer, and lines for signature and date signed.

(3) Name and lines for the 8(a) contractor's signature and date signed.

(d) Prior to award of contract actions in excess of $100,000, the SBA shall provide the contracting activity with the competing contractor certifications required by 3.104–9 from its 8(a) contractor. The contracting activity's contracting officer shall maintain the list required by 3.104–9 and complete the contracting officer certification.

19.811–2 Competitive.

(a) The contract will be prepared in accordance with 14.407–1(d), except that appropriate blocks on the Standard Form 26 or 1442 will be asterisked and a continuation sheet appended which includes the following:

(1) The agency contracting activity, prime contract number, name of agency contracting officer, and lines for signature, date signed, and effective date.

(2) The SBA office, the SBA subcontract number, name of the SBA contracting officer and lines for signature and date signed.

(b) For contract actions in excess of $100,000, the contracting activity's contracting officer shall obtain the competing contractor certifications as required by 3.104–9 directly from the 8(a) firm(s). The contracting activity's contracting officer shall maintain the list required by 3.104–9 and complete the contracting officer certification.

(c) The process for obtaining signatures shall be as specified in 19.811–1(b)(4).

19.811–3 Contract clauses.

(a) The contracting officer shall insert the clause at 52.219–11, Special 8(a) Contract Conditions, in contracts between the SBA and the agency when the acquisition is accomplished using the procedures of 19.811–1(a) and (b).

(b) The contracting officer shall insert the clause at 52.219–12, Special 8(a) Subcontract Conditions, in contracts between the SBA and its 8(a) contractor when the acquisition is accomplished using the procedures of 19.811–1 (a) and (b).

(c) The contracting officer shall insert the clause at 52.219–17, Section 8(a) Award, in competitive solicitations and contracts when the acquisition is accomplished using the procedures of 19.805 and in sole source awards which utilize the alternative procedure in 19.811–1(c).

(d) The contracting officer shall insert the clause at 52.219–18, Notification of Competition Limited to Eligible 8(a) Concerns, in competitive solicitations and contracts when the acquisition is accomplished using the procedures of 19.805.

(1) The clause at 52.219–18 with its Alternate I will be used when competition is to be limited to 8(a) concerns within one or more specific SBA districts/regions pursuant to 19.804–3.

(2) The clause at 52.219–18 with its Alternate II will be used when competition is to be limited to 8(a) concerns within a specific stage of 8(a) Program participation (i.e., developmental or transitional) pursuant to 19.804–3.

(e) the contracting officer shall insert the clause at 52.219–14, Limitations or Subcontracting, in any solicitation and contract resulting from this subpart.

19.812 Contract administration.

(a) The contracting officer shall assign contract administration functions, as required, based on the location of the 8(a) contractor (see DoD Directory of Contract Administration Services Components (DoD 4105.59–H)).

(b) The agency shall distribute copies of the contract(s) in accordance with Part 4. All contracts and modifications, if any, shall be distributed to both the SBA and the firm in accordance with the timeframes set forth in 4.201.

(c) To the extent consistent with the contracting activity's capability and resources, 8(a) contractors furnishing requirements shall be afforded production and technical assistance, including, when appropriate, identification of causes of deficiencies in their products and suggested corrective action to make such products acceptable.

PART 52—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

8. Section 52.219–11 is amended by revising the introductory text; by removing in the title of the clause the date "(APR 1984)" and inserting in its place "(OCT 1989)"; by removing the words "Delegates to the . . . " and inserting "Except for novation agreements and advance payments, delegates to the . . ." in paragraph (c) of the clause; and by removing the derivation line following "(End of clause)" to read as follows:

52.219–11 Special 8(a) Contract Conditions.

As prescribed in 19.811–3(a), insert the following clause:

* * * * *

9. Section 52.219–12 is amended by revising the introductory text; by removing in the title of the clause the date "(APR 1984)" and inserting in its place "(OCT 1989)"; by revising paragraph (b)(2) of the clause; by removing the derivation line following "(End of clause)"; and by removing Alternate I to read as follows:

52.219–12 Special 8(a) Subcontract Conditions.

As prescribed in 19.811–3(b), insert the following clause:

* * * * *

(b)(2) That the SBA has delegated responsibility, except for novation agreements and advance payments, for the administration of this subcontract to the ..... [*insert name of contracting agency*] with complete authority to take any action on behalf of the Government under the terms and conditions of this contract.

* * * * *

10. Section 52.219–17 is added to read as follows:

52.219–17 Section 8(a) Award.

As prescribed in 19.811–3(c), insert the following clause:

Section 8(a) Award (Oct 1989)

(a) By execution of a contract, the Small Business Administration (SBA) agrees to the following:

(1) To furnish the supplies or services set forth in the contract according to the specifications and the terms and conditions by subcontracting with the Offeror who has been determined an eligible concern pursuant to the provisions of section 8(a) of the Small Business Act, as amended (15 U.S.C. 637(a)).

(2) Except for novation agreements and advance payments, delegates to the ..... (*insert name of contracting activity*) the responsibility for administering the contract with complete authority to take any action on behalf of the Government under the terms and conditions of the contract; *provided, however* that the contracting agency shall give advance notice to the SBA before it issues a final notice terminating the right of the subcontractor to proceed with further performance, either in whole or in part, under the contract.

(3) That payments to be made under the contract will be made directly to the subcontractor by the contracting activity.

(b) The offeror/subcontractor agrees and acknowledges that it will, for and on behalf of the SBA, fulfill and perform all of the requirements of the contract.

(End of clause)

11. Section 52.219–18 is added to read as follows:

52.219–18 Notification of Competition Limited to Eligible 8(a) Concerns.

As prescribed in 19.811–3(d), insert the following clause:

NOTIFICATION OF COMPETITION LIMITED TO ELIGIBLE 8(A) CONCERNS (OCT 1989)

(a) Offers are solicited only from small business concerns expressly certified by the Small Business Administration (SBA) for participation in the SBA's 8(a) Program and which meet the following criteria at the time of submission of offer—

(1) SIC code _____ • _____ is specifically included in the Offeror's approved business plan;

(2) The Offeror is in conformance with the 8(a) support limitation set forth in its approved business plan; and

(3) The Offeror is in conformance with the Business Activity Targets set forth in its approved business plan or any remedial action directed by the SBA.

(b) By submission of its offer, the Offeror certifies that it meets all of the criteria set forth in paragraph (a) of this clause.

(c) Any award resulting from this solicitation will be made to the Small Business Administration, which will subcontract performance to the successful 8(a) offeror selected through the evaluation criteria set forth in this solicitation.

(d) *Agreement.* A manufacturer or regular dealer submitting an offer in its own name

VOL
54
ISS
209
OC
31
1989
UMI

agrees to furnish, in performing the contract, only end items manufactured or produced by small business concerns inside the United States, its territories or possessions, the Commonwealth of Puerto Rico, or the Trust Territory of the Pacific Islands. However, this requirement does not apply in connection with construction or service contracts.

(End of clause)

(*Insert SIC code assigned to the acquisition by the contracting activity.)

Alternate I (OCT 1989). If the competition is to be limited to 8(a) concerns within one or more specific SBA regions or districts, add the following subparagraph (a)(4) to paragraph (a) of the clause:

(4) The offeror's approved business plan is on the file and serviced by _____* _____ (**Contracting Officer completes by inserting the appropriate SBA District and/or Regional Office(s) as identified by the SBA*).

Alternate II (OCT 1989). If the competition is to be limited to 8(a) concerns within a particular program participation stage, add the following subparagraph (a)(4) to paragraph (a) of the clause. When used in conjunction with Alternate I, this subparagraph should be renumbered (a)(5).

(4) The offeror is in the _____ *_____ stage of 8(a) Program participation. (**Contracting Officer completes by inserting the appropriate stage of participation as identified by SBA (i.e., developmental or transitional).)*

Alternate III (OCT 1989). When the acquisition is for a product in a class for which the Small Business Administration has determined that there are not small business manufacturers in the Federal market in accordance with 19.502(b), substitute the following paragraph (d) for paragraph (d) of the basic clause:

(d) *Agreement.* A regular dealer submitting an offer in its own name agrees to furnish, in performing the contract, only end items manufactured or produced in the United States, its territories or possessions, the Commonwealth of Puerto Rico, or the Trust Territory of the Pacific Islands.

ENVIRONMENTAL PROTECTION AGENCY

[FRL-3566-3]

Superfund Response Action Contractor Indemnification

AGENCY: Environmental Protection Agency.

ACTION: Proposed policy; request for public comment.

SUMMARY: The Environmental Protection Agency (EPA) is issuing a proposed guidance document to implement section 119 of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), as amended by the Superfund Amendments and Reauthorization Act of 1986 (42 U.S.C. 9619). Section 119 provides the President with discretionary authority to indemnify response action contractors (RACs) for negligent releases arising out of response action activities at sites on the National Priorities List (NPL) and removal action sites, and to indemnify certain other persons as provided expressly by statute. As delegated by the President, EPA may extend indemnification to RACs working at NPL or removal action sites for EPA, states (or a political subdivision), and potentially responsible parties (PRPs). EPA is publishing the proposed section 119 guidance document to solicit public comments.

DATES: Comments must be submitted on or before January 2, 1990.

ADDRESSES: An original and two copies of comments must be sent to Tom Gillis, U.S. Environmental Protection Agency, OS-510, 401 M Street SW., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: Tom Gillis, 202-475-6771.

SUPPLEMENTARY INFORMATION: Pursuant to section 119 of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA), 42 U.S.C. 9619, (CERCLA), and E.O. 12580, the Environmental Protection Agency (EPA) is proposing guidelines to implement EPA's discretionary authority to indemnify Response Action Contractors (RACs) for negligent releases arising from response action activities conducted under CERCLA.

1.0 Background

This background section describes the pollution liability insurance availability problem that contributed to the impetus for enactment of section 119. Section 119 is summarized, and EPA interim guidance which has implemented section 119 since date of enactment of SARA is summarized. Sections two and three of this document outline the four general policy approaches considered by EPA, and the policy proposed in this Notice.

1.1 Background Information on the Pollution Liability Insurance Problem

The perceived need for EPA indemnification of Superfund RACs arose from the contractors' inability to purchase adequate and affordable pollution liability insurance. During the past few years, the Property & Casualty (P&C) insurance industry has been generally unwilling, with a few exceptions, to provide affordable and adequate pollution liability insurance coverage to businesses engaged in hazardous waste management or that have a potential for pollution liability. In addition to pollution liability, several other insurance lines have experienced similar availability and affordability problems during the recent restricted insurance market. For example, entities seeking coverage for directors' and officers' liability, municipal liability, professional liability, product liability, daycare liability, excess liability, etc., have experienced availability, affordability, and adequacy problems in the last four years.

The availability, affordability, and adequacy of commercial liability insurance is affected directly by internal and external economic forces that influence the P&C insurance industry. The P&C market, like other markets, is subject to business cycles. The business cycle in the insurance industry is known as the underwriting cycle. The P&C underwriting cycle behaved fairly predictably until the mid 1980s, with a normal cyclic duration of approximately six years. During the late 1970s and early 1980s, however, the U.S. economy experienced unprecedented high interest rates, altering the behavior of the underwriting cycle. The commercial liability insurance shortage that began in late 1984 was caused primarily by the high interest rates of the late 1970s and early 1980s.

From 1976 to 1983, many P&C insurers experienced record profits derived primarily from investment income. Insurers' profits arise from two sources: underwriting income and investment income. Underwriting income is the difference between premiums collected and claims paid by insurers. Investment income arises when insurers invest premium dollars prior to the payment of future claims. In response to the high interest rates of this period, many insurers abandoned traditional underwriting practices and instead relied more on investment income from increasing premium volume. During this period, insurance rates in many of the long-tail commercial liability insurance lines (i.e., insurance lines in which underwriting losses are expected many years after premiums are collected) did not adequately reflect the insured's loss potential, because of the insurer's practice of cashflow underwriting (that is, underwriting to maximize premium volume rather than underwriting income). Primary insurers and reinsures, competing for limited premium dollars, reduced insurance rates in many commercial liability insurance lines in order to increase their premium volume (i.e., cash flow). Insurers sought increased premium volume to increase their investment income, by investing premiums at high interest rates.

While they were practicing cashflow underwriting, many insurers experienced increasing insurance capacity (i.e., the financial ability to write insurance). This increased capacity was provided primarily by capital investors during the early eighties, and caused even further competition between insurers, resulting in further reductions in premium rates for insurance. The reduced rates and lax underwriting practices eventually led to record pretax underwriting losses in 1984 and 1985 ($21.5 and $24.7 billion respectively) for the P&C insurance industry.

Record P&C industry underwriting losses in 1984 and 1985, and withdrawal of the world reinsurance industry from perceived high risk liability lines, were the primary causes of the insurance capacity shortage in many different commercial liability insurance lines. When their financial capacity is limited, P&C insurers tend to withdraw from high risk liability lines (for example, pollution liability) and save their limited financial capacity for more traditionally profitable (and predictable) insurance lines. P&C insurers that perceived pollution liability insurance to be a high risk insurance line abandoned the pollution liability insurance market in 1984 and generally incorporated broad pollution exclusions into all commercial insurance lines. Even though the P&C insurance industry had become more stable by 1987, the market for pollution liability insurance has remained very limited.

In addition to the reasons cited above, insurers contend that several other problems have exacerbated the decline of the pollution liability insurance market. In October, 1985, an All-Industry

Research Advisory Council (AIRAC) report ("Pollution Liability: The Evolution of a Difficult Insurance Market") indicated that the pollution liability insurance market has declined because of the following developments:

- Some provisions and interpretations of Federal pollution laws make it difficult for the insurance mechanism to work. State pollution laws create similar difficulties in a few instances.
- Courts in key jurisdictions have imposed retroactive liabilities on insurers for pollution damages and cleanup costs that were never intended to be covered. Insurers are concerned that the courts will not respect the intent of future pollution contracts, no matter what language they use to describe the terms and limitations.
- The reinsurance market for gradual pollution insurance has virtually disappeared because of adverse loss experience and concerns over legal trends in the U.S.
- Demand for gradual pollution insurance has been confined mostly to entities with a high probability of sustaining large losses, causing problems for insurers in developing enough insurance capacity to handle the catastrophic risks involved. Insurers have yet to see the kind of broad demand that would be enable them to build and sustain a robust market for the coverage.
- The pollution hazard has turned out to be much more complex and expensive to underwrite than anticipated. Gearing up to underwrite this liability risk requires major commitments of time, dollars, as well as specialized expertise which typically is not available.

The problems of cashflow underwriting and those raised by the AIRAC combined to create a situation where reasonably priced pollution liability insurance was generally unavailable, and, for some contractors, unavailable at any price. Today, limited (although expensive) insurance coverage is available for most contractors at most sites.

1.2 Pre-1986 Indemnification of Superfund RACS

RACs have traditionally relied upon commercial liability insurance to offset their potential liability stemming from participation in the Superfund program. In addition, prior to the enactment of SARA, EPA provided indemnification to EPA RACs involved in the Superfund cleanup program (see 48 CFR 1528.3). Such indemnification was intended to be a supplement to commercially provided liability insurance. EPA's pre-SARA indemnification covered third party liability and cleanup costs not otherwise covered by commercial liability insurance or self-insurance, except for cases involving gross negligence or willful misconduct, and was based upon EPA's inherent contract authority (the contractor was required to maintain at least $1 million of comprehensive general liability coverage which, by 1986, generally excluded all pollution liability coverage). The RAC community viewed this EPA indemnification as inadequate because:

(1) EPA lacked explicit statutory authority to indemnify RACs;

(2) No source of indemnification funding was identified by statute; therefore indemnification was subject to availability of funds in the EPA budget; and

(3) The scope of coverage of EPA indemnification was inadequate (for example, EPA's indemnification extended only to RACs employed by EPA, and not to RACs employed by other parties such as other federal agencies, potentially responsible parties, and states).

During the Superfund reauthorization, the RAC community sought explicit indemnification assistance from Congress. They contended that their ability to participate in the Superfund cleanup program was impaired because the commercial insurance market was no longer willing to provide them affordable liability insurance coverage, and existing EPA indemnification was not an adequate substitute for commercial pollution liability insurance. They contended that the unavailability of pollution liability insurance for RACs may cause prudent qualified RACs to withdraw from the Superfund cleanup program.[1] In response to this concern, Congress incorporated section 119 into CERCLA to mitigate the potential withdrawal of qualified RACs from the Superfund program and to prevent delays and quality reductions in Superfund site cleanups.

1.3 Section 119

Section 119 of CERCLA addresses many of the concerns raised by the RAC community during the Superfund reauthorization debate. Section 119 includes the following major provisions:

- Exempts RACs from liability under all Federal laws for injuries, costs, damages, expenses, or other liability with respect to any release or threatened release of a hazardous substance or pollutant or contaminant from a vessel or facility except in cases of negligence, gross negligence, or intentional misconduct (i.e., no strict liability under Federal law).
- Provides EPA and other Federal agencies with discretionary authority to indemnify RACs who meet the requirements of section 119 against liability for releases arising out of the RAC's negligent performance in carrying out response activities unless such liability was caused by conduct of the contractor which was grossly negligent or which constituted intentional misconduct.
- Authorizes indemnification of RACs working for EPA, other Federal agencies, a state or political subdivision under a contract or cooperative agreement, or any potentially responsible party (PRP) carrying out an agreement under section 106 or section 122 of CERCLA.
- Indemnification can be provided only:

—For liability related to releases of hazardous substances or pollutants or contaminants as a result of RAC activities conducted under the Superfund program.

—When a RAC has made a diligent effort to obtain insurance from non-federal sources and has found that it is unavailable, inadequate, or unreasonably priced.

—As a comparable supplement or substitute for commercial insurance, to include deductibles and limits of indemnity, for adequate insurance when such insurance is either unavailable, insufficient, or unreasonably priced.

—As a comparable supplement or substitute for commercial insurance, to include deductibles and limits of indemnity, for adequate indemnification of RACs by PRPs, when such indemnification, as determined by EPA, is either unavailable or insufficient.

- Indemnification cannot be provided to owners or operators of facilities regulated under the Resource Conservation and Recovery Act (RCRA).
- Indemnification payments will be made from the Hazardous Substance Superfund (the Fund). If sufficient funds are unavailable from the Fund, or if the Fund is repealed, authorization is provided for such amounts to be appropriated as may be necessary to make such payments.
- Amounts expended under section 119 are considered governmental response costs for purposes of cost recovery.

[1] For example, see Poirot, James W., Chairman CH2M Hill, Testimony before the Committee on Environment and Public Works, U.S. Senate, April 3, 1985, pg. 212.

• Indemnification claim payments are exempted from the Anti-Deficiency Act.

• Payment of a claim under section 119 indemnification agreements for an RAC working for a PRP may be made only if the RAC exhausts all administrative, judicial, and common law claims for indemnification against PRPs participating in the response.

Section 119 is a discretionary temporary vehicle by which EPA and other Federal agencies can provide indemnification to RACs participating in the Superfund program if market conditions indicate the need for such indemnification.

1.4 Section 119 Indemnification Objectives

EPA's primary goal in the Superfund program is to protect human health and the environment by expeditiously and effectively cleaning up the maximum possible number of NPL and removal sites. To meet this primary EPA objective, Congress enacted section 119 to assure that qualified RACs would be available to keep the Superfund program operative during the commercial liability insurance crisis of the mid-eighties. EPA indemnification of Superfund program RACs under the authority of section 119 was clearly intended as an interim vehicle to assure that the Superfund program remained operative until the commercial liability insurance crisis of the mideighties was resolved. A review of the legislative history of SARA indicates that section 119 indemnification was never intended to be a permanent government solution or a complete risk transfer mechanism for RAC liability risk. For example, the Judiciary Committee of the House of Representatives in its Report on Superfund Amendments of 1985 states:

> The indemnification authority provided by this section may be offered in the discretion of the Administrator (EPA). The Committee strongly believes that such authority should be discretionary because:
>
> • Discretionary indemnification allows EPA to provide an interim solution to the lack of insurance until the insurance community restores financial stability and is capable and willing to provide prospective insurance for these contractors.
>
> • Discretionary indemnification, as opposed to mandatory indemnification, does not create a disincentive for insurers to provide prospective insurance by establishing the equivalent of a Federally intrusive insurance program.
>
> • Discretionary indemnification allows EPA to provide Federal indemnification with appropriate limits (i.e., to provide it in amounts equivalent to, but not in excess of, adequate insurance coverage; to include deductibles; to set limits of coverage; to require payment by contractors of a premium for indemnification coverage; and/or to offer it only as a supplement to available insurance, if available insurance is not adequate).[1]

The legislative history of section 119 reflects several objectives for section 119 indemnification:

• Provide RACs with a temporary comparable substitute for commercial pollution insurance, in the absence of affordable and adequate commercial insurance coverage or other viable private sector risk transfer mechanisms;

• Encourage the P&C insurance industry to provide RACs with adequate and affordable pollution insurance products;

• Encourage the development of other private sector mechanisms that provide RACs with adequate and affordable prospective pollution risk transfer mechanisms;

• Maintain EPA's fiduciary responsibility to ensure that Superfund monies are used to clean up sites to the maximum extent possible;

• Assure that an adequate pool of qualified RACs will be available to keep the Superfund program operative at SARA funding levels;

• Maintain strong RAC incentive to prevent and reduce RAC induced release incidents throughout a given Superfund response action contract; and

• Maintain strong RAC incentive to continue to seek commercial insurance coverages and/or develop alternative risk transfer mechanisms

EPA specifically incorporated those objectives into the development of section 119 guidelines.

1.5 EPA Interim Section 119 Indemnification Policy

Because of the complexity of section 119 indemnification issues, EPA has proceeded deliberately in implementing section 119. During this period from enactment of SARA on October 17, 1986, to issuance of final section 119 guidelines, EPA has provided and will continue to provide RACs with section 119 indemnification on an interim basis, using procedures outlined in its "Interim Guidance on Indemnification of Superfund Response Action Contractors Under section 119 of SARA" (OSWER Directive # 9835.5), which was issued on October 6, 1987. The Interim Guidance contains general policy guidelines, procedural guidance for EPA's contracting officers, and model indemnification agreements to be used with various classes of contractors. Interim section 119 guidelines and contract modifications were necessary to keep the Superfund program operative during the period when EPA analyzed the complex RAC indemnification issue, proposed, and finalized section 119 guidelines. An interim guideline approach, consistent with section 119 requirements, allowed EPA to comprehensively study the entire indemnification subject and to subject this proposal to public review, while the Superfund program remained operative. Ultimately, the interim guidance indemnification coverage offered by EPA to RACs will be amended to reflect the final guidelines.

In summary, the interim section 119 guidance was intended to provide a temporary indemnification policy, to be replaced in its entirety by policy reflected in more detailed guidelines, subject to public review and comment before finalization. The policy guidelines which are the subject of today's proposal, when released in final form, will supplant completely, not simply amend, the policy reflected in OSWER Directive 9835.5.

2.0 Proposed EPA Section 119 Indemnification Policy: Discussion of Alternative Approaches Considered

2.1 Alternatives Considered

EPA considered four broad options during development of the proposed indemnification policy. This section presents those four broad policy options, along with pro/con arguments for each.

The four options are:

A. No indemnification;

B. Provide indemnification subject to statutory requirements;

C. Offer indemnification with market incentives to purchase commercial insurance;

D. Provide reinsurance for a commercial insurance pool.

A. Provide No Indemnification

Summary. EPA's use of Option A would be based on the conclusion that indemnification of Superfund RACs may be neither appropriate nor necessary. EPA's goal in the Superfund program is to protect human health and the environment by expeditiously and effectively cleaning up the maximum number of NPL sites possible and conducting removal activities. In order to achieve this goal, EPA must expend its limited funding in areas most likely to yield cleanups. Under Option A, EPA would not agree to indemnify RACs, and thus would not commit itself to use the Superfund to fund contingent liabilities.

Arguments in Favor of Option A. The prime goal of the Superfund program is to protect human health and the environment by cleaning up hazardous waste sites and conducting removal actions. This goal must be accomplished by EPA (and states) with a limited amount of funding. As in any other government program, EPA must make choices as to where funds should be best expended in order to achieve its ultimate purpose. Funds unnecessarily expended in one area of the program detract from other areas of the program that could be improved with an infusion of funding. Therefore, EPA must choose whether section 119 indemnification is a necessary expense vital to the continued functioning of the Superfund program, or an expenditure of funds that could be put to better use in an area of the program that would more directly contribute to site cleanups.

Section 119 was included in SARA in part to address concerns that, without a viable risk transfer mechanism, RACs would not participate in the Superfund program. At that time, adequate and reasonably priced pollution liability insurance was not available to RACs. The section 119 legislative history indicates clearly that section 119 indemnification was to serve as a temporary risk transfer mechanism to ensure that the Superfund program was not delayed due to the unwillingness of qualified RACs to perform response actions. The House of Representatives Judiciary Committee Report (1985) states:

> Finally by simply authorizing EPA to provide indemnification, the Committee intends to allow for flexibility if regular market-place forces lead to the availability of insurance for response action contractors in the future. In this event, EPA should not agree to provide indemnification. [House of Representatives Report # 99-253, page 29]

EPA's experience during the past few years indicates that it is likely that Superfund sites will continue to be cleaned up and no program delays will result if EPA declines to provide indemnification to RACs. Although the failure to indemnify RACs could result in the withdrawal of some RACs from the market, it is likely that enough qualified RACs will remain available to perform Superfund program response actions so that the cleanup of sites will not be delayed.

Since the enactment of SARA, EPA has consulted other federal agencies that employ RACs to perform response actions at NPL sites. Through a series of informal consultations, EPA has found no other Federal agency, including the Department of Defense and the Department of Energy, that offers section 119 indemnification to Superfund RACs. RACs face similar risks performing response actions at NPL sites regardless of the Federal agency for which they are performing work. If RACs do not require Federal indemnification to perform essentially the same tasks for other Federal agencies, then they may not require indemnification to perform these tasks for EPA.

EPA has also informally consulted a number of states that employ RACs to perform response actions. In October 1988, EPA contacted all fifty states to determine the effect of state indemnification of RACs, or lack of state indemnification of RACs, on the states' ability to retain RACs. The informal survey indicated that eight states have statutory authority to indemnify RACs, while 13 states may require the RAC to indemnify the state. Five of those 13 states indicated that they had "some difficulty" procuring qualified RACs, and two of the 29 states that neither indemnify RACs nor require RAC indemnification of the state had "some difficulty" procuring qualified RACs. In general, the states were able to retain a sufficient number of qualified contractors to ensure the continued operation of their cleanup programs.

One might well conclude that, if RACs are willing to perform essentially the same response action activities for states without indemnification (and even in some cases indemnifying the state), then EPA should be able to obtain an adequate number of qualified RACs without Federal indemnification. Taking into consideration both EPA's limited resources and the experience of other Federal agencies and states, one must question whether indemnification is prerequisite to Superfund cleanups, and whether indemnification represents a judicious allocation of scarce financial resources.

Arguments Against Option A. If the commercial pollution liability insurance market does not fill any potential gap in coverage for Superfund RACs, then, absent EPA indemnification, these RACs could be left without an adequate risk transfer mechanism. If RACs do not possess such a risk transfer mechanism for their work in the Superfund program, it is possible that they may decide that the risks of performing Superfund response work outweigh any potential profits, and then may discontinue their participation in the program. The lack of an adequate number of qualified RACs to perform response actions could result in program delays for EPA.

A lack of indemnification or other viable risk transfer mechanisms could change the nature of competition in the RAC industry. The lack of an adequate risk transfer mechanism for RACs (either commercial pollution liability insurance or indemnification) may create a climate where many smaller, local firms are unwilling, or financially unable, to compete with larger companies. As a result, competition within the RAC industry may be decreased, causing an increase in the cost of response action work. A failure to offer indemnification could result in EPA being faced with a limited number of large RACs with the resources to self-insure who could demand a higher price for their services. More costly cleanups would result in fewer cleanups being performed given EPA's limited resources.

Alternatively, the absence of EPA indemnification may have just the opposite negative effect on competition in the RAC industry. EPA may be faced with a situation where only small RACs with few assets will be willing to perform response actions in the absence of commercial pollution liability insurance and indemnification. If such a small company with few assets and no risk transfer mechanisms were responsible for an injury to a third party, that third party would most likely be uncompensated for their injuries. While the section 119 indemnification program is not a victim's compensation program, public policy should not generally favor creating a situation which is likely to result in uncompensated injuries to third parties.

Another risk EPA faces if it does not offer indemnification is the possibility of subjecting the Superfund program to the uncertainties of the underwriting cycle. If section 119 indemnification is not available, it is uncertain how the commercial pollution liability insurance market would react to another hard swing in the P&C underwriting cycle. Commercial pollution liability insurance has become available from a small number of insurers in 1988 and 1989. This corresponds with a general softening of the P&C insurance market. Due to the predictably cyclical nature of the P&C industry, it is likely that another hard P&C insurance market will ensue in the next two to five years. If events transpire as they did during the last hard market, commercial P&C insurers may once again abandon perceived high risk lines such as pollution liability for Superfund RACs. If no alternative risk transfer mechanism such as section 119 indemnification is available, RACs may not wish to participate in the Superfund program. This situation could result in disruptive program delays for EPA's Superfund program.

Even if an absence of indemnification led to no reductions in the willingness of RACs to participate in the Superfund

[1] See Judiciary Committee of the House of Representatives Superfund Amendments Report of 1985, pg. 28.

program, it is possible that some RACs would be unable to continue to participate due to an unavailability of performance bonds. Most construction contractors are required to post a performance bond. Most RACs are not required to post performance bonds. Therefore, RACs may be able to continue to perform response actions without indemnification. Even if RACs are required to post performance bonds, RACs may be able to obtain performance bonds from sureties without indemnification. Sureties may be willing to provide performance bonds to RACs without indemnification because sureties may be willing to provide performance bonds at a price that RACs are willing to pay. Sureties may be willing to provide performance bonds at a price that RACs are willing to pay because sureties may be willing to accept the risk that RACs will perform adequately. Sureties may be willing to accept the risk that RACs will perform adequately because sureties may be able to mitigate the risk that RACs will perform inadequately by monitoring RAC performance. Sureties may be able to monitor RAC performance because sureties may be able to hire technical experts to monitor RAC performance. Sureties may be able to hire technical experts to monitor RAC performance because sureties may be able to obtain the services of technical experts at a reasonable cost. Sureties may be able to obtain the services of technical experts at a reasonable cost because sureties may be able to hire technical experts who are not employed by RACs. Sureties may be able to hire technical experts who are not employed by RACs because sureties may be able to hire technical experts who are employed by other companies. Sureties may be able to hire technical experts who are employed by other companies because sureties may be able to hire technical experts who are employed by companies that are not RACs. Sureties may be able to hire technical experts who are employed by companies that are not RACs because sureties may be able to hire technical experts who are employed by companies that are not involved in the Superfund program. Sureties may be able to hire technical experts who are employed by companies that are not involved in the Superfund program because sureties may be able to hire technical experts who are employed by companies that are not involved in the cleanup of hazardous waste sites. Sureties may be able to hire technical experts who are employed by companies that are not involved in the cleanup of hazardous waste sites because sureties may be able to hire technical experts who are employed by companies that are not involved in the generation, transportation, treatment, storage, or disposal of hazardous waste. Sureties may be able to hire technical experts who are employed by companies that are not involved in the generation, transportation, treatment, storage, or disposal of hazardous waste because sureties may be able to hire technical experts who are employed by companies that are not involved in the production of chemicals. Sureties may be able to hire technical experts who are employed by companies that are not involved in the production of chemicals because sureties may be able to hire technical experts who are employed by companies that are not involved in the use of chemicals. Sureties may be able to hire technical experts who are employed by companies that are not involved in the use of chemicals because sureties may be able to hire technical experts who are employed by companies that are not involved in the disposal of chemicals. Sureties may be able to hire technical experts who are employed by companies that are not involved in the disposal of chemicals because sureties may be able to hire technical experts who are employed by companies that are not involved in the transportation of chemicals. Sureties may be able to hire technical experts who are employed by companies that are not involved in the transportation of chemicals because sureties may be able to hire technical experts who are employed by companies that are not involved in the storage of chemicals. Sureties may be able to hire technical experts who are employed by companies that are not involved in the storage of chemicals because sureties may be able to hire technical experts who are employed by companies that are not involved in the treatment of chemicals. Sureties may be able to hire technical experts who are employed by companies that are not involved in the treatment of chemicals because sureties may be able to hire technical experts who are employed by companies that are not involved in the generation of chemicals. Sureties may be able to hire technical experts who are employed by companies that are not involved in the generation of chemicals

VOL 54 ISS 209 OCT 31 1989 UMI

program, it is possible that some RACs would be unable to continue to participate due to an unavailability of performance bonds. Most construction contractors are required to post a performance bond at the time that a bid is submitted. Sureties may be concerned that a contractor with no insurance coverage poses too great a risk; that is, without adequate liability insurance, a third party claim may bankrupt the contractor, leaving the surety responsible for completing the cleanup. Thus, it is possible that sureties may be unwilling to provide surety bonds if, in the opinion of the surety, adequate insurance and/or indemnification is not available to the contractor. Consequently, EPA indemnification may be necessary to ensure adequate competition on sealed bid construction contracts.

Finally, if EPA were unwilling to offer indemnification, EPA would almost certainly be required to expend additional funds. Most of EPA's Superfund contracts are cost-reimbursement contracts. Under such contracts, the reasonable costs of performing work assignments are reimbursed by EPA. If EPA does not indemnify its response contractors, then the RACs will be compelled to obtain insurance (or self-insure), the cost of which would be paid by EPA (as long as the cost is reasonable, as defined by the Federal Acquisition Regulations). A "reasonable" cost for insurance or self-insurance could be defined as the market price for insurance. It is entirely possible that the market price (i.e., premium) for insurance could exceed the present value of future claims, the risk of which are offset by the premium. Those Superfund dollars in excess of the expected present value of future claims which are expended on the purchase of liability insurance are resources that will not be available to clean up sites (except insofar as those costs are recovered from Responsible Parties).

In contrast, contractor indemnification may continue to reflect current claims history and generate few costs. Since the start of the Superfund program, EPA has included indemnification agreements in dozens of contracts, and those contractors have passed through the indemnification agreement to hundreds of subcontractors. As of September 15, 1989, EPA has been presented pollution liability claims totalling approximately $8,000, while saving millions of dollars by not having to reimburse contractors for the cost of pollution liability insurance (or self-insurance). While an indemnification program is unlikely to remain virtually costless forever, indemnifying RACs may save substantial Fund resources.

B. Provide Section 119 Indemnification Subject to Statutory Requirements When Adequate Insurance Is Not Available

Summary. Under this option, EPA would offer section 119 indemnification subject to statutory requirements. Implementation of this option would be based on the conclusion that, although it is likely that an EPA decision not to offer indemnification will not cause program delays, at this time EPA may not want to accept the risk of interrupting the operation of the Superfund program. The purpose of Option B indemnification would be to ensure that an adequate number of RACs are available for response activities in the event that RACs are once again left without an adequate commercial risk transfer mechanism. Moreover, due to the excellent loss history of RACs in the Superfund program, EPA indemnification could result in lower per site cleanup costs than would reimbursement by EPA of RACs' commercial insurance.

Arguments in Favor of Option B. Section 119 provides EPA with the statutory authority to indemnify RACs. According to its legislative history, section 119 indemnification was designed to serve as a discretionary interim risk transfer mechanism to ensure that the Superfund program remains operative. The House of Representatives Judiciary Committee Report on section 119 stated:

> Discretionary indemnification allows EPA to provide an interim solution to the lack of insurance until the insurance community restores financial stability and is capable and willing to provide prospective insurance for these contractors. Discretionary indemnification, as opposed to mandatory indemnification, does not create a disincentive for insurers to provide prospective insurance by establishing the equivalent of a Federally intrusive insurance program. Discretionary indemnification allows EPA to provide Federal indemnification with appropriate limits=(i.e., to provide it in amounts equivalent to, but not in excess of, adequate insurance coverage), to include deductibles, to require the payment by contractors of a premium for indemnification coverage, and/or to offer it only as a supplement to available insurance, if available insurance is not adequate. [House of Representatives Report #99-253, page 28]

An EPA decision not to offer indemnification would probably not cause program delays at this time. However, EPA may find it necessary at this time to retain the option of offering discretionary indemnification if EPA finds that such indemnification is necessary in order to avoid program delays in the future.

EPA does not want to create an intrusive federal program that interferes with private sector efforts to develop RAC liability insurance coverage. Also, EPA does not want to create an indemnification program that provides greater coverage (or other benefits) than would traditional commercial pollution liability insurance. Therefore, the section 119 indemnification under Option B would include reasonable limits and deductibles in order to encourage high quality work, and would be offered only if commercial insurance is not available at a fair and reasonable price.

In addition to being consistent with section 119 legislative history, Option B indemnification could save substantial Fund resources. As noted above in the "Arguments Against Option A", in the absence of EPA indemnification, RACs would be compelled to obtain insurance (or self-insure), the cost of which would be paid by EPA (as long as the cost is reasonable). It is entirely possible that the cost of available insurance (even when included as part of the indirect cost pool on a cost reimbursement contracts) would be far greater than the present value of future claims, in which case EPA could, under Option B, determine that the cost of insurance was unreasonable, and offer to indemnify the RACs. In effect, Option B gives EPA the opportunity to self-insure (and incur future costs rather than pay insurance premiums) in those instances where the expected present value of future claims is much less than the cost of insurance. Retaining the option to self-insure becomes especially important in light of the claims history of the Superfund program. As noted above, EPA has expended minimal funds on pollution liability claims, despite having entered indemnification agreements with hundreds of contractors and (indirectly) subcontractors over an eight year time period. Purchasing liability insurance in lieu of indemnification would have cost millions of Superfund dollars.

Finally, offering Option B indemnification could avoid subjecting the Superfund program to the uncertainties of the underwriting cycle. If section 119 indemnification were not available, it is uncertain how the commercial pollution liability insurance market would react to another hard swing in the P&C underwriting cycle. Commercial pollution liability insurance has become available from a small number of insurers, corresponding with a general softening of the P&C insurance market. Due to the predictably cyclical nature of the P&C industry, it is likely that another hard P&C insurance market will ensue in the next five years. If events transpire as they did during the last hard market, commercial P&C insurance may once again abandon perceived high risk lines such as pollution liability for Superfund RACs. If no alternative risk transfer mechanism such as section 119 indemnification is available, it is possible that RACs may not wish to participate in the Superfund program. This situation could result in disruptive program delays for EPA's Superfund program. Offering section 119 indemnification on a limited basis could deflect some of the impact of swings in the underwriting cycle from the Superfund program.

Arguments Against Option B. The prime goal of the Superfund program is to clean up hazardous waste sites. This goal must be accomplished by EPA (and states) with a limited amount of funding. As in any other government program, EPA must make choices concerning where funds should be best expended in order to achieve its ultimate purpose. Funds unnecessarily expended in one area of the program detract from those other areas of the program that could be improved with an infusion of funding. Therefore, EPA must decide whether section 119 indemnification is necessary to the continued functioning of the Superfund program, justifying the possible use of Superfund dollars for third-party liability claims (and administrative expenses) rather than in an area of the program that would more directly contribute to site cleanups.

Section 119 was included in SARA in part to address concerns that, without a risk transfer mechanism, RACs would not participate in the Superfund program. At that time, no adequate and affordable pollution liability insurance was available to RACs. Section 119 indemnification was designed to serve as a discretionary interim risk transfer mechanism to ensure that the Superfund program was not delayed due to a refusal by RACs to perform. If the entire Superfund program were to be delayed because of a lack of an adequate risk transfer mechanism, then expending funds for RAC indemnification may be justified. However, as noted above in "Arguments in Favor of Option A", Federal agencies other than EPA, as well as many states, have had little or no trouble retaining qualified RACs absent contractor indemnification. Consequently, it is reasonable to conclude that, since RACs are willing to perform essentially the same response action activities for states and other Federal agencies without indemnification (and even in some cases indemnifying the state), EPA would most likely be able to obtain an adequate number of qualified RACs without Federal indemnification.

C. Offer Indemnification with Market Incentives To Promote Purchase of Commercial Insurance

Summary. Rather than deciding on a case-by-case basis whether or not to offer indemnification (as would be done if option "B" were used), EPA could set up a system whereby the RACs themselves would decide whether they were to enter an indemnification agreement with EPA. Such a program would be identical to option "B", except that a cost would be associated with contractor indemnification. That is, a RAC would perceive that a financial cost must be borne (or, conversely, a financial benefit would be foregone) if the contractor were to enter into an indemnification agreement with EPA. The RAC would be free to choose whether to request indemnification (and bear the consequent cost) or use some other risk transfer mechanism (e.g., commercial insurance). EPA has identified three potential methods of setting up this "incentive-based" scheme:

1. EPA provides indemnification for a set price.
2. EPA offers to (a) indemnify, or (b) reimburse a set amount for pollution liability insurance (regardless of the actual cost of the insurance).
3. Indemnification and insurance cost reimbursement terms are determined during the competitive procurement process.

The three incentive-based approaches share a characteristic that distinguishes them as a group from option "B". All three require that EPA place an explicit price on EPA indemnification or the equivalent pollution liability insurance. The price would be in dollar terms, or, in the case of approach 3, the price would be converted to technical evaluation points for those contracts where the contract prices are negotiated and the choice of RAC depends on factors other than cost. The existence of an explicit price for indemnification gives RACs the incentive to seek pollution liability insurance that is less expensive than the EPA-priced indemnification (or insurance).

Incentive-based approach (1): Provide indemnification for a set price. The first market based incentive approach considered by EPA is a system whereby EPA would behave as if it were an insurer, and offer indemnification for a price. The price of indemnification would depend upon the work being performed by an RAC (for example, the price might be lower for an RAC performing a remedial investigation than it would be for a RAC performing a remedial action). All RACs would have the option of purchasing the indemnification from EPA. The cost of the indemnification, as well as the cost of any purchased insurance, would not be reimbursable. In effect, EPA would be setting the maximum price for RACs' pollution liability insurance: If the market price were less than the EPA indemnification price, then RACs would purchase commercial liability insurance (assuming that the terms of the commercial insurance are similar to those of EPA indemnification). Conversely, if the market price were greater than the EPA price, RACs would eschew commercial insurance, and would purchase EPA indemnification.

Similar types of government insurance programs have been established as a response to the inability or unwillingness of commercial insurers to assume a particular type of risk. Examples include the Federal Crop Insurance Program and the National Flood Insurance Program.

The Federal Crop Insurance Program was initially established in 1938 and replaced three times by updated versions. The current program was established as the Federal Crop Insurance Act of 1980. This Act established an all-risk[3] crop insurance program to be administered by the Department of Agriculture's Federal Crop Insurance Corporation (FCIC). The program utilizes commercial insurance companies as a delivery system and reimburses them for the costs associated with the coverage. Commercial insurers may enter the market at any time but, unlike the EPA insurance option, must price the coverage at the same level as the federal program.

The National Flood Insurance Program was established as part of the Housing and Urban Development (HUD) Act of 1968. Before this time flood insurance was generally considered unfeasible. The HUD Act established a national flood insurance program, which made flood insurance available to communities that adopted control measures designed to promote development away from flood prone areas. The program was initially established as a joint effort of the federal government and commercial

[3] "All-risk" insurance provides protection from loss arising out of any fortuitous cause other than those perils or causes specifically excluded by name. This is in contrast to other policies which name the peril or perils insured against.

VOL 54 ISS 209 OC 31 1989 UMI

insurers. The most recent enactment of the program however, established the federal government as the risk bearer. Residents in eligible communities can purchase flood insurance from licensed agents and brokers.

Incentive-based approach (2): Provide indemnification, or reimburse a fixed amount for pollution liability insurance. The second "incentive-based" approach considered by EPA is identical to the first, except that, rather than "selling" indemnification to RACs, EPA would offer RACs a set price if the RACs purchase pollution liability insurance. In other words, EPA would "reimburse" the RAC if the RAC purchased pollution liability insurance, but the amount of the reimbursement would be EPA's valuation of the risk transfer, and would be independent of the actual cost of the insurance (thus, this approach differs from the interim indemnification policy, which calls for reimbursement of the actual cost of any EPA approved pollution insurance purchased by an RAC). The key characteristic of this approach is the independence of the reimbursement amount from the actual cost of purchased insurance. This gives RACs incentive to seek the least costly pollution liability insurance available. If no insurance is available at a reasonable cost, RACs would still have the option to self-insure (as an alternative to EPA indemnification), in which case EPA would "reimburse" to the RAC an amount identical to the amount that would have been "reimbursed" had the RAC purchased insurance. If the RAC were to self-insure under this scheme, it would have to demonstrate financial responsibility for the self-insured amount before EPA would "reimburse".

Incentive-based approach (3): Indemnification terms determined as part of the procurement process. The third "incentive-based" option that is being considered by EPA is to incorporate indemnification decisions into the procurement process. This approach is similar to the first two "incentive-based" approaches discussed in that it would require EPA to set explicit prices for insurance/indemnification, but it differs in that there is no direct payment or reimbursement for insurance/indemnification. Instead, the potential RAC's bid (or proposal, in the case of negotiated contracts) is adjusted by the procuring official to reflect EPA's valuation of the RAC's insurance or request for indemnification.

Under this "bid-adjustment" approach, EPA would include as part of an Invitation for Bid (IFB) or Request for Proposal (RFP) a price schedule for insurance/indemnification which would reflect EPA's valuation of various magnitudes of insurance/indemnification. Bidders (or Proposers) would be given the option of requesting EPA indemnification.

For sealed bid procurements, EPA would adjust the submitted bids by adding to the bid EPA's valuation of the requested indemnification. That valuation would reflect, to the extent possible, the real cost to EPA of providing indemnification, and would be based on a combination of the market price for insurance (the cost of which, presumably, EPA would be obliged to pay absent indemnification), and a subjective evaluation of the risk posed by the site in question. A contractor will be paid an amount equal to the submitted bid, not an amount equal to the adjusted bid. For example, assume that RAC X submits a bid of $5 million, and RAC Z submits a bid of $4.8 million. However, RAC Z requests indemnification valued by EPA at $0.4 million. For purposes of the selection process only, RAC Z is considered to have submitted a $5.2 million bid. RAC X is selected, and receives a $5 million contract. Under this approach, RACs are not reimbursed for the cost of insurance (except insofar as the cost of insurance is included in the bid). Presumably, those costs will be reflected in the bids.

The procedure with negotiated procurements is similar except, instead of adjusting bids, the technical evaluation of proposals is adjusted. For example, EPA would subtract evaluation points from (or not award as many points to) proposals which include a request for EPA indemnification. Once again, the cost of insurance is not reimbursable.

Argument in Favor of Option C. As noted above, Option C differs from Option B only insofar as Option C places a perceived cost on EPA indemnification. Thus, it would provide an incentive for RACs to search actively for pollution insurance coverage (or the equivalent) which is similar to EPA's indemnification but has a lower cost. Encouraging RACs to seek the least costly risk transfer mechanism will ultimately save EPA resources, since EPA ends up paying for the cost of commercial insurance either via a cost reimbursement contract, or when the cost of insurance is included in a fixed-price bid.

Creating incentives for RACs to seek reasonably priced commercial insurance is an important step in encouraging a viable commercial insurance market. The insurance industry is not likely to actively develop new pollution insurance products unless there is a strong enough demand for these products to make them profitable. When commercial insurers see enough demand, and create a product that ensures adequate coverage at a reasonable price, it will no longer be necessary for EPA to consider offering indemnification. As a condition of reimbursement, EPA could require submission of copies of insurance policies purchased (with evidence of premiums paid), thus monitoring the market price of insurance. Presumably, EPA would then be able to reset periodically the "fixed premium" it is willing to pay, based on the market information gathered in the previous period. In this way, government intervention in the market would be minimized, with EPA responding to market signals rather than distorting market prices.

The use of market incentives (through placing a cost on EPA indemnification) would relieve EPA of the burden of determining the level of "adequate indemnification" and, just as importantly, of determining the type of RACs that should be covered by EPA indemnification. Through the pricing mechanism, EPA would leave such determinations to RACs. In effect, any RAC that was willing to pay the EPA price would receive indemnification; each RAC would determine its own indemnification limit (that is, up to EPA's proposed maximum indemnity limit level), based on the risk it perceives and the price of additional indemnification.

Another advantage to this approach is that it makes it clear to RACs and to commercial insurers the value EPA puts on section 119 indemnification. Under the system currently in place (under the interim guidelines), EPA decides when insurance is reasonably priced (among other factors) and either reimburses the RAC for the insurance or rejects the insurance. After EPA rejects the insurance, the RAC and the insurer know that the price for the insurance is too high, but they do not know what price will be considered reasonable. Under the "market incentives" approach, RACs and insurers will know specifically what price will be considered reasonable by EPA without the trial and error inherent in the present system.

Arguments Against Option C. The primary argument against the first two approaches is that they place EPA unambiguously in the position of an insurer. EPA does not wish to foster the perception that its indemnification is a permanent alternative to commercial pollution liability insurance. These options could lead commercial insurers already active in the pollution liability market to withdraw if these insurers perceive their products as unable to compete with the price set for indemnification by the Federal government. Moreover, commercial insurers who were considering developing pollution liability insurance products could be discouraged from doing so if they perceive EPA's indemnity price is too low for them to compete with.

The third approach of incorporating the decision to indemnify into the procurement process also has its disadvantages. This approach has very little flexibility. For any given contract, the decision to request indemnification or seek liability insurance can be made only once, i.e., at the bidding (or proposing) stage. For example, if EPA inserts an indemnification clause into a fixed-price contract, and later determines that pollution liability insurance is generally available and fairly priced, EPA cannot withdraw its indemnification, since the RAC submitted (and EPA accepted) its contract bid on the condition that EPA provide indemnification throughout contract performance. Conversely, if EPA awards a contract to an RAC who has agreed to provide pollution liability insurance, EPA cannot later provide indemnification (if, for example, insurance becomes unavailable). To do so would be unfair to those potential RACs who were not awarded contracts, some of whom may have not been awarded the contract because they requested indemnification.

One disadvantage is common to all three of the incentive based approaches. Compared to Option A and Option B, these approaches are significantly more of an administrative burden to EPA. Calculating the value of transferring a portion of the RAC risk may place a substantial analytical and administrative burden on EPA. At this time EPA does not possess the resources to assess accurately the value of the RAC risk. Obtaining the resources to accomplish this task may add substantially to the cost of choosing this option.

D. Provide Reinsurance for a Commercial Insurance Pool

Summary. EPA has considered the option of acting as a reinsurer [4] above a programmed layer of commercial pollution insurance. Under such a plan, commercial insurers would provide primary pollution coverage with EPA acting as a reinsurer above this primary coverage up to a defined limit. This option could be established as a temporary measure until commercial insurers gain confidence in their ability to underwrite the RAC risk, thus allowing EPA to reduce or discontinue its role in the transfer of RAC risk.

When the Federal government has chosen to assist in specific insurance problems, the reinsurance option has been the method of choice in many circumstances. Since the ultimate aim of reinsurance is to spread the exposure and therefore the risk of loss, the public as represented by the Federal government has in some circumstances provided one avenue towards risk dispersal. Adoption of a reinsurance program could act as a catalyst for insurers' entry into the pollution insurance market by giving insurers experience in the market without the risk of paying out any large claims.

Similar types of government reinsurance programs have been established in several instances. Current programs include the Nuclear Energy Liability Insurance Program and the Federal Riot Reinsurance Program, among others. Both of these programs were established by the government as a response to the inability or unwillingness of commercial insurers to assume a particular type of risk. The majority of these and similar programs sought to include commercial insurers in the program in a way comparable to that described in this option.

The Nuclear Energy Liability Insurance Program was established in 1957 as an amendment to the Atomic Energy Act. This amendment, called the Price-Anderson Act, established a $560 million limit on liability arising out of a nuclear accident. The Price-Anderson Act required operators of nuclear reactors to purchase insurance up to this maximum limit or demonstrate the ability to retain all or a portion of the amount. Insurance pools formed by the commercial insurance industry currently provides for coverage up to $160 million per occurrence. The remaining limit is provided by contributions from individual operators. These contributions are limited to $5 million per operating license.

The Federal Riot Reinsurance Program was established to provide equal access to property insurance for inner-city property owners who were unable to obtain coverage from commercial insurers. The urban riots that occurred during the late 1960s made commercial insurers hesitant to provide coverage in those areas. Urban areas had always presented an increased risk to commercial insurers since the density to which most urban areas were developed increased the possibility of a conflagration. Intentionally ignited fires, like those that occurred during the riots, represented a risk that commercial insurers were unwilling to assume. A presidential committee was established to study the problem and made recommendations that led Congress to enact the Urban Protection and Reinsurance Act. This Act established the National Insurance Development Fund providing riot reinsurance to commercial insurers.

These programs establish precedent for the type of program that is being considered by EPA. Under this option, the EPA program would serve as a temporary measure, operating until such time as commercial insurers gain confidence in their ability to underwrite the RAC risk. As more primary insurers and reinsurers enter the market, the need for EPA reinsurance would disappear.

The method used to establish a reinsurance agreement varies. Between commercial insurers, two types of reinsurance agreements are generally implemented. The first is a "specific" agreement where coverage is optional to both the insurer and reinsurer in that neither party is universally obligated to provide insurance. Each contract is written on its own merit and negotiated individually. EPA could adopt this type of agreement and incorporate it into its proposal evaluation process. As commercial insurers enter the market they could be added to a list of potential insurers. Individual RACs could be provided this list as sources in order to obtain the primary layer of insurance. EPA could then negotiate a specific reinsurance agreement with the selected commercial insurer. The advantage of this approach is that as commercial insurers enter the market and gain underwriting experience, EPA could gradually withdraw by slowly changing the reinsurance agreements.

The second type of reinsurance agreement generally used by commercial insurers is called a treaty or automatic agreement. Under this type of agreement, the two parties agree in advance to the terms of coverage involving a designated class of risk. The liability of the reinsurer begins

[4] Reinsurance is the practice whereby one party, called the reinsurer, in consideration of a premium paid to him, agrees to indemnify another party, called the reinsured, for part or all of the liability assumed by the latter party under a policy or policies of insurance which it has issued. The reinsured may be referred to as the original or primary insurer, or the ceding company.

automatically when the original insurer accepts the risk. EPA could adopt this method by identifying insurers willing to provide the primary layer of insurance and establishing automatic agreements with these insurers. This list could then experience underwriting the RACs. EPA could then gradually withdraw from the market by reducing the amount of coverage offered. This could be done either by increasing the stipulated limit a permanent government insurance program.

2.2 Proposed Policy

EPA is proposing to offer Option C

determination concerning the amount of insurance that would have been purchased by a company following sound business practices. Insurance generally covers all of a company's operations. Generally, only an allocable the appropriate limit of coverage. The Agency used four approaches to attempt to estimate the amount of coverage that would be appropriate to offer. First, the Agency requested the RAC Review Panel (and other firms working in the included. Therefore, EPA is proposing to tie the size of the RAC's deductible to the size of the indemnification limit requested. Under such a scheme, an RAC most concerned with the size of the

VOL 54 ISS 209 OCT 31 1989 UMI

automatically when the original insurer accepts the risk. EPA could adopt this method by identifying insurers willing to provide the primary layer of insurance and establishing automatic agreements with these insurers. This list could then be provided to contractors who could choose primary coverage on the most favorable terms.

Specific and automatic reinsurance agreements also may use two basic methods of distributing the risk between the insurer and the reinsurer. The reinsurer agrees to accept either:

- A share of the amounts of risk which the primary insurer underwrites; or,
- An excess of the losses beyond certain established limits.

Reinsurance contracts that share the amounts of risk establish a ratio of insurance provided by the primary insurer and the reinsurer that is applied to every contract. For example, the primary insurer may retain one-fourth of the risk and the reinsurer assumes three-fourths of the risk. The reinsurer is entitled to three-fourths of the premium and would pay three-fourths of the losses. This form of reinsurance contract allows primary insurers to provide coverage in much larger amounts.

Reinsurance written as an excess of loss contract primarily provides protection against large losses. Under this type of contract, the reinsurer has no obligation until losses are in excess of the amount covered by the primary insurer. Some excess of loss contracts are written so that the primary insurer retains a share of the excess loss. Excess of loss is the usual way that a contract for catastrophic reinsurance is written.

Argument in Favor of Option D. This option would serve as a catalyst for commercial insurers to enter the pollution insurance market. Insurers could provide whatever level of insurance that they felt comfortable with. Even if the commercial layer of insurance does not provide a great deal of coverage, insurers will gain experience underwriting the RAC risk.

The reinsurance agreement and contract can be structured to provide constant encouragement to commercial insurers to assume greater portions of the risk. Particularly, if specific reinsurance is offered as a program, the amount of risk retained by the primary commercial insurer could be continuously under review and adjusted as allowed by market conditions. The variety of activities performed by RACs could also be part of the evaluation.

When capacity in the insurance industry expands, at least some commercial insurers will possess experience underwriting the RACs. EPA could then gradually withdraw from the market by reducing the amount of coverage offered. This could be done either by increasing the stipulated limit of primary insurance in an excess of loss contract or, by reducing the proportion of insurance carried in a risk sharing contract.

One of the biggest advantages of this option is that it will save EPA resources by putting the responsibility for administering claims upon commercial insurers. These insurers possess experience administering claims and could perform this task more efficiently than EPA. Employing this option would save the expense and time involved in creating a claims administration structure within EPA. At the same time whichever commercial insurers participate in insuring RACs to some extent will gain experience in the administration of RAC claims.

Arguments Against Option D. This option does not substantially reduce EPA's exposure to risk or expenditures for operating the section 119 indemnification. Under this system it is likely that commercial insurers will only write pollution insurance for companies with the best loss histories and least risk of claims against it. The "specific" reinsurance agreement is particularly susceptible to this adverse selection [5] since the agreement would be negotiated for every RAC contract. As a result EPA may still be forced to indemnify the marginal or bad risks. In addition, the cost of any insurance provided by commercial insurers will be reimbursed by EPA. Therefore, unless commercial insurers eliminate EPA's role as insurer completely, the savings of providing some commercial insurance is not that great.

Another factor working against this option is the past history of such government insurance programs. Some past efforts at cooperation between government and commercial insurers in providing insurance have not been a success. In particular, the National Flood Insurance Program was initially established as a cooperative effort between the federal government and the commercial insurance industry. This program has since been reestablished with the federal government acting as the insurer. This type of result would be unacceptable. Section 119 indemnification was enacted as an interim risk transfer mechanism and not a permanent government insurance program.

2.2 Proposed Policy

EPA is proposing to offer Option C indemnification in sealed bid procurements, and, specifically, is proposing to use the third incentive-based approach, where indemnification terms are decided as part of the procurement process. When submitting a bid, a bidder will request some combination of indemnification limit and deductible. For the purpose of selecting the lowest bidder, the submitted bids will be adjusted to reflect EPA's valuation of the requested indemnification. In effect, EPA will be procuring the bidder who requires the least compensation, where that compensation consists of dollar payments plus some amount of indemnification coverage from EPA.

EPA is proposing to offer Option B indemnification to other types of RACs (typically, cost-reimbursement RACs). Even though they are offered indemnification, RACs are required to make "diligent efforts" to obtain pollution liability insurance. Cost reimbursement contractors would be reimbursed the reasonable cost of purchased insurance.

3.0 Discussion of Proposal Details

3.1 Deductibles and Limits of Coverage Under Cost-Reimbursement Contracts

The reasonable cost of liability insurance is generally an allowable cost (thus reimbursable) under Federal Acquisition Regulations (FAR) section 31. Specifically, the cost of insurance is allowable under cost-reimbursement contracts if the insurance is "required or approved, and maintained by the contractor pursuant to the contract" [48 CFR 31.205-19(a)(1)]. Also, the cost of insurance is allowable if the types and extent of coverage follow sound business practice and if the premiums are reasonable [section 31.205-19(a)(2)]. One can infer from this set of FAR requirements (in combination with CERCLA section 119) that EPA has the responsibility to reimburse contractors for the allocable portion of the cost of insurance maintained by the contractor, or, if EPA determines that insurance is unreasonably priced or is unavailable, EPA may offer indemnification as a replacement for insurance that would have been purchased by a firm following "sound business practices" (had that insurance been available at "reasonable" prices).

For most types of insurance, it is not necessary for the government to make a

[5] "Adverse selection" is an imbalance in a risk exposure group, created when organizations that perceive a high probability of loss for themselves seek to buy insurance to transfer that risk.

determination concerning the amount of insurance that would have been purchased by a company following sound business practices. Insurance generally covers all of a company's operations. Generally, only an allocable portion of the cost of that insurance will be reimbursed by the government under a cost-reimbursement contract (unless the insurance cost is identified specifically and solely with the government contract as a direct cost). If a contractor purchases an amount of insurance greater than that required by "sound business practice", the government may agree to reimburse only the allocable portion of the extra premium payments. The contractor has an incentive not to purchase coverage in excess of that required by sound business practice. Consequently, although the government may make a more substantial evaluation of the contractor's costs, the government need only assume that its contractor is maintaining a "sound" amount of insurance, and pay the portion of the cost that is allocable to the contract.

Unfortunately, there is no sure way of knowing how much pollution liability insurance would be purchased by a contractor "following sound business practices". Most pollution liability insurance available today is written on either a project-specific or contract-specific basis, or covers operations performed almost exclusively under cost-reimbursement contracts with EPA. EPA may pay the entire cost of any pollution liability insurance purchased if it is a direct cost of the EPA contract. Consequently, there would be no incentive for a contractor to limit its insurance coverage to that required by sound business practice. If EPA paid the bill, the contractor would wish to purchase as much insurance as there was available.

Even in the absence of an incentive problem, EPA would be unable to rely on the contractor's purchased insurance being the amount of insurance required by sound business practice. Today, pollution liability insurance is available in limited amounts, and some contractors are unable to purchase any pollution liability insurance for the type of work they perform. Therefore, EPA cannot use the amount of purchased insurance as a guide to determine the "sound" amount of insurance.

Since the Agency could not depend on market forces to determine the appropriate amount of pollution liability insurance coverage (or the equivalent indemnification from EPA) for RACs, a primary task faced by the Agency was to use some other method to determine the appropriate limit of coverage. The Agency used four approaches to attempt to estimate the amount of coverage that would be appropriate to offer. First, the Agency requested the RAC Review Panel (and other firms working in the hazardous waste cleanup business) to supply information to EPA concerning their firms' risk transfer practices (for example, the EPA wanted an estimate of the amount of professional liability insurance carried by architect/engineering firms). The Agency received only 4 responses out of approximately 100 questionnaires distributed. Those that did respond carried $10–$20 million of professional liability insurance. Second, the Agency hired an actuarial firm to conduct a study of the risk faced by RACs, and to recommend an appropriate coverage limit. The actuarial firm was unable to make a recommendation based on its study. Third, the Agency conducted a study of the insurance coverage maintained by firms active in other high risk industries. That study indicated that coverage varied widely, and EPA was unable to infer from the study any general business practice that would be applicable to Superfund RACs. Finally, the Agency looked at the extent of indemnification coverage being offered to Superfund cleanup contractors by states and by other federal agencies. We found that, in general, states and other federal agencies did not offer indemnification, although some states offered limited coverage.

The information gathered by EPA is not adequate to determine the "sound" amount of insurance that any particular RAC should maintain, nor is it adequate to determine the extent to which indemnification should be offered to meet the Agency's objective (expeditious cleanup at least cost). Rather, the amount of insurance that would be purchased by an RAC following "sound business practices" depends on the type of work to be performed, the risk attendant at the sites at which the RAC will work, and the size and risk transfer practices of the RAC. Consequently, the Agency determined that the appropriate amount of insurance (or indemnification) needs to be determined on a contract-specific basis.

The indemnification limit and deductible scheme found in section 10 of the proposed guidance is based on the assumption that the RAC itself is best able to determine its required level of insurance or indemnification coverage. The RAC will, however, overstate its required indemnification limit unless a disincentive to overstatement is included. Therefore, EPA is proposing to tie the size of the RAC's deductible to the size of the indemnification limit requested. Under such a scheme, an RAC most concerned with the size of the deductible can request low limits of indemnification (and, consequently, be responsible for a small deductible amount), while an RAC most concerned about very large claims, while being relatively unconcerned about small (but more frequent) claims, can request large limits of indemnification (and, consequently, be responsible for a large deductible amount).

Today, deductible amounts of $100,000 to $250,000 are common in commercial pollution liability insurance policies, with liability limits of up to $5 million (in some cases, limits of up to $25 million may be available). Since section 119 indemnification is intended to supplement unavailable, inadequate, or unreasonably priced insurance, EPA chose to set a deductible amount that would be similar to that found in commercial pollution liability insurance policies. Section 10(e) of the guidance specifies that an RAC requesting an indemnification limit of $5 million will incur a $100,000 deductible, and an RAC requesting an indemnification limit of $10 million will incur a $250,000 deductible. RACs requesting a greater limit will incur a greater deductible, and RACs requesting a lesser limit will incur a lesser deductible.

EPA requests comment on the structure of its indemnification limits/deductibles scheme for cost reimbursement RACs, and the reasonableness of the specified limits and deductibles. Given the limited data which EPA has had available to it in shaping this scheme, the Agency is particularly interested in receiving further information that may support this or alternative schemes. The Agency will review its proposal in light of any such information received.

3.2 Indemnification Under Fixed Price Contracts

The Agency is not, in general, concerned with the amount of insurance carried by fixed-price contractors. Unlike the case of the cost reimbursement RAC, the Agency is unconcerned about a fixed-price RAC that carries "too much" insurance, since the cost of that insurance is not reimbursable. Presumably, the cost of extraneous insurance would be reflected in the RAC's bid. Thus, firms will have an incentive to not carry extraneous insurance, in order to be able to submit competitive bids.

BEST COPY AVAILABLE

The Agency is concerned with the financial viability of a fixed-price contractor insofar as it affects the RAC's ability to complete the project. Generally, the Miller Act (40 U.S.C. indemnification of subcontractors must be provided by the prime contractors. The Agency may, however, agree to indemnify the prime contractor with respect to liability arising as a result of

The disadvantage of this approach is that it would require significant Agency administrative resources, and the time required to process subcontractor applications could reduce the pace of

govern general provisions. Accordingly, the detailed, specific statutory scheme of section 119 necessarily supplants and supercedes the broad, general contract authority that EPA relied on before the agreements with RACs. The Agency requests comment on the feasibility and advisability of using underwriting criteria, and on the varieties of criteria that should be used. Careful

individuals in the insurance industry and in the RAC community, the Agency is proposing a maximum limit of $50 million. The Agency is not suggesting that this maximum limit has been

VOL 54 ISS 209 OCT 31 1989 UMI

The Agency is concerned with the financial viability of a fixed-price contractor insofar as it affects the RAC's ability to complete the project. Generally, the Miller Act (40 U.S.C. 270a–270f) requires a construction contractor to post a performance bond, guaranteeing the government that the job will be completed. If the contractor fails to complete the project, the government can call on the surety to complete it. It is possible, however, that surety companies may be unwilling to bond some Superfund RACs without adequate third-party liability coverage, because the surety will be called on to complete the job if the RAC is sued and forced into bankruptcy as a result of inadequate third-party liability coverage. In that case, it may be in the Agency's interest to offer indemnification to fixed-price RACs, if adequate insurance may not be available.

The Agency is also concerned with the degree of competition in sealed-bid procurements. It is possible that some firms, in the absence of adequate and reasonably priced insurance, will refrain from bidding on Superfund fixed-price contracts (those firms may be unwilling to self-insure and include the cost of self-insurance in their bids). Therefore, even if the availability of surety bonds is not a problem, it may be in the Agency's interest to offer indemnification as a substitute for pollution liability insurance.

Section 11 of the proposed guidance includes an indemnification scheme for fixed-price contracts that is designed to discourage requests for indemnification unless the RAC requires coverage for pollution liability, but insurance is unavailable, inadequate, or unreasonably priced. Before requesting indemnification, a bidder must consider carefully its need for third-party liability coverage, the cost of commercial insurance to cover that liability (presumably, that cost would be included in the bid), the possibility of self-insurance, and EPA's evaluation of the cost of indemnification at that site. The bidder may find that a request for indemnification is the difference between a low bid and the second lowest bid.

3.3 *Indemnification of Subcontractors*

Under CERCLA section 119, both prime contractors and subcontrators are defined as RACs. Consequently, there is no distinction between the Agency's authority to agree to indemnify prime contractors and its authority to agree to indemnify subcontractors. Because the Agency does not have privity of contract with subcontractors, however, any indemnification of subcontractors must be provided by the prime contractors. The Agency may, however, agree to indemnify the prime contractor with respect to liability arising as a result of the prime's indemnification of the subcontractor. In effect, the Agency would be extending section 119 indemnification to the subcontractor. Section 9 of the Proposed Guidance outlines policies and procedures for such an extension of an indemnification agreement to subcontractors.

In order for the Agency to indemnify the prime contractor with respect to any liability arising as a result of an agreement between the prime contractor and subcontractor, the terms and conditions of that agreement must be consistent with the requirements of section 119. The Agency has considered three options for ensuring that indemnification agreements with subcontractors (through prime contractors) satisfy the requirements of section 119 (as well as any other conditions required of RACs by EPA). The first option would require prime contractors to enforce the requirements of section 119 and EPA policy. If a claim were to arise, the Agency would inspect the records maintained by the prime contractor to determine if the prerequisites to indemnification had been met by the subcontractor. This option has the advantage of economy of resources in that it minimizes EPA oversight of the prime contractor's administration of subcontracts. Its major disadvantage is that it would leave the prime contractor (and subcontractor) ignorant of whether EPA would actually provide indemnification if the subcontractor were faced with a claim. The contractor would be certain of EPA coverage only after EPA had reviewed the documentation collected by the prime contractor and determined that the documentation was not deficient in any way.

The second option considered by the Agency is reflected in section 9 of the Proposed Guidance. Under this option, EPA would review all subcontractors' requests for indemnification. The prime contractor would be able to "pass through" EPA indemnification only if EPA had determined that the subcontractor's indemnification request met all the requirements of section 119 and section 7 of the proposed guidance. The advantage of this approach is that it allows the Agency to exercise discretion in determining what subcontractors it will indemnify, and it allows the subcontractor to know the terms of its contract (i.e., the indemnification terms) before it enters into the contract.

The disadvantage of this approach is that it would require significant Agency administrative resources, and the time required to process subcontractor applications could reduce the pace of cleanups at Superfund sites.

The third subcontractor indemnification option is to not indemnify any subcontractors. Under this option the prime contractor would, of course, be free to include any indemnification terms in its subcontracts. The Agency, however, would not indemnify the prime contractor with respect to any liability arising from indemnification agreements in subcontracts (that is, EPA indemnification would not "pass through" to subcontracts). This option has the obvious advantage of eliminating government administrative cost, while posing the risk that the Agency may be unable to procure subcontractors at certain sites. Furthermore, the Agency would no longer retain the option of agreeing to indemnify subcontractors as a replacement for liability insurance if the Agency determines that the insurance is too expensive.

The Proposed Guidance reflects the second option under consideration by the Agency. Upon further consideration, the Agency may determine to include any one of the three options in the final indemnification guidance. The Agency is soliciting comment on each of the three proposed approaches to indemnifying subcontractors.

3.4 *Other Issues*

Application. Section 4 of the guidance defines the application of the EPA section 119 indemnification program by stating that the guidance applies to indemnification of all RACs (for work started after the date of enactment of SARA). No indemnification other than section 119 indemnification is to be used by EPA RACs.

Some RACs have suggested that EPA supplement its use of section 119 indemnification authority with other forms of indemnification, such as the indemnification called for by the insurance clauses at FAR section 52.228–7, EPAAR section 1552.228, or FAR section 52.250–1 (i.e., "Indemnification Under Public Law 85–804"). EPA has determined that CERCLA section 119 is the sole authority for RAC indemnification. In drafting SARA, Congress had the opportunity to authorize EPA to provide any form of indemnification, including those forms found in the FAR/EPAAR clauses mentioned above. It is a rule of statutory construction that specific provisions govern general provisions. Accordingly, the detailed, specific statutory scheme of section 119 necessarily supplants and supercedes the broad, general contract authority that EPA relied on before the enactment of SARA. Moreover, there is no indication in section 119 or its legislative history that Congress did not intend the provisions of section 119 to provide exclusive indemnification authority.

Indemnification Request. EPA indemnification is intended to provide a temporary substitute for pollution liability insurance when that insurance is inadequate, unavailable, or unreasonably priced. Section 119 requires RACs to make "diligent efforts" to obtain pollution liability insurance as a condition of federal indemnification. Because EPA indemnification provides the equivalent of "free insurance" to RACs, contractors have little incentive to look for insurance. A failure by the RACs to search for and purchase insurance would be contrary to the letter and spirit of section 119, and would leave EPA as the RACs' insurer for the indefinite future. Consequently, a requirement to search diligently for insurance coverage has been included as a prerequisite for EPA indemnification.

Section 7 of the guidance includes the specific steps that an RAC must take in order to be eligible for EPA indemnification. It should be noted that the RAC must submit the required information, and EPA must approve the request, before an indemnification clause will be included in the contract. For EPA RACs, this is a minor change from the procedures used under the interim indemnification policy, where standard indemnification language was routinely included in the contract, and RACs were required to submit the "diligent efforts" documentation within 30 days after signing the contract.

Section 7(h) of the guidance notes that EPA may decline to agree to indemnify an RAC even if the RAC satisfies all the requirements of section 119. This paragraph reflects the concern that EPA may become the insurer of last resort for RACs that are unable to satisfy the underwriting criteria of commercial insurers. That is, insurers may refuse to provide coverage for certain RACs because, for some reason, those RACs pose an unacceptably high risk. As a result of this process of adverse selection, the Agency may be left with providing coverage only for the very worst risks. Consequently, the Agency is considering using some sort of underwriting criteria when it considers entering into indemnification agreements with RACs. The Agency requests comment on the feasibility and advisability of using underwriting criteria, and on the varieties of criteria that should be used. Careful consideration should be given to how the indemnification process and underwriting criteria would be implemented in a sealed bid vs. a negotiated procurement, and how the indemnification process and underwriting criteria would be implemented in prime contracts and subcontracts.

Terms and Conditions. Section 8 of the guidance presents the general terms and conditions of EPA indemnification. These terms and conditions reflect the scope, requirements, and limitations of indemnification found in CERCLA section 119.

The definitions of limits and deductibles are similar to those found in commercial policies. The indemnification limit is a "contract aggregate" limit; EPA will pay claims and the cost of litigation until the contract aggregate is reached, regardless of the number of claims, whether the incidents leading to claims occurred at one site or many, and regardless of whether the claims all occur in one year or are spread out over a long time period (see "Coverage Term", however). Coverage at a particular site or for a particular firm is not necessarily limited to the contract aggregate amount. For a particular site, several EPA contracts may be involved (for example, a TAT contractor and an ERCS contractor may be present at a removal site), each of which has coverage up to its contract aggregate amount. A single RAC may have several contracts with EPA, each of which provides coverage up to the contract aggregate amount (each contract, of course, provides for indemnification for work conducted under that contract only).

EPA is proposing to set the maximum indemnification limit at $50 million. As noted above, the Agency has been unable to determine the amount of insurance that would be purchased by a firm following "sound business practice" under Superfund contracts (see "Indemnification under Cost Reimbursement Contracts", above). Consequently, the Agency was unable to infer from its research the maximum amount of insurance coverage required by Superfund contractors following "sound business practice". The Agency understands, however, that a maximum amount must be set, both to protect the Superfund and to satisfy the requirements of CERCLA section 119. Based on its consultations with individuals in the insurance industry and in the RAC community, the Agency is proposing a maximum limit of $50 million. The Agency is not suggesting that this maximum limit has been derived from formal actuarial studies, or from a statistical analysis or formal risk management analysis of any kind. Rather, it represents the informed professional judgment of EPA staff of the maximum reasonable amount of insurance/indemnification that would satisfy CERCLA section 119, protect the Superfund, and provide protection from the risk of pollution liability that is adequate to ensure that the Agency can attract qualified contractors to perform cleanup activities at Superfund sites.

The deductible amount (or "self-insured retention") is defined as a "per occurrence". That is, the RAC must incur a loss on each claim equal to the deductible amount before EPA will indemnify. There is, then, no logical upper limit to the potential loss that an RAC may incur; the loss is limited only by the number of occurrences.

Section 8(e) defines the coverage term of EPA indemnification. Today, commercial pollution liability policies generally have a coverage term extending at most two years beyond the policy period. The Agency recognizes that a two year "completed operations" or "extended reporting" period does not fit the entire liability exposure at a Superfund site. On the other hand, a very lengthy coverage term (of, for example, twenty or more years) may not be acceptable to the Agency because of the difficulties created by carrying contingent liability on its books for a period that far exceeds the life of the program as currently authorized. Furthermore, EPA indemnification is intended to be a temporary substitute for pollution liability insurance. It is unlikely that commercial insurers will offer a coverage period of greater than ten years anytime in the near future; if, then, EPA offers a coverage period of greater than ten years, any commercial insurance that is offered would not replace completely the broader EPA coverage. Consequently, the EPA indemnification program would not be a temporary substitute; instead, it would be at least a long-term supplement to commercial insurance. Therefore, the Agency is proposing to limit its coverage term to a ten year completed operations period; that is, the indemnification agreement will cover claims presented up to ten years after the completion of work at the site.

The Agency requests comment on the terms and conditions of its proposed indemnification agreements.

VOL 54 ISS 209 OCT 31 1989 UMI

Indemnification of PRP RACs. CERCLA section 119(c), through E.O. 12580, gives EPA the discretionary authority to agree to indemnify RACs working for PRPs, where the PRP is conducting the cleanup pursuant to a consent decree or an administrative order. The purpose of this authority is to ensure that a lack of pollution liability insurance does not eliminate the possibility of PRP cleanups. Section 119(c)(5)(C) imposes significant limitations on EPA's ability to indemnify PRP RACs. To indemnify a PRP RAC, the Agency must first determine that the combined financial resources of all PRPs at the site are inadequate to provide indemnification against the reasonable potential liability of the contractor at the site. Before the Agency can pay a claim, the contractor must exhaust all administrative, judicial, and common law claims for indemnification against the PRPs. Finally, section 119(c)(6) provides for recovery from the PRPs of all indemnification costs paid by EPA.

EPA's interim indemnification guidance included policies and procedures for EPA indemnification of RACs working for PRPs. Nevertheless, EPA has not indemnified any RAC working for a PRP, having received only one request, which was denied on the grounds that the PRP did not demonstrate that it had inadequate financial resources to provide indemnification to the RAC. Based on this experience, it is reasonable to conclude that EPA indemnification of PRP RACs is not prerequisite to PRP cleanup of sites. Section 17 of the Proposed Guidance, which asserts that EPA will not agree to indemnify RACs working for PRPs, follows from that conclusion.

Guidance Document—EPA Indemnification of Superfund Response Action Contractors—Introduction

This guidance fulfills the requirement of CERCLA section 119(c)(7) and E.O. 12580, which require EPA to develop guidelines to carry out subsection 119(c).

1. Purpose

The purpose of the section 119 guidance is to provide policies and procedures by which the Environmental Protection Agency (EPA) may indemnify response action contractors (RACs) for claims that result from a release of a hazardous substance, pollutant or contaminant due to RAC negligence arising out of response action activities at a National Priorities List (NPL) or removal action site.

2. Authority

These guidelines are required by section 119(c)(7) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), 42 U.S.C. 9601, *et seq.*, as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA), Public Law 99-499. In E.O. 12580, the President delegated to EPA the responsibility for issuing section 119 guidelines and regulations that establish an indemnification program funded by the Hazardous Substance Superfund (52 FR 2923 (Jan. 29, 1987)).

3. Scope

These guidelines govern indemnification by EPA of all RACs that work under contract at NPL or removal action sites for EPA, States (or political subdivisions) under cooperative agreement with EPA, and potentially responsible parties (PRPs) under a CERCLA administrative order or consent decree. EPA interprets section 119 to permit the Agency to provide indemnification to RACs working for federally recognized Indian tribes pursuant to a cooperative agreement with EPA. These guidelines also apply to EPA indemnification of SITE program vendors conducting field investigations pursuant to SARA section 311(b), recipients of training grants under SARA section 126, and of RACs working for other Federal agencies (such as the U.S. Army Corps of Engineers) at EPA-lead sites under a Memorandum of Understanding (MOU) or an Inter-Agency Agreement with EPA. Where other Federal agencies indemnify RACs under section 119, those indemnification agreements must not be inconsistent with the broad policies found in this guidance document.

4. Application

(a) These guidelines govern EPA's indemnification of RACs for work initiated after October 17, 1986, the date of enactment of SARA. These guidelines supercede OSWER Directive #9835.5, "EPA Interim Guidance on Indemnification of Superfund Response Action Contractors Under Section 119 of SARA".

(b) These guidelines will govern all RAC indemnification by EPA for future response action contracts.

(c) Contract indemnification terms (under EPAAR 1552.228-70) rather than these guidelines will apply to work performed at a site after the date of enactment of SARA only if response work at the site was initiated under an EPA contract prior to SARA's date of enactment. Indemnification terms under the SARA section 119 Interim Policy (as specified in OSWER Directive #9835.5) will be replaced, at the mutual consent of EPA and the contractor, with indemnification terms consistent with the policies found in this guidance document. Those terms will be applicable retroactively to the date of enactment of SARA, or to the starting date of the contract, whichever is later.

(d) Subject to all the requirements of these guidelines, any indemnification agreement provided by EPA to a prime contractor may be provided by the prime contractor to its subcontractors if the agreement is approved by EPA at the time of the award of the subcontract. That is, the prime contractor can agree to indemnify a subcontractor, and EPA may indemnify the prime contractor with respect to the prime contractor's obligations that may arise as a consequence of its indemnification of the subcontractor (see section 9, below).

5. Abbreviations

CERCLA—Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (as amended)
EPAAR—EPA Acquisition Regulations
FAR—Federal Acquisition Regulations
NPL—National Priorities List
PRP—Potentially Responsible Party
RAC—Response Action Contractor
SARA—Superfund Amendments and Reauthorization Act of 1986

6. Definitions

Terms not defined in this section have the meaning given by CERCLA, as amended by SARA.

"Claim" means the receipt by the RAC of a written demand for money, naming the RAC and alleging a release from RAC response action activities.

"Indemnification", for the purpose of these guidelines, means an agreement under which EPA will compensate certain losses suffered by a RAC, and the actual payment of that compensation.

"Non-federal sources" means commercial insurance, PRP indemnification, state indemnification, or other alternative risk transfer mechanisms.

"Response Action Contractor", as provided in section 119(e)(2), means any person who enters into a response action contract to provide services directly related to any release or threatened release of a hazardous substance or pollutant or contaminant from a facility, and any person hired or retained by such a person. It also includes recipients of cooperative agreements under section 311(b) and recipients of grants pursuant to section 126(g) of SARA.

"Response Action Contract", as provided in section 119(e)(1), means any written contract or agreement entered into by an RAC with the President, any Federal agency, a state or political subdivision under a cooperative agreement with EPA, or any PRP under an order or decree, to provide response action at an NPL or removal action site.

Indemnification Requirements, Terms, and Conditions

7. Indemnification Request

(a) EPA will not indemnify RACs that fail to meet the statutory requirements of section 119. EPA will not enter into an indemnification agreement with an RAC until the RAC submits the documentation described in section 119 and in this guidance document.

(b) To be eligible for indemnification by EPA, the RAC shall submit evidence of the following:

(i) That its potential third party liability is not covered by insurance available at a fair and reasonable price at the time the contract to perform a response action is entered into, and that adequate insurance is not generally available;

(ii) That it has made diligent efforts to obtain insurance coverage from non-federal sources (or, if it is a cost-reimbursement RAC, it has satisfied the minimum insurance requirements of 10(b), below);

(iii) And, under a multi-site contract, that the RAC also has made (or agrees to make) such diligent efforts (or, if it is a cost-reimbursement RAC, it will otherwise satisfy the requirements of 10(b)] every time it begins work at a new facility.

(c) Due to the variability of market conditions, EPA will determine on a case-by-case basis whether adequate insurance is available at a fair and reasonable price at the time indemnification documentation is submitted. This determination will be based on the documentation submitted in fulfillment of the diligent effort requirement, or on any other insurance market information available to EPA.

(d) To demonstrate that diligent efforts have been made to obtain non-federal pollution liability insurance coverage, an RAC must submit in writing:

(i) The names and addresses of at least three commercial insurers or alternative risk financiers to whom the RAC has submitted applications; and

(ii) A copy of each application submitted, insurance policies offered (including the declaration page), and any rejection letters received. If pollution liability insurance was offered by a commercial insurer, but not accepted by the RAC, an explanation of the reasons why such coverage was rejected must be included.

(e) The EPA will not enter into an indemnification agreement until the RAC has submitted the documentation required in (b) and (d). EPA will not enter into an indemnification agreement if it determines that the documentation submitted is insufficient, or if it determines that the RAC's efforts to obtain insurance were not sufficiently diligent.

(f) If the RAC is working under a multi-site contract, the "diligent effort" information must be updated and resubmitted within 30 days of the RAC beginning work at a new site (as part of the indemnification agreement, the RAC will have agreed to make such "diligent efforts" each time work is started at a new site (see 7(b)(iii), above)).

(i) If previously purchased insurance covers work at the new site, and the EPA has already determined that the purchase (and maintenance) of that insurance satisfies the diligent effort requirement for that contract, then there is no need to submit additional documentation for that site.

(ii) For certain types of contracts, where a search for insurance each time new site work starts is inappropriate or impractical, EPA may waive the requirement to search for insurance each time new site work starts. Where EPA has granted such a waiver, the RAC is required to resubmit "diligent efforts" documentation every 12 months. In any case, a RAC under a multi-site indemnification agreement must notify EPA before work (covered by the indemnification agreement) begins at a new site.

(g) EPA reserves the right to change the frequency and content of documentation submittal requirements, and also to direct indemnified RACs to purchase insurance from insurers identified by EPA.

(h) EPA may apply underwriting criteria in addition to the specific requirements of this section. That is, EPA may decline to enter into an indemnification agreement with an RAC even if the RAC meets all the requirements of the FAR, CERCLA section 119, and this guidance.

8. Indemnification Terms and Conditions

(a) Where EPA has agreed to indemnify an RAC, EPA will indemnify the RAC against third party liability (including the expenses of litigation or settlement) for negligence arising from the RAC's performance in carrying out the response action contract. Such indemnification shall apply only to liability not compensated by insurance or otherwise and shall apply only to liability which results from a release of a hazardous substance, pollutant, or contaminant if such release arises out of the response action activities of the contract.

(b) EPA indemnification is subject to limits and deductibles. For the purpose of determining the amount of the indemnification limit and deductible, the expenses of litigation or settlement are considered part of the liability covered by the indemnification agreement. That is, there is not a separate limit or deductible for expenses of litigation or settlement. The amount of the indemnification limit and deductible depends on the type of contract entered into (see below).

(i) The indemnification limit is defined as a contract aggregate limit.

(ii) The indemnification deductible is a per occurrence deductible. There is no aggregate limit to the deductible.*

(c) EPA indemnification will not cover liabilities (including the expenses of litigation or settlement) that were caused by the conduct of the RAC (including any conduct of its directors, managers, staff, representatives or employees) which was grossly negligent or constituted intentional misconduct. Nor shall the RAC be indemnified for liability arising under strict tort liability, or any basis of liability other than negligence.

(i) EPA indemnification will apply if the RAC is found to be not liable for alleged negligence, or if a negligence suit is settled. That is, EPA indemnification will cover the expenses of litigation or settlement subject to the terms and conditions of the indemnification agreement (such as limits and deductibles).

(ii) EPA indemnification will not apply if the RAC is found both strictly liable and negligent, and the cause of action is not divisible.

(d) If an RAC has an indemnification agreement with EPA, the RAC must promptly notify EPA of any claim or action against the RAC that may involve indemnification. Also, the RAC must promptly notify its insurers of any claim

* That is, the amount of deductible that must be incurred is limited only by the number of occurrences, whereas the total amount of indemnification payments per contract is limited by the defined "indemnification limit", which is invariant with respect to the number of occurrences.

VOL 54 ISS 209 OCT 31 1989 UMI

or action that may involve EPA indemnification, even if the RAC believes that its insurance is not applicable to the claim or action. Indemnification is conditional on prompt receipt from the RAC of copies of the complaint (or other claim), the notice to the insurer, and the insurer's response.

(i) For the purpose of this guidance, "prompt" action is defined as action within twenty days of the date when the RAC knew or should have known of the claim or event.

(e) Coverage Term: Subject to the other terms and conditions listed in this document, an EPA indemnification agreement will cover claims arising (and reported to EPA) during the period of performance of the contract, plus any time within ten years after the contract term. For multisite contracts, the coverage term, with respect to an individual site, is the ten year period following the RAC's completion of work (as specified in the Work Assignment or other relevant work order) at the site.

9. Subcontractors

(a) EPA will not agree to indemnify subcontractors directly. However, with the prior written permission of EPA, prime contractors can include subcontractors in their indemnification agreements with EPA. Thus, EPA will enter into no more than one indemnification agreement per contract, with that agreement affording coverage to the prime contractor, including any obligation the prime contractor may incur as a result of its indemnification agreements with its subcontractors. See also the approval requirement in (b), below.

(b) The prime contractor confers indemnification to the subcontractor by including in the subcontract an indemnification clause by which the prime contractor agrees to indemnify the subcontractor. That clause must have terms and conditions (except for limits and deductibles, see below) identical to those found in the clause by which EPA agrees to indemnify the prime contractor. EPA will indemnify the prime contractor with respect to any liability incurred by the subcontractor(s) pursuant to an indemnification agreement between the prime contractor and any subcontractor (subject to the indemnification limits and deductibles specified in the prime contract). EPA, however, must approve (in writing) the subcontract which contains the indemnification agreement between the prime contractor and subcontractor. Accordingly, no indemnification agreement shall be included in any subcontract without first obtaining EPA approval. This will avoid indemnifying subcontractors that are determined to present an adverse risk and to whom indemnification would be denied pursuant to paragraph 7(h).

(c) EPA indemnification limits and deductibles are unaffected by the number of subcontracts entered into by the prime contractor. That is, the limit of EPA's obligation and the deductible specified in an indemnification agreement with a prime contractor applies jointly to the prime contractor and all subcontractors.

(d) The prime contractor is free to include any limit or deductible in its contract with the subcontractor (for example, the prime contractor may wish to provide a small deductible for a small company). EPA's obligation, however, is governed by its indemnification agreement with the prime contractor.[7]

(e) Subcontractors are defined as RACs. Consequently, subcontractors are subject to all indemnification requirements, terms, and conditions. These applicable requirements include the reporting requirements of section 7, above. That is, the subcontractor must demonstrate that it has made diligent efforts to obtain pollution liability insurance, and agree to continue to make such efforts. The subcontractor should forward all documentation to the prime contractor, and the prime contractor should forward copies of the documentation to the contracting officer (or other appropriate official). The contracting officer (or other appropriate official) may consent to the subcontract including the indemnification clause (see paragraph 9(b), above) only if the contracting officer has determined, based on the documentation supplied by the subcontractor (through the prime contractor), that the subcontractor has satisfied the reporting requirements of section 7.

(i) A demonstration of diligent efforts by the prime contractor is not sufficient to demonstrate that, by implication, insurance is unavailable to the subcontractor.

Indemnification Terms and Conditions for Specific Contract Types

10. RACs Working for EPA Under Cost Reimbursement Contracts

(a) RACs working for EPA under cost reimbursement contracts must procure and maintain all insurance required by law or regulation including:

(i) Insurance required for cost reimbursement contracts by part 28 of the Federal Acquisition Regulations,

(ii) Commercial general liability insurance for bodily injury, death or loss of or damage to property of third persons in the minimum amount of $1,000,000 per occurrence, and

(iii) Any additional insurance EPA may require.

(b) Indemnification and Insurance: Any RAC working for EPA under a cost reimbursement contract who requests that EPA enter into an indemnification agreement must procure and maintain pollution liability insurance for bodily injury, death or loss of or damage to property of third persons in the minimum amount of $1,000,000 per occurrence (or self-insure for the same), or it must demonstrate that it has made diligent efforts to obtain such pollution liability insurance (and, despite such diligent efforts, has failed to procure reasonably priced insurance), and, under a multi-site contract, agrees to make such diligent efforts every time work begins at a new site. EPA will not agree to indemnify a RAC who does not either purchase the required insurance or demonstrate diligent efforts, nor will EPA make indemnification payments to an RAC who has entered into an indemnification agreement but has failed to demonstrate adequately that it has made diligent efforts each time work started at a new site (possible exception: *See* 7(f)(ii), above).

(i) The RAC must procure and maintain pollution liability coverage for professional liability and/or general liability, as appropriate.

(ii) The minimum amount of pollution liability insurance to be purchased will increase by 25% per year unless EPA determines that the increased amount of insurance is not generally available. Thus, where t is defined as the number of years elapsed since promulgation of this policy guidance, the minimum amount of pollution liability insurance required in year t is equal to:

$1 million *1.25^{t}

(iii) The demonstration of "diligent efforts" is defined in 7(d), above. Those diligent efforts must be deemed satisfactory by EPA.

(c) Reimbursement: RACs working for EPA under cost reimbursement contracts shall submit to the Contracting Officer for prior approval all insurance policies (or documentation of all self-insurance plans) for which reimbursement will be sought from EPA.

[7] For example, if the indemnification agreement between the prime contractor and subcontractor calls for a $50,000 deductible, and the agreement between EPA and the prime contractor calls for a $200,000 deductible, then, in the event of a claim for $300,000, the subcontractor incurs a $50,000 loss, the prime contractor incurs a $150,000 loss, and EPA incurs a $100,000 loss.

(i) Any cost incurred within the EPA indemnification deductible amount (see below) will not be reimbursed as either direct or indirect cost. The RAC may purchase insurance to cover the indemnification deductible amount, but the cost of that insurance is not reimbursable (nor is any portion of the deductible amount of that insurance reimbursable as either a direct or indirect cost).

(d) Self-Insurance: If an RAC proposes to self-insure against pollution liability, and seeks reimbursement for the cost of self-insurance or seeks to satisfy the "minimum insurance" requirement of section 10(b) through self-insurance, it must demonstrate to EPA financial responsibility for the amount of self-insurance proposed. Financial responsibility may be demonstrated by letter of credit, surety bond, trust fund, escrow account, or other method approved by the EPA Contracting Officer.

(i) A demonstration of financial viability, by itself, does not consitute an adequate demonstration of financial responsibility.

(ii) To be eligible for reimbursement of the cost of self-insurance, a RAC must satisfy the applicable requirements of 48 CFR Parts 28, 30, and 31, and 4 CFR Part 416.

(e) Limits and Deductibles: Where EPA has agreed to indemnify a cost reimbursement RAC working for EPA, the limit of indemnification included in the indemnification agreement shall be requested by the RAC. The limit must be not less than $1 million and not more than $50 million. The deductible to be incurred by the RAC will depend on the limit chosen. Both the indemnification limit and the deductible amount shall be specified in the indemnification agreement.

(i) For RACs requesting indemnification limits of $1 million, the deductible amount shall be equal to 1% of the indemnification limit (i.e., $10,000).

(ii) For RACs requesting indemnification limits of $5 million or less, but more than $1 million, the deductible amount shall be equal to 2% of the indemnification limit. That is:

.02 * L

Where L is the indemnification limit.

(iii) For RACs requesting indemnification limits of $10 million or less, but more than $5 million, the deductible amount shall be equal to 3% of the indemnification limit in excess of $5 million, plus $100,000. That is:

$100,000 + (.03 * (L − $5,000,000))

Where L is the indemnification limit.

(iv) For RACs requesting indemnification limits of $25 million or less, but more than $10 million, the deductible amount shall be equal to 5% of the indemnification limit in excess of $10 million, plus $250,000. That is:

$250,000 + (.05 * (L − $10,000,000))

Where L is the indemnification limit.

(v) For RACs requesting indemnification limits of $50 million or less, but more than $25 million, the deductible amount shall be equal to 10% of the indemnification limit in excess of $25 million, plus $1,000,000. That is:

$1,000,000 + (0.1 * (L − $25,000,000))

Where L is the indemnification limit.

Therefore, a cost reimbursement RAC requesting the maximum per contract indemnification limit of $50 million will be subject to a deductible of $3.5 million per occurrence.

(f) Limits, Deductibles, and Purchased Insurance: Any pollution liability insurance (or self-insurance), for the cost of which EPA reimbursed the RAC, reduces the limit of EPA indemnification on a dollar for dollar basis. Further, the RAC must exhaust both the available insurance coverage and the EPA deductible (found in the indemnification agreement) before EPA will make an indemnification payment. For example, if a RAC has an indemnification agreement with EPA that includes a $5 million limit (thus, a $100,000 deductible), and has $1 million of pollution liability insurance coverage, then the RAC must incur $1,100,000 before EPA will make indemnification payments, and EPA's obligation to indemnify is limited to $4 million ($5 million from the indemnification agreement, less $1 million purchased insurance). Any deductible amount on the commercial insurance policy (or self-insurance) is irrelevant to EPA's coverage trigger.

11. Indemnification of RACs Working for EPA with Firm Fixed Price (Sealed Bid) Contracts

(a) General: Although the Government is not ordinarily concerned with the contractor's insurance coverage if the contract is a fixed price contract, EPA recognizes that a RAC cleaning up a Superfund site may require insurance coverage against third-party liability, and that, in some cases, adequate insurance may not be available. In such cases, and from a bidder's perspective, EPA indemnification may be a prerequisite to cleanup activities at the site. Therefore, EPA will offer limited indemnification against third-party pollution liability to all firm fixed price RACs.

(b) RACs that seek EPA indemnification, and are working for EPA under fixed price contracts, including RACs working for the U.S. Army Corps of Engineers at EPA-lead sites, must procure and maintain all insurance required by the Contracting Officer.

(c) RACs working for EPA under fixed price contracts will not be reimbursed the cost of purchased insurance (except insofar as the cost of insurance may be reflected in the fixed price).

(d) All indemnification agreements must contain a limit of indemnification and a deductible amount. A firm fixed-price RAC may request any amount of indemnification coverage (not to exceed $50 million), and any deductible (with a minimum deductible of $10,000) as part of its bid.

(i) The Invitation For Bid (IFB) will include a "price schedule" for indemnification (with prices depending on the size of the limit and size of deductible amount). When EPA evaluates a bid, it will consider the requested indemnification coverage to be part of the bidder's requested remuneration. That is, when selecting the lowest bidder for a project, EPA will evaluate the "net bid", i.e. the bid plus the value (as reflected in the price schedule) of any requested indemnification. Consequently, bidders should consider carefully their estimation of the value of EPA indemnification before requesting such indemnification.

(ii) Model price schedules will be published in a supplement to this policy guidance.

(iii) Once included in the contract of a firm fixed-price RAC, indemnification terms and conditions cannot be modified.

(e) RACs working for EPA under firm fixed price contracts are deemed to have met the "diligent efforts" requirements of section 7, above. Because of the implicit "penalty" associated with indemnification of fixed-price RACs (through the bid evaluation scheme), it can be assumed that adequate "reasonably priced" insurance is not available if a fixed-price RAC requests indemnification.

12. Indemnification of RACs Working for EPA Under Negotiated Fixed Price Contracts

(a) For the purpose of indemnification, RACs working for EPA under negotiated fixed price contracts (including RACs under fixed rate contracts with some cost elements reimbursable, such as Time-and-Materials Contracts) will be considered cost reimbursement

VOL 54 ISS 209 OCT 31 1989 UMI

contractors. If a negotiated fixed price RAC requests indemnification, it will be subject to the same insurance requirements and indemnification terms and conditions as cost reimbursement contractors (see section 10, above).

13. Indemnification of SITE Program RACs

(a) Technology vendors participating in the SITE program are defined as RACs by CERCLA section 119(e). Thus, those vendors participating in the SITE program, under cooperative agreement with EPA, may be eligible to enter into an indemnification agreement with EPA.

(b) Before EPA will agree to enter into an indemnification agreement with a SITE program vendor, the vendor must satisfy the requirements of section 7 of this document (i.e., EPA must determine that reasonably priced pollution liability insurance is not available to SITE program RACs, or the vendor must demonstrate that it has made diligent efforts to obtain pollution liability insurance from non-federal sources). The cost of insurance purchased pursuant to section 7 will not be reimbursed by EPA. The vendor should be aware that indemnification coverage from EPA may be available only at a substantial cost (i.e., the cost of purchased insurance).

(c) The limit and deductible amounts of EPA indemnification will be determined as if the vendor were a cost-reimbursement contractor working for EPA (see section 10, above).

(d) EPA will not indemnify SITE program RACs with respect to facilities which receive waste for disposal, treatment (not including small-scale demonstration testing), or storage independently of the SITE technology demonstration.

(e) EPA will not indemnify SITE program RACs with respect to any work conducted at a Federal facility (as described in CERCLA section 120), unless the Federal agency in question is the EPA.

(f) If a SITE demonstration project is funded by a party other than EPA, then the SITE RAC will be considered, for the purpose of indemnification, a RAC employed by that party. For example, if a SITE Program RAC is conducting a demonstration funded at least in part by a PRP, then EPA will not indemnify the SITE Program RAC (see section 10, below).

14. Indemnification of RACs Receiving Grants Under SARA Section 126(g)

(a) RACs receiving SARA section 126(g) grants may be eligible to enter into an indemnification agreement with EPA. Before EPA will agree to enter into an indemnification agreement with a grantee, the grantee must satisfy the requirements of section 7 of this document (i.e., the grantee must demonstrate that it has made diligent efforts to obtain pollution liability insurance from non-federal sources).

(i) The cost of insurance purchased pursuant to section 7 will not be reimbursed by EPA. The grantee should be aware that indemnification coverage from EPA may be available only at a substantial cost (i.e., the cost of purchased insurance).

(b) The limit of EPA indemnification will be equal to the greater of the dollar amount of the grant, or $1 million. The maximum limit is $50 million. The deductible amount is computed as if the grantee were a cost-reimbursement contractor (see section 10(e), above).

15. Indemnification of RACs Employed by States or Political Subdivisions

(a) General: EPA has been granted discretionary authority to indemnify RACs employed by states, political subdivisions of states, or federally-recognized Indian tribes that have entered into a cooperative agreement with EPA for new work initiated at NPL or removal action sites after the date of enactment of SARA. If EPA agrees to indemnify a RAC employed by such entity, the indemnification agreement will be embodied in the cooperative agreement through insertion of a special condition.

(b) Requirements for EPA Indemnification: The procedures for entering into indemnification agreements with RACs working for states (or political subdivisions) or federally-recognized Indian tribes under cooperative agreements are identical to those for RACs working directly for EPA. In addition, before EPA will enter into an indemnification agreement, proof of the following must be supplied to EPA:

(i) The RAC's contract concerns new site work initiated at an NPL or removal action site after the date of enactment of SARA; and

(ii) The RAC's contract is directly related to site cleanup.

(c) Terms and Conditions: For the purpose of determining the terms and conditions of an indemnification agreement, a RAC working for a state (or political subdivision) or federally-recognized Indian tribe under cooperative agreement will be subject to the same provisions of this guidance as would an EPA RAC. For example, if a RAC is working for a state under a cost reimbursement contract, the terms and conditions found in section 10 of this guidance will apply.

(d) EPA will agree to indemnify a RAC working for a state (or political subdivision) or federally-recognized Indian tribe even if that entity has agreed to indemnify the RAC. Responsibility for making indemnification payments will be held jointly by the EPA and the state (or political subdivision or federally-recognized Indian tribe). Unless otherwise stated in the indemnification agreement(s), responsibility for making indemnification payments will be divided equally between EPA and the state (or political subdivision or federally-recognized Indian tribe). Any indemnification payments made by EPA, however, are subject to the limits and deductibles specified in the indemnification agreement.

(e) EPA may agree to indemnify a RAC which is required under the terms of its contract with a state (or political subdivision) or federally-recognized Indian tribe to indemnify and hold harmless such contracting entity from claims, damages, losses and expenses, including litigation costs, that arise out of the RAC's performance of the contract. However, any costs or expenses payable to the state (or political subdivision) or federally-recognized Indian tribe under such indemnification are the sole responsibility of the RAC and are not covered under EPA's indemnification of the RAC or otherwise an eligible expense of the cooperative agreement.

16. Indemnification of RACs Employed by Federal Agencies Other Than EPA

(a) General Rule: Under CERCLA section 119 (as implemented by E.O. 12580), other Federal agencies are granted discretionary authority to indemnify RACs they employ at NPL or removal action sites from the date of enactment of SARA. Other federal agencies that indemnify RACs under section 119 must use their own appropriations to fund their programs and pay all indemnification costs. Under CERCLA section 120(a)(2), if other federal agencies choose to indemnify their RACs under CERCLA authority, then that indemnification must not be inconsistent with these guidelines.

(b) Interagency agreements: RACs employed by other Federal agencies (e.g., the Army Corps of Engineers) at EPA-lead NPL or removal action sites, managed pursuant to an interagency agreement with EPA, are subject to the same provisions of this guidance as are RACs employed by EPA. Thus, the same indemnification terms and conditions offered to RACs employed by EPA may be offered to RACs employed by other agencies under interagency agreements with EPA.

17. Indemnification of RACs Employed by PRPs

CERCLA § 119(c)(5)(C) (as implemented by E.O. 12580) gives EPA the discretionary authority to enter into an indemnification agreement with a RAC employed by any potentially responsible party (PRP) which has entered into an agreement (such as a consent decree) with EPA. EPA will not exercise that discretionary authority, i.e., EPA will not agree to indemnify a RAC under contract with a PRP.

Other Issues

18. Exclusion of Facilities That Receive Waste

(a) EPA is prohibited (by CERCLA section 119(c)(5)(D)) from providing indemnification to owners or operators of facilities regulated under the Solid Waste Disposal Act, as amended, with respect to response activities performed at, or potential liability related to, those facilities.

(b) Under section 119, EPA will not agree to indemnify any owner or operator of a facility that receives solid or hazardous waste (for disposal, treatment, or storage), including publicly owned treatment works (POTWs), with respect to that facility. This applies to a facility regardless of whether or not it is subject to the permit-by-rule provisions, or any other provision of RCRA.

19. Other Terms and Conditions

(a) EPA will indemnify only RACs performing work directly related to site cleanup.

(b) At any time, EPA may cancel its indemnification of a RAC due to a material misrepresentation or a failure on the part of the RAC to provide necessary information.

(c) EPA reserves the right to add such additional terms and conditions to its RAC indemnification agreements as it deems necessary. Such terms and conditions will be consistent with CERCLA section 119.

20. Claims Notifications and Processing

(a) The RAC shall provide written notification to the contracting officer (or other EPA official designated in the indemnification agreement) immediately (i.e., within 20 days) upon receiving notice of any claim or action that may involve section 119 indemnification. EPA will not provide indemnification payments for costs incurred prior to its receipt of written notice from the RAC. Notice must include a copy of the complaint or other claim, or, if no written claim has been received, available information on the time, place, and circumstances involved and the names and addresses of the injured and of available witnesses.

(b) The RAC shall notify its insurers promptly (i.e., within 20 days) of any claim or action that may involve EPA indemnification, even if the RAC believes that its insurance is not applicable to the claim or action. The RAC shall provide to the contracting officer (or other designated person) a copy of any correspondence from the insurance company, including any notice of denial of coverage.

(c) The RAC shall furnish evidence or proof related to any claim that may involve indemnification payments in the manner and form required by EPA.

(d) The RAC shall furnish to EPA complete photocopies of all of the RAC's insurance policies that were in force at the time of the response action, and all those in force at the time of the notice of claim.

(e) EPA reserves the right to direct, control, or assist in the settlement or defense of any claim or action against an indemnified RAC.

(f) The RAC shall not admit liability or settle any claim without EPA's written consent.

(g) If EPA recommends settlement of a claim for an amount within the RAC's deductible, and the RAC refuses such settlement, EPA shall not be obligated to indemnify for any loss or obligation of the RAC relating to the claim in excess of the deductible.

(h) If EPA recommends settlement of a claim for a total amount in excess of the RAC's indemnification limit (as specified in the contract) and the RAC refuses such settlement, EPA's obligation for any loss shall be limited to that portion of the recommended settlement and the costs, charges, and expenses (as of the RAC's refusal) that exceeds the deductible and falls within the limit of liability.

(i) EPA reserves the right to make any claim payment either to the RAC or the claimant at its discretion.

21. Cost Recovery

Under section 119(c)(6), indemnification payments made by EPA to RACs are recoverable from PRPs as a response cost. EPA shall document any indemnification payments by following the same record-keeping and reporting procedures as for all other response costs.

22. Limitation

Nothing in this guidance shall be construed as a waiver of sovereign immunity by the United States. Nothing in this guidance shall be construed to establish the United States as a liable party, within the meaning of section 107 of CERCLA, for any release that has occurred or may occur in the course of any response action the United States undertakes pursuant to section 104 of CERCLA. In addition, EPA's agreement to indemnify any RAC, or EPA's payment of any money under an indemnification agreement, shall not be construed as a waiver of sovereign immunity by the United States, within the meaning of section 107 of CERCLA.

Jonathan Z. Cannon,

Acting Assistant Administrator, Office of Solid Waste and Emergency Response.

"1B1.10. Retroactivity of Amended

VOL 54 ISS 209 OCT 31 1989 UMI

UNITED STATES SENTENCING COMMISSION

Notification of Miscellaneous Actions

AGENCY: United States Sentencing Commission.

ACTION: Public notice of (1) promulgation of a temporary, emergency sentencing guideline amendment for possession of cocaine base ("crack"); (2) promulgation of a temporary, emergency guideline amendment concerning the statutory authority of judges to deny or terminate certain Federal benefits; (3) promulgation of a sentencing policy statement concerning the retroactive applicability of sentencing guideline amendments; and, (4) approval of miscellaneous technical and clarifying revisions to the Guidelines Manual.

SUMMARY: The Sentencing Commission hereby gives public notice of several actions taken pursuant to its authorities under section 21(a) of the Sentencing Act of 1987 (Pub. L. 100–182) and section 217(a) of the Comprehensive Crime Control Act of 1984 (28 U.S.C. § 994 (a) and (u)).

DATES: The effective date of the actions set forth below is November 1, 1989.

FOR FURTHER INFORMATION CONTACT: Paul K. Martin, Communications Director for the Commission, telephone (202) 662–8800.

SUPPLEMENTARY INFORMATION: The United States Sentencing Commission is an independent commission in the judicial branch of the United States Government. Section 21(a) of the Sentencing Act of 1987 (Pub. L. 100–182, Dec. 7, 1987) authorizes the U.S. Sentencing Commission to promulgate temporary, emergency guidelines or amend existing guidelines in certain circumstances, including "the creation of a new offense or amendment of an existing offense." Unlike regular amendments issued pursuant to 28 U.S.C. 994(p), amendments promulgated by the Commission under this authority are not required to be submitted to Congress for 180 days' review prior to their taking effect; nor is the Commission required to publish proposed temporary, emergency guideline amendments prior to promulgation, though it may do so if circumstances permit. However, section 21 emergency amendments are temporary; i.e., unless submitted to Congress as regular amendments in the next regular amendment report, they expire upon the disposition of that report.

The temporary amendments set forth below pertain to the possession of cocaine base ("crack") and to the authority of courts to deny or terminate certain federal benefits to defendants convicted of controlled substances offenses.

Possession of cocaine base ("crack"). Section 6371 of the Anti-Drug Abuse Act of 1988 (Pub. L. 100–690, Nov. 18, 1988), sets forth mandatory minimum terms of imprisonment for defendants possessing certain amounts of cocaine base ("crack"). On June 5, 1989, the Commission published in the **Federal Register** for comment three options for a proposed temporary, emergency sentencing guideline amendment incorporating the new statutory penalties. 54 FR 24073–24074 (1989). On July 18, 1989, the Commission reviewed its proposed temporary, emergency guideline amendments on simple possession and possession with intent to distribute. While it did not necessarily accept the view of some who submitted comments that the proposals were outside of its emergency guideline promulgation authority, the Commission decided to promulgate the narrow amendment set forth below as amendment 1. This amendment provides that convictions for possession of cocaine base ("crack") subject to the enhanced penalties created by section 6371 of the Anti-Drug Abuse Act of 1988 are to be treated as if the conduct constituted possession of the controlled substance with intent to distribute.

Denial of certain Federal benefits. On August 30, 1989, the President of the United States submitted a report to Congress concerning the implementation of section 5301 of the Anti-Drug Abuse Act of 1988 (Pub. L. 100–690, Nov. 18, 1988) pertaining to denial of Federal benefits for certain drug offenders. In that report, the President "ask[s] the United States Sentencing Commission to assist in the initial dissemination of information to the Federal courts" regarding section 5301. Further, the report states that "[p]rincipal responsibility will rest with the Sentencing Commission to disseminate all necessary information concerning section 5301 to Article III Judges and other appropriate Federal personnel." In response to discussions with the Office of Drug Policy and the Office of Management and Budget regarding this anticipated request of the President, and in preparation for the submission of his report to Congress, the Commission adopted the temporary, emergency guideline amendment on August 22, 1989, set forth below as amendment 2. The amendment informs judges, probation officers, and all recipients of the Guidelines Manual of the availability of penalties under section 5301.

New Policy Statement: Retroactive application of amendments to guideline sentencing ranges. Section 994(a)(2) of title 28, United States Code authorized the Commission to promulgate policy statements regarding application of the guidelines or any other aspect of sentencing or sentence implementation. Unlike guideline amendments issued pursuant to 28 U.S.C. § 994(p), sentencing policy statements and amendments thereto promulgated by the Commission are not required to be submitted to Congress for 180 days' review prior to their taking effect.

Section 3582(c)(2) of title 18, United States Code provides that "the court may reduce the term of imprisonment [in the case of a defendant who has been sentenced to a term of imprisonment based upon a sentence range that has subsequently been lowered by the Sentencing Commission] * * * if such a reduction is consistent with applicable policy statements issued by the Sentencing Commission." Further, under section 994(u) of title 28, United States Code, the Commission is directed to "specify in what circumstances and by what amount the sentences of prisoners serving terms of imprisonment for the offense may be reduced" where it has lowered sentencing ranges applicable to an offense or group of offenses. In furtherance of these statutory mandates, on September 12, 1989, the Commission adopted a policy statement concerning the retroactive application of amendments that reduce guideline ranges set forth below as amendment 3.

Technical revisions to the Guidelines Manual. The Commission approved several miscellaneous technical and clarifying revisions to the Guidelines Manual as set forth below under Miscellaneous Matters.

Authority: Section 217(a) of the Comprehensive Crime Control Act of 1984 (28 U.S.C. 994(a) and (u)) and Section 21(a) of the Sentencing Act of 1987 (Pub. L. 100–182).

William W. Wilkins, Jr.,
Chairman.

Amendment 1

The Commission has promulgated the following temporary, emergency amendment to the guidelines and commentary implementing statutory minimum sentences for possession of cocaine base ("crack"):

Section 2D2.1 is amended by inserting the following additional subsection:

"(b) Cross Reference

(1) If the defendant is convicted of possession of more than 5 grams of a mixture or substance containing cocaine base, apply § 2D1.1 (Unlawful Manufacturing, Importing, Exporting, or Trafficking) as if the defendant had been convicted of possession of that mixture or substance with intent to distribute.'".

The Commentary to § 2D2.1 captioned "Background" is amended by deleting the entire text as follows:

"Background: Absent a prior drug related conviction, the maximum term of imprisonment authorized by st... te is one year. With a single prior drug related conviction, a mandatory minimum term of imprisonment of fifteen days is required by statute and the maximum term of imprisonment authorized is increased to two years. With two or more prior drug related convictions, a mandatory minimum term of imprisonment of ninety days is required by statute and the maximum term of imprisonment authorized is increased to three years.",

and inserting in lieu thereof:

"Background: Mandatory minimum penalties for several categories of cases, ranging from fifteen days' to five years' imprisonment, are set forth in 21 U.S.C. 844(a). When a mandatory minimum penalty exceeds the guideline range, the mandatory minimum becomes the guideline sentence. § 5G1.1(b).

Section 2D2.1(b)(1) provides a cross reference to § 2D1.1 for possession of more than five grams of a mixture or substance containing cocaine base, an offense subject to an enhanced penalty under Section 6371 of the Anti-Drug Abuse Act of 1988. Other cases for which enhanced penalties are provided under Section 6371 of the Anti-Drug Abuse Act of 1988 (e.g., for a person with one prior conviction, possession of more than three grams of a mixture or substance containing cocaine base; for a person with two or more prior convictions, possession of more than one gram of a mixture or substance containing cocaine base) are to be sentenced in accordance with § 5G1.1(b).'".

Statement of Reasons: The purpose of this amendment is to reflect revisions in 21 U.S.C. 844(a) made by section 6371 of the Anti-Drug Abuse Act of 1988.

Amendment 2

The Commission has promulgated the following temporary, emergency guideline amendment concerning the statutory authority of judges to deny or terminate certain Federal benefits: Chapter Five, Part F, is amended by inserting the following additional section:

"§ 5F1.6. Denial of Federal Benefits to Drug Traffickers and Possessors

The court, pursuant to 21 U.S.C. 853a, may deny the eligibility for certain Federal benefits of any individual convicted of distribution or possession of a controlled substance.

Commentary

Application Note:

1. 'Federal benefit' is defined in 21 U.S.C. 853a(d) to mean 'any grant, contract, loan, professional license, or commercial license provided by an agency of the United States or by appropriated funds of the United States' but 'does not include any retirement, welfare, Social Security, health, disability, veterans benefit, public housing, or other similar benefit, or any other benefit for which payments or services are required for eligibility.'

Background: Subsections (a) and (b) of 21 U.S.C. § 853a provide that an individual convicted of a state or federal drug trafficking or possession offense may be denied certain federal benefits. Except for an individual convicted of a third or subsequent drug distribution offense, the period of benefit ineligibility, within the applicable maximum term set forth in 21 U.S.C. 853a(a)(1) (for distribution offenses) and (a)(2) (for possession offenses), is at the discretion of the court. In the case of an individual convicted of a third or subsequent drug distribution offense, denial of benefits is mandatory and permanent under 21 U.S.C. 853a(a)(1)(C) (unless suspended by the court under 21 U.S.C. 853a(c)).

Subsection (b)(2) of 21 U.S.C. § 853a provides that the period of benefit ineligibility that may be imposed in the case of a drug possession offense 'shall be waived in the case of a person who, if there is a reasonable body of evidence to substantiate such declaration, declares himself to be an addict and submits himself to a long-term treatment program for addiction, or is deemed to be rehabilitated pursuant to rules established by the Secretary of Health and Human Services.'

Subsection (c) of 21 U.S.C. 853a provides that the period of benefit ineligibility shall be suspended 'if the individual (A) completes a supervised drug rehabilitation program after becoming ineligible under this section; (B) has otherwise been rehabilitated; or (C) has made a good faith effort to gain admission to a supervised drug rehabilitation program, but is unable to do so because of inaccessibility or unavailability of such a program, or the inability of the individual to pay for such a program.'

Subsection (e) of 21 U.S.C. 853a provides that a period of benefit ineligibility 'shall not apply to any individual who cooperates or testifies with the Government in the prosecution of a Federal or State offense or who is in a Government witness protection program.'".

Statement of Reasons: The purpose of this amendment is to reflect the enactment of 21 U.S.C. 853a by section 5301 of the Anti-Drug Abuse Act of 1988.

Amendment 3

The Commission has promulgated the following policy statement concerning the retroactive application of amendments to guideline sentencing ranges:

Chapter One, Part B, is amended by inserting the following additional policy statement:

"1B1.10. Retroactivity of Amended Guideline Range (Policy Statement)

(a) Where a defendant is serving a term of imprisonment, and the guideline range applicable to that defendant has subsequently been lowered as a result of an amendment to the guidelines listed in subsection (d) below, a reduction in the defendant's term of imprisonment may be considered under 18 U.S.C. 3582(c)(2). If none of the amendments listed in subsection (d) is applicable, a reduction in the defendant's term of imprisonment under 18 U.S.C. 3582(c)(2) is not consistent with this policy statement.

(b) In determining whether a reduction in sentence is warranted for a defendant eligible for consideration under 18 U.S.C. 3582(c)(2), the court should consider the sentence that it would have originally imposed had the guidelines, as amended, been in effect at that time.

(c) Provided, however, that a reduction in a defendant's term of imprisonment—

(1) is not authorized unless the maximum of the guideline range applicable to the defendant (from Chapter Five, Part A) has been lowered by at least six months; and

(2) May, in no event, exceed the number of months by which the maximum of the guideline range applicable to the defendant (from Chapter Five, Part A) has been lowered.

(d) Amendments covered by this policy statement are listed in Appendix C as follows: 126, 130, 156, 176, and 269.

Commentary

Application Note:

1. Although eligibility for consideration under 18 U.S.C. 3582(c)(2) is triggered only by an amendment listed in subsection (d) of this section, the amended guideline range referred to in subsections (b) and (c) of this section is to be determined by applying all amendments to the guidelines (i.e., as if the defendant was being sentenced under the guidelines currently in effect).

Background: Section 3582(c)(2) of Title 18, United States Code, provides: '[I]n the case of a defendant who has been sentenced to a term of imprisonment based on a sentencing range that has subsequently been lowered by the Sentencing Commission pursuant to 28 U.S.C. 994(o), upon motion of the defendant or the Director of the Bureau of Prisons, or on its own motion, the court may reduce the term of imprisonment, after considering the factors set forth in section 3553(a) to the extent that they are applicable, if such a reduction is consistent with applicable policy statements issued by the Sentencing Commission.'

VOL 54 ISS 209 OCT 31 1989 UMI

This policy statement provides guidance for a court when considering a motion under 18 U.S.C. 3582(c)(2) and implements 28 U.S.C. 994(u), which provides: 'If the Commission reduces the term of imprisonment recommended in the guidelines applicable to a particular offense or category of offenses, it shall specify in what circumstances and by what amount the sentences of prisoners serving terms of imprisonment for the offense may be reduced.'

Among the factors considered by the Commission in selecting the amendments included in subsection (d) were the purpose of the amendment, the magnitude of the change in the guideline range made by the amendment, and the difficulty of applying the amendment retroactively.

The requirement in subsection (c)(1) that the maximum of the guideline range be lowered by at least six months for a reduction to be considered is in accord with the legislative history of 28 U.S.C. 994(u) (formerly 994(t)), which states: 'It should be noted that the Committee does not expect that the Commission will recommend adjusting existing sentences under the provision when guidelines are simply refined in a way that might cause isolated instances of existing sentences falling above the old guidelines or when there is only a minor downward adjustment in the guidelines. The Committee does not believe the courts should be burdened with adjustments in these cases.' S. Rep. 98–225, 98th Cong., 1st Sess. 180 (1983).".

Statement of Reasons: The purpose of this amendment is to implement the directive in 28 U.S.C. 994(u).

Miscellaneous Matters

The Commission has approved the following miscellaneous, technical, and clarifying revisions to the Guidelines Manual. The number of the amendment in Appendix C of the revised Manual containing the revision is shown following each revision.

The following additional application note is inserted in the Commentary to § 2B3.1 to complement the addition of a specific offense characteristic subdivision pertaining to "an express threat of death:"

"8. 'An express threat of death,' as used in subsection (b)(2)(D), may be in the form of an oral or written statement, act, gesture, or combination thereof. For example, an oral or written demand using words such as 'Give me the money or I will kill you', 'Give me the money or I will pull the pin on the grenade I have in my pocket', 'Give me the money or I will shoot you', 'Give me your money or else (where the defendant draws his hand across his throat in a slashing motion)', or 'Give me the money or you are dead' would constitute an express threat of death. The court should consider that the intent of the underlying provision is to provide an increased offense level for cases in which the offender(s) engaged in conduct that would instill in a reasonable person, who is a victim of the offense, significantly greater fear than that necessary to constitute an element of the offense of robbery.".

(Appendix C, amendment 110).

A typographical error in the amended § 2D1.1(c)(14) is corrected by revising "Schedule I or I Depressants" to read "Schedule I or II Depressants". No substantive change occurs because this result would be required by, and the intent of this subsection is clear from, the immediately preceding and following subsections. In addition, the Commentary to § 2D1.1 captioned "Application Notes" is amended in Note 10 by deleting "Other Schedule I or II Substances" and inserting in lieu thereof "Schedule I or II Depressants" to conform to the revision in the guideline (Appendix C, amendment 125).

The Commentary to § 2D1.5 captioned "Application Notes" is amended in Note 2 by deleting "if the quantity of drugs substantially exceeds that required for level 36 in the drug quantity table,", and by deleting "is extremely" and inserting in lieu thereof "was extremely". This revision conforms this Commentary to the amendment of the Drug Quantity Table in § 2D1.1, which expanded the Drug Quantity Table itself to provide higher offense levels for extremely large drug quantities (Appendix C, amendment 139).

The Commentary to § 2F1.1 captioned "Application Notes" is amended in Note 1 by deleting "(b)(2)" and inserting in lieu thereof "(b)(3)", and by deleting "several" and inserting in lieu thereof "both" to conform to the revision of the guideline (Appendix C, amendment 156).

The Commentary to § 4B1.1 captioned "Application Note" is amended in Note 1 by deleting "felony conviction" and inserting in lieu thereof "two prior felony convictions" to make an editorial improvement (Appendix C, amendment 267).

The caption to § 4B1.2 is amended by deleting "Definitions" and inserting in lieu thereof "Definitions of Terms Used in § 4B1.1", and §§ 4B1.2 (1) and (2) are amended by deleting "as used in this provision" in each instance to make an editorial improvement (Appendix C, amendment 268).

Editorial improvements are made to the sentencing table in Chapter Five, part A, by inserting "(in months of imprisonment)" immediately under the title "Sentencing Table", by inserting "(Criminal History Points)" immediately following the caption "Criminal History Category", and by enclosing in parentheses each of the six sets of criminal history points displayed under that caption (Appendix C, amendment 270).

To conform to an amendment to § 5C1.1 authorizing the use of home detention as a substitute for imprisonment in certain circumstances, § 5B1.1(a)(2) is amended by deleting "or community confinement" and inserting in lieu thereof ", community confinement, or home detention". The Commentary to § 5B1.1 captioned "Application Notes" is amended in Note 1 by inserting ", home detention," immediately after "community confinement" wherever the latter appears. Chapter One, section 4(d) is amended in the third sentence of the third paragraph by deleting "or intermittent confinement" and inserting in lieu thereof ", intermittent confinement, or home detention", and in the fourth sentence of the third paragraph by inserting "or home detention" immediately following "of community confinement". These conforming revisions make no substantive change because § 5C1.1, as amended, is controlling in any event (Appendix C, amendment 271).

A revision to the amended Commentary of § 5G1.3, is made to clarify that the amended commentary recommends, rather than requires, the court apply the methodology described. The Commentary to § 5G1.3, as amended, is revised in the second sentence of the second paragraph by deleting "The court should impose" and inserting in lieu thereof "The court may consider imposing", and by inserting the following additional sentences at the end "Where the defendant is serving a term of imprisonment for a state offense, the information available may permit only a rough estimate of the total punishment that would have been imposed under the guidelines. It is not intended that the above methodology be applied in a manner that unduly complicates or prolongs the sentencing process." (Appendix C, amendment 289).

A typographical error in an amended statutory reference in the Statutory Index is corrected by revising "43 U.S.C. 1773(a)" to read "43 U.S.C. 1733(a)" (Appendix C, amendment 298).

In addition, the Commission inserted a "Historical Note" following each guideline section that contains the effective date of the section and the Appendix C reference number of each amendment to the section, and has made a number of additional minor editorial changes to improve the internal consistency and appearance of the Manual.

Part VII

Department of Defense
General Services Administration
National Aeronautics and Space Administration

48 CFR Parts 29 and 52
Federal Acquisition Regulation (FAR); Raising Thresholds in FAR Tax Sections; Proposed Rule

VOL 54 ISS 209 OC 31 1989 UMI

DEPARTMENT OF DEFENSE

GENERAL SERVICES ADMINISTRATION

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

48 CFR Parts 29 and 52

Federal Acquisition Regulation (FAR); Raising Thresholds in FAR Tax Sections

AGENCIES: Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Proposed rule.

SUMMARY: The Civilian Agency Acquisition Council and the Defense Acquisition Regulatory Council are considering revisions to FAR Parts 29 and 52 regarding taxes.

DATE: Comments should be submitted to the FAR Secretariat at the address shown below on or before January 2, 1990 to be considered in the formulation of a final rule.

ADDRESS: Interested parties should submit written comments to: General Services Administration, FAR Secretariat (VRS), 18th & F Streets, NW., Room 4041, Washington, DC 20405.

Please cite FAR Case 89–73 in all correspondence related to this issue.

FOR FURTHER INFORMATION CONTACT: Margaret A. Willis, FAR Secretariat, Room 4041, GS Building, Washington, DC 20405, (202) 523–4755.

SUPPLEMENTARY INFORMATION:

A. Background

As part of an ongoing review of various dollar thresholds in the FAR, the Councils have concluded that certain thresholds in Parts 29 and 52 pertaining to taxes should be changed.

Section 29.201 instructs Government contracting officers to solicit prices on a tax-exclusive basis when they know that the Government is exempt from the taxes and the exemption is at least $100. The Councils are proposing that the threshold be eliminated since it requires no additional effort by either the Government or offerors if prices are solicited on a tax-free basis, and if the Government is exempt from a tax it should not pay it.

The Councils are proposing to revise 29.401–3, 29.401–4, and 29.402–2 to consistently apply the policy that contract clauses relating to taxes generally are not applicable to procurements of less than $25,000. The clauses at 52.229–3, 52.229–4, 52.229–6, and 52–229–7 all state that no adjustments in contract price shall be made to contracts that contain the clauses unless the amount of the adjustment exceeds $100. The Councils believe that $100 is too low to justify a contract modification, and therefore are proposing to raise the figure to $250.

B. Regulatory Flexibility Act

This proposed rule is not expected to have a significant cost or administrative impact on a substantial number of small businesses within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, et. seq., because it does not require any additional action on the part of contractors, and because the dollar amounts involved are relatively low. Therefore, an Initial Regulatory Flexibility Analysis has not been performed. Comments from small entities concerning the affected FAR subparts will also be considered in accordance with section 610 of the Act. Such comments must be submitted separately and cite § 89–610 (FAR Case 89–73) in correspondence.

C. Paperwork Reduction Act

The Paperwork Reduction Act does not apply because the proposed changes to the FAR do not impose recordkeeping information collection requirements or collection of information from offerors, contractors, or members of the public which require the approval of OMB under 44 U.S.C. 3501, et seq.

List of Subjects in 48 CFR Parts 29 and 52

Government procurement.

Dated: October 23, 1989.

Albert A. Vicchiolla,

Director, Office of Federal Acquisition Policy.

Therefore, it is proposed that 48 CFR parts 29 and 52 be amended as set forth below:

1. The authority citation for 48 CFR parts 29 and 52 continues to read as follows:

Authority: 40 U.S.C. 486(c); 10 U.S.C. Chapter 137; and 42 U.S.C. 2473(c).

PART 29—TAXES

2. Section 29.201 is amended by revising paragraphs (b) and (c) to read as follows:

29.201 General.

* * * * *

(b) Sometimes the law exempts the Federal Government from these taxes. Contracting officers should solicit prices on a tax-exclusive basis when it is known that the Government is exempt from these taxes, and on a tax-inclusive basis when no exemption exists.

(c) Executive agencies shall take maximum advantage of available Federal excise tax exemptions.

3. Section 29.401–3 is revised to read as follows:

29.410–3 Competitive contracts.

The contracting officer shall insert the clause at 52.229–3, Federal, State, and Local Taxes, in all solicitations and contracts if the contract is to be performed wholly or partly within the United States, its possessions, or Puerto Rico when a fixed-price contract is contemplated, and the contract is expected to exceed the small purchase limitation in 13.000, unless the clause at 52.229–4, Federal, State, and Local Taxes (Noncompetitive Contract), is included in the contract.

4. Section 29.401–4 is amended by revising the first sentence to read as follows:

29.401–4 Noncompetitive contracts.

The contracting officer shall insert the clause at 52.229–4, Federal, State, and Local Taxes (Noncompetitive Contract), in fixed-price noncompetitive contracts when the contract exceeds the small purchase limitation in 13.000 to be performed wholly or partly within the United States, its possessions, or Puerto Rico when satisfied (a) that the contract price does not include contingencies for State and local taxes and (b) that, unless the clause is used, the contract price will include such contingencies. * * *

29.402–1 [Amended]

5. Section 29.402–1 is amended in paragraph (a) by inserting the words "expected to exceed the dollar amount in 13.000" after the words "solicitations and contracts", and in paragraph (b) by inserting the words "that exceed the dollar amount in 13.000" after the words "solicitations and contracts".

PART 52—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

52.229–3 [Amended]

6. Section 52.229–3 is amended by removing in the title of the clause the date "(APR 1984)" and inserting in its place the date "(OCT 1989)"; by removing in paragraph (f) the figure "$100" and inserting in its place the figure "$250"; and by removing the two derivation lines following "(End of clause)".

7. Section 52.229–4 is amended by revising the introductory text; by removing in the title of the clause the date "(APR 1984)" and inserting in its

place the date "(OCT 1989)"; by removing in paragraph (f) the figure "$100" and inserting in its place the figure "$250"; and by removing the two derivation lines following "(End of clause)" to read as follows:

52.229–4 Federal, State, and Local Taxes (Noncompetitive Contract).

As prescribed in 29.401–4, insert the following clause:

* * * * *

52.229–6 [Amended]

8. Section 52.229–6 is amended by inserting a colon in the first sentence of the introductory text following the word "clause" and removing the remainder of the paragraph; by removing in the title of the clause the date "(APR 1984)" and inserting in its place the date "(OCT 1989)"; by removing in paragraph (g) the figure "$100" and inserting in its place the figure "$250"; and by removing the derivation line following "(End of clause)".

52.229–7 [Amended]

9. Section 52.229–7 is amended by inserting a colon in the first sentence of the introductory text following the word "clause" and removing the remainder of the paragraph; by removing in the title of the clause the date "(APR 1984)" and inserting in its place the date "(OCT 1989)"; by removing in paragraph (d) the figure "$100" and inserting in its place the figure "$250"; and by removing the derivation line following "(End of clause)".

Title 3—

The President

Proclamation 6057 of October 27, 1989

Fire Safety at Home Day, 1989

By the President of the United States of America

A Proclamation

Sunday, October 29, 1989, is the date on which the Nation will return to Standard Time. In jurisdictions that observe daylight savings time, clocks will be set back 1 hour. We may use this adjustment of the clocks as a reminder to perform other simple actions—actions that can save lives by helping to make our homes safe from accidental fire.

All Americans can take simple steps such as checking to ensure that fire exit paths are clear, safely disposing of dangerous and flammable chemicals through means recommended by their local fire department, and verifying that home appliances are fire-safe. In particular, we can also take a few minutes to test our home smoke detectors, clean them, and change their batteries.

Smoke detectors are a proven lifesaver. The few minutes spent by each American in ensuring the proper operation of smoke detectors can help avert many senseless tragedies. Most of the 6,000 Americans who succumb to fire each year fall victim in their homes. Children, senior citizens, families in substandard housing, and persons with disabilities are particularly vulnerable. Information on the proper methods for cleaning and testing smoke detectors may be obtained from local fire departments.

The Congress, by Senate Joint Resolution 177, has designated October 29, 1989, as "Fire Safety at Home—Change Your Clock, and Change Your Battery Day" and has authorized and requested the President to issue a proclamation in observance of this occasion.

NOW, THEREFORE, I, GEORGE BUSH, President of the United States of America, do hereby proclaim October 29, 1989, as Fire Safety at Home Day, 1989. I call upon all Americans to observe this day by taking steps to ensure that their homes are safe from fire.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-seventh day of October, in the year of our Lord nineteen hundred and eighty-nine, and of the Independence of the United States of America the two hundred and fourteenth.

George Bush

The authentic text behind the news . . .

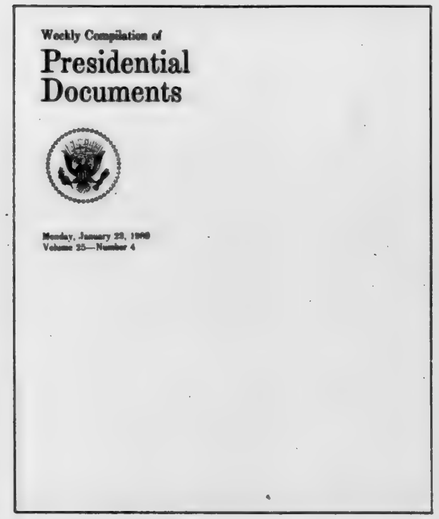
The Weekly Compilation of **Presidential Documents**

Administration of George Bush



This unique service provides up-to-date information on Presidential policies and announcements. It contains the full text of the President's public speeches, statements, messages to Congress, news conferences, personnel appointments and nominations, and other Presidential materials released by the White House.

The Weekly Compilation carries a Monday dateline and covers materials released during the preceding week. Each issue contains an Index of Contents and a Cumulative Index to Prior Issues.

Separate indexes are published periodically. Other features include lists of acts approved by the President, nominations submitted to the Senate, a checklist of White House press releases, and a digest of other Presidential activities and White House announcements.

Published by the Office of the Federal Register, National Archives and Records Administration.

Superintendent of Documents Subscriptions Order Form

Order Processing Code:
*6466

Charge your order. It's easy! MasterCard VISA

Charge orders may be telephoned to the GPO order desk at (202) 783-3238 from 8:00 a.m. to 4:00 p.m. eastern time, Monday-Friday (except holidays)

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The Federal Register provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The Federal Register will be furnished by mail to subscribers for $340 per year in paper form; $195 per year in microfiche form; or $37,500 per year for the magnetic tape. Six-month subscriptions are also available at one-half the annual rate. The charge for individual copies in paper or microfiche form is $1.50 for each issue, or $1.50 for each group of pages as actually bound, or $175.00 per magnetic tape. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or charge to your GPO Deposit Account or VISA or Mastercard.

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 54 FR 12345.

FEDERAL AGENCIES

Subscriptions:

Paper or fiche	523–5240
Magnetic tapes	275–3328
Problems with Federal agency subscriptions	523–5240

For other telephone numbers, see the Reader Aids section at the end of this issue.

THE FEDERAL REGISTER
WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: The Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:
1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

SAN FRANCISCO, CA

WHEN: November 29; at 9:00 a.m.
WHERE: Room 15138,
450 Golden Gate Avenue,
San Francisco, CA.
RESERVATIONS: Call Mary Walters at the San Francisco Federal Information Center,
415–556–6600.

SEATTLE, WA

WHEN: November 30; at 1:00 p.m.
WHERE: South Auditorium, 4th Floor,
915 2nd Avenue,
Seattle, WA.

Title 3—

The President

Notice of October 30, 1989

Continuation of Iran Emergency

On November 14, 1979, by Executive Order No. 12170, the President declared a national emergency to deal with the threat to the national security, foreign policy, and economy of the United States constituted by the situation in Iran. Notices of the continuation of this national emergency have been transmitted annually by the President to the Congress and the **Federal Register**, most recently on November 9, 1988, dated November 8, 1988. Because our relations with Iran have not yet returned to normal, and the process of implementing the January 19, 1981, agreements with Iran is still underway, the national emergency declared on November 14, 1979, must continue in effect beyond November 14, 1989. Therefore, in accordance with section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)), I am continuing the national emergency with respect to Iran. This notice shall be published in the **Federal Register** and transmitted to the Congress.

THE WHITE HOUSE,
October 30, 1989.

Rules and Regulations

Federal Register
Vol. 54, No. 210
Wednesday, November 1, 1989

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 88-ANE-04; Amdt. 39-6360]

Airworthiness Directives; Pratt & Whitney (PW) JT8D-1, -1A, -1B, -7, -7A, -7B, -9, -9A, -11, -15, -15A, -17, -17A, -17R, and -17AR Turbofan Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment amends an existing airworthiness directive which requires repetitive inspections of the combustion chamber outer case. The AD replaces the mirror and white light and the borescope inspection techniques with an eddy current inspection. The AD also adds a reference to the JT8D-17 engine which was inadvertently omitted in one paragraph of the original amendment. The AD is needed to improve the effectiveness of the current inspection program by detecting combustion chamber outer case rear flange cracks which can go undetected and result in uncontained engine failure, inflight shutdown, engine cowl release, and airframe damage.

DATES: Effective—November 13, 1989.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of November 13, 1989.

Compliance: As indicated in the body of the AD.

ADDRESSES: The applicable alert service bulletin (ASB) may be obtained from Pratt & Whitney, Publication Department, P.O. Box 611, Middletown, Connecticut 06457, or may be examined in the Regional Rules Docket, Room 311, Office of the Assistant Chief Counsel, Federal Aviation Administration, New England Region, 12 New England Executive Park, Burlington, Massachusetts 01803.

FOR FURTHER INFORMATION CONTACT: Thomas Boudreau, Engine Certification Branch, ANE-141, Engine Certification Office, Engine and Propeller Directorate, Aircraft Certification Service, Federal Aviation Administration, 12 New England Executive Park, Burlington, Massachusetts 01803; telephone (617) 273-7121.

SUPPLEMENTARY INFORMATION: This amendment amends Amendment 39-5619 (52 FR 19483; May 26, 1987), AD 87-11-07, which currently requires repetitive inspections to detect cracking of the combustion chamber outer case. The mirror and white light, and borescope inspection techniques for use on installed engines were developed and are included in AD 87-11-07 to provide an alternate inspection method for operator flexibility.

Since AD 87-11-07 was issued two incidents have occurred resulting in an uncontained rupture of the combustion chamber outer case. It has been determined that these ruptures were due to a crack which initiated from the case rear flange. Furthermore, one case rear flange had been inspected in accordance with AD 87-11-07, using the mirror and white light inspection technique while installed on the engine. The failure occurred well within the required reinspection interval, and analysis of the failed case indicates that the crack was of sufficient length to be detected at the last inspection.

The FAA has determined that AD 87-11-07 must be amended to replace the mirror and white light and the borescope inspection techniques for use on installed engines with an eddy current inspection. The mirror and white light and the borescope inspection techniques have been determined inadequate for detecting rear flange cracking of the combustion chamber outer case. Therefore, the FAA is amending Amendment 39-5619, by allowing only an eddy current inspection of the combustion chamber outer case rear flange on certain installed PW JT8D engines. Otherwise cracks could go undetected and result in uncontained engine failure, inflight shutdown, engine cowl release, and airframe damage. The amendment also adds the JT8D-17 engine model where it was inadvertently omitted in one paragraph of the original AD.

Since a situation exists that requires the immediate adoption of this regulation, it is found that notice and public procedure hereon are impracticable and good cause exists for making this amendment effective in less than 30 days.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implication to warrant the preparation of a Federalism Assessment.

The FAA has determined that this regulation is an emergency regulation and that it is not considered to be major under Executive Order 12291. It is impracticable for the agency to follow the procedures of Executive Order 12291 with respect to this rule since the rule must be issued immediately to correct an unsafe condition in aircraft. It has been further determined that this action involves an emergency regulation under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). If it is determined that this emergency regulation otherwise would be significant under DOT Regulatory Policies and Procedures, a final regulatory evaluation will be prepared and placed in the Rules Docket (otherwise, an evaluation is not required). A copy of it, if filed, may be obtained from the Rules Docket.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety, and Incorporation by reference.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration (FAA) amends 14 CFR part 39 of the Federal Aviation Regulations (FAR) as follows:

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by

VOL 54 ISS 210 NO 1 1989 UMI

amending Amendment 39-5619 (52 FR 19483; May 26, 1987), Airworthiness Directive (AD) 87-11-07, as follows:

(a) By revising the paragraph preceding paragraph (a) by deleting "Revision 1, September 24, 1986" and inserting in lieu thereof, "Revision 6, June 26, 1989".

(b) By revising paragraphs (b)(1) through (b)(8) by deleting "the effective date of this AD" and inserting in lieu thereof, "June 29, 1987".

(c) By adding to paragraph (c)(2), "-17," between "-15A," and "-17A,".

(d) By revising paragraphs (d)(1) through (d)(8) by deleting "the effective date of this AD; inspect in accordance with Appendix A of PW ASB 5676" and inserting in lieu thereof, "June 29, 1987; eddy current inspect in accordance with Appendix A of PW ASB 5676, Revision 6".

(e) By adding the following NOTE (7):

(7) The mirror and white light and borescope inspections for use on installed engines accomplished in accordance with AD 87-11-07, Amendment 39-5619, and PW ASB 5676, Revision 1, at the last inspection prior to the effective date of this AD, are considered to be in compliance with this AD. However, subsequent to the effective date of this AD, the only rear flange crack inspection technique for use on installed engines to be performed in compliance with this AD is the eddy current inspection referenced in Appendix A of PW ASB 5676, Revision 6.

The inspection procedures shall be done in accordance with PW ASB 5676, Revision 6, dated June 26, 1989. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Pratt & Whitney, Publication Department, P.O. Box 611, Middletown, Connecticut 06457. Copies may be inspected at the Regional Rules Docket, Office of the Assistant Chief Counsel, Federal Aviation Administration, New England Region, 12 New England Executive Park, Room 311, Burlington, Massachusetts 01803, or at the Office of the Federal Register, 1100 L Street NW., Room 8301, Washington, DC 20591.

This amendment becomes effective on November 13, 1989.

This amendment amends Amendment 39-5619 (52 FR 19483; May 26, 1987), AD 87-11-07.

Issued in Burlington, Massachusetts, on October 3, 1989.

Jay J. Pardee,

Acting Manager, Engine and Propeller Directorate Aircraft Certification Service.

BILLING CODE 4910-13-M

14 CFR Part 71

[Airspace Docket Number 89-ACE-18]

Alteration of Transition Areas—Emporia, KS

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The nature of this Federal action is to alter the 700-foot transition area at Emporia, Kansas, to provide additional controlled airspace for aircraft executing instrument approaches to the Emporia, Kansas, Municipal Airport. The existing transition area designation at this location delineates two extensions of 8 and 12.5 miles, respectively, but fails to contain a description of the radius surrounding the airport. The intent of this action is to include a 5-mile radius around the Emporia Municipal Airport in the Emporia, Kansas, 700-foot transition area description.

EFFECTIVE DATE: 0901 UTC, March 8, 1990.

FOR FURTHER INFORMATION CONTACT: Lewis, G. Earp, Airspace Specialist, System Management Branch, Air Traffic Division, ACE-530, FAA, Central Region, 601 East 12th Street, Kansas City, Missouri 64106, Telephone (816) 426-3408.

SUPPLEMENTARY INFORMATION:

History

On July 28, 1989, the FAA published a Notice of Proposed Rulemaking, which would amend § 71.181 of part 71 of the Federal Aviation Regulations so as to alter the transition area at Emporia, Kansas (54 FR 31346). Interested persons were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No objections were received as a result of the Notice of Proposed Rulemaking. Section 71.181 of part 71 of the Federal Aviation Regulations was republished in Handbook 7400.6E, dated January 3, 1989.

The Rule

This amendment to Part 71 of the Federal Aviation Regulations alters the transition area at Emporia, Kansas. To enhance airport usage at the Emporia, Kansas Municipal Airport, additional controlled airspace is being provided for aircraft executing instrument approach procedures to this airport by the inclusion of a 5-mile radius surrounding the airport in the transition area designation. The intended effect of this action is to ensure segregation of aircraft using approach procedures under instrument flight rules (IFR) from other aircraft operating under visual flight rules (VFR).

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore, this regulation—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, transition areas.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 71 of the Federal Aviation Regulations (14 CFR part 71) is amended as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE, AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); 14 CFR 11.69.

§ 71.181 [Amended]

2. Section 71.181 is amended as follows:

Emporia, KS [Revised]

The airspace extending upward from 700 ft. above the surface within a 5-mile radius of the Emporia Municipal Airport (lat. 38°19'48" N., long. 96°11'21" W.) and within 2 miles either side of the Emporia VORTAC 134° radial, extending from the 5-mile radius to 8 miles southeast of the VORTAC and 5 miles either side of the 010° bearing from the airport extending from the 5-mile radius to 12.5 miles north.

Issued in Kansas City, Missouri, on October 17, 1989.

Clarence E. Newbern,

Manager, Air Traffic Division Central Region.

14 CFR Part 71

[Airspace Docket No. 89-ANM-10]

Description of Transition Area—McCall, Idaho

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment changes the description of the McCall, Idaho, Transition Area. The McCall Very High Frequency Omnidirectional Radio Range and Tactical Air Navigation Aid (VORTAC) is not located on the McCall Airport. According to FAA guidelines, navigational aids (NAVAIDS) not located within the confines of the airport boundaries should not retain that airport's name. Therefore, the McCall VORTAC has been renamed DONNELLY VORTAC. This action amends the transition area description where "McCall VORTAC" appears to read "DONNELLY VORTAC.".

EFFECTIVE DATE: 0901 UTC, January 11, 1990.

FOR FURTHER INFORMATION CONTACT: Robert L. Brown, ANM-535, Federal Aviation Administration, Docket No. 89-ANM-10, 17900 Pacific Highway South, C-68966, Seattle, Washington 98168, Telephone: (206) 431-2536.

SUPPLEMENTARY INFORMATION:

The Rule

The purpose of this amendment to part 71 of the Federal Aviation regulations (14 CFR part 71) is to amend the description of the McCall, Idaho Transition Area to read "DONNELLY VORTAC" where "McCALL VORTAC" appears. This amendment changes the description of the McCall, Idaho, Transition Area. The McCall Very High Frequency Omnidirectional Radio Range and Tactical Air Navigation Aid (VORTAC) is not located on the McCall Airport. According to FAA guidelines, navigational aids (NAVAIDS) not located within the confines of the airport boundaries should not retain that airport's name. Therefore, the McCall VORTAC has been renamed DONNELLY VORTAC. This action amends the transition area description where "McCall VORTAC" appears to read "DONNELLY VORTAC."

Because this amendment only changes the reference to the VORTAC, and does not alter the character or dimension of the McCall Transition Area, the FAA finds that prior notice and public procedure under 5 U.S.C. 553(b) are unnecessary.

Section 71.181 of part 71 of the Federal Aviation Regulations was republished in Handbook 7400.6E dated January 3, 1989.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current.

It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, Transition areas.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 71 of the Federal Aviation Regulations (14 CFR part 71) is amended as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES CONTROLLED AIRSPACE, AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a) 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); 14 CFR 11.69.

§ 71.18 [Amended]

2. Section 71.181 is amended as follows:

McCall, Idaho [Amended]

By removing "McCall VORTAC" where it appears and substituting "DONNELLY VORTAC".

Issued in Seattle, Washington, on October 16, 1989.

Temple H. Johnson, Jr.,

Manager, Air Traffic Division, Northwest Mountain Region.

BILLING CODE 4910-13-M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

18 CFR Part 271

[Docket No. RM89-53]

Publication of Prescribed Maximum Lawful Prices Under the Natural Gas Policy Act of 1978

AGENCY: Federal Energy Regulatory Commission, Energy.

ACTION: Order of the Director, OPPR.

SUMMARY: Pursuant to the authority delegated by 18 CFR 375.307(c)(1), the Director of the Office of Pipeline and Producer Regulation revises and publishes the maximum lawful prices prescribed under Title I of the Natural Gas Policy Act (NGPA) for the months of November, December, 1989 and January, 1990. Section 101(b)(6) of the NGPA requires that the Commission compute and publish the maximum lawful prices before the beginning of each month for which the figures apply.

EFFECTIVE DATE: November 1, 1989.

FOR FURTHER INFORMATION CONTACT: Garry L. Penix (202) 357-8622.

Order of the Director, OPPR

Issued: October 26, 1989.

Section 101(b)(6) of the Natural Gas Policy Act of 1978 (NGPA) requires that the Commission compute and make available maximum lawful prices and inflation adjustments prescribed in Title I of the NGPA before the beginning of any month for which such figures apply.

Pursuant to this requirement and § 375.307(c)(1) of the Commission's regulations, which delegates the publication of such prices and inflation adjustments to the Director of the Office of Pipeline and Producer Regulation, the maximum lawful prices for the months of November, December 1989, and January, 1990 are issued by the publication of the price tables for the applicable quarter. Pricing tables are found in § 271.101(a) of the Commission's regulations. Table I of § 271.101(a) specifies the maximum lawful prices for gas subject to NGPA sections 102, 103(b)(1), 105(b)(3), 106(b)(1)(B), 107(c)(5), 108 and 109. Table II of § 271.101(a) specifies the maximum lawful prices for sections 104 and 106(a) of the NGPA. Table III of § 271.102(c) contains the inflation adjustment factors. The maximum lawful prices and the inflation adjustment factors for the periods prior to November, 1989 are found in the tables in §§ 271.101 and 271.102.

VOL 54 ISS 210 NO 1 1989 UMI

List of Subjects in 18 CFR Part 271

Natural gas.

Kevin P. Madden,

Director, Office of Pipeline and Producer Regulation.

PART 271—[AMENDED]

1. The authority citation for part 271 continues to read as follows:

Authority: Natural Gas Act, 15 U.S.C. 717–717w (1982); Department of Energy Organization Act, 42 U.S.C. 7101–7352 (1982); E.O. 12009, 3 CFR 1978 Comp., p. 142; Natural Gas Policy Act of 1978, 15 U.S.C. 3301–3432 (1982).

§ 271.101 [Amended]

2. Section 271.101(a) is amended by adding the maximum lawful prices for November, December 1989, and January, 1990 in Tables I and II.

TABLE I.—NATURAL GAS CEILING PRICES (OTHER THAN NGPA §§ 104 and 106(a))

[Maximum lawful price per MMBtu for deliveries in]

Subpart of Part 271	NGPA Section	Category of Gas	Nov. 1989	Dec. 1989	Jan. 1990
B	102	New natural gas, certain OCS gas [1]	$5.480	$5.521	$5.553
C	103(b)(1)	New onshore production wells [2]	3.497	3.506	3.515
E	105(b)(3)	Intrastate existing contracts	5.246	5.274	5.300
F	106(b)(1)(B)	Alternative maximum lawful price for certain intrastate rollover gas [3].	2.001	2.006	2.011
G	107(c)(5)	Gas produced from tight formations	6.994	7.012	7.030
H	108	Stripper gas	5.879	5.913	5.947
I	109	Not otherwise [4] covered	2.895	2.902	2.909

[1] Commencing January 1, 1985, the price of natural gas finally determined to be new natural gas under section 102(c) was deregulated. (See Part 272 of the Commission's regulations.)

[2] Commencing January 1, 1985, and July 1, 1987, the price of some natural gas finally determined to be natural gas produced from a new, onshore production well under section 103 was deregulated. (See part 272 of the Commission's regulations.) Thus, for all months succeeding June 1987 publication of a maximum lawful price per MMBtu under NGPA section 103(b)(2) is discontinued.

[3] Section 271.602(a) provides that for certain gas sold under an intrastate rollover contract the maximum lawful price is the higher of the price paid under the expired contract, adjusted for inflation or an alternative Maximum Lawful Price specified in this Table. The alternative Maximum Lawful Price for each month appears in this row of Table I. Commencing January 1, 1985, the price of some intrastate rollover gas was deregulated. (See part 272 of the Commission's regulations.)

[4] The maximum lawful price for tight formation gas is the lesser of the negotiated contract price or 200% of the price specified in Subpart C of Part 271. The maximum lawful price for tight formation gas applies on or after July 16, 1979. (See § 271.703 and § 271.704.)

TABLE II.—NATURAL GAS CEILING PRICES: NGPA §§ 104 AND 106(a) (SUBPART D, PART 271)

[Maximum lawful price per MMBtu for deliveries made in]

Category of natural gas	Type of sale or contract	Nov. 1989	Dec. 1989	Jan. 1990
Post-1974 gas [5]	All producers	$2.895	$2.902	$2.909
1973–74 Biennium gas	Small producer	2.444	2.450	2.456
	Large producer	1.872	1.877	1.882
Interstate rollover gas	All producers	1.075	1.078	1.081
Replacement contract gas or recompletion gas	Small producer	1.375	1.379	1.383
	Large producer	1.051	1.054	1.057
Flowing gas	Small producer	0.694	0.696	0.698
	Large producer	0.584	0.585	0.588
Certain Permian Basin gas	Small producer	0.819	0.821	0.823
	Large producer	0.723	0.725	0.727
Certain Rocky Mountain gas	Small producer	0.819	0.821	0.823
	Large producer	0.694	0.696	0.698
Certain Appalachian Basin gas	North subarea contracts dated after 10–7–69	0.660	0.662	0.664
	Other contracts	0.611	0.613	0.615
Minimum rate gas [1]	All producers	0.359	0.360	0.361

[1] Prices for minimum rate gas are expressed in terms of dollars per Mcf, rather than MMBtu.

[5] This price may also be applicable to other categories of gas (see § 271.402 and 271.602).

§ 271.102 [Amended]

3. Section 271.102(c) is amended by adding the inflation adjustment for the month of November, December 1989, and January, 1990 in Table III.

TABLE III.—INFLATION ADJUSTMENT

Month of delivery 1989 and 1990	Factor by which price in preceding month is multiplied
Nov.	1.00255
Dec.	1.00255
Jan.	1.00255

[FR Doc. 89–25680 Filed 10–31–89; 8:45 am]

BILLING CODE 6717–01–M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of the Assistant Secretary for Housing—Federal Housing Commissioner

24 CFR Part 3280

[Docket No. R–89–1966; FR 1637–C–06]

Manufactured Home Construction and Safety Standards

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Technical amendment.

SUMMARY: This rule amends § 3280.309(d) in title 24 of the Code of Federal Regulations which contains a typographical error that references the Manufactured Home Consumer Manual Requirements in part 3282 instead of part 3283.

EFFECTIVE DATE: November 1, 1989.

FOR FURTHER INFORMATION CONTACT: Grady J. Norris, Assistant General Counsel for Regulations, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, (202) 755–7055. (This is not a toll-free telephone number.)

SUPPLEMENTARY INFORMATION: This rule does not constitute a "major rule" as that term is defined in section 1(b) of the Executive Order on Federal Regulation issued by the President on February 17, 1981. Analysis of the rule indicates that it does not: (1) Have an annual effect on the economy of $100 million or more; (2) cause a major increase in costs or prices for consumers, individual industries, Federal, State or local government agencies, or geographic regions; or (3) have a significant adverse effect on competition, employment, investment, productivity, innovation or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

This rule was not listed in the Department's Semiannual Agenda of Regulations published on April 24, 1989 (54 FR 16708), pursuant to Executive Order 12291 and the Regulatory Flexibility Act.

Under 5 U.S.C. 605(b) (the Regulatory Flexibility Act), the Undersigned hereby certifies that this rule does not have a significant economic impact on a substantial number of small entities.

An environmental finding under the National Environmental Policy Act (42 U.S.C. 4321–4347) is unnecessary since this technical amendment constitutes an internal administrative procedure which is categorically excluded under HUD regulations at 24 CFR 50.20(k).

List of Subjects in 24 CFR Part 3280

Fire prevention, Housing standards, Manufactured homes.

Accordingly, 24 CFR part 3280 is amended as follows:

PART 3280—[AMENDED]

1. The authority citation for part 3280 continues to read as follows:

Authority: Secs. 604 and 625 of the National Manufactured Housing Construction and Safety Standards Act of 1974, 42 U.S.C. 5403 and 5424, and sec. 7(d) of the Department of Housing and Urban Development Act, 42 U.S.C. 3535(d).

2. Section 3280.309 is amended by revising paragraph (d) as follows:

§ 3280.309 Health notice on formaldehyde emissions.

* * * * *

(d) A copy of the Notice shall be included in the Consumer Manual (refer to part 3283—Manufactured Home Consumer Manual Requirements).

Dated: October 25, 1989.

Grady J. Norris,

Assistant General Counsel for Regulations.

BILLING CODE 4210–27–M

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 914

Indiana Regulatory Program; Diversions

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSM), Interior.

ACTION: Final rule; approval of amendment.

SUMMARY: OSM is announcing the approval of a proposed amendment to the Indiana regulatory program (hereinafter referred to as the Indiana program) approved under the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The amendment modifies the Indiana rules concerning diversions and is intended to simplify those rules.

EFFECTIVE DATE: November 1, 1989.

FOR FURTHER INFORMATION CONTACT: Mr. Richard D. Rieke, Director, Indianapolis Field Office, Office of Surface Mining Reclamation and Enforcement, 575 N. Pennsylvania Street, Room 301, Indianapolis, Indiana 46204; Telephone: (317) 226–6166.

SUPPLEMENTARY INFORMATION:

I. Background on the Indiana Program
II. Submission of Amendment
III. Director's Findings
IV. Disposition of Comments
V. Director's Decision
VI. Procedural Determinations

I. Background on the Indiana Program

On July 29, 1982, the Secretary of the Interior conditionally approved the Indiana program. Information regarding general background on the Indiana program, including the Secretary's findings, the disposition of comments, and a detailed explanation of the conditions of approval of the Indiana program can be found in the July 26, 1982, **Federal Register** (47 FR 32107). Subsequent actions taken with regard to the Indiana program and program amendments can be found in 30 CFR 914.10, 914.15, and 914.16.

II. Submission of Amendment

By letter dated September 28, 1988 (Administrative Record No. IND–0607), Indiana submitted a program amendment to modify the following rules of Title 310, Article 12 of the Indiana Administrative Code (IAC):12–5–18, 12–5–19, 12–5–84, and 12–5–85. The proposed amendment is the result of a State initiated revision of its rules and is intended to simplify the rules concerning diversions by departing from construction standards and incorporating performance standards substantively similar to the counterpart Federal regulations.

OSM announced receipt of the proposed amendment in the November 22, 1988, **Federal Register** (53 FR 47224) and, in the same notice, opened the public comment period and provided opportunity for a public hearing on the adequacy of the proposed amendments.

III. Director's Findings

Set forth below, pursuant to SMCRA and the Federal regulations at CFR 732.17, are the Director's findings concerning the proposed amendment.

1. 310 IAC 12–5–18 Diversions; General Requirements

(a) *Diverting Flow.* Indiana has deleted and replaced with new language most of the provisions of this section. New paragraph 310 IAC 12–5–18(a) states that flow may be diverted around disturbed areas through temporary or permanent diversions if approved by the commission or the director for: (1) Mined areas abandoned before May 3, 1978; (2) reclaimed areas which meet the criteria of 310 IAC 12–5–21(e) for siltation structure removal; (3) undisturbed areas; or (4) active surface coal mining operations after passing

through a siltation structure and meeting the applicable effluent limitations.

Three of the new provisions, 310 IAC 12–5–18(a) (1), (2), and (3), are substantively identical to the corresponding Federal regulations at 30 CFR 816.43(a)(1), (2), and (3). The fourth provision, 310 IAC 12–5–18(a)(4), requires that flow may be diverted around disturbed areas through temporary or permanent diversions if approved by the commission or the director for active surface coal mining operations after passing through a siltation structure and meeting the applicable effluent limitations. The Federal regulations at 30 CFR 816.43(a)(4) require that flow may be diverted around disturbed areas through temporary or permanent diversions if approved by the regulatory authority for active surface coal mining operations after passing through a siltation structure and meeting the applicable effluent limitations and the applicable requirements of 30 CFR 816.46. Because Indiana has not yet submitted its counterpart to 30 CFR 816.46, the Director is not approving 310 IAC 12–5–18(a)(4) at this time.

(b) *Design Capacity.* The proposed paragraph at 310 IAC 12–5–19(b)(2) states that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(2) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(3) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(3) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(4) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(4) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(5) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(5) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(6) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(6) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(7) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(7) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(8) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(8) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(9) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(9) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(10) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(10) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(11) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(11) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(12) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(12) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(13) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(13) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(14) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(14) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(15) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(15) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(16) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(16) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(17) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(17) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(18) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(18) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(19) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(19) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(20) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(20) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(21) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(21) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(22) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(22) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(23) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(23) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(24) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(24) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(25) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(25) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(26) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(26) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(27) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(27) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(28) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(28) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 30 CFR 816.43(c)(2)(i) and (ii) and that the certification be made by a qualified registered professional engineer.

The proposed paragraph at 310 IAC 12–5–19(b)(29) requires that the design capacity of channels for temporary and permanent diversions shall be at least equal to the capacity of the channel of the unaltered stream flowing at the peak velocity of the runoff from a precipitation event of the magnitude specified in 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a qualified registered professional engineer. Therefore, the Director finds that the proposed paragraph at 310 IAC 12–5–19(b)(29) is no less effective than the Federal regulations at 30 CFR 816.43(b)(2) and 816.43(c)(2)(i) and (ii) which require that the design capacity of channels for temporary and perm

VOL 54 ISS 210 NO 1 1989 UMI

through a siltation structure and meeting the applicable effluent limitations.

Three of the new provisions, 310 IAC 12–5–18(a) (1), (2), and (3), are substantively identical to the counterpart Federal rules at 30 CFR 816.43(a)(1). There is no Federal counterpart to the proposed rule at 310 IAC 12–5–18(a)(4) which allows flow from active surface coal mining operations to be diverted after passing through a siltation structure and meeting the applicable effluent limitations. The rule is not inconsistent with the Federal regulations concerning sediment control measures and siltation structures since the rule allows flow from active surface coal mining operations to be diverted only after passing through a siltation structure and meeting the applicable effluent limitations. The Director finds the amendment to be consistent with and no less effective than the Federal regulations.

(b) *Diversion design.* Paragraph 310 IAC 12–5–18(b) states that diversions shall be designed to: (1) Minimize adverse impacts to the hydrologic balance within the permit and adjacent areas; (2) prevent material damage to public or private property; and (3) assure the safety of the public. Two of the proposed provisions, 310 IAC 12–5–18(b) (1) and (3) are identical to the counterpart Federal rules at 30 CFR 816.43(a)(1). The Indiana rule at 310 IAC 12–5–18 (b)(2) differs from the counterpart Federal rule only in that the Indiana rule states that diversions shall be designed to prevent material damage to "public or private property," while the counterpart Federal rule states that diversions shall be designed to prevent material damage "outside the permit area." The Director finds that the language difference is not substantive, and that the proposed rule at 310 IAC 12–5–18(b) is no less effective than the Federal rules.

(c) *Diverting to Underground Mines.* The proposed rule at paragraph 310 IAC 12–5–18(c) is similar to the previously approved rule at 310 IAC 12–5–18(f) except that the words "constructed or operated" were deleted from the original language and replaced with the word "used." As modified, the proposed rule is substantively identical to and no less effective than the counterpart Federal rule at 30 CFR 816.43(a)(1).

(d) *Design, Construction, and Maintenance.* The proposed rule at paragraph 310 IAC 12–5–18(d) states that a diversion and its appurtenant structures shall be designed, located, constructed, maintained and used to be stable; provide protection against flooding and resultant damage to life and property; to prevent, to the extent possible using the best technology currently available, additional contributions of suspended solids to streamflow outside the permit area; and to comply with all applicable local, state, and federal laws and regulations. The Director finds the rule at paragraph 310 IAC 12–5–18(d) to be identical to and no less effective than the counterpart Federal rules at 30 CFR 816.43(a)(2) and can be approved.

(e) *Temporary diversions.* Paragraph 310 IAC 12–5–18(e) specifies that temporary diversions shall be promptly removed and that the land disturbed by the removal process shall be restored in accordance with the approved reclamation plan and 310 IAC 12–5–5 through 310 IAC 12–5–71. The Director finds that this rule is substantively identical to and no less effective than the counterpart Federal provisions at 30 CFR 816.43(a)(3).

(f) *Downstream treatment facilities.* Paragraph 310 IAC 12–5–18(f) requires that before any diversion is removed, downstream treatment facilities previously protected by the diversion shall be modified or removed, as necessary, to prevent overtopping or failure of the facilities. The rule also states that this requirement does not relieve the permittee from maintaining water treatment facilities as otherwise required. The Director finds that this rule is substantively identical to and no less effective than the counterpart Federal rule at 30 CFR 816.43(a)(3).

(g) *Removal of diversions.* Paragraph 310 IAC 12–5–18(g) requires that permanent diversions or stream channels reclaimed after the removal of a temporary diversion shall be designed and constructed to restore or approximate the pre-mining characteristics of the original stream channel, including the natural riparian vegetation, to promote the recovery and the enhancement of the aquatic habitat. The Director finds that this rule is substantively identical to and no less effective than the counterpart Federal rule at 30 CFR 816.43(a)(3).

(h) *Design considerations.* Paragraph 310 IAC 12–5–18(h) requires that consideration during the design of diversions shall be given to the anticipated flow velocity, the erosion characteristics of the channel and side slopes, the need for adequate freeboard above the design water surface elevation, and the need for channel lining or energy dissipators. The Federal rule at 30 CFR 816.43(a)(2)(i) requires diversions to be stable. While there is no direct Federal counterpart to these design considerations, the Federal rule at 30 CFR 816.43(a)(4) states that the regulatory authority may specify design criteria for diversions to meet the requirements concerning diversions. The factors to be considered in the design of diversions are reasonable and not inconsistent with the Federal rules. The Director finds, therefore, that the proposed rule is no less effective than the Federal rules.

2. 310 IAC 12–5–19 Diversions; Stream Channel Diversions

This section supplements the requirements contained in 310 IAC 12–5–18 for diversions of perennial streams, intermittent streams with a watershed greater than one (1) square mile, and miscellaneous flows.

(a) *Perennial and intermittent streams.* Paragraph 310 IAC 12–5–19(b)(1) states that diversion of perennial streams, and intermittent streams with watershed greater than one (1) square mile may be approved by the commission after making a finding related to stream buffer zones that the diversions will not adversely affect the water quantity and quality and related environmental resources of the stream. The proposed language which requires the finding related to stream buffer zones is substantively identical to the counterpart Federal language to 30 CFR 816.43(b)(1).

Indiana's use of the term "intermittent streams with watershed greater than one (1) square mile" is not new to this section, but was approved by the Secretary of the Interior on July 26, 1982 (47 FR 32071). In that ruling the Secretary found that the Indiana definition of "intermittent stream" is no less effective than the Federal definition at 30 CFR 701.5.

The proposed rule has also deleted the phrase "within the permit area" from the language of the rule. The Federal rule at 30 CFR 816.43(b)(1) contains this phrase, and limits diversion to streams within the permit area. The approved Indiana definition of "permit area" at 310 IAC 12–1–3 states that the permit area shall include "all the areas which are or will be affected by the surface coal mining and reclamation operations during the term of permit." Diversions would, of course, affect the areas in which they are constructed. Therefore, under Indiana's definition of "permit area," all diversions have to be included within the permit area. The Director finds, therefore, that the deletion of the words "within the permit area" does not render the Indiana rule less effective than the counterpart Federal rules and that the amendment at proposed paragraph 310 IAC 12–5–19(b)(1) can be approved.

The proposed paragraph at 310 IAC 12–5–19(b)(2) states that the design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the unmodified stream channel immediately upstream and downstream from the diversion. This language is identical to the Federal language at 30 CFR 816.43(b)(2).

Paragraph 310 IAC 12–5–19(b)(3) states that the requirements of 310 IAC 12–5–18(d)(2) shall be met when the temporary and permanent diversions for intermittent streams having a watershed greater than one (1) square mile and perennial streams are designed so that the combination of channel, bank, and floodplain configuration is adequate to pass safely the peak runoff of a ten-year, six-hour precipitation event for a temporary diversion and a one hundred-year, six-hour precipitation event for a permanent diversion. This language is substantively identical to and no less effective than the counterpart Federal language at 30 CFR 816.43(b)(3).

The proposed paragraph at 310 IAC 12–5–19(b)(4) states that stream channel diversions shall be designed under the supervision of qualified registered professional engineer in accordance with good engineering practices and the requirements of this section, and shall be certified after construction by the engineer as having been constructed in accordance with the approved plans. The Federal rule at 30 CFR 816.43(b)(4) states that the design and construction of all stream channel diversions of perennial and intermittent streams shall be certified by a qualified registered professional engineer as meeting the performance standards of this part (30 CFR part 816) and any design criteria set by the regulatory authority. The language of the proposed rule differs from the language of the counterpart Federal rule in two important ways.

In a letter dated June 16, 1989 (Administrative Record number IND–0650), OSM informed Indiana that the proposed rule does not require that a qualified registered professional engineer certify the design of stream channel diversions. Indiana responded by letter dated August 10, 1989 (Administrative Record number IND–0673). In that letter, Indiana stated that "while the proposed change to 310 IAC 12–5–19(b)(4) * * * does not specifically state that the design be certified by a qualified professional engineer, 310 IAC 12–3–39(m) does make this specific requirement." In a follow-up letter dated September 5, 1989 (Administrative Record number IND–0678), Indiana stated that the approved Indiana rule at 310 IAC 12–3–44(c) provides a more specific requirement for the certification of diversion plans.

Both of the rules cited by Indiana require that certifications be made by a "registered professional engineer or professional geologist." At first reading, however, it is not clear that, as is required by 30 CFR 816.43(b)(4), stream diversion designs be certified only by a qualified registered professional engineer. The proposed rule at 310 IAC 12–5–19(b)(4), however, is clear in that only qualified registered professional engineers can supervise the design of Indiana diversions and can certify their construction. Additionally, Indiana's letter to OSM dated August 10, 1989, specifically states that while the proposed change to 310 IAC 12–5–19(b)(4) does not specifically state that the design be certified by a qualified professional engineer, 310 IAC 12–3–39(m) "does make this specific requirement." Indiana has, therefore, affirmed that the approved rule at 310 IAC 12–3–39(m) specifically requires that a qualified registered professional engineer certify Indiana stream diversions designs. That is, the proposed rule at 310 IAC 12–5–19(b)(4) in concert with the approved rules at 310 IAC 12–3–39(m) and 310 IAC 12–3–44(c) require that all stream channel diversion designs be certified by a qualified registered professional engineer. Therefore, the Director finds that the proposed rule is no less effective than the Federal rules at 30 CFR 816.43(b)(4) which require that all stream channel diversion designs be certified by a qualified registered professional engineer.

The proposed rule at 310 IAC 12–5–19(b)(4) also states that the engineer must certify that a stream channel diversion was constructed in accordance with the approved plans. The Federal rule at 30 CFR 816.43(b)(4), however, requires that the design and construction of all stream channel diversions be certified as meeting the performance standards of the rules. In the June 16, 1989 letter to Indiana, OSM stated that, in order to be no less effective than the Federal rules, the Indiana rules should require that both the design and construction of stream channel diversions be certified as meeting the performance standards of the approved rules. Indiana responded in the August 10, 1989 letter by stating that a proposed plan must be capable of complying with the performance standards before it would be accepted and approved. Indeed, the approved Indiana rules at 310 IAC 12–3–51, concerning permit application requirements for reclamation and operations plans for diversions, require that each application contain descriptions, including maps and cross sections, of stream channel diversions to be constructed to achieve compliance with 310 IAC 12–5–18 and 310 IAC 12–5–19. As modified by this proposed amendment, the Indiana rules at 310 IAC 12–5–18 and 310 IAC 12–5–19 are Indiana's performance standards concerning diversions, and these rules are substantively identical to the counterpart Federal performance standards for diversions at 30 CFR 816.43. That is, permit application rules require that plans for stream channel diversions achieve compliance with the Indiana performance standards for stream channel diversions. In addition, in its letter to OSM dated August 10, 1989, Indiana attests that if an Indiana diversion is certified to be in accordance with the approved plan, the Indiana performance standards have already been addressed with the plan's original approval. Therefore, when qualified registered professional engineers certify that Indiana stream channel diversions have been designed or constructed in accordance with the approved plans, they are certifying that the plans and construction achieve compliance with the Indiana performance standards for diversions at 310 IAC 12–5–18 and 310 IAC 12–5–19. The Director, therefore, finds that the proposed rule at 310 IAC 12–5–19(b)(4) is no less effective than the Federal rules at 30 CFR 816.43(b)(4) which require that the design and construction of all stream channel diversions shall be certified by a qualified registered professional engineer as meeting the performance standards of the rules.

(b) *Miscellaneous flows.* Paragraph 310 IAC 12–5–19(c)(1) states that miscellaneous flows, which consist of all flows except those specified in subsection 310 IAC 12–5–19(b), may be diverted around disturbed areas if required and approved by the director. Miscellaneous flows include groundwater discharges, overland flow, ephemeral streams and intermittent streams having a watershed not greater than one (1) square mile. The Director finds that the language of this rule is substantively identical to and no less effective then the Federal rule at 30 CFR 816.43(c)(1).

Paragraph 310 IAC 12–5–19(c)(2) states that the design, location, construction, maintenance, and removal of diversions of miscellaneous flows shall meet all the performance standards set forth in 310 IAC 12–5–18. The Director finds that the proposed

VOL 54 ISS 210 NO 1 1989 UMI

language is substantively identical to and no less effective than the counterpart Federal rules at 30 CFR 816.43(c)(2).

Proposed paragraph 310 IAC 12–5–19(c)(3) states that the requirements of 310 IAC 12–5–18(d)(2) shall be met when the temporary and permanent diversions for miscellaneous flows are designed so that a combination of channel, bank and floodplain configuration is adequate to pass safely the peak runoff of a two-year, six-hour precipitation event for a temporary diversion and a ten-year, six-hour precipitation event for a permanent diversion. The Director finds that the language of this proposed rule is substantively identical to and no less effective than the counterpart Federal rules at 30 CFR 816.43(c)(3).

3. *310 IAC 12–5–84 Underground mining; diversions; general requirements.* Indiana has deleted and replaced most of the language of the existing approved rule. This proposed rule contains language identical to the proposed rules for surface mines at 310 IAC 12–5–18 except for reference citations related specifically to underground mines. Therefore, all of the comments and findings at Finding 1 apply to the proposed amendments for 310 IAC 12–5–84, and those comments will not be repeated here. The Director finds that 310 IAC 12–5–84, as amended, is substantively identical to and no less effective than the Federal rules at 30 CFR 817.43.

4. *310 IAC 12–5–85 Underground mining; stream channel diversions.* Indiana has deleted and replaced most of the language of the existing approved rule. This proposed rule contains language identical to the proposed rules for surface mines at 310 IAC 12–5–19 except for reference citations related specifically to underground mines. Therefore, all of the comments and findings discussed at Finding 2 apply to the proposed amendments for 310 IAC 12–5–85, and those comments will not be repeated here. The Director finds that 310 IAC 12–5–85, as amended, is substantively identical to and no less effective than the Federal rules at 30 CFR 817.43.

IV. Disposition of Comments

Public Comments

The public comment period and opportunity to request a public hearing announced in the November 22, 1988, **Federal Register** ended on December 22, 1988. One comment was received. The Indiana Coal Council, Inc., supported the amendment. A public hearing concerning this amendment was not held as no one requested an opportunity to provide testimony.

Agency Comments

Pursuant to Section 503(b) of SMCRA and the implementing regulations at 30 CFR 732.17(h)(11)(i), comments were solicited from various Federal agencies with an actual or potential interest in the Indiana program. The U.S. Fish and Wildlife Service commented that clauses and/or subsections should be added to 310 IAC 12–5–18, 12–5–19, 12–5–84, and 12–5–85 requiring that diversions not disrupt water circulation to downstream wetlands, protected natural areas, or other areas of high ecological significance; and that water circulation to such areas be reestablished after reclamation of a temporary diversion. In response, the Director notes that these concerns are addressed by existing Indiana regulations at 310 IAC 12–5–51 which provide for restoration, enhancement where practicable, or avoidance of disturbances to habitats of unusually high value for fish and wildlife. The proposed rules at 310 IAC 12–5–18(d)(4) require that diversions shall be designed, located, constructed, and maintained to comply with all applicable State and Federal laws and regulations. Indiana's proposed rules concerning diversions are no less effective than the counterpart Federal rules.

The U.S. Fish and Wildlife Service also commented that paragraph 310 IAC 12–5–18(g) [and 12–5–84(g)] should be expanded to specify that stream channel restoration include: "The original channel substrate and aquatic habitat structure." As discussed in Finding 1, paragraph (g) the proposed Indiana rule at 310 IAC 12–5–18(g) is substantively identical to and no less effective than the Federal rule at 30 CFR 816.43(a)(3). It should be noted that the proposed rule does require that stream channel restoration approximate the pre-mining characteristics of the original stream channel to promote the recovery and the enhancement of the aquatic habitat.

V. Director's Decision

Based on the above findings, the Director is approving the program amendment submitted by Indiana on September 28, 1988, amending the Indiana regulations at 310 IAC 12–5–18, 12–5–19, 12–5–84, and 12–5–85. The Federal regulations at 30 CFR Part 914 codifying decisions concerning the Indiana program are being amended to implement this decision. This final rule is being made effective immediately to expedite the State program amendment process and to encourage states to bring their programs in conformity with the Federal standards without undue delay. Consistency of State and Federal standards is required by SMCRA.

VI. Procedural Determinations

National Environmental Policy Act

The Secretary has determined that, pursuant to section 702(d) of SMCRA, 30 U.S.C. 1292(d), no environmental impact statement need be prepared on this rulemaking.

Executive Order 12291 and the Regulatory Flexibility Act

On July 12, 1984, the Office of Management and Budget (OMB) granted OSM an exemption from sections 3, 4, 7, and 8 of Executive Order 12291 for actions directly related to approval or conditional approval of State regulatory programs. Therefore, this action is exempt from preparation of a regulatory impact analysis and regulatory review by OMB.

The Department of the Interior has determined that this rule will not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). This rule will not impose any new requirements; rather, it will ensure that existing requirements established by SMCRA and the Federal rules will be met by the State.

Paperwork Reduction Act

This rule does not contain information collection requirements which require approval by the Office of Management and Budget under 44 U.S.C. 3507.

List of Subjects in 30 CFR Part 914

Coal mining, Intergovernmental relations, Surface mining, Underground mining.

Dated: October 24, 1989.

David G. Simpson,

Acting Assistant Director, Eastern Field Operations.

For the reasons set out in the preamble, title 30, chapter VII, subchapter T of the Code of Federal Regulations is amended as set forth below:

PART 914—INDIANA

1. The authority citation for part 914 continues to read as follows:

Authority: 30 U.S.C. 1201 *et seq.*

2. In § 914.15, a new paragraph (w) is added to read as follows:

§ 914.15 Approval of regulatory program amendments.

* * * * *

(w) The following amendments to the Indiana regulatory program, as submitted by letter dated September 28, 1988, are approved effective November 1, 1989: Revisions to the Indiana regulations concerning diversions at 310 IAC 12–5–18, 310 IAC 12–5–19, 310 IAC 12–5–84, and 310 IAC 12–5–85.

[FR Doc. 89-25644 Filed 10-31-89; 8:45 am]

BILLING CODE 4310-05-M

DEPARTMENT OF THE TREASURY

Fiscal Service

31 CFR Parts 316, 342, and 351

[Department of the Treasury Circulars No. 653, Tenth Revision; Public Debt Series No. 3–67, Second Revision; and No. 1–80, Second Revision]

U.S. Savings Bonds and Notes; Tables Reflecting Investment Yields and Maturity Periods

AGENCY: Bureau of the Public Debt, Fiscal Service, Department of the Treasury.

ACTION: Notice providing update of tables showing the redemption values and investment yields of United States Savings Bonds/Notes.

SUMMARY: This notice updates the tables set forth in the offering circulars for Series E/EE savings bonds and savings notes. The tables reflect the redemption values and investment yields for interest accrual dates occurring November 1, 1989 through April 1, 1990, for Series E/EE savings bonds and savings notes.

EFFECTIVE DATE: November 1, 1989.

FOR FURTHER INFORMATION CONTACT: Jacqueline L. Jackson, Attorney Adviser, Office of the Chief Counsel, Bureau of the Public Debt, Washington, DC 20239–0001, (202) 376–4320.

SUPPLEMENTARY INFORMATION: This notice, published semi-annually, updates the tables reflecting the investment yields of Series E/EE savings bonds and savings notes. Department of the Treasury Circulars No. 653 (Series E), No. 1–80 (Series EE) and Public Debt Series No. 3–67 (Saving Notes) are hereby supplemented by the addition of tables showing the redemption values and investment yields for interest accrual dates occurring November 1, 1989 through April 1, 1990. It should be noted that the values and yields contained in the tables apply through April 30, 1990. It should also be noted that the tables reflect the market-based variable yields described in the offering circulars at 31 CFR 316.8(b)(2)(C)(iii) for Series E savings bonds, 31 CFR 351.2(f)(2) for Series EE savings bonds, and 31 CFR 342.2a(b)(2) for savings notes. The values shown apply only where the securities are actually paid. They do not form the basis for future accruals.

Procedural Requirements

This notice is not a rulemaking document and, therefore, is not considered a "major rule" for purposes of Executive Order 12291.

A regulatory impact analysis, therefore, is not required. The notice and public procedures of the Administrative Procedure Act are inapplicable, pursuant to 5 U.S.C. 553(a)(2). As no notice of proposed rule-making is required, the provisions of the Regulatory Flexibility Act (5 U.S.C. 601, *et seq.*) do not apply.

List of Subjects in 31 CFR Parts 316, 342, 351

Banks and banking, Federal Reserve System, Government securities.

Dated: October 27, 1989.

Marcus W. Page,

Deputy Fiscal Assistant Secretary.

Accordingly, pursuant to the authority of Department of the Treasury Circular No. 653, Tenth Revision (31 CFR part 316), Public Debt Series No. 3–67, Second Revision (31 CFR part 342), and No. 1–80, Second Revision (31 CFR part 351), the following updated tables are provided:

Announcement of Effective Dates

AGENCY: Department of Education.

ACTION: Notice of effective dates of final regulations and other regulatory documents.

SUMMARY: Section 431(d) of the General Education Provisions Act requires that most of the Department's rules and regulations be published in the Federal Register for forty-five (45) calendar days, or longer, if Congress takes certain adjournments, before the rules and regulations take effect. Since future congressional adjournments cannot be predicted with certainty when a rule or regulation is published, the Department cannot announce a specific effective date at the time of publication. This notice announces the effective dates for regulatory documents subject to the delayed effective date requirement of section 431(d).

DATES: For effective dates, see **"SUPPLEMENTARY INFORMATION."**

FOR FURTHER INFORMATION CONTACT: Kenneth C. Depew, Acting Director, Division of Regulations Management, Office of the General Counsel, Department of Education, Room 2131, FOB–6, 400 Maryland Avenue SW., Washington, DC 20202–2241. Telephone: (202) 732–2887.

SUPPLEMENTARY INFORMATION: The effective date provision for each of the regulatory documents included in this notice stated that the effective date would be announced in a notice published in the Federal Register. Accordingly, this notice announces the following effective dates:

PART 608—[AMENDED]

1. 34 CFR part 608, final regulations published April 6, 1989 (54 FR 14041).
Effective Date: June 9, 1989.

PART 690—[AMENDED]

2. 34 CFR part 690, final regulations published April 12, 1989 (54 FR 14788).
Effective Date: June 9, 1989.

PART 307—[AMENDED]

3. 34 CFR part 307, final regulations published April 17, 1989 (54 FR 15308).
Effective Date: June 9, 1989.

PART 300—[AMENDED]

4. 34 CFR part 300, final regulations published April 27, 1989 (54 FR 18248).
Effective Date: June 11, 1989.

PARTS 757 and 758—[AMENDED]

5. 34 CFR parts 757 and 758, final regulations published May 2, 1989 (54 FR 18840).
Effective Date: June 16, 1989.

PART 251—[AMENDED]

6. 34 CFR part 251, final regulations published May 4, 1989 (54 FR 19334).
Effective Date: June 18, 1989.

PART 548—[AMENDED]

7. 34 CFR part 548, final regulations published May 5, 1989 (54 FR 19488).
Effective Date: June 19, 1989.

PART 280—[AMENDED]

8. 34 CFR part 280, final regulations published May 5, 1989 (54 FR 19506).
Effective Date: June 19, 1989.

PART 81—[AMENDED]

9. 34 CFR part 81, final regulations published May 5, 1989 (54 FR 19512).
Effective Date: June 19, 1989.

PART 205—[AMENDED]

10. 34 CFR part 205, final regulations published May 9, 1989 (54 FR 20052).
Effective Date: June 23, 1989.

PARTS 250, 252, 253, 254, 255, 256, 257, and 258—[AMENDED]

11. 34 CFR parts 250, 252, 253, 254, 255, 256, 257, and 258, final regulations published May 11, 1989 (54 FR 20480).
Effective Date: June 25, 1989.

PART 263—[AMENDED]

12. 34 CFR part 263, final regulations published May 18, 1989 (54 FR 21576).
Effective Date: July 19, 1989.

PARTS 75, 76, 77, 78, 200, and 204—[AMENDED]

13. 34 CFR parts 75, 76, 77, 78, 200, and 204, final regulations published May 19, 1989 (54 FR 21752).
Effective date: July 19, 1989.

PART 212—[AMENDED]

14. 34 CFR part 212, final regulations published May 25, 1989 (54 FR 22728).
Effective date: July 19, 1989.

PARTS 668 and 682—[AMENDED]

15. 34 CFR parts 668 and 682, final regulations published June 5, 1989 (54 FR 24114).
Effective date: July 20, 1989.

PARTS 785, 786, and 787—[AMENDED]

16. 34 CFR parts 785, 786, and 787, final regulations published June 6, 1989 (54 FR 24648).
Effective date: July 23, 1989.

PART 654—[AMENDED]

17. 34 CFR part 654, final regulations published June 20, 1989 (54 FR 26006).
Effective date: August 4, 1989.

PART 303—[AMENDED]

18. 34 CFR part 303, final regulations published June 22, 1989 (54 FR 26306).
Effective date: September 4, 1989.

PART 222—[AMENDED]

19. 34 CFR part 222, final regulations published July 18, 1989 (54 FR 30039).
Effective date: September 4, 1989.

PART 203—[AMENDED]

20. 34 CFR part 203, final regulations published July 18, 1989 (54 FR 30192).
Effective date: September 4, 1989.

PART 345—[AMENDED]

21. 34 CFR part 345, final regulations published August 9, 1989 (54 FR 32770).
Effective date: September 23, 1989.

PART 208—[AMENDED]

22. 34 CFR part 208, final regulations published August 10, 1989 (54 FR 32936).
Effective date: September 24, 1989.

PART 755—[AMENDED]

23. 34 CFR part 755, final regulations published August 10, 1989 (54 FR 32946).
Effective date: September 24, 1989.

PARTS 425, 426, 432, 433, 434, 435, 436, 437, 438, and 441—[AMENDED]

24. 34 CFR parts 425, 426, 432, 433, 434, 435, 436, 437, 438, and 441, final regulations published August 18, 1989 (54 FR 34408).
Effective date: October 2, 1989.

PART 379—[AMENDED]

25. 34 CFR part 379, final regulations published August 31, 1989 (54 FR 36098).
Effective date: October 15, 1989.

PART 222—[AMENDED]

26. 34 CFR part 222, final regulations published September 7, 1989 (54 FR 37250).
Effective date: October 22, 1989.

PARTS 245, 246, 247, and 745—[AMENDED]

27. 34 CFR parts 245, 246, 247, and 745, final regulations published September 13, 1989 (54 FR 37874).
Effective date: October 28, 1989.

(20 U.S.C. 1232(d))

Dated: October 27, 1989.

Edward C. Stringer,

General Counsel.

BILLING CODE 4000–01–M

34 Parts 435, 436, 437, and 438

RIN 1830–AA06

State-Administered Adult Education Programs and Secretary's Discretionary Programs of Adult Education

AGENCY: Department of Education.

ACTION: Final regulations.

SUMMARY: The Secretary amends 34 CFR parts 435, 436, 437, and 438 to add Office of Management and Budget (OMB) control numbers to certain sections of the regulations. These sections contain information collection requirements approved by OMB. The Secretary takes this action to inform the public that these requirements have been approved.

EFFECTIVE DATE: These regulations are effective November 1, 1989.

FOR FURTHER INFORMATION CONTACT: Mary Hanrahan, Acting Director, Division of Adult Education, Office of Vocational and Adult Education, U.S. Department of Education (Mary E. Switzer Building, Room 4428), 400 Maryland Avenue, SW., Washington, DC 20202–7240, Telephone: (202) 732–2270.

SUPPLEMENTARY INFORMATION: On August 18, 1989, final regulations implementing Title II, Part B of the Augustus F. Hawkins-Robert T. Stafford Elementary and Secondary School Improvement Amendments of 1988 (Pub. L. 100–297) were published in the Federal Register (54 FR 34408–34439). The effective date of certain sections of these regulations was delayed until information collection requirements contained in these sections were approved by OMB under the Paperwork Reduction Act of 1980, as amended. OMB has now approved the information collection requirements.

Waiver of Proposed Rulemaking

In accordance with section 431(b)(2)(A) of the General Education Provisions Act (20 U.S.C. 1232(b)(2)(A) and the Administrative Procedure Act (5 U.S.C. 551 *et seq.*), it is the practice of the Secretary to offer interested parties the opportunity to comment on proposed regulations. However, the publication of OMB control numbers is purely technical and does not establish substantive policy. Therefore, the Secretary has determined, under 5 U.S.C. 553(b)(B), that proposed rulemaking is unnecessary and contrary to the public interest.

List of Subjects

34 CFR Part 435

Adult education, Bilingual education, Education, Grant programs, and Reporting and recordkeeping requirements.

34 CFR Part 436

Adult education, Bilingual education, Education, Foreign persons, Grant programs, Migrant labor, and Reporting and recordkeeping requirements.

34 CFR Part 437

Adult education, Elderly, Education, Grant programs, Reporting and recordkeeping requirements, and Volunteers.

34 CFR Part 438

Adult education, Education, Grant programs, and Reporting and recordkeeping requirements.

(Catalog of Federal Domestic Assistance Numbers have not been assigned to National English Literacy Demonstration Program for Individuals of Limited English Proficiency, Adult Migrant Farmworker and Immigrant Education Program, National Adult Literacy Volunteer Training Program, State Program Analysis Assistance and Policy Studies Program)

Dated: October 26, 1989.

Lauro F. Cavazos,

Secretary of Education.

The Secretary amends parts 435, 436, 437, and 438 of title 34 of the Code of Federal Regulations as follows:

PART 435—NATIONAL ENGLISH LITERACY DEMONSTRATION PROGRAM FOR INDIVIDUALS OF LIMITED ENGLISH PROFICIENCY

1. The authority citation for part 435 continues to read as follows:

Authority: 20 U.S.C. 1211a(d), unless otherwise noted.

§ 435.21 [Amended]

2. Section 435.21 is amended by adding

(Approved by the Office of Management and Budget under control number 1830–0013)

following the section.

PART 436—ADULT MIGRANT FARMWORKER AND IMMIGRANT EDUCATION PROGRAM

3. The authority citation for part 436 continues to read as follows:

Authority: 20 U.S.C. 1213, unless otherwise noted.

§ 436.22 [Amended]

4. Section 436.22 is amended by adding

(Approved by the Office of Management and Budget under control number 1830–0013)

following the section.

PART 437—NATIONAL ADULT LITERACY VOLUNTEER TRAINING PROGRAM

5. The authority citation for Part 437 continues to read as follows:

Authority: 20 U.S.C. 1213a, unless otherwise noted.

§ 437.21 [Amended]

6. Section 437.21 is amended by adding

(Approved by the Office of Management and Budget under control number 1830–0013)

following the section.

PART 438—STATE PROGRAM ANALYSIS ASSISTANCE AND POLICY STUDIES PROGRAM

7. The authority citation for part 438 continues to read as follows:

Authority: 20 U.S.C. 1213b(a), unless otherwise noted.

§ 438.21 [Amended]

8. Section 438.21 is amended by adding

(Approved by the Office of Management and Budget under control number 1830–0013)

following the section.

BILLING CODE 4000–01–M

COPYRIGHT ROYALTY TRIBUNAL

37 CFR Part 307

Cost of Living Adjustment of the Mechanical Royalty Rate

AGENCY: Copyright Royalty Tribunal.

ACTION: Final rule.

SUMMARY: The Copyright Royalty Tribunal announces an adjustment of the mechanical royalty rate based on the change in the Consumer Price Index from September, 1987 to September, 1989. The rate is increased to either 5.7 cents, or 1.1 cent per minute of playing

VOL 54 ISS 210 NO 1 1989 UMI

time or fraction thereof, whichever amount is larger.

EFFECTIVE DATE: January 1, 1990.

FOR FURTHER INFORMATION CONTACT: Robert Cassler, General Counsel, Copyright Royalty Tribunal, 1111 20th Street, NW., Suite 450, Washington, DC 20036 (202) 653–5175.

SUPPLEMENTARY INFORMATION: In 1987, the Copyright Royalty Tribunal adopted the joint proposal submitted by the National Music Publishers' Association, The Songwriters Guild of America and the Recording Industry Association of America, Inc. to make adjustments every two years to the mechanical royalty rate based upon changes in the Consumer Price Index (CPI), except when the CPI declined, in which case the mechanical rate could go no lower than the rates in effect in 1986–1987, and except when the CPI increased by more than 25%, in which case the rate increase would be no greater than 25%. *1987 Adjustment of the Mechanical Royalty Rate,* 52 FR 22637 (June 15, 1987, as corrected, 52 FR 23546 (June 23, 1987).

Accordingly, it is announced that the change in the cost of living as determined by the Consumer Price Index (all urban consumers, all items) is 8.7% (September, 1987's Index was 115.0 and September, 1989's Index was 125.0, with 1982–1984=100). The current mechanical rate is 5.25 cents, or 1 cent per minute of playing time or fraction thereof, whichever amount is larger. Adjusting that rate upward by 8.7% and rounding off the results to the nearest ½oth of a cent, the new rate, effective January 1, 1990, shall be 5.7 cents, or 1.1 cent per minute of playing time or fraction thereof, whichever amount is larger. Section 307.3 is revised as shown below.

List of Subjects in 37 CFR Part 307

Copyright, Music, Recordings.

For the reasons set forth in the preamble, the Tribunal amends 37 CFR part 307 as follows:

PART 307—[AMENDED]

1. The authority citation for part 307 continues to read as follows:

Authority: 17 U.S.C. 801(b)(1) and 804.

Section 307.3 is revised to read as follows:

§ 307.3 Adjustment of royalty rate.

(a) For every phonorecord made and distributed on or after January 1, 1983, the royalty payable with respect to each work embodied in the phonorecord shall be either 4.25 cents, or .8 cent per minute of playing time or fraction thereof, whichever amount is larger, subject to further adjustment pursuant to paragraphs (b), (c), (d), (e) and (f) of this section.

(b) For every phonorecord made and distributed on or after July 1, 1984, the royalty payable with respect to each work embodied in the phonorecord shall be either 4.5 cents, or .85 cent per minute of playing time or fraction thereof, whichever amount is larger, subject to further adjustment pursuant to paragraphs (c), (d), (e) and (f) of this section.

(c) For every phonorecord made and distributed on or after January 1, 1986, the royalty payable with respect to each work embodied in the phonorecord shall be either 5 cents, or .95 cent per minute of playing time or fraction thereof, whichever amount is larger, subject to further adjustment pursuant to paragraphs (d), (e) and (f) of this section.

(d) For every phonorecord made and distributed on or after January 1, 1988, the royalty payable with respect to each work embodied in the phonorecord shall be either 5.25 cents, or 1 cent per minute of playing time or fraction thereof, whichever amount is larger, subject to further adjustment pursuant to paragraphs (e) and (f) of this section.

(e) For every phonorecord made and distributed on or after January 1, 1990, the royalty payable with respect to each work embodied in the phonorecord shall be either 5.7 cents, or 1.1 cent per minute of playing time or fraction thereof, whichever amount is larger, subject to further adjustment pursuant to paragraph (f) of this section.

(f)(1) On November 1, 1991, and each November 1 biennially thereafter until November 1, 1995 (that is, November 1, 1993 and 1995), the Copyright Royalty Tribunal (CRT) shall publish in the **Federal Register** a notice of the percent change in the Consumer Price Index (all urban consumers, all items) (CPI) from the Index published for the September two years earlier to the Index published for the September of the year in which such notice is published, and the underlying calculations.

(2) On the same date as the notice is published pursuant to paragraph (f)(1) of this section, the CRT shall publish in the **Federal Register** revised compulsory license royalty rates which shall adjust the amounts then in effect in direct proportion to the percent change in the CPI determined as provided in paragraph (f)(1) of this section, rounded to the nearest ½oth of a cent; *Provided,* however, That:

(i) The adjusted rates shall be no greater than 25% more than the rates then in effect; and

(ii) The adjusted rates shall be no less than the amounts set forth in § 307.3(c).

(3) The revised royalty rates for the compulsory license adjusted pursuant to this paragraph (f) shall become effective for every phonorecord made and distributed on or after January 1 of the year following that in which such notice is published; that is, on January 1, 1992, 1994 and 1996, respectively.

Dated: October 27, 1989.

Mario F. Aguero,

Acting Chairman.

[FR Doc. 89–25551 Filed 10–31–89; 8:45 am]

BILLING CODE 1410–09–M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[PP 6E3403/R1040; FRL 3663–3]

Pesticide Tolerance for Ethyl 3-Methyl-4-(Methylthio) Phenyl (1-Methylethyl) Phosphoramidate

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This rule establishes a tolerance for the combined residues of the nematacide ethyl 3-methyl-4-(methylthio)phenyl (1-methylethyl)phosphoramidate (also referred to in this document as fenamiphos) and its cholinesterase-inhibiting metabolites in or on the raw agricultural commodity strawberries. The Inter-regional Research Project No. 4 (IR–4) petitioned EPA for this tolerance.

EFFECTIVE DATE: November 1, 1989.

ADDRESS: Written objections, identified by the document control number, [PP 6E3403/R1040], may be submitted to: Hearing Clerk (A–110), Environmental Protection Agency, Rm. 3708, 401 M St., SW., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: By mail:

Hoyt Jamerson, Emergency Response and Minor Use Section, Registration Division (H–7505C), Environmental Protection Agency, 401 M St., SW., Washington, DC 20460.

Office location and telephone number: Rm. 716, CM #2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703)–557–2310.

SUPPLEMENTARY INFORMATION: EPA issued a proposed rule, published in the **Federal Register** of August 3, 1989 (54 FR 31971), in which it was announced that the Interregional Research Project No. 4 (IR–4), New Jersey Agricultural Experiment Station, P.O. Box 231, Rutgers University, New Brunswick, NJ 08903, had submitted pesticide petition 6E3403 to EPA on behalf of Dr. Robert H. Kupelian, National Director, IR–4 Project, and the Agricultural Experiment Stations of California, Florida, New Jersey, Maryland, and Washington.

The petition requested that the Administrator, pursuant to section 408(e) of the Federal Food, Drug, and Cosmetic Act, propose the establishment of a tolerance for the residues of the nematacide fenamiphos (ethyl 3-methyl-4-(methylthio)phenyl (1-methylethyl)phosphoramidate and its cholinesterase-inhibiting metabolites, ethyl 3-methyl-4-(methylsulfinyl)phenyl (1-methylethyl)phosphoramidate and ethyl 3-methyl-4-(methylsulfonyl) phenyl (1-methylethyl)phosphoramidate) in or on the raw agricultural commodity strawberries at 0.6 part per million (ppm).

There were no comments or requests for referral to an advisory committee received in response to the proposed rule.

The data submitted in the petition and all other relevant material have been evaluated and discussed in the proposed rule. Based on the data and information considered, the Agency concludes that the tolerance will protect the public health. Therefore, the tolerance is established as set forth below.

Any person adversely affected by this regulation may, within 30 days after publication of this document in the **Federal Register**, file written objections with the Hearing Clerk, at the address given above. Such objections should specify the provisions of the regulation deemed objectionable and the grounds for the objections. A hearing will be granted if the objections are supported by grounds legally sufficient to justify the relief sought.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Pursuant to the requirements of the Regulatory Flexibility Act (Pub. L. 96–354, 94 Stat. 1164, 5 U.S.C. 601–612), the Administrator has determined that regulations establishing new tolerances or raising tolerance levels or establishing exemptions from tolerance requirements do not have a significant economic impact on a substantial number of small entities. A certification statement to this effect was published in the **Federal Register** of May 4, 1981 (46 FR 24950).

List of Subjects in 40 CFR part 180

Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: September 29, 1989.

Susan H. Wayland,

Acting Director, Office of Pesticide Programs.

Therefore, 40 CFR Part 180 is amended as follows:

PART 180—[AMENDED]

1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 346a and 371.

2. Section 180.349(a) is amended by adding and alphabetically inserting the raw agricultural commodity strawberries, to read as follows:

§ 180.349 Ethyl 3-methyl-4-(methylthio)phenyl(1-methylethyl) phosphoramidate; tolerances for residues.

(a) * * *

Commodities	Parts per million
* * * * *	
Strawberries	0.6
* * * * *	

[FR Doc. 89–25479 Filed 10–31–89; 8:45 am]

BILLING CODE 6560–50–M

40 CFR Part 180

[PP 7E3493/R1041; FRL–3663–4]

Pesticide Tolerance For Fluvalinate

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This rule establishes a tolerance for residues of the insecticide (alpha RS,2R)-fluvalinate[(RS)-alpha-cyano-3-phenoxybenzyl(R)-2-[2-chloro-4-(trifluoromethyl)anilino]-3-methylbutanoate] (referred to in this document as fluvalinate) in or on the raw agricultural commodity coffee. The Interregional Research Project No. 4 (IR–4) petitioned EPA for this tolerance.

EFFECTIVE DATE: November 1, 1989.

ADDRESS: Written objections, identified by the document control number, [PP 7E3493/R1041], may be submitted to: Hearing Clerk (A–110), Environmental Protection Agency, Rm. 3708, 401 M St., SW., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: By mail:

Hoyt Jamerson, Emergency Response and Minor Use Section, Registration Division (H–7505C), Environmental Protection Agency, 401 M St., SW., Washington, DC 20460.

Office location and telephone number: Rm. 716, CM #2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703)–557–2310.

SUPPLEMENTARY INFORMATION: EPA issued a proposed rule, published in the **Federal Register** of August 3, 1989 (54 FR 31972), in which it was announced that the Interregional Research Project No. 4 (IR–4), New Jersey Agricultural Experiment Station, P.O. Box 231, Rutgers University, New Brunswick, NJ 08903, had submitted pesticide petition 7E3493 to EPA on behalf of Dr. Robert H. Kupelian, National Director, IR–4 Project, and the Agricultural Experiment Station of Hawaii.

The petition requested that the Administrator, pursuant to section 408(e) of the Federal Food, Drug, and Cosmetic Act, propose the establishment of a tolerance for the residues of the insecticide fluvalinate in or on the raw agricultural commodity coffee at 0.01 part per million (ppm). This use of the pesticide is limited to Hawaii based on the geographical representation of the residue data submitted. Additional residue data will be required to expand the area of usage. Persons seeking geographically broader registration should contact the Agency's Registration Division at the address provided above.

There were no comments or requests for referral to an advisory committee received in response to the proposed rule.

The data submitted in the petition and all other relevant material have been evaluated and discussed in the proposed rule. Based on the data and information considered, the Agency concludes that the tolerance will protect the public health. Therefore, the tolerance is established as set forth below.

Any person adversely affected by this regulation may, within 30 days after publication of this document in the **Federal Register**, file written objections with the Hearing Clerk, at the address given above. Such objections should specify the provisions of the regulation deemed objectionable and the grounds for the objections. A hearing will be granted if the objections are supported by grounds legally sufficient to justify the relief sought.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Pursuant to the requirements of the Regulatory Flexibility Act (Pub. L. 96–354, 94 Stat. 1164, 5 U.S.C. 601–612), the Administrator has determined that regulations establishing new tolerances or raising tolerance levels or

establishing exemptions from tolerance requirements do not have a significant economic impact on a substantial number of small entities. A certification statement to this effect was published in the **Federal Register** of May 4, 1981 (46

ACTION: Final rule.

SUMMARY: This rule establishes tolerances for residues of the insecticide cyfluthrin in or on the raw agricultural commodity fresh hops and the food

Information Section, at the address given above. Such objections should specify the provisions of the regulations deemed objectionable and the grounds for the objections. A hearing will be

Authority: 21 U.S.C. 346.

b. In § 185.1250, by adding new paragraph (d), to read as follows:

§ 185.1250 Cyfluthrin.

in the NFIP. The communities are now in compliance. This rule withdraws the suspension. The communities' continued participation in the program authorizes the sale of flood insurance.

EFFECTIVE DATE: As shown in fourth

construction of buildings in the Special Flood Hazard Area shown on the map.

The Director finds that the delayed effective dates would be contrary to the public interest. The Director also finds that notice and public procedure under 5

VOL 54 ISS 210 NO 1 1989 UMI

establishing exemptions from tolerance requirements do not have a significant economic impact on a substantial number of small entities. A certification statement to this effect was published in the **Federal Register** of May 4, 1981 (46 FR 24950).

List of Subjects in 40 CFR Part 180

Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: September 29, 1989.

Susan H. Wayland,

Acting Director, Office of Pesticide Programs.

Therefore, 40 CFR part 180 is amended as follows:

PART 180—[AMENDED]

1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 346a and 371.

2. Section 180.427 is amended in the heading by adding the phrase "tolerances for residues," and by designating the current text and list of tolerances as paragraph (a), and by adding new paragraph (b), to read as follows:

§ 180.427 (Alpha RS,2R)-fluvalinate [(RS)-alpha-cyano-3-phenoxybenzyl(R)-2-[2-chloro-4-(trifluoromethyl)anilino]-3-methylbutanoate; tolerances for residues.

* * * * *

(b) Tolerances with regional registration, as defined in § 180.1(n), are established for residues of the insecticide (alpha RS,2R)-fluvalinate[(RS)-alpha-cyano-3-phenoxybenzyl(R)-2-[2-chloro-4-(trifluoromethyl)anilino]-3-methylbutanoate in or on the following commodities:

Commodities	Parts per million
Coffee	0.01

BILLING CODE 6560-50-M

Office of Pesticides and Toxic Substances

40 CFR Parts 180 and 185

[PP 9E3747 and FAP 9H5580/R1042; FRL-3663-5]

Pesticide Tolerances for Cyfluthrin

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This rule establishes tolerances for residues of the insecticide cyfluthrin in or on the raw agricultural commodity fresh hops and the food commodity dried hops. The regulations to establish maximum permissible levels for residues of the insecticide were requested pursuant to petitions by Mobay Corp., Agricultural Chemicals Division.

EFFECTIVE DATE: November 1, 1989.

ADDRESS: Written objections, identified by the document control number [PP 9E3747 and FAP 9H5580/R1042], may be submitted to: Public Docket and Freedom of Information Section, Environmental Protection Agency, Room 3708, 401 M Street SW., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT:

By mail: George T. LaRocca, Product Manager (PM) 15, Registration Division (H-7505C), Environmental Protection Agency, 401 M Street SW., Washington, DC 20460.

Office location and telephone number: Room 204, CM #2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703) 557-2400.

SUPPLEMENTARY INFORMATION: EPA issued a proposed rule, published in the **Federal Register** of August 16, 1989 (54 FR 33718), which announced that Mobay Corp., Agricultural Chemicals Division, P.O. Box 9413, Kansas City, MO 64120-0013, had submitted pesticide petition (PP) 9E3747 proposing to establish a tolerance for the insecticide cyfluthrin(cyano(4-fluoro-3-phenoxyphenyl)methyl-3-(2,2-dichloroethenyl)-2,2-dimethyl-cyclopropanecarboxylate) in or on the raw agricultural commodity (RAC) fresh hops imported from Germany at 4.0 parts per million (ppm) and food additive petition (FAP) 9H5580 proposing to amend 40 CFR part 185 by establishing a tolerance for cyfluthrin in or on dried hops at 20.0 ppm.

There were no comments or requests for referral to an advisory committee received in response to the proposed rule.

The data submitted in the petition and all other relevant material have been evaluated and discussed in the proposed rule. Based on the data and information considered, the Agency concludes that the tolerances will protect the public health. Therefore, the tolerances are established as set forth below.

Any person adversely affected by these regulations may, within 30 days after publication of this document in the **Federal Register**, file written objections with the Public Docket and Freedom of Information Section, at the address given above. Such objections should specify the provisions of the regulations deemed objectionable and the grounds for the objections. A hearing will be granted if the objections are supported by grounds legally sufficient to justify the relief sought.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Pursuant to the requirements of the Regulatory Flexibility Act (Pub. L. 96-354, 94 Stat. 1164, 5 U.S.C. 601-612), the Administrator has determined that regulations establishing new tolerances or raising tolerance levels or establishing exemptions from tolerance requirements do not have a significant economic impact on a substantial number of small entities. A certification statement to this effect was published in the **Federal Register** of May 4, 1981 (46 FR 24950).

List of Subjects in 40 CFR Parts 180 and 185

Administrative practice and procedure, Agricultural commodities, Food additives, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: October 2, 1989.

Douglas D. Campt,

Director, Office of Pesticide Programs.

Therefore, chapter I of title 40 of the Code of Federal Regulations is amended as follows:

PART 180—[AMENDED]

1. In part 180:

a. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 346a and 371.

b. In § 180.436, in the table therein, by adding and alphabetically inserting the commodity hops, to read as follows:

§ 180.436. Cyfluthrin; tolerances for residues.

* * * * *

Commodities	Parts per million
* * * * *	
Hops, fresh	4.0
* * * * *	

PART 185—[AMENDED]

2. In part 185:

a. The authority citation for part 185 continues to read as follows:

Authority: 21 U.S.C. 346.

b. In § 185.1250, by adding new paragraph (d), to read as follows:

§ 185.1250 Cyfluthrin.

* * * * *

(d) A tolerance of 20.0 parts per million is established for residues of the insecticide cyfluthrin (cyano(4-fluoro-3-phenoxyphenyl)methyl-3-(2,2-dichloroethenyl)-2,2-dimethyl-cyclopropanecarboxylate) in or on dried hops resulting from application of the insecticide to hops.

[FR Doc. 89-25477 Filed 10-31-89; 8:45 am]

BILLING CODE 6560-50-M

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 64

[Docket No. FEMA 6854]

List of Communities Eligible for the Sale of Flood Insurance

AGENCY: Federal Emergency Management Agency, FEMA.

ACTION: Final rule.

SUMMARY: This rule lists communities participating in the National Flood Insurance Program (NFIP). These communities were required to adopt floodplain management measures compliant with the NFIP revised regulations that became effective on October 1, 1986. If the communities did not do so by the specified date, they would be suspended from participation in the NFIP. The communities are now in compliance. This rule withdraws the suspension. The communities' continued participation in the program authorizes the sale of flood insurance.

EFFECTIVE DATE: As shown in fourth column.

ADDRESSES: Flood insurance policies for property located in the communities listed can be obtained from any licensed property insurance agent or broker serving the eligible community, or from the NFIP at: P.O. Box 457, Lanham, Maryland 20706, Phone: (800) 638-7418.

FOR FURTHER INFORMATION CONTACT: Frank H. Thomas, Assistant Administrator, Office of Loss Reduction, Federal Insurance Administration, (202) 646-2717, Federal Center Plaza, 500 C Street, Southwest, Room 416, Washington, DC 20472.

SUPPLEMENTARY INFORMATION: The NFIP enables property owners to purchase flood insurance at rates made reasonable through a Federal subsidy. In return, communities agree to adopt and administer local floodplain management measures aimed at protecting lives and new construction from future flooding.

In addition, the Director of the Federal Emergency Management Agency has identified the Special Flood Hazard Areas in these communities by publishing a Flood Insurance Rate Map. In the communities listed where a flood map has been published, section 102 of the Flood Disaster Protection Act of 1973, as amended, requires the purchase of flood insurance as a condition of Federal or federally related financial assistance for acquisition or construction of buildings in the Special Flood Hazard Area shown on the map.

The Director finds that the delayed effective dates would be contrary to the public interest. The Director also finds that notice and public procedure under 5 U.S.C. 553(b) are impracticable and unnecessary.

The Catalog of Domestic Assistance Number for this program is 83.100 "Flood Insurance."

Pursuant to the provisions of 5 U.S.C. 605(b), the Administrator, Federal Insurance Administration, to whom authority has been delegated by the Director, Federal Emergency Management Agency, hereby certifies that this rule, if promulgated will not have a significant economic impact on a substantial number of small entities. This rule provides routine legal notice stating the community's status in the NFIP and imposes no new requirements or regulations on these participating communities.

List of Subjects in 44 CFR Part 64

Flood insurance and floodplains.

1. The authority citation for part 64 continues to reads as follows:

Authority: 42 U.S.C. 4001 *et seq.*, Reorganization Plan No. 3 of 1978, E.O. 12127.

2. Section 64.6 is amended by adding in alphabetical sequence new entries to the table.

In each entry, the suspension for each listed community has been withdrawn. The entry reads as follows:

§ 64.6 List of eligible communities.

Proposed Rules

Federal Register
Vol. 54, No. 210
Wednesday, November 1, 1989

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Rural Electrification Administration

17 CFR Part 1772

[REA Bulletin 345-13]

REA Specification for Aerial and Underground Cables, PE-22

AGENCY: Rural Electrification Administration, U.S. Department of Agriculture.

ACTION: Proposed rule.

SUMMARY: The Rural Electrification Administration (REA) proposes to amend 7 CFR 1772.97, Incorporation by Reference of Telephone Standards and Specifications by issuing revised Bulletin 345-13, REA Specification for Aerial and Underground Telephone Cables, PE-22, to include the material and performance requirements for: (1) Service pairs in screened cables, (2) cables designed to operate on carrier systems with a 3.152 Mb/s bit rate (T1C), and (3) the raw materials used in insulating the conductors and jacketing the cables. This action will assist REA borrowers in that they will be able to choose from a wider variety of nonfilled telephone cables. It will also provide REA borrowers with an economic and efficient means of furnishing increased subscriber services using digital transmission technologies. This revision will not adversely affect cable manufacturers because no design changes in presently manufactured products will be required.

DATE: Public comments must be received by REA no later than January 2, 1990.

ADDRESS: Submit written comments to William F. Albrecht, Director, Telecommunications Staff Division, Rural Electrification Administration, room 2835, South Building, U.S. Department of Agriculture, Washington, DC 20250-1500. Copies of the document are available upon request from the above address. All written submissions made pursuant to this action will be made available for public inspection during regular business hours at the above address.

FOR FURTHER INFORMATION CONTACT: Garnett G. Adams, Chief, Outside Plant Branch, Telecommunications Staff Divison, Rural Electrification Administration, Washington, DC 20250-1500, telephone (202) 382-8667.

SUPPLEMENTARY INFORMATION: Pursuant to the Rural Electrification Act, as amended (7 U.S.C. 901 et seq.), REA proposes to amend 7 CFR 1772.97, Incorporation by Reference of Telephone Standards and Specifications, by issuing revised Bulletin 345-13, REA Specification for Aerial and Underground Telephone Cables, PE-22. This incorporation by reference was approved by the Director of the Federal Register on December 30, 1983. This rule is issued in conformity with Executive Order 12291, Federal Regulation. This action will not (1) have an annual effect on the economy of $100 million or more; (2) result in a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; (3) result in significant adverse effects on competition, employment, investment or productivity, innovation, or on the ability of the United States-based enterprises to compete with foreign-based enterprises in domestic or export markets, and therefore, has been determined to be "not major."

This action does not fall within the scope of the Regulatory Flexibility Act. REA has concluded that promulgation of this rule would not represent a major Federal action significantly affecting the quality of the human environment under the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.* (1976)) and, therefore, does not require an environmental impact statement or an environmental assessment.

This regulation contains no information or record keeping requirement which requires approval under the Paperwork Reduction Act of 1980 (44 U.S.C. 3507 *et seq.*).

This program is listed in the Catalog of Federal Domestic Assistance under No. 10.851, Rural Telephone Loans and Loan Guarantees and 10.852, Rural Telephone Bank Loans. The reasons set forth in the Final Rule related Notice to 7 CFR part 3015, subpart V (50 FR 47034, November 14, 1985), this program is excluded from the scope of Executive Order 12372 which requires intergovernmental consultation with State and local officials.

Background

REA has issued a series of publications entitled "bulletins" which serve to implement the policy, procedures, and requirements for administering its loan and loan guarantee programs and the security instruments which provide for and secure REA financing. In the bulletin series REA issues standards and specifications for the construction of telephone facilities financed with REA loan funds. REA is proposing to revise Bulletin 345-13, the REA Specification for Aerial and Underground Telephone Cables, PE-22. This specification was last issued in January 1983. The PE-22 designation is an arbitrary set of letters and numbers assigned by REA to identify telephone materials and equipment specifications.

Aerial and underground nonfilled telephone cables are used by REA telephone borrowers in the construction of outside plant facilities. The cables are used as the transport media for transmission of voice, data, pictures, and signals between telephone subscribers.

The current specification does not allow service pairs in screened cables because the majority of REA borrowers have a small subscriber base and have not needed the full carrier transmission capacity that a screened cable provides. Thus, all the cable pairs were not utilized for carrier transmission which allowed unused pairs to be used as service pairs. With REA borrowers' continuing growth, there is greater probability that all screened cable pairs will be used for carrier transmission necessitating REA approval of the use of service pairs for voice order and interrogation functions.

The current specification also does not include requirements for cables designed to transmit a digital line running at 3.152 million bits per second (this is the industry designated T1C carrier system). Up until now there was very little demand for transmission links on REA borrower systems that were capable of handling this high bit rate. Technology, however, is changing and so are the services that the REA borrowers are required to provide. Many of the subscribers are now asking for

VOL 54 ISS 210 NO 1 1989 UMI

data communications, digital facsimile, and video teleconferencing tariffs. To be sure that cables used for current and future T1C installations are of the highest quality, REA is incorporating requirements into the specification for cables intended for T1C carrier applications.

The reason that raw material insulating and jacketing requirements are not in the existing specification is that these requirements are covered by REA Specifications PE–200 and –210. REA incorporated the raw material requirements covered by these two specifications into the revised REA Specification PE–22. REA will be incorporating the applicable raw materials requirements in PE–200 and PE–210 into all the wire and cable specifications as they are revised. When this has been accomplished, PE–200 and PE–210 will be withdrawn.

This action establishes requirements for a wider range of aerial and underground nonfilled telephone cables without affecting current designs or manufacturing techniques of cable manufacturers. This wider selection of cables will provide REA borrowers with an economic and efficient means of furnishing increased subscriber services using digital transmission technologies.

List of Subjects in 7 CFR Part 1772

Loan Programs—Communications, Telecommunications, Telephone.

In view of the above, REA is proposing to amend 7 CFR part 1772 by issuing a revised Bulletin 345–13.

PART 1772—[AMENDED]

1. The authority cited for part 1772 would continue to read as follows:

Authority: 7 U.S.C. 901 et seq., 7 U.S.C. 1921 et seq.

2. The table in § 1772.97 would be amended by revising the entry 345–13 to read as follows:

§ 1772.97 Incorporation by Reference of Telephone Standards and Specifications.

345–13	PE–22	REA Specification for Aerial and Underground Telephone Cables.

Dated: October 26, 1989.

Jack Van Mark,

Acting Administrator.

[FR Doc. 89–25757 Filed 10–31–89; 8:45 am]

BILLING CODE 3410–15–M

DEPARTMENT OF ENERGY

10 CFR Part 764

Uranium Mill Tailings; Annotation of Land Records

AGENCY: U.S. Department of Energy.

ACTION: Proposed rule; rescheduled hearing and extension of comment period.

SUMMARY: On July 14, 1989, the U.S. Department of Energy (DOE) issued a proposed rule to clarify the obligations of certain states to annotate the local land records of certain properties at which DOE performed remedial action to remove uranium mill tailings.

In response to comments received by DOE's Uranium Mill Tailings Remedial Action Projects Office in Albuquerque, New Mexico, DOE decided to change the date and location of the public hearing and extend the comment period on the proposed rule. This action is intended to provide a more convenient opportunity for interested persons to attend the public hearing and express their views.

DATES: The new date for the public hearing is November 9, 1989. The hearing location is announced in the addresses section. At that time, interested persons will be provided an opportunity to express their views and provide oral presentation of data and arguments, if any. The comments period on the proposed rule will be further extended until November 28, 1989. Comments received on or before that date will be considered in the decision-making process on the final rule. Comments received after that date will be considered only to the extent feasible.

ADDRESSES: The hearing will be held at Two Rivers Plaza, Second Street and Main Street in Grand Junction, Colorado. Comments should be sent to: Ms. Joelene Garcia, Uranium Mill Tailings Project Office, U.S. Department of Energy, 5301 Central Avenue, N.E., S. 1700, Albuquerque, New Mexico 87108. Comments will be available for public review at the above address during regular business hours, 9:00 am–4:00 pm Monday through Friday.

FOR FURTHER INFORMATION CONTACT:

L.C. Brazley, Office of Nuclear Energy, NE–22, U.S. Department of Energy, 1000 Independence Avenue, SW., Washington, DC 20585;

Steven R. Miller, Office of General Counsel, GC–11, U.S. Department of Energy, 1000 Independence Avenue, SW., Washington, DC 20585.

SUPPLEMENTARY INFORMATION: DOE issued its proposed rule pursuant to section 109 of the Uranium Mill Tailings Radiation Control Act of 1978 (42 U.S.C. 7901 *et seq.*). Notice of the proposed rule was published in the **Federal Register** on Friday, July 14, 1989 (54 FR 29732).

Issued in Germantown, MD on October 23, 1989.

J.A. Coleman,

Acting Director, Office of Remedial Action and Waste Technology, U.S. Department of Energy.

[FR Doc. 89–25866 Filed 10–31–89; 8:45 am]

BILLING CODE 6450–01–M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Airspace Docket No. 89–ACE–30]

Proposed Alteration of Control Zone—Offutt Air Force Base, Nebraska

AGENCY: Federal Aviation Administration (FAA), DOT..

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This Notice proposes to amend the Offutt Air Force Base Nebraska, control zone description to correct the airport coordinates and to add airspace necessary to protect the ILS approach to Runway 30.

DATES: Comments must be received on or before December 1, 1989.

ADDRESSES: Send comments on the proposal to' Federal Aviation Administration, Manage, Systems Management Branch, Air Traffic Division, ACE–530, 601 East 12th Street, Kansas City, Missouri 64106, Telephone (816) 426–3408.

The official docket may be examined at the Office of the Assistant Chief Counsel, Central Region, Federal Aviation Administration, Room 1558, 601 East 12th Street, Kansas City, Missouri.

An informal docket may be examined at the Office of the Manager, System Management Branch, Air Traffic Division.

FOR FURTHER INFORMATION CONTACT:

Dale Carnine, Airspace Specialist, System Management Branch, Air Traffic Division, ACE–530, FFA, Central Region, 601 East 12th Street, Kansas City, Missouri 64106. Telephone (816) 426–3408.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons may participate in the proposed rulemaking by submitting such written data, views or arguments as they may desire. Communications should identify the airspace docket number, and be submitted in duplicate to the System Management Branch, Air Traffic Division, Federal Aviation Administration, 601 East 12th Street, Knasas City, Missouri 64106. All communications received on or before the closing date for comments will be considered before action is taken on the proposed amendment. The proposal contained in this Notice may be changed in light of the comments received. All comments received will be available both before and after the closing date for comments in the Rules Docket for examination by interested persons.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the Federal Aviation Administration, System Management Branch, 601 East 12th Street, Kansas City, Missouri 64106, or by calling (816) 426–3408.

Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRMs should also request a copy of Advisory Circular No. 11–2A which describes the application procedure.

The Proposal

The FAA is considering an amendment to subpart F of part 71 of the Federal Aviation Regulations [14 CFR part 71 to altering the description of the control zone for Offutt Air Force Base, Nebraska. The Department of the Air Force has requested that action be taken to correct the airport coordinates and to add the additional airspace that is required to protect the ILS approach to Runway 30. This action is necessary to redefine controlled airspace to this location.

Section 71.171 of part 71 of the Federal Aviation Regulations was republished in Handbook 7400.6E dated January 3, 1989.

The FAA has determined that this proposed regulation ony involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore, this proposed regulation—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrent preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, control zones.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE, AND REPORTING POINTS.

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854: 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983); 14 CFR 11.69.

§ 71.171 [Amended]

2. Section 71.171 is amended as follows:

Offutt AFB, NE [Revised]

Within a 5.5-mile radius of Offutt AFB (1at. 4°07'06"N., long. 95°54'44" W.), within 2 miles each side of the Offutt Runway 30 ILS localizer southeast course to a point 7.5 miles from the origin.

Issued in Kansas City, Missouri, on October 17, 1989.

Clarence E. Newbern,

Manager, Air Traffic Division Central Region.

[FR Doc. 89–25729 Filed 10–31–89; 8:45 am]

BILLING CODE 4910–13–M

14 CFR Part 71

[Airspace Docket No. 89–ACE–33]

Proposed Alteration of Control Zone and Transition Area—Jefferson City, MO

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This Notice proposes to alter the control zone and the 700-foot transition area at Jefferson City, Missouri. An additional instrument approach procedure is being developed for Jefferson City Memorial Airport, Jefferson City, Missouri, utilizing the NOAH nondirectional radio beacon (NDB) as a navigational aid. The intended effect of this proposed action is to provide additional controlled airspace for aircraft executing the new instrument approach procedures to the Jefferson City Memorial Airport.

DATES: Comments must be received on or before December 1, 1989.

ADDRESSES: Send comments on the proposal to: Federal Aviation Administration, Manager, Systems Management Branch, Air Traffic Division, ACE–530, 601 East 12th Street, Kansas City, Missouri 64106, Telephone (816) 426–3408.

The official docket may be examined at the Office of the Assistant Chief Counsel, Central Region, Federal Aviation Administration, Room 1558, 601 East 12th Street, Kansas City, Missouri.

An informal docket may be examined at the Office of the Manager, System Management Branch, Air Traffic Division.

FOR FURTHER INFORMATION CONTACT:

Lewis G. Earp, Airspace Specialist, System Management Branch, Air Traffic Division, ACE–530, FAA, Central Region, 601 East 12th Street, Kansas City, Missouri 64106, Telephone (816) 426–3406.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons may participate in the proposed rulemaking by submitting such written data, views or arguments as they may desire. Communications should identify the airspace docket number, and be submitted in duplicate to the System Management Branch, Air Traffic Division, Federal Aviation Administration, 601 East 12th Street, Kansas City, Missouri 64106. All communications received on or before the closing date for comments will be considered before action is taken on the proposed amendment. The proposal contained in this Notice may be changed in light of the comments received. All comments received will be available both before and after the closing date for comments in the Rules Docket for examination by interested persons.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the Federal Aviation Administration, System Management Branch, 601 East 12th Street, Kansas City, Missouri 64106, or by calling (816) 426–3408.

VOL 54 ISS 210 NOV 1 1989 UMI

Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRMs should also request a copy of Advisory Circular No. 11-2A which describes the application procedure.

The Proposal

The FAA is considering an amendment to subpart F, section 71.171 of the Federal Aviation Regulations [14 CFR Part 71] and subpart G, section 71.181 of the Federal Aviation Regulations [14 CFR 71.181] by altering the control zone and 700-foot transition area at Jefferson City, Missouri. This proposed action is necessary in order to provide additional controlled airspace for aircraft executing a new instrument approach procedure to Runway 12 at the Jefferson City Memorial Airport. Therefore, the control zone and the transition area at this location would be altered as described in this proposed airspace action. The intended effect of this proposal is to provide adequate controlled airspace for aircraft executing this new instrument approach procedure. Sections 71.171 and 71.181 of Part 71 of the Federal Aviation Regulations were republished in Handbook 7400.6E dated January 3, 1989.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore, this proposed regulation—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a reguloatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, Control zones, and Transition areas.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE, AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); 14 CFR 11.69.

Jefferson City, MO [Revised]

2. Section 71.171 is amended as follows:

§ 71.171 [Amended]

Within a 5-mile radius of Jefferson City Memorial Airport (lat. 30°35'28" N., long. 92°09'22" W.); and within 3 miles each side of the NOAH NDB (lat. 38°38'14" N., long. 92°14'40" W.) 303° bearing, extending from the 5-mile radius to 8 miles northwest of the NOAH NDB, and within 2.5 miles each side of the Memorial NDB (lat. 38°33'14" N., long. 92°04'40" W.) 122° bearing, extending from the 5-mile radius zone to 11.5 miles southeast of the Memorial NDB. This control zone shall be effective during the times established by Notice to Airmen and continuously published in the Airport/Facility Directory.

§ 71.181 [Amended]

3. Additionally, Section 71.181 is amended as follows:

Jefferson City, MO [Revised]

That airspace extending upward from 700 ft. above the surface within an 8.5-mile radius of the Jefferson City Memorial Airport (lat. 38°35'28" N., long. 92°09'22" W.) and within 3.5 miles each side of the NOAH NDB (lat. 38°38'14" N., long. 92°14'40" W.) 303° bearing, extending from the 8.5-mile radius area to 16.5 miles northwest of the airport, and within 4.5 miles each side of the Runway 30 localizer final approach course extending from the 8.5-mile radius to 12 miles southeast of the Memorial NDB (lat. 38°33'14" N., long. 92°04'40" W.).

Issued in Kansas City, Missouri, on October 17, 1989.

Clarence E. Newbern,

Manager, Air Traffic Division.

14 CFR Part 71

[Airspace Docket No. 89-ACE-31]

Proposed Alteration of Transition Area—Omaha, NE

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This notice proposes to alter the 700-foot transition area at Omaha, Nebraska. This alteration is necessary to correct the airport coordinates for the airfield at Offutt Air Force Base and for Omaha Eppley Field.

DATES: Comments must be received on or before December 1, 1989.

ADDRESSES: Send comments on the proposal to: Federal Aviation Administration, Manager, Systems Management Branch, Air Traffic Division, ACE-530, 601 East 12th Street, Kansas City, Missouri 64106, Telephone (816) 426-3408.

The official docket may be examined at the Office of the Assistant Chief Counsel, Central Region, Federal Aviation Administration, Room 1558, 601 East 12th Street, Kansas City, Missouri.

An informal docket may be examined at the Office of the Manager, System Management Branch, Air Traffic Division.

FOR FURTHER INFORMATION CONTACT: Dale Carnine, Airspace Specialist, System Management Branch, Air Traffic Division, ACE-530, FAA, Central Region, 601 East 12th Street, Kansas City, Missouri 64106, Telephone (816) 426-3408.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons may participate in the proposed rulemaking by submitting such written data, views or arguments as they may desire. Communications should identify the airspace docket number, and be submitted in duplicate to the System Management Branch, Air Traffic Division, Federal Aviation Administration, 601 East 12th Street, Kansas City, Missouri 64106. All communications received on or before the closing date for comments will be considered before action is taken on the proposed amendment. The proposal contained in this Notice may be changed in light of the comments received. All comments received will be available both before and after the closing date for comments in the Rules Docket for examination by interested persons.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the Federal Aviation Administration, System Management Branch, 601 East 12th Street, Kansas City, Missouri 64106, or by calling (816) 426-3408. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRMs should also request a copy of Advisory Circular No. 11-2A which describes the application procedure.

The Proposal

The FAA is considering an amendment to subpart G of part 71 of the Federal Aviation Regulations (14 CFR part 71) by altering the 700-foot transition area at Omaha, Nebraska. The Department of the Air Force has requested that the control zone for the airfield at Offutt Air Force Base be altered. As a result, this proposed action is necessary to redefine the 700-foot transition area at Omaha, Nebraska, in order to correct the coordinates for the Offutt Air Force Base Airfield. This action would also correct the coordinates for Eppley Field, Omaha, Nebraska.

Section 71.181 of part 71 of the Federal Aviation Regulations was republished in Handbook 7400.6E dated January 3, 1989.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore, this proposed regulation—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, Transition areas.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE, AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); 14 CFR 11.69.

§ 71.181 [Amended]

Omaha, NE [Amended]

On the second line change "41°18'00" N., Long. 95°53'36" W., to read 41°18'06" N., Long. 95°53'36" W." On the eighth line change "41°07'20" N., Long. 95°54'35" W." to read "41°07'06" N., Long. 95°54'44" W."

Issued in Kansas City, Missouri, on October 17, 1989.

Clarence E. Newbern,

Manager, Air Traffic Division Central Region.

[FR Doc. 89-25730 Filed 10-31-89; 8:45 am]

BILLING CODE 4910-13-M

DEPARTMENT OF THE TREASURY

Customs Service

19 CFR Part 4

Fuel Oil Blending—Creation of a New and Different Product for the Purposes of the Coastwise Laws

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Notice of proposed change of position; solicitation of comments.

SUMMARY: The U.S. Customs Service is reviewing its current position on fuel oil blending operations as they relate to the coastwise laws. The current position is that a fuel oil blending operation which changes the original product in sulfur content, specific gravity, pour point, and viscosity creates a new and different product. Customs now believes that this policy may not be correct for all such blending operations. Whether a new and different product is created by such operations is significant because foreign-flag ships are prohibited from transporting merchandise (including oil) between ports in the U.S. under existing law unless prior to delivering the cargo to its U.S. port of destination it has been transformed into a new and different product from that which was laden in a U.S. port. Because this possible change of position could have an impact on certain members or the public, this notice invites public comments on the subject.

DATE: Comments must be received on or before January 2, 1990.

ADDRESS: Comments (preferably in triplicate) may be addressed to, and inspected at, the Regulations and Disclosure Law Branch, Room 2119, U.S. Customs Service, 1301 Constitution Avenue NW., Washington, DC 20229.

FOR FURTHER INFORMATION CONTACT: Glen Vereb, Carrier Rulings Branch, (202) 566-5706.

SUPPLEMENTARY INFORMATION:

Background

The Customs Service is reviewing its current position that a fuel oil blending operation which changes the original product in sulphur content, specific gravity, pour point, and viscosity generally creates a new and different product within the meaning of § 4.80b(a), Customs Regulations (19 CFR 4.80b(a)).

Whether a new product is created or not is particularly significant because of the implications associated with transportation of the product. Title 46, United States Code Appendix, section 883 (46 U.S.C. App. 883), commonly called the Jones Act, provides, in part, that no merchandise shall be transported between points in the United States embraced within the coastwise laws, either directly or via a foreign port, or for any part of the transportation, in any vessel other than a vessel built in and documented under the laws of the United States and owned by citizens of the United States.

The case of *American Maritime Association* v. *Blumenthal*, 590 F. 2d 1156 (1978), involved the applicability of 46 U.S.C. App. 883 to the transportation of crude oil by a foreign-flag tanker from Valdez, Alaska, to the U.S. Virgin Islands, and the subsequent transfer of products refined from that oil from the Virgin Islands to the continental United States. The refining process turned the Alaska crude oil into eleven different products, each different in name, physical and chemical character, and use, both from each other and from the crude oil. Because of these processes, it was determined that refining created new and different products from the Alaskan crude, and therefore their transportation by foreign-flag vessels from the Virgin Islands to the United States did not violate section 883.

Section 4.80b was added to the Customs Regulations in 1979 in order to enunciate the Customs position that merchandise must undergo some manufacturing or processing at an offshore port or place which results in a new or different product to be exempt from the restrictions of the coastwise laws.

Historically, in determining whether a new or different product has occurred as the result of a particular fuel oil blending operation, Customs has looked to whether the resultant product differed from the original products in four characteristics: sulphur content, specific gravity, pour point, and viscosity. Additionally, Customs has held that merchandise manufactured or processed into a new and different product must

BEST COPY AVAILABLE

VOL 54 ISS 210 NO 1 1989 UMI

be landed and processed at an intermediate port or place other than a coastwise point. The manufacturing or processing may not take place on board a vessel.

Customs has reviewed its current treatment of the oil blending process, and now is of the position that without specific data concerning the process and materials used, it is not possible to determine whether a new and different product has been manufactured or processed within the meaning of § 4.80b(a), Customs Regulations, as a result of blending of fuel oil. Customs believes that the process of refining whereby the actual chemical structure of the original product is altered creates a new and different product. Although blending changes some characteristics (i.e., sulphur content, specific gravity, pour point, and viscosity), these changes would have to be of significant proportions for a new and different product to be created within the meaning of § 4.80b(a), Customs Regulations.

Customs has suspended all rulings on this matter until the issue has been finally resolved. It is Customs view that, prior to reaching future determinations that a new and different product has in fact been created by a blending operation for purposes of § 4.80b(a), the procedures and specific data of such operations should be submitted by the party seeking such a determination. Customs will then review the data and make the necessary determination, which will form the basis for a decision regarding any possible violation of the coastwise laws.

Authority

Because a change of position, if implemented, will result in some operational changes in affected business entities, Customs is giving interested parties notice and an opportunity to comment in accordance with § 177.10(c)(2), Customs Regulations (19 CFR 177.10(c)(2)).

Request for Comments

Accordingly, Customs is requesting interested parties to submit comments on the extent to which the blending of fuel oil is necessary in order to create a new and different product within the meaning of § 4.80b(a), or whether some degree of refining is necessary to create such a product.

Before making a final determination in this matter, consideration will be given to any written comments timely submitted to Customs. Comments submitted will be available for public inspection in accordance with the Freedom of Information Act (5 U.S.C. 552) and § 1.6, Treasury Department Regulations (31 CFR 1.6), and § 103.11(b), Customs Regulations (19 CFR 103.11(b)), on regular business days between the hours of 9:00 a.m. and 4:30 p.m. at the Regulations and Disclosure Law Branch, U.S. Customs Service Headquarters, 1301 Constitution Avenue, NW. Room 2119, Washington, DC 20229.

Drafting Information

The principal author of this document was Peter T. Lynch, Regulations and Disclosure Law Branch, Office of Regulations and Rulings; U.S. Customs Service. However, personnel from other Customs offices participated in its development.

Samuel H. Banks,

Acting Commissioner of Customs.

Approved: October 25, 1989.

Salvatore R. Martoche,

Assistant Secretary of the Treasury.

BILLING CODE 4820-02-M

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 914

Indiana Regulatory Program; Show Cause Orders

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSM), Interior.

ACTION: Proposed rule.

SUMMARY: OSM is announcing the receipt of proposed amendments to the Indiana regulatory program (hereinafter referred to as the Indiana program) under the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The amendments consist of proposed changes to the Indiana Surface Mining Rules concerning the suspension or revocation of permits. The amendments are intended to improve the operational efficiency of the rules.

This notice sets forth the times and locations that the Indiana program and the proposed amendments will be available for public inspection, the comment period during which interested persons may submit written comments on the proposed amendments, and the procedures that will be followed for the public hearing, if one is requested.

DATES: Written comments must be received on or before 4:00 p.m. on December 1, 1989; if requested, a public hearing on the proposed amendments is scheduled for 1:00 p.m. on November 26, 1989; and requests to present oral testimony at the hearing must be received on or before 4:00 p.m. on November 16, 1989.

ADDRESSES: Written comments and requests to testify at the hearing should be directed to Mr. Richard D. Rieke, Director, Indianapolis Field Office, at the address listed below. If a hearing is requested, it will be held at the same address.

Copies of the Indiana program, the amendments, a listing of any scheduled public meeting, and all written comments received in response to this notice will be available for public review at the addresses listed below, during normal business hours Monday through Friday, excluding holidays. Each requester may receive, free of charge, one single copy of the proposed amendment by contacting the OSM Indianapolis Field Office:

Office of Surface Mining Reclamation and Enforcement, Indianapolis Field Office, Minton-Capehart Federal Building, 575 North Pennsylvania Street, Room 301, Indianapolis, IN 46204. Telephone: (317) 226-6166.

Indiana Department of Natural Resources, 608 State Office Building, Indianapolis, IN 46204. Telephone (317) 232-1547.

FOR FURTHER INFORMATION CONTACT: Mr. Richard D. Rieke, Director, Indianapolis Field Office, (317) 226-6166.

SUPPLEMENTARY INFORMATION:

I. Background on the Indiana Program

The Secretary of the Interior conditionally approved the Indiana program, effective July 29, 1982.

Information pertinent to the general background on the Indiana program, including the Secretary's findings, the disposition of comments, and a detailed explanation of the conditions of approval of the Indiana program can be found in the July 26, 1982 **Federal Register** (47 FR 32107). Subsequent actions concerning the conditions of approval and program amendments are identified at 30 CFR 914.10, 914.15, and 914.16.

II. Discussion of Amendments

The Indiana Department of Natural Resources (IDNR) submitted proposed amendments to the Indiana program at 310 Indiana Administrative Code (IAC) 12-6-6.5 (Administrative Record No. IND-0607). The proposed changes are briefly summarized below:

The existing language of paragraph 310 IAC 12-6-6.5(c) concerning requirements for providing public notice

of show cause orders is deleted, and is replaced by new language concerning public notice. Paragraph 310 IAC 12-6-6.5(d) concerning requests for a hearing and providing public notice of hearings is proposed to be deleted. Paragraph 310 IAC 12-6-6.5(e) concerning the requirements for the issuance of the Director's decision following a hearing is proposed to be deleted. Various reference citation changes and stylistic changes are made throughout 310 IAC 12-6-6.5.

III. Public Comment Procedures

In accordance with the provisions of 30 CFR 732.17(h), OSM is now seeking comment on whether the amendments proposed by IDNR satisfy the requirements of 30 CFR 732.15 for the approval of State program amendments. If the amendments are deemed adequate, they will become part of the Indiana program.

Written Comments

Written comments should be specific, pertain only to the issues proposed in this rulemaking, and include explanations in support of the commenter's recommendations. Comments received after the time indicated under **"DATES"** or at locations other than the Indianapolis Field Office will not necessarily be considered in the final rulemaking or included in the Administrative Record.

Public Hearing

Persons wishing to comment at the public hearing should contact the person listed under **"FOR FURTHER INFORMATION CONTACT"** by the close of business on November 16, 1989. If no one requests an opportunity to comment at a public hearing, the hearing will not be held.

Filing of a written statement at the time of the hearing is requested as it will greatly assist the transcriber. Submission of written statements in advance of the hearing will allow OSM officials to prepare adequate responses and appropriate questions.

The public hearing will continue on the specified date until all persons scheduled to comment have been heard. Persons in the audience who have not been scheduled to comment and who wish to do so will be heard following those scheduled. The hearing will end after all persons scheduled to comment and persons present in the audience who wish to comment have been heard.

Public Meeting

If only one person requests an opportunity to comment at a hearing, a public meeting, rather than a public hearing, may be held. Persons wishing to meet with OSM representatives to discuss the proposed amendment may request a meeting at the Indianapolis Field Office by contacting the person listed under **"FOR FURTHER INFORMATION CONTACT."** All such meetings will be open to the public and, if possible, notices of meetings will be posted at the locations listed under **"ADDRESSES."** A written summary of each meeting will be included in the Administrative Record.

List of Subjects in 30 CFR Part 914

Coal mining, Intergovernmental relations, Surface mining, Underground mining.

Dated: October 24, 1989.

David G. Simpson,

Acting Assistant Director, Eastern Field Operations.

BILLING CODE 4310-05-M

30 CFR Part 914

Indiana Regulatory Program; Water Replacement

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSM), Interior.

ACTION: Proposed rule.

SUMMARY: OSM is announcing the receipt of proposed amendments to the Indiana regulatory program (hereinafter referred to as the Indiana program) under the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The amendments consist of proposed changes to the Indiana Surface Mining Rules concerning hydrologic balance; water rights and replacement. The amendments are intended to improve the operational efficiency of the rules.

This notice sets forth the times and locations that the Indiana program and the proposed amendments will be available for public inspection, the comment period during which interested persons may submit written comments on the proposed amendments, and the procedures that will be followed for the public hearing, if one is requested.

DATES: Written comments must be received on or before 4:00 p.m. on December 1, 1989; if requested, a public hearing on the proposed amendments is scheduled for 1:00 p.m. on November 26, 1989; and requests to present oral testimony at the hearing must be received on or before 4:00 p.m. on November 16, 1989.

ADDRESSES: Written comments and requests to testify at the hearing should be directed to Mr. Richard D. Rieke, Director, Indianapolis Field Office, at the address listed below. If a hearing is requested, it will be held at the same address.

Copies of the Indiana program, the amendments, a listing of any scheduled public meeting, and all written comments received in response to this notice will be available for public review at the addresses listed below, during normal business hours Monday through Friday, excluding holidays. Each requester may receive, free of charge, one single copy of the proposed amendment by contacting the OSM Indianapolis Field Office:

Office of Surface Mining Reclamation and Enforcement, Indianapolis Field Office, Minton-Capehart Federal Building, 575 North Pennsylvania Street, Room 301, Indianapolis, IN 46204. Telephone: (317) 226-6166.

Indiana Department of Natural Resources, 608 State Office Building, Indianapolis, IN 46204. Telephone (317) 232-1547.

FOR FURTHER INFORMATION CONTACT: Mr. Richard D. Rieke, Director, Indianapolis Field Office, (317) 226-6166.

SUPPLEMENTARY INFORMATION:

I. Background on the Indiana Program

The Secretary of the Interior conditionally approved the Indiana program, effective July 29, 1982.

Information pertinent to the general background on the Indiana program, including the Secretary's findings, the disposition of comments, and a detailed explanation of the conditions of approval of the Indiana program can be found in the July 26, 1982 **Federal Register** (47 FR 32107). Subsequent actions concerning the conditions of approval and program amendments are identified at 30 CFR 914.10, 914.15, and 914.16.

II. Discussion of Amendments

The Indiana Department of Natural Resources (IDNR) submitted proposed amendments to the Indiana program at 310 Indiana Administrative Code (IAC) 12-5-29 and 310 IAC 12-5-94 (Administrative Record No. IND-0663). The proposed changes are briefly summarized below:

The amendment to 310 IAC 12-5-29 adds the words "pursuant to a lawful order of an agency or court order under IC 13-2-2.5 or another state water rights law" to the first sentence which requires replacement of water rights. The words "within a reasonable time" are deleted from the first sentence following the word "replace". A new sentence is added to the rule which states: Water

VOL 54 ISS 210 NO 1 1989 UMI

replacement rights are not determined by this article. The proposed amendments to 310 IAC 12–5–04 are identical to the proposed changes to 310 IAC 12–5–29 discussed above. Other changes to 310 IAC 12–5–29 and 310 12–5–04 are stylistic.

III. Public Comment Procedures

In accordance with the provisions of 30 CFR 732.17(h), OSM is now seeking comment on whether the amendments proposed by IDNR satisfy the requirements of 30 CFR 732.15 for the approval of State program amendments. If the amendments are deemed adequate, they will become part of the Indiana program.

Written Comments

Written comments should be specific, pertain only to the issues proposed in this rulemaking, and include explanations in support of the commenter's recommendations. Comments received after the time indicated under "**DATES**" or at locations other than the Indianapolis Field Office will not necessarily be considered in the final rulemaking or included in the Administrative Record.

Public Hearing

Persons wishing to comment at the public hearing should contact the person listed under "**FOR FURTHER INFORMATION CONTACT**" by the close of business on November 16, 1989. If no one requests an opportunity to comment at a public hearing, the hearing will not be held.

Filing of a written statement at the time of the hearing is requested as it will greatly assist the transcriber. Submission of written statements in advance of the hearing will allow OSM officials to prepare adequate responses and appropriate questions.

The public hearing will continue on the specified date until all persons scheduled to comment have been heard. Persons in the audience who have not been scheduled to comment and who wish to do so will be heard following those scheduled. The hearing will end after all persons scheduled to comment and persons present in the audience who wish to comment have been heard.

Public Meeting

If only one person requests an opportunity to comment at a hearing, a public meeting, rather than a public hearing, may be held. Persons wishing to meet with OSM representatives to discuss the proposed amendment may request a meeting at the Indianapolis Field Office by contacting the person listed under "**FOR FURTHER INFORMATION CONTACT.**" All such meetings will be open to the public and, if possible, notices of meetings will be posted at the locations listed under "**ADDRESSES.**" A written summary of each meeting will be included in the Administrative Record.

30 CFR Part 936

Oklahoma Abandoned Mine Land Reclamation Plan

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSM), Interior.

ACTION: Proposed rule; public comment period and opportunity for public hearing on proposed amendment.

SUMMARY: On August 24, 1989, the State of Oklahoma submitted to OSM a proposed amendment to its abandoned mine land reclamation (AMLR) plan. The proposed amendment provides new procedures for the ranking of eligible reclamation projects affeced by surface and underground coal mining processes that qualify for funding under Title IV of the Surface Mining Control and Reclamation Act of 1977 (SMCRA), 30 U.S.C. 1201 *et seq.* In addition, the amendment discusses how those projects that will be included in the State's annual reclamation grant request will be selected. OSM is seeking public comments on the proposed changes.

DATES: Written comments on the proposed rule must be received by 4:00 p.m. local time on December 1, 1989. Comments received after that date may not necessarily be considered in the decision document. If requested, a public hearing will be held at 10:00 a.m. local time on November 27, 1989 regarding the proposed rule. OSM reserves the right to cancel the hearing without further notice if insufficient requests are received. Requests to present oral testimony at the hearing must be received by 4:00 p.m. local time on November 16, 1989.

Public meetings: Scheduled on request only.

ADDRESSES: Written comments, requests to present oral testimony, and requests for a hearing should be mailed or hand carried to Mr. James H. Moncrief at the address listed below. Copies of the Oklahoma plan, the proposed amendment to the plan, and all written comments received in response to this notice will be available for public review and copying at the address listed below during normal business hours Monday through Friday, excluding holidays. Each requestor may receive, free of charge, one copy of the proposed amendment by contacting, the OSM Tulsa Field Office.

Mr. James H. Moncrief, Director, Tulsa Field Office, Office of Surface Mining Reclamation and Enforcement, 5100 E. Skelly Drive, Suite 550, Tulsa, Oklahoma 74135, (918) 581–6430

or

Oklahoma Conservation Commission, Room 160, 2800 N. Lincoln Boulevard, Oklahoma City, Oklahoma 73105, (405) 521–2384.

FOR FURTHER INFORMATION CONTACT: Mr. James H. Moncrief, Director, Tulsa Field Office, at the address listed in "**ADDRESSES,**" telephone number (918) 581–6430.

SUPPLEMENTARY INFORMATION:

I. Background

The Secretary of the Interior (Secretary) approved the Oklahoma AMLR program submitted on June 30, 1981. Information pertinent to the general background, revisions, and amendment to the initial program submission, as well as the Secretary's findings and disposition of comments can be found in the January 21, 1982, **Federal Register** (47 FR 2991).

Information concerning the approved plan and the proposed amendment may be obtained from the agency offices listed under "**ADDRESSES.**"

The Secretary has adopted regulations that specify the content requirements of a State's reclamation plan and the criteria for plan approval (30 CFR part 884). The regulations provide that a State may submit to the Director of OSM proposed amendments or revisions to the approved reclamation plan. If the amendments or revisions change the scope of the plan or major policies followed by the State in the conduct of its reclamation program, the Director must follow the procedures set out in 30 CFR 884.14 in approving or disapproving the amendment or revision.

II. Discussion of Proposed Amendment

By letter dated August 8, 1989, Oklahoma submitted a reclamation plan amendment to OSM (Administrative Record No. AML–OK 42). The proposed amendment concerns the project selection criteria as specified in 30 CFR 884.13(c)(2). The Oklahoma Conservation Commission (OCC) has submitted revised project scoring criteria to ensure that projects involving threats to the public health and safety are addressed before lower priority problems.

Project ranking and selection procedures are described in general terms in 30 CFR 874.13. Specifically, reclamation projects should reflect the priorities set out in Section 403 of SMCRA and should be accomplished in accordance with OSM's "Final Guidelines for Reclamation Programs and Projects" (45 FED. Reg. 14810–14819, March 6, 1980).

OSM regulations do not provide any specific methodology for selecting and ranking projects. However, OSM did develop a model AML plan to assist the States in developing their reclamation plans. As part of this model, a site evaluation matrix was designed together with an objective, quantifiable method for ranking specific priority problems. The site matrix contains certain environmental, socio-economic, programmatic, and technical factors. Each site has a specific priority; therefore, each site can be ranked numerically depending on the matrix score. The higher ranking projects within each priority are then selected for funding in a State's annual grant request.

For the purposes of AML project site selection, OCC has proposed two matrices. One matrix would be used to evaluate surface mine sites and the other for underground mines.

This was done because the hazards associated with the two types of mines are very different and difficult to compare.

OSM is requesting specific comments on the adequacy of Oklahoma's revised ranking and selection procedures.

III. Public Comment Procedures

In accordance with 30 CFR 732.17(h), OSM is seeking comments on whether the proposed amendment satisfies the applicable program approval criteria of 30 CFR 732.15. If the amendment is deemed adequate, it will become part of the Oklahoma program.

1. Written Comments

Written comments should be specific, pertain only to the issues proposed in this rulemaking, and include explanations in support of the commenter's recommendations. Comments received after the time indicated under "**DATES**" or at locations other than the Tulsa Field Office will not necessarily be considered in the final rulemaking or included in the administrative record.

2. Public Hearings

Persons wishing to testify at the public hearing should contact Mr. James H. Moncrief by 4:00 p.m., local time on November 16, 1989. The location and time of the hearing will be arranged with those persons requesting the hearing. If no one requests an opportunity to testify at the public hearing, the hearing will not be held.

Filing of a written statement at the time of the hearing is requested to assist the transcriber. Submission of a written statement in advance of the hearing will allow OSM officials to prepare adequate responses and appropriate questions.

The public hearing will continue on the specified date until all persons scheduled to testify have been heard. Persons in the audience who have not been scheduled to testify, but who wish to do so, will be heard following those who have been scheduled. The hearing will end after all persons scheduled to testify and persons present in the audience who wish to testify have been heard.

3. Public Meeting

If only one person requests an opportunity to testify at a hearing, a public meeting, rather than a public hearing, may be held. Persons wishing to meet with OSM representatives to discuss the proposed amendment may request a meeting by contacting Mr. James H. Moncrief. The meeting will be open to the public and, if possible, notice of the meeting will be posted at the locations listed under "**ADDRESSES.**" A written summary of each meeting will be made part of the administrative record.

IV. Procedural Matters

OSM intends to continue to discuss the amendment with representatives of the State throughout the review process. All contacts between OSM personnel and representatives of the State will be conducted in accordance with OSM's guidelines on contacts with states published September 19, 1979 (44 FR 54444).

1. Federal Paperwork Reduction Act

This rule does not contain information collection requirements that require approval by the Office of Management and Budget (OMB) under 44 U.S.C. 3507 *et seq.*

2. Executive Order No. 12291 and the Regulatory Flexibility Act

On October 4, 1985, OMB granted OSM an exemption from sections 3, 4, 7, and 8 of Executive Order 12291 for actions directly related to apporval or disapproval of State reclamation plans or amendments. Therefore, this action is exempt from preparation of a Regulatory Impact Analysis and regulatory review by OMB. The Department of the Interior has determined that this rule would not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). No burden would be imposed upon entities operating in compliance with the Act.

3. Compliance With the National Environmental Policy Act

Approval of State AMLR plans and amendments is categorically excluded from compliance with the National Environmental Policy Act by the Department of the Interior's Manual, 516 DM 2. appendix 1.

BILLING CODE 4310–05–M

DEPARTMENT OF VETERANS AFFAIRS

38 CFR Part 36

RIN 2900–AD94

Loan Guaranty; Pre-Foreclosure Waiver or Compromise of Debts

AGENCY: Department of Veterans Affairs.

ACTION: Proposed regulatory amendments.

SUMMARY: The Department of Veterans Affairs (VA) is proposing amendments to its loan guaranty regulations to establish a new procedure for the waiver and compromise of loan guaranty indebtedness. Under the new procedure, indebtedness could be waived or compromised prior to foreclosure, in which case a Veteran's debt could be reduced making it more likely to be collected.

DATES: Comments must be received on or before December 1, 1989. Comments will be available for public inspection until December 11, 1989.

ADDRESSES: Interested persons are invited to submit written comments, suggestions or objections regarding this

VOL 54 ISS 210 NO 1 1989 UMI

proposal to the Secretary of Veterans Affairs (271A), Department of Veterans Affairs, 810 Vermont Avenue NW., Washington, DC 20420. All written comments received will be available for public inspection only in room 132, Veterans Services Unit, at the above address between the hours of 8 a.m. and 4:30 p.m. Monday through Friday (except holidays) until December 11, 1989.

FOR FURTHER INFORMATION CONTACT: Mr. Leonard A. Levy, Assistant Director for Loan Management (261), Loan Guaranty Service, Veterans Benefits Administration, (202) 233–6376.

SUPPLEMENTARY INFORMATION: Under section 1810 of title 38, United States Code, VA guarantees a portion of the loan made to an eligible veteran to acquire or refinance a home, condominium, or manufactured home which is treated as real estate under State law, or to install certain energy conservation features or other home improvements. The guaranty is a promise by the Government to pay a portion of the veteran's indebtedness in the event of a loan default and eventual termination through foreclosure or other proceedings.

When a VA guaranteed loan goes into default and servicing efforts by the holder and VA fail, the holder proceeds with termination of the loan. Under 38 CFR 36.4323(e), any amounts paid by the Secretary or account of a VA guaranteed home loan constitute a debt owing to the United States by the veteran. Under 38 U.S.C. 1820, the Secretary has the authority to waive or compromise these debts or the right to collect these debts. Presently, the authority to waive debts is exercised, in appropriate cases, after a debt has been established against the veteran. The proceedings for waiver or compromise of a debt are generally held before a Committee on Waivers and Compromises which is constituted at the Regional Office level.

VA presently uses its authority to waive or compromise its right to collect debts before foreclosure when it is advantageous to the Government to do so. This occurs, for example, when VA accepts a deed in lieu of foreclosure or when VA authorizes a private sale of the property for less than the indebtedness and pays a partial claim. It can also occur when there is little or no likelihood that any debt established would be collectable, and VA therefore authorizes use of a foreclosure method which is more expeditious than an alternate method which would preserve the right to establishment of a debt.

The proposed regulatory amendments would expand VA's ability to waive or compromise its collection rights prior to the foreclosure. This could have significant advantages for veterans and VA. The number and size of debts established against veterans could be reduced and their collectability could be increased. Committee on Waiver and Compromise workloads could be reduced, as could the dollar amount of claims paid by VA.

VA proposes to use the following criteria in determining whether a waiver or compromise before foreclosure would be appropriate:

1. The veteran responded to VA outreach efforts and had personal contact with Loan Guaranty staff;
2. The veteran cooperated fully with VA in exploring all alternatives to foreclosure;
3. The default was not willful—there were no indications of fraud, material fault, misrepresentation or bad faith on the part of the veteran;
4. There were no realistic alternatives to foreclosure (or, VA and the veteran were able to take advantage of an alternative); and,
5. The veteran does not have the ability to repay the full amount of the anticipated debt after foreclosure within a reasonable period of time.

In such cases, it would be appropriate to fully or partially waive VA's collection rights prior to foreclosure depending on the benefits VA receives in connection with such action (e.g., obtaining a deed in lieu of foreclosure or a promissory note to secure repayment of an affordable amount of debt) and the veteran's estimated ability to repay a debt.

The Secretary hereby certifies that these proposed regulatory amendments will not, if promulgated, have a significant economic impact on a substantial number of small entities as they are defined in the Regulatory Flexibility Act, 5 U.S.C. 601–612. These proposed regulations will affect the debts established against individual veterans, who are not small entities within the coverage of the Act. Pursuant to 5 U.S.C. 605(b), these regulations are exempt from the initial and final regulatory analysis requirements of sections 603 and 604.

The proposed regulatory amendments have been reviewed pursuant to Executive Order 12291 and have been found to be nonmajor regulation changes. The regulations will not impact on the public or private sectors as major rules. They will not have an annual effect on the economy of $100 million or more; cause a major increase in cost or prices for consumers, individual industries, Federal, State or local government agencies, or geographic regions; or have other significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

(Catalog of Federal Domestic Assistance Program Number is 64.114)

List of Subjects in 38 CFR Part 36

Condominium, Handicapped, Housing loan programs-housing and community development, Veterans.

These amendments are promulgated under authority granted the Secretary by sections 210(c), 1803(c)(1), and 1820 of title 38 United States Code, and the enabling legislation.

Approved: October 3, 1989.

Edward J. Derwinski,

Secetary of Veterans Affairs.

PART 36—[AMENDED]

In 38 CFR part 36, Loan Guaranty, § 36.4323 is proposed to be amended by adding paragraphs (e)(1) through (e)(4) to read as follows:

§ 36.4323 Subrogation and indemnity.

* * * * *

(e) * * *

(1) Prior to a liquidation sale, an official authorized to act for the Secretary under provisions of § 36.4342 of this part may approve a complete release of the Secretary's right to collect a debt owing to the United States under this paragraph and/or under paragraph (a) of this section provided such official determines:

(i) The loan default was caused by circumstances beyond the control of the obligor;

(ii) There are no indications of fraud, material fault, misrepresentation or bad faith on the part of the obligor in obtaining the loan or in connnection with the loan default;

(iii) The obligor cooperated with VA in exploring all realistic alternatives to termination of the loan through foreclosure; and, either

(iv) Review of the obligor's current financial situation and prospective earning potential and obligations indicates there are no realistic prospects that the obligor could repay all or part of the anticipated debt within six years of the liquidation sale while providing the necessities of life for himself or herself and his or her family; or,

(v) In consideration for a release of the Secretary's collection rights the obligor completes, or VA is enabled to authorize, an action which reduces the Government's claim liability sufficiently to offset the amount of the anticipated indebtedness which would otherwise be established pursuant to this paragraph and likely be collectable by VA after foreclosure in view of the obligor's financial situation; such actions would include termination of the loan by means of a deed in lieu of foreclosure, private sale of the property for less than the indebtedness with a reduced claim paid by VA for the balance due the loan holder or enabling VA to authorize the holder to elect a more expeditious foreclosure procedure when such an election would result in the legal release of the obligor's liability.

(2) Prior to a liquidation sale, an official authorized to act for the Secretary under provisions of § 4342 of this part may approve a partial release of the Secretary's right to collect a debt owing to the United States under this paragraph and/or under paragraph (a) of this section provided such official determines:

(i) The loan default was caused by circumstances beyond the control of the obligor;

(ii) There are no indications of fraud, material fault, misrepresentation or bad faith on the part of the obligor in obtaining the loan or in connection with the loan default;

(iii) The obligor cooperated with VA in exploring all realistic alternatives to termination of the loan through foreclosure;

(iv) Review of the obligor's current financial situation and prospective earning potential and obligations indicates there are no realistic prospects that the obligor could repay all of the anticipated debt within six years of the liquidation sale while providing the necessities of life for himself or herself and his or her family; and,

(v) The obligor executes a written agreement acknowledging his or her liability to VA under this paragraph and executes a promissory note which provides for regular amortized monthly payments of an amount determined by VA in accordance with paragraph (e)(3) of this section including interest on the total amount payable at the rate in effect for loan guaranty liability accounts at the time of execution, or, the obligor agrees to other terms of repayment acceptable to VA including payment of a lump sum in settlement of his or her obligation under this paragraph;

(3) For purposes of this paragraph a review of an obligor's financial situation will take into consideration:

(i) The obligor's current and anticipated family income based on employment skills and experience;

(ii) The obligor's current short-term and long-term financial obligations, including the obligation to repay the Government which must be afforded consideration at least equal to his or her consumer debt obligations;

(iii) A current credit report on the obligor;

(iv) The obligor's assets and net worth; and

(v) The required balance available for family support used in underwriting VA guaranteed loans in the area.

The amount of indebtedness established will be such that the obligor's financial situation permits repayment of the debt to the Government in regular monthly installments of principal plus interest over a five year period commencing within one year after the date the promissory note is executed, except in those cases in which a lump sum settlement appears to be in the best interest of the Government or in which it appears the obligor may reasonably expect significant changes in his or her financial situation which would permit higher payments to be made during later periods of the life of the note.

(4) Determinations made under paragraphs (e)(2) and (e)(3) of this section are intended for the benefit of the Government in reducing the amount of claim payable by VA and/or avoiding the establishment of uncollectable debts owing to the United States. Such determinations are discretionary on the part of VA and shall not constitute a defense to any legal action to terminate the loan nor vest any appellate right in an obligor which would require further review of the case.

(Authority: 38 U.S.C. 210(c), 1803(c)(1))

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[PP 9E3737/P492; FRL3663–2]

Pesticide Tolerance for Fluazifop-Butyl

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: This document proposes that a tolerance be established for residues of the herbicide fluazifop-butyl in or on the raw agricultural commodity macadamia nuts. The proposed regulation to establish a maximum permissible level for residues of the herbicide in or on the commodity was requested in a petition submitted by the Interregional Research Project No. 4 (IR–4).

DATE: Comments, identified by the document control number [PP 9E3737/P492], must be received on or before December 1, 1989.

ADDRESS:

By mail, submit written comments to: Public Information Branch, Field Operations Division (H7506C), Office of Pesticide Programs, Environmental Protection Agency 401 M Street, SW., Washington, DC 20460.

In person, bring comments to: Room 246, CM #2, 1921 Jefferson Davis Highway, Arlington, VA 22202.

Information submitted as a comment concerning this document may be claimed confidential by marking any part or all of that information as "Confidential Business Information" (CBI). Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the comment that does not contain CBI must be submitted for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice. All written comments will be available for public inspection in Rm. 246 at the address given above, from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays.

FOR FURTHER INFORMATION CONTACT:

By mail: Hoyt Jamerson, Emergency Response and Minor Use Section (H7505C), Registration Division, Environmental Protection Agency, 401 M Street SW., Washington, DC 20460.

Office location and telephone number: Room 716B, CM #2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703) 557–2310.

SUPPLEMENTARY INFORMATION: The Interregional Research Project No. 4 (IR–4), New Jersey Agricultural Experiment Station, P.O. Box 231, Rutgers University, New Brunswick, NJ 08903, has submitted pesticide petition 9E3737 to EPA on behalf of Dr. Robert H. Kupelian, National Director, IR–4 Project, and the Agricultural Experiment Station of Hawaii.

The petition requested that the Administrator, pursuant to section 408(e) of the Federal Food, Drug, and Cosmetic Act, propose the establishment of a tolerance for residues of the herbicide (R)-2-[4-[[5-(trifluoromethyl)-2-pyridinyl]oxy]phenoxy]propanoic acid (resolved isomer of fluazifop), both free and conjugated and of butyl(R)-2-[4-[[5-(trifluoromethyl)-2-pyridinyl]oxy]phenoxy]propanoate (resolved isomer of fluazifop-p-butyl), all expressed as fluazifop, in or on the raw agricultural commodity macadamia

action amounts to an insignificant increase.

The nature of the residues is adequately understood and adequate analytical methods, high-pressure liquid

Dated: September 28, 1989.

Anne E. Lindsay,

Director, Registration Division, Office of Pesticide Programs.

Agency, 401 M Street SW., Washington, DC 20460.

In person, bring comments to: Room 246, CM#2, 1921 Jefferson Davis Highway,

data considered in support of the proposed tolerance include:

1. A 2-year feeding study in dogs with a NOEL for cholinesterase inhibition

secondary residues in meat, milk, or eggs are expected since the commodity is not considered a livestock feed commodity. There are currently no

VOL 54 ISS 210 NO 1 1989 UMI

(trifluoromethyl)-2-pyridinyl]oxy]phenoxy]propanoate (resolved isomer of fluazifop-p-butyl), all expressed as fluazifop, in or on the raw agricultural commodity macadamia nuts at 0.10 part per million (ppm).

The data submitted in the petition and other relevant material have been evaluated. The pesticide is considered useful for the purpose for which the tolerance is sought. The toxicological data considered in support of the proposed tolerance include:

1. A 2-year chronic feeding/oncogenicity study in rats which was negative for oncogenic potential under the conditions of the study at all feeding levels of 0.1, 0.3, 1.0, and 3.0 milligram (mg) per kilogram (kg) of body weight (bw) per day (equivalent to 2, 6, 20, and 60 ppm) and a systemic no-observed-effect level (NOEL) of 1 mg/kg/day.

2. A 90-day rat feeding study with a NOEL of 0.5 mg/kg/day (equivalent to 10 ppm).

3. A 90-day dog feeding study with a NOEL of 25 mg/kg/day (equivalent to 1,000 ppm).

4. A rat oral lethal dose LD50 of 3,300 mg/kg.

5. A rat teratology study with a teratogenic and maternal toxicity NOEL of 10 mg/kg/day (equivalent to 200 ppm) and a NOEL for fetotoxicity of 1 mg/kg/day.

6. A rabbit teratology study with a maternal NOEL of 30 mg/kg/day and a NOEL for fetotoxicity of 10 mg/kg/day (equivalent to 330 ppm).

7. A two-generation rat reproduction study with a NOEL of 80 ppm (equivalent to 4 mg/kg/day).

8. A 1-year dog feeding study with a NOEL of 5 mg/kg/day.

9. An 18-month mouse chronic feeding/oncogenicity study with no observed oncogenic potential under conditions of the study at all feeding levels of 0.1, 0.3, 1.0, and 3.0 mg/kg/day and a NOEL for systemic toxicity of 1.0 mg/kg/day (equivalent to 7 ppm).

10. An Ames test (negative), a rat cytogenetic study (negative), and an in-vitro transformation assay (negative).

11. An acute delayed neurotoxicity study in hens (negative).

The acceptable daily intake (ADI), based on the 2-year rat feeding study (NOEL of 1.0 mg/kg/day) and using a 100-fold safety factor, is calculated to be 0.01 mg/kg of body weight (bw)/day. The theoretical maximum residue contribution (TMRC) from existing tolerances for a 1.5-kg daily diet is calculated to be 0.002100 mg/kg/day; the current action will increase the TMRC by less than 0.000001 mg/kg/day (0.05 percent). Published tolerances utilize 20.90 percent of the ADI; the current action amounts to an insignificant increase.

The nature of the residues is adequately understood and adequate analytical methods, high-pressure liquid chromatography using an ultraviolet detector, are available in the *Pesticide Analytical Manual*, Volume II (PAM–II), for enforcement purposes.

Based on the above information considered by the Agency, the tolerance established by amending 40 CFR 180.411 would protect the public health. No secondary residues in meat, milk, poultry, or eggs are expected since macadamia nuts are not considered a livestock feed commodity.

Any person who has registered or submitted an application for registration of a pesticide, under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended, which contains any of the ingredients listed herein, may request within 30 days after publication of this document in the **Federal Register** that this rulemaking proposal be referred to an Advisory Committee in accordance with section 408(e) of the Federal Food, Drug, and Cosmetic Act.

Interested persons are invited to submit written comments on the proposed regulation. Comments must bear a notation indicating the document control number, [PP 9E3737/P492]. All written comments filed in response to this petition will be available in the Public Docket and Freedom of Information Section, at the address given above from 8 a.m. to 4 p.m., Monday through Friday, except legal holidays.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Pursuant to the requirements of the Regulatory Flexibility Act (Pub. L. 96–354, 94 Stat. 1164, 5 U.S.C. 601–612), the Administrator has determined that regulations establishing new tolerances or raising tolerance levels or establishing exemptions from tolerance requirements do not have a significant economic impact on a substantial number of small entities. A certification statement to this effect was published in the **Federal Register** of May 4, 1981 (46 FR 24950).

List of Subjects in 40 CFR Part 180

Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: September 28, 1989.

Anne E. Lindsay,

Director, Registration Division, Office of Pesticide Programs.

PART 180—[AMENDED]

Therefore, it is proposed that 40 CFR part 180 be amended as follows:

1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 346a and 371.

2. In § 180.411(c), by adding and alphabetically inserting the raw agricultural commodity macadamia nuts, to read as follows:

§ 180.411 Fluazifop-butyl; tolerances for residues.

* * * * *

(c) * * *

Commodity	Parts per million
* * * * *	
Macadamia nuts	0.1
* * * * *

Agency, 401 M Street SW., Washington, DC 20460.

In person, bring comments to: Room 246, CM#2, 1921 Jefferson Davis Highway, Arlington, VA 22202.

Information submitted as a comment concerning this document may be claimed confidential by marking any part or all of that information as "Confidential Business Information" (CBI). Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the comment that does not contain CBI must be submitted for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice. All written comments will be available for public inspection in Rm. 246 at the address given above, from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays.

FOR FURTHER INFORMATION CONTACT:

By mail: Hoyt L. Jamerson, Emergency Response and Minor Use Section (H7505C), Registration Division, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460.

Office location and telephone number: Room 716H, CM #2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703)–557–2310.

SUPPLEMENTARY INFORMATION: The Interregional Research Project No. 4 (IR–4), New Jersey Agricultural Experiment Station, P.O. Box 231, Rutgers University, New Brunswick, NJ 08903, has submitted pesticide petition (PP) 8E3618 to EPA on behalf of Dr. Robert H. Kupelian, National Director, IR–4 Project, and the Agricultural Experiment Station of California.

This petition requested that the Administrator, pursuant to section 408(e) of the Federal Food, Drug, and Cosmetic Act, propose the establishment of a tolerance for residues of the insecticide azinphos-methyl in or on the raw agricultural commodity pomegranates at 0.1 part per million (ppm).

The petitioner proposed that this use of the pesticide be limited to California based on the geographical representation of the residue data submitted. Additional residue data will be required to expand the area of usage. Persons seeking geographically broader registration should contact the Agency's Registration Division at the address provided above.

The data submitted in the petition and other relevant material have been evaluated. The pesticide is considered useful for the purpose for which the tolerance is sought. The toxicological data considered in support of the proposed tolerance include:

1. A 2-year feeding study in dogs with a NOEL for cholinesterase inhibition (ChE) at 5 ppm (equivalent to 0.125 mg/kg/day).

2. An oncogenicity bioassay in Osborne-Mendel rats with feeding levels of 78 or 156 ppm (equivalent to 3.9 or 7.8 mg/kg/day) in male rats and 62.5 or 125 ppm (equivalent to 3.1 or 6.3 mg/kg/day) in female rats. Azinphos-methyl was administered in the diet of the rats for 80 weeks and then the rats were observed for an additional 34 to 35 weeks. The occurrence of neoplasms of the thyroid and pancreas in male rats suggested, but did not provide sufficient evidence of, oncogenicity owing to the wide range of spontaneous incidence of thyroid and pancreatic tumors in this strain of rats. A repeat rat oncogenicity study is required since the study in Osborne-Mendel rats is judged to be inadequate.

3. An oncogenicity study in B6C3F1 mice with no observed oncogenic potential under the conditions of the study at dosage levels of 31.3 or 62.5 ppm in male mice and 62.5 or 125 ppm in female mice.

4. A 2-year oncogenicity study in CD1 mice with no observed oncogenic potential under the conditions of the study at dosage levels of 0, 5, 20, or 40 ppm (equivalent to 0, 0.75, 3, or 6 mg/kg/day).

5. A two-generation rat reproduction study with NOEL's for maternal and reproductive effects at 5 ppm.

6. A rat teratology study with NOEL's for maternal and developmental effects greater than 2 mg/kg.

7. Genotoxicity studies including: An Ames *Salmonella* test, an unscheduled DNA synthesis test, and an *in vitro* cytogenic test in human lymphocytes (all negative except for the cytogenic test in human lymphocytes, which showed clastogenic effects with metabolic activation at 500 micrograms/mililiter).

The provisional acceptable daily intake (PADI), based on the 2-year feeding study in dogs (NOEL of 0.125 mg/kg/day) and using a 100-fold uncertainty factor, is calculated to be 0.0013 mg/kg of body weight (bw)/day. The tolerance for pomegranates, which will utilize less than 0.001 percent of the PADI, will result in a negligible incremental increase in risk.

The nature of the residues is adequately understood and an adequate analytical method, gas-liquid chromatography, is available for enforcement purposes. An analytical method for enforcing this tolerance has been published in the Pesticide Analytical Manual (PAM), Vol. II. No secondary residues in meat, milk, or eggs are expected since the commodity is not considered a livestock feed commodity. There are currently no actions pending against the continued registration of this chemical.

Based on the above information considered by the Agency, the tolerance established by amending 40 CFR 180.154 would protect the public health. Therefore, it is proposed that the tolerance be established as set forth below.

Any person who has registered or submitted an application for registration of a pesticide, under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended, which contains any of the ingredients listed herein, may request within 30 days after publication of this document in the **Federal Register** that this rulemaking proposal be referred to an Advisory Committee in accordance with section 408(e) of the Federal Food, Drug, and Cosmetic Act.

Interested persons are invited to submit written comments on the proposed regulation. Comments must bear a notation indicating the document control number, [PP 8E3618/P495]. All written comments filed in response to this petition will be available in the Information Services Section, at the address given above from 8 a.m. to 4 p.m., Monday through Friday, except legal holidays.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Pursuant to the requirements of the Regulatory Flexibility Act (Pub. L. 96–354, 94 Stat. 1164, 5 U.S.C. 601–612), the Administrator has determined that regulations establishing new tolerances or raising tolerance levels or establishing exemptions from tolerance requirements do not have a significant economic impact on a substantial number of small entities. A certification statement to this effect was published in the **Federal Register** of May 4, 1981 (46 FR 24950).

List of Subjects in 40 CFR Part 180

Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Recording and recordkeeping requirements.

Dated: October 5, 1989.

Frank Sanders,

Acting Director, Registration Division, Office of Pesticide Programs.

Therefore, it is proposed that 40 CFR part 180 be amended as follows:

PART 180—[AMENDED]

1. The authority citation for part 180 continues to read as follows:

In reaching this conclusion, the Toxicology Branch Peer Review Committee considered the following information:

1. The positive carcinogenic effects

herein, may request within 30 days after publication of this notice in the **Federal Register** that this rulemaking proposal be referred to an Advisory Committee in

Commodity	Parts per million
Kiwifruit	0.1

VOL 54 ISS 210 NO 1 1989 UMI

PART 180—[AMENDED]

1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 346a and 371.

2. Section 180.154 is amended by designating the current paragraph and list of tolerances as paragraph (a) and by adding new paragraph (b), to read as follows:

§ 180.154 O,O-Dimethyl S-[(4-oxo-1,2,3-benzotriazin-3(4H)-yl)methyl] phosphorodithioate; tolerances for residues.

* * * * *

(b) Tolerances with regional registration, as defined in § 180.1(n), are established for residues of the insecticide *O,O*-dimethyl *S*-[(4-oxo-1,2,3-benzotriazin-3(4H)-yl)methyl] phosphorodithioate in or on the following commodity:

Pesticide Tolerance for Methidathion

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: This document proposes that a tolerance be established for residues of the insecticide methidathion in or on the raw agricultural commodity kiwifruit. The proposed regulation to establish a maximum permissible level for residues of the insecticide in or on the commodity was requested in a petition submitted by the Interregional Research Project No. 4 (IR-4).

DATE: Comments, identified by the document control number [PP 7E3566/P491], must be received on or before December 1, 1989.

ADDRESS:

By mail, submit written comments to: Public Information Branch, Field Operations Division (H7506C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460.

In person, bring comments to: Room 246, CM#2, 1921 Jefferson Davis Highway, Arlington, VA 22202.

Information submitted as a comment concerning this document may be claimed confidential by marking any part or all of that information as "Confidential Business Information" (CBI). Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the comment that does not contain CBI must be submitted for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice. All written comments will be available for public inspection in Rm. 246 at the address given above, from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays.

FOR FURTHER INFORMATION CONTACT:

By mail: Hoyt Jamerson, Emergency Response and Minor Use Section (H7505C), Registration Division, Environmental Protection Agency, 401 M Street SW., Washington, DC 20460.

Office location and telephone number: Rm. 716C, CM #2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703) 557-2310.

SUPPLEMENTARY INFORMATION: The Interregional Research Project No. 4 (IR-4), New Jersey Agricultural Experiment Station, P.O. Box 231, Rutgers University, New Brunswick, NJ 08903, has submitted pesticide petition 7E3566 to EPA on behalf of Dr. Robert H. Kupelian, National Director, IR-4 Project, and the Agricultural Experiment Station of California and the United States Department of Agriculture.

This petition requested that the Administrator, pursuant to section 408(e) of the Federal Food, Drug, and Cosmetic Act, propose the establishment of a tolerance for residues of the insecticide methidathion (*O,O*-dimethyl phosphorodithioate, S-ester with 4-(mercaptomethyl-2-methoxy-1,3,4-thiadiazolin-5-one)) in or on the raw agricultural commodity kiwifruit at 0.1 part per million (ppm).

The petitioner proposed that this use of methidathion on kiwifruit be limited to use in California based on the geographical representation of the residue data submitted. Additional residue data will be required to expand the area of usage. Persons seeking geographically broader registration should contact the Agency's Registration Division at the address provided above.

The data submitted in the petition and other relevant material have been evaluated. The pesticide is considered useful for the purpose for which the tolerance is sought. The toxicological data considered in support of the proposed tolerance include:

1. A 2-year rat feeding/oncogenicity study with a no-observed-effect level (NOEL) of 4 ppm (0.2 milligram (mg)/kilogram (kg)/day) and no indication of oncogenic potential at any dose tested (0, 4, 16 and 64 ppm).

2. A 2-year dog feeding study with a NOEL of 4 ppm (0.1 mg/kg/day).

3. A two-generation rat reproduction study with a reproductive NOEL of 5 ppm (0.25 mg/kg/day).

4. A rabbit teratology study with a maternal NOEL of 6 mg/kg/day and a developmental NOEL equal to or greater than 12/mg/kg/day.

5. A rat teratology study with a maternal NOEL of 1 mg/kg/day and a developmental NOEL of equal to or greater than 2.25 mg/kg/day.

6. A 2-year mouse feeding/oncogenicity study with a NOEL for systemic effects at 1.6 mg/kg/day (10 ppm) and liver tumors observed in male animals at 7.5 mg/kg/day (50 ppm) dose level.

7. Mutagenicity studies including gene mutation, chromosomal aberrations, and direct DNA damage tests were negative for mutagenic effects.

The Agency had previously reviewed another oncogenicity study in mice which was conducted by Industrial Biotest Laboratories. The study indicated statistically significant increases in the frequency of hepatocellular adenomas in male mice at the high-dose levels of 100 ppm (15 mg/kg/day). However, the study was determined to be invalid because of unacceptable methodologies, including partial degradation of methidathion in the diets, low survival of the animals, and deficiencies in animal husbandry. The Methidation Registration Standard issued in 1983 required two replacement oncogenicity studies. The replacement 2-year rat oncogenicity study indicated no increase in neoplastic lesions in either sex at any dose, but the results of the replacement 2-year mouse oncogenicity study did show an increase in the incidence of combined benign and malignant hepatocellular tumors in male mice at the high-dose level of 16.1 mg/kg/day (100 ppm). Based on the mouse study, the Agency has classified methidathion as a possible human carcinogen (Group C). This classification is based on the Agency's Risk Assessment, published in the Federal Register of September 24, 1986 (51 FR 33992). The evidence as a whole is not considered strong enough to warrant a quantitative estimation of human risk.

In reaching this conclusion, the Toxicology Branch Peer Review Committee considered the following information:

1. The positive carcinogenic effects were found in only one species, the mouse, and one sex, the male.

2. Tumors were discovered in animals exposed to very high doses. Adenomas (benign epithelial tumors) were only considered to be biologically significant at 16.1 mg/kg/day (HDT); carcinomas were increased at 7.5 mg/kg/day, but were significant only at 16.1 mg/kg/day; combined adenomas/carcinomas were significantly increased at 50 ppm (7.5 mg/kg/day) and 100 ppm (16.1 mg/kg/day).

3. The rat study was negative for oncogenic effects at all levels, i.e., 0, 4, 40, 100 ppm (equivalent to 0, 0.2, 2, or 5 mg/kg/day, respectively).

4. There are no close structural analogs with oncogenic concerns identified.

5. Methidation is not mutagenic in several acceptable studies (in vitro point mutation assays, both mammalian and bacterial; nuclear anomaly test; sister chromatid exchange; dominant lethal test).

The reference dose (RfD), based on the 2-year dog feeding study NOEL of 0.1 mg/kg/day and using a 100-fold safety factor, is calculated to be 0.001 mg/kg/day. The anticipated residue contribution (ARC) from existing tolerances for the overall U.S. population is calculated to be 0.000641 mg/kg/day; the current action will increase the TMRC by 0.000000002 mg/kg/day (0.0003 percent). Published tolerances utilize 64 percent of the ADI; the current action will utilize an additional 0.002 percent.

The nature of the residues is adequately understood and an adequate analytical method is available in the Pesticide Analytical Manual, Volume II (PAM II), for enforcement purposes. There are currently no actions pending against the continued registration of this chemical.

Based on the above information considered by the Agency, the tolerance established by amending 40 CFR 180.298 would protect the public health. No secondary residues in meat, milk, poultry or livestock are expected since kiwifruit is not considered a livestock feed commodity. Therefore, it is proposed that the tolerance be established as set forth below.

Any person who has registered or submitted an application for registration of a pesticide, under the Federal Insecticide, Fungicide, and Rodenticide Act [FIFRA] as amended, which contains any of the ingredients listed herein, may request within 30 days after publication of this notice in the Federal Register that this rulemaking proposal be referred to an Advisory Committee in accordance with section 408(e) of the Federal Food, Drug, and Cosmetic Act.

Interested persons are invited to submit written comments on the proposed regulation. Comments must bear a notation indicating the document control number [PP 7E3566/P491]. All written comments filed in response to this petition will be available in the Public Information Branch, at the address given above, from 8 a.m. to 4 p.m., Monday through Friday, except legal holidays.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Pursuant to the requirements of the Regulatory Flexibility Act (Pub. L. 96-354, 94 Stat. 1164, 5 U.S.C. 601-612), the Administrator has determined that regulations establishing new tolerances or raising tolerance levels or establishing exemptions from tolerance requirements do not have a significant economic impact on a substantial number of small entities. A certification statement to this effect was published in the Federal Register of May 4, 1981 (46 FR 24950).

Title VI Civil Rights Regulation

AGENCY: Department of Transportation, Office of the Secretary.

ACTION: Notice of proposed rulemaking; Withdrawal.

SUMMARY: This action withdraws a proposal to revise the Department of Transportation's (DOT) rules that implement Title VI of the Civil Rights Act of 1964. The Department has concluded that the proposed revisions are unnecessary.

DATE: This withdrawal is effective November 1, 1989.

FOR FURTHER INFORMATION CONTACT: Robert C. Ashby, Office of the General Counsel, U.S. Department of Transportation, 400 Seventh Street SW., Washington, DC 20590, (202) 366-9306.

SUPPLEMENTARY INFORMATION: On January 19, 1981, the Office of the Secretary of the Department of Transportation (DOT) published a Notice of Proposed Rulemaking (46 FR 5587) proposing to add a new Title VI regulation and revise existing rules. It also would have gathered all then-existing DOT Title VI guidance and requirements affecting recipients and the public into one place for easier reference. The Department received sixteen comments in response to the NPRM. Most of these comments were from state or local agencies receiving DOT assistance. All the comments responded negatively to the NPRM. The comments mainly criticized the NPRM for being ambiguous and for placing unnecessary administrative and financial burdens on state and local units of government.

The Department has concluded that existing rules are adequate for implementing Title VI, and that the proposed revisions could have unnecessarily increased administrative burdens on DOT financial assistance

UMI

recipients. Consequently, the Department has decided to withdraw the proposal and terminate the rulemaking. If the DOT decides that Title VI rules need to be revised in the future, the Department will issue a new Notice of Proposed Rulemaking at that time.

For these reasons, the January 19, 1981, proposal to revise the Department of Transportation's Title VI regulation is withdrawn.

Issued this 24th day of October, 1989, at Washington, DC.

Samuel K. Skinner,

Secretary.

National Oceanic and Atmospheric Administration

50 CFR Part 216

[Docket No. 90920-9220]

Taking and Importing of Marine Mammals Incidental to Commercial Fishing Operations

AGENCY: National Marine Fisheries Service (NOAA Fisheries), NOAA, DOC.

ACTION: Proposed rule.

SUMMARY: The National Marine Fisheries Service (NOAA Fisheries) proposes to establish a system of performance standards for operators of U.S.-flag tuna purse seine fishing vessels that catch yellowfin tuna associated with marine mammals in the eastern tropical Pacific Ocean (ETP). The purpose of this proposal is to allow vessel operators with good records of marine mammal safety to continue fishing throughout the year. Operators with marine mammal mortality rates that are consistently and substantially higher than the fleet average rate would be required to have additional training. Operators whose rate of incidental taking reflects a lack of diligence or proficiency in the use of the best marine mammal safety techniques and equipment would be removed from the fishery to reduce the kill of marine mammals and prolong the availability of the quotas.

DATE: Comments on the proposed rule must be postmarked on or before December 1, 1989.

ADDRESS: Comments may be mailed to E.C. Fullerton, Director, Southwest Region, National Marine Fisheries Service, 300 South Ferry Street, Terminal Island, CA 90731. A copy of the Environmental Assessment/Regulatory Impact Review may be obtained from this same address.

FOR FURTHER INFORMATION CONTACT: E.C. Fullerton (Director, Southwest Region, NMFS) telephone (213) 514-6196.

SUPPLEMENTARY INFORMATION:

Background

In 1988 Congress reauthorized the Marine Mammal Protection Act (MMPA) and amended it to require development and implementation of a system to identify vessel operators in the U.S. tuna purse seine fishery with a consistently and substantially higher marine mammal mortality rate than the average rate for the fleet as a whole. Depending on an identified operator's rate of kill, the operator's certificate of inclusion would be suspended or the operator would be required to undertake remedial training and be subject to supplemental observer obligations. If such remedial training did not improve an operator's performance to acceptable levels, the operator's certificate of inclusion would be suspended or revoked. These measures are intended to reduce the marine mammal mortality for the U.S.-flag tuna purse seine fleet and to allow vessel operators who are diligent and proficient in using marine mammal safety techniques and equipment to have the entire year to catch yellowfin tuna.

Performance Systems Considered

In developing this proposed performance system, NOAA Fisheries established several criteria which the system would have to meet and apply them to different various alternatives. First, the system selected would have to be understandable and predictable to those subject to it. Second, it must be based on credible data. Third it should be unambiguous and clear to avoid lengthy administrative process or litigation. Fourth, to the extent practicable, it must involve and rely upon the party or parties that have control over marine mammal mortality performance. The alternatives examined met these criteria in most cases. Some would be more expensive to administer than others due to the need to provide higher observer coverage rates than are necessary to estimate mammal mortality or the need to augment NOAA Fisheries' expertise by adding staff.

A primary consideration was how to separate the performance of the vessel operator from that of the vessel. A vessel-based performance standard would focus responsibility for vessel performance on the owner of the vessel. The owner controls aspects of the operation which the vessel operator does not. For example, the owner controls not only who operates the vessel but also the quality and maintenance of its equipment. Owners of tuna purse seine fishing vessels setting on marine mammals are required to obtain an annual vessel certificate of inclusion. If the gear requirements are met, and a fish captain with a valid operator certificate of inclusion is aboard, the vessel can set on marine mammals in compliance with the regulations if the quota has not been reached.

Vessel operators are issued annual certificates of inclusion by NOAA Fisheries after completing an initial skipper workshop on the Federal regulations and marine mammal safety procedures and attending any required supplemental reviews. The operator is the individual in charge of the fishing operation at sea and has immediate control over how a set is made and how marine mammals are removed from the net. He can choose whether to make a set in conditions that reduce or increase the probability of high marine mammal kill. With this control over day to day operations, an operator's performance is critical to the marine mammal safety performance on a trip.

A performance system that separately considers marine mammal safety performance of both the vessel and the operator would best recognize the respective responsibilities and control of the vessel owner and the operator. Because operators may change vessels, it would be necessary to keep records separately on vessels and operators. Such a system could assign responsibility for each marine mammal mortality to either the owner or the operator, depending on the cause for the mortality, or it could attribute all mortalities to both owner and operator. A system that assigns responsibility for dolphin mortality to the owner or the operator would require considerably more judgment and expertise to implement than a system that held both accountable for each mortality.

A variety of performance systems were considered including individual vessel quotas, vessel or operator performance ratings based on the kill of marine mammals per ton of yellowfin tuna caught in association with marine mammals, and a multiple-standard system for rating operator performance. For details on the alternative systems that were considered, refer to the Environmental Assessment (see **ADDRESS**) on this proposed rule

Description of the Proposed Rule

Vessel Certificate Holder's Performance

The vessel certificate holders will continue to be responsible for ensuring that the vessel has the required marine mammal safety gear and that it is maintained in seaworthy condition. Under current regulations if the required marine mammal safety gear is not available for use, sets involving marine mammals may not be made. Vessel certificate holders are subject to fines for violations resulting from their failure to properly equip their vessel(s) for fishing in association with marine mammals. This gear is inspected on every trip carrying a NOAA Fisheries observer. The results of the observer's inspection are provided to the vessel certificate holder after the trip is completed so that any potential deficiencies may be corrected before the next fishing trip. The observer records also are reviewed by NOAA enforcement agents to detect violations of the regulations. Whether or not a notice of gear deficiency is issued, the vessel certificate holder remains responsible for the required mammal safety equipment on the vessel.

Operator's Performance System

The proposed performance system would track individual operators and measure their performance against a kill-per-ton standard derived from an analysis of the data recorded on observed fishing trips during the most recent five-year period. The analysis would be completed and the certificated operators and vessel certificate holders notified of the results by July 1 of each year. Data through December 31 of the past year would be considered. The July date allows time for the completion of all trips that were at sea on December 31 and for the analysis of the observer records. The updated standards would then apply to fishing trips that begin between July 1, and June 30 of the following year.

Kill-per-ton was selected as the performance measure in this proposed rule because it is a meaningful performance measure within the fishing industry, was used in deriving the overall mortality quota, and as a fleet average it is less variable than kill-per-set or kill-per-day. Use of this performance rate is also consistent with regulations prohibiting sundown sets and governing yellowfin tuna importation. However, the ability of the observer to independently and accurately determine the amount of tuna caught in each set is critical under a system using kill per ton whereas a system measuring operator performance in terms of dolphins killed per set or dolphins killed per day would not rely on the observer's estimate of the tons of yellowfin in each set.

For any fishing trip during which one or more purse seine sets are made on marine mammals, an operator who has an observed mortality rate that exceeds five times the fleet average for the previous five-year period, measured in marine mammals killed per ton of yellowfin tuna caught in purse seine sets on marine mammals, will have his operator's certificate of inclusion suspended immediately for a period of six months. A factor of five times the fleet averge mortality rate is beyond the variation that would normally be expected in the fleet and indicates a serious problem in need of immediate correction. A lower factor would cause this strong response more frequently and certificate holders who should be identified for remedial training would have their certificates suspended. Without an upper limit on an operator's mortality rate, an operator with severe problems in marine mammal safety could continue fishing for one or two more trips before facing a suspension. Such a delay in suspending an operator with a high kill rate would be detrimental to the diligent and proficient operators who are regulated under the same marine mammal quota.

An operator whose certificate of inclusion is suspended under this provision may appeal to the NOAA Assistant Administrator for Fisheries who, in consultation with the General Permit holder, will review the operator's performance on the trip and may restore the operator's certificate of inclusion, if the high mortality rate for the trip was caused by an unforeseeable equipment breakdown. Excluding sets with unforeseeable equipment breakdowns from the computation of the kill rate best implements the statutory mandate to take action to suspend or revoke certificates when an operator's unacceptably high rate of incidental mortality reflects a lack of diligence or proficiency in the use of the best marine mammal safety techniques and equipment. If the operator's certificate is suspended, NOAA Fisheries will also require the operator to participate in remedial training to review marine mammal release and safety techniques before maing another trip as a certificated operator.

Fishing trips with five or fewer sets on marine mammals will not be subject to evaluation under the operator performance system if the mortality rate does not exceed five times the fleet average. A representative fishing trip for a U.S.-flage purse seine vessel in this fishery would include 50 or more purse seine sets. Therefore, five or fewer sets on marine mammals would likely account for less than 10 percent of the fishing effort on a trip. For this reason, trips with five or fewer marine mammal set will not be cvonsidered trips under the performance system for determining the operator's performance in consecutive trips.

For fishing trips during which more than five sets on marine mammals are made, the operator will not have met the performance standard for that trip if the marine mammal mortality exceeds 1.5 times the fleet average marine mammal kill-per-ton of yellowfin tuna caught. A mortality rate that exceeded the fleet average rate by more than 50 percent was reported for approximately 20 percent of the observed fishing trips between 1981 and 1988. The consequence of not meeting the standard for a trip depends upon the operator's performance on the previous two trips.

Should an operator fail to meet the performance standard on one trip, the NOAA Fisheries Regional Director will request that the General Permit holder review that records of that fishing trip and recommend to the operator corrective actions to reduce marine mammal mortality before the operator's next fishing trip. In conducting this review, it is expected that the General Permit holder will consult with the Expert Skippers' Panel and apply whatever other expertise may be appropriate. The General Permit holder will report to the Regional Director what actions were taken. The Regional Director will determine if the recommended actions are likely to improve the operator's performance to meet the standard on the next trip. If the Regional Director finds that the actions recommended by the General Permit holder are insufficient, he will return the recommendations to the General Permit holder, with the deficiencies noted, for further consideration or the Regional Director may require the operator to participate in additional training in marine mammal safety techniques. If the Regional Director finds that the actions recommended are sufficient, he will order the operator to implement the recommendations and to carry an observer on the next trip. Under the current schedule, an observer is assigned to every vessel departing on a trip. If a lesser observer coverage is required in the future, the operator would be required to be accompanied by an observer on his next trip whether or not the vessel had been scheduled to

VOL
54
ISS
2
1
0
NO
1
1989
UMI

carry an observer. Should an operator refuse or fail to follow the remedial actions ordered by the Regional Director, the operator's certificate of inclusion will be suspended for six months.

If the operator meets the performance standard on the second trip, the record is cleared and no further action would be required. An operator who fails to meet the applicable standard on a second consecutive trip will be required to undergo full review once again by the General Permit holder and may be required by the Regional Director to participate in additional training related to mammal release and to carry on his next trip an experienced operator with particular expertise in reducing marine mammal mortality. The General Permit holder will provide the experienced operator. The operator must be accompained by an observer on that trip.

If the operator meets the standard on that third trip, the record is cleared and no further action is required. If the operator exceeds the mortality standard on a third consecutive trip, the operator's certificate of inclusion would automatically become invalid for a period of six months upon the Regional Director notifying the operator.

After a period of an operator's certificate of inclusion being suspended, the operator would be required to carry an observer on the first trip following the suspension. The operator's certificate of inclusion would become invalid for a period of one year if the operator's performance fell below standard on the first trip following a suspension or if an operator's certificate were suspended twice within a period of 36 months beginning with the first notice of suspension from the Regional Director to the operator. The potential harm to the diligent and proficient operators that can be caused by waiting an additional three trips to remove an operator with consistently high mortality rates outweighs the benefits of allowing an individual operator greater opportunity to demonstrate improved performance.

When determining whether an operator has exceeded the mortality standard for a second or third consecutive trip, the Regional Director may exclude from consideration one or more sets, if the operator in consultation with the General Permit holder establishes to the satisfaction of the Regional Director that the high kill in those sets was caused by an unforeseeable equipment breakdown that could not have been avoided by reasonable diligence in operating or maintaining the vessel. Such an exclusion will not be considered for the first trip exceeding the performance standard because careful review by the General Permit holder and NOAA Fisheries after such a trip is needed to ensure that any equipment problems are resolved.

When considering a petition to exclude a set, the Regional Director will examine observer records for an indication that one or more of the following equipment problems occurred during the set and was the cause of marine mammal mortality: failure of the main engine, net skiff, winch, power block, bow thruster, or breakage of the purse cable, towline cable, leadline, vang guy line, topping winch cable, bunchline, or corkline. Other equipment problems will be considered on a case-by-case basis and may allow for the exclusion of the set from calculations under this proposed performance system. Speed boat failure will not be an acceptable reason for excluding a set because multiple speed boats should be available when fishing on dolphin.

If an equipment malfunction occurred and was the cause of dolphin mortality in the set, the Regional Director will determine whether the equipment malfunction could have been foreseen or prevented. If the same or a related equipment failure occurred on previous sets, the set in question will not be excluded from calculating the operator's mortality rate.

Should exclusion of a set or sets cause the operator's performance to fall within the standard performance, that trip would not be counted as a trip for the purposes of the performance evaluation system. Such a trip would neither be counted as a consecutive trip which exceeded the standard nor would it be counted as a trip that fully met the performance standard. As a result, the operator would remain under scrutiny in the performance system, until the operator's performance on a trip fully meets the standards without the exclusion of a set.

The Regional Director in making these various determinations on performance will consider whatever information is provided by the operator, the vessel certificate of inclusion holder, and the General Permit holder, as well as NOAA's own records. Typically, half of the trips by certificated U.S.-flag tuna purse seine vessels are observed by technicians placed by the NOAA Fisheries and half by the Inter-American Tripical Tuna Commission (IATTC). The IATTC charter requires that data collected on tuna vessels be held in confidence and released only in aggregated form which does not allow for the identification of individual vessels or operators. In order to implement this performance system, data collected by observers on trips under the IATTC must be made available to NOAA Fisheries. Therefore, NOAA proposes to require the vessel certificate holder to obtain the observer logbooks from IATTC and provide them to NOAA Fisheries. Records submitted in this manner will be subject to verification by IATTC. This procedure will require that the vessel certificate holder obtain the vessel operator's permission for IATTC to release the observer's records. Because the NOAA Fisheries review and possibly General Permit holder review and remedial training must take place before the operator departs on his next trip, the timely delivery of observer data is critical. Vessel certificate holders will be required to deliver the observer data from IATTC trips within five days after the observer returns to IATTC in La Jolla, California at the conclusion of a fishing trip. The certificated fishing vessel cannot depart on its next trip until the vessel certificate holder delivers the required IATTC observer records to the NOAA Fisheries San Diego Field Office, 1520 State Street, Suite 200, San Diego California 92101.

NOAA Fisheries will review the observer records and notify the operator whether the performance standard was met and, if not, what steps must be taken within five days (excluding Saturdays and Sundays) after receiving the complete data in the Tuna/Porpoise Management Branch Office in San Diego, California. An operator cannot operate a vessel on a next trip until the Regional Director determines whether the operator met or failed to meet the performance standard on the previous trip.

The General Permit holder also will be notified of all failures to meet the standards. The Expert Skipper's Panel, now used by the General Permit holder to work with operators, is expected to continue its function for the General Permit holder of monitoring individual operator's performance throughout the year and offering assistance to operators who have marine mammal related problems before those operators become subject to the sanctions under the performance system.

Expected Impacts

The primary impact of this proposed regulation will be to increase the personal responsibility of individual tuna vessel operators for their marine mammal mortality. The fleet wide quota now allows poorly performing operators to continue fishing to the detriment of the skilled and conscientious operators.

Existence of an individual performance review by the General Permit holder and counseling by the Expert Skippers' Panel under the current situation has had a positive effect on the performance of some operators. The additional influence of NOAA Fisheries authority and the prospect of having the operator's certificate of inclusion suspended or revoked is expected to increase the willingness of operators to cooperate with the General Permit holder to reduce marine mammal mortalities.

The proposed performance standard system is not expected to result in suspending or revoking operators' certificates of inclusion on a routine basis. The system is expected to encourage operators to improve their personal marine mammal safety performance, thereby reducing the overall fleet mortality rate to the benefit of the marine mammal populations. If the proposed system were in effect during 1987 and 1988, twelve operators would have failed to meet the performance standard on one trip. Two operators would have failed to meet the standard on two consecutive trips and may have been required to carry an experienced operator with demonstrated skill in marine mammal release on their next trip. Based on the trips during that two year period, no operators would have exceeded the performance standard on three consecutive trips.

Marine mammal populations of the ETP will benefit from this proposed regulation but the benefits will accrue slowly. The performance system will be implemented over several fishing trips and the fleet performance standard is expected to improve due to the sundown set prohibition (see 54 FR 411, January 6, 1989) more than from the performance system itself. The magnitude of the reduction in marine mammal mortality related to the proposed performance system will depend on several factors. One key factor will be the variability of an operator's performance from one trip to the next. Though unlikely, an operator could alternate trips of high and low kill per ton and never have two or more consecutive trips that exceed the performance standard. Should such an operator exceed five times the five-year fleet average kill per ton, the operator's certificate of inclusion would be suspended for a six month period.

The impact on individual operators that may fail to meet the performance standard on one trip is expected to be minimal, requiring a meeting with the General Permit holder and the Expert Skippers' Panel and possibly some adjustments to marine mammal safety practices on the next trip. Unless there are delays in the delivery of the observer's records or in the processing of those data, there should be no delays in the operator's return to fishing.

An operator who fails to meet the performance standard on two consecutive trips will have the same impacts as after the first trip but also may be required to be accompanied by an experienced operator who has particular expertise in marine mammal release. Depending on the vessel, the requirement to carry an expert operator/consultant and an observer may reduce the crew available for fishing operations causing a potential reduction of efficiency which cannot be quantified at this time. In addition, the expense of the expert operator/consultant may be borne in part by the operator, depending on arrangements with the General Permit holder.

An operator who fails to meet the performance standard on three consecutive trips will have the operator's certificate of inclusion suspended for a period of six months. The suspension of the operator's certificate precludes that individual from serving as the certificated operator on a tuna purse seine vessel under the General Permit issued to the American Tunaboat Association. If the suspended operator does accompany a vessel on a fishing trip during the term of suspension, another individual holding a valid operator's certificate must direct the fishing operations. Since the number of certificated operators exceeds the number of certificated vessels by a factor of two, an operator under suspension would likely be replaced on the vessel for at least the period of suspension.

Classification

The NOAA Assistant Administrator for Fisheries has determined, based on an environmental assessment (EA) prepared by NOAA, that the modifications to the regulations being made at 50 CFR 216.24(c) and 216.24(d) will not have a significant impact on the environment. As a result of this determination, an environmental impact statement will not be prepared. The EA is available upon request (see **ADDRESS**).

The Administrator of NOAA has determined that this rule is not a major rule requiring a regulatory impact analysis under Executive Order 12291. NOAA Fisheries prepared a regulatory impact review as part of its EA which concluded that this rule will not result in (1) an annual major increase in costs or prices for consumers, individual industries or government agencies; (2) an annual effect on the economy of $100 million or more; or (3) significant adverse effect on competition, employment, productivity, innovation, or on the ability of U.S.-based enterprises to compete with foreign-based enterprises in domestic or export markets. The estimated economic impact of this rule on the U.S. tuna fishery in the ETP is expected to be approximately $50,000 for an estimated two trips by an expert operator/consultant with operators that fail to meet the performance standard on two consecutive trips. The General Permit holder (the American Tunaboat Association) has indicated that it will provide an expert operator when needed. How the costs related to that operator/consultant will be paid has not yet been determined, except that the U.S. Government will not bear the expense. If the costs were apportioned equally over the 28 currently certificated vessels, the cost per vessel would be approximately $1800 per year. A copy of the regulatory impact review is available upon request (see **ADDRESS**).

This proposed regulation will not have a significant economic effect on a substantial number of small entities as defined under the Regulatory Flexibility Act. In 1989, 28 vessels, which is less than half of the U.S.-flag tuna purse seiners larger than 400 tons carrying capacity, fished in the ETP for yellowfin tuna associated with marine mammals, and will be subject to the rule. These vessels all have essentially the same capabilities and would be affected similarly. The expected operating cost increase which may be as high as $1800 per vessel is not a significant increase for a U.S. tuna vessel operation. The EA prepared by NOAA Fisheries serves as an initial regulatory flexibility analysis for the purposes of the Regulatory Flexibility Act.

This proposed rule contains collection of information requirements subject to the Paperwork Reduction Act of 1980 (44 USC 3501 *et seq.*). The collection, which is subject to the Act, is found at 50 CFR 216.24(d)(2)(iii)(D), which requires that the vessel certificate holder deliver to NOAA Fisheries records that are collected by observers on fishing trips that are placed by the IATTC or other international marine mammal observer program which cannot provide observer records to the Government in a form that can be used for enforcement of the U.S. regulations. This information collection has been submitted to the Office of Management and Budget (OMB) with a request for review.

Public reporting burden for this collection of information is estimated to

average 1.5 hours per fishing trip carrying an IATTC or other international marine mammal program observer including the time providing releases to the IATTC or international

National Marine Fisheries Service of all data collected by observers aboard during fishing trips under the Inter-American Tropical Tuna Commission observer program or any other

mammals resulting in a kill per ton for a fishing trip which exceeds five times the fleet average mortality rate for the previous five calendar-year period. Such suspension shall be effective upon

or failed to meet the applicable performance standard on the previous observed trip. The Southwest Regional Director will make the determination within five days (excluding Saturdays,

Regional Director and the General Permit holder for the purpose of determining the causes of higher than acceptable mortality, must participate in supplemental marine mammal safety

(l) If an operator does not meet the mortality performance standard for a subsequent trip within three years of reinstatement, the Regional Director shall immediately suspend the

VOL 54 ISS 210 NO 1 1989 UMI

average 1.5 hours per fishing trip carrying an IATTC or other international marine mammal program observer including the time providing releases to the IATTC or international program and arranging for the delivery of the observer records to the NOAA Fisheries Office in San Diego, California. Based on the current fleet of 28 certificated vessels and an average of four trips per year half of which carry IATTC observers, approximately 56 responses to this requirement are expected. The total reporting burden on tuna vessel certificate holders will be 84 hours to ensure the NOAA receives IATTC observer data. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the National Marine Fisheries Service (F/PR1), 1335 East-West Highway, Silver Spring, MD 20910, and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503 (Attn: Paperwork Reduction Act Project 0648–XXXX).

This rule does not contain policies with federalism implications sufficient to warrant preparation of a federalism assessment under Executive Order 12612.

List of Subjects in 50 CFR Part 216

Administrative practice and procedure, Imports, Marine mammals, Penalties, Reporting and recordkeeping requirements, Transportation.

Dated: October 25, 1989.

James E. Douglas, Jr.,

Acting Assistant Administrator for Fisheries, National Marine Fisheries Service.

For the reasons stated in the preamble to this rulemaking, section 50 CFR part 216 is proposed to be amended as follows:

1. The authority citation for part 216 continues to read as follows:

Authority: 16 U.S.C. 1361 *et seq.*, unless otherwise stated.

§ 216.24 [Amended]

2. In § 216.24 paragraph (c)(4)(ii) is amended by removing the old address, and adding in its place the words "National Marine Fisheries Service, Southwest Region, 1520 State Street, Suite 200, San Diego, California 92101."

3. In § 216.24 a new paragraph (c)(9) is added to read as follows:

(c) * * *

(9) By accepting an operator or vessel certificate of inclusion under the Category 2 general permit, the certificate holder authorizes the release to the National Marine Fisheries Service of all data collected by observers aboard during fishing trips under the Inter-American Tropical Tuna Commission observer program or any other international observer program in which the United States may participate. The certificate holder must furnish the international observer program all release forms required to provide the observer data to the National Marine Fisheries Service. Data obtained under such releases will be used for the same purposes as data collected directly by National Marine Fisheries Service observers and will be subject to the same standards of confidentiality.

4. In § 216.24 paragraphs (d)(2)(ii)(C), (iii)(A) and (v)(B) are amended by removing the old address, and adding in its place the words "National Marine Fisheries Service, Southwest Region, 1520 State Street, Suite 200, San Diego, California 92101, telephone 619–557–6540."

5. In § 216.24 paragraph (d)(2)(iii)(D) is revised and a new paragraph (d)(2)(ix) is added to read a follows:

(d) * * *

(2) * * *

(iii) * * *

(D) The vessel certificate holder must deliver to the National Marine Fisheries Service Office in San Diego, California (1520 State Street, Suite 200, San Diego, California 92101) all records made by an observer on board the vessel under the Inter-American Tropical Tuna Commission or other international marine mammal program, if such records cannot be provided to National Marine Fisheries Service directly by the international program. Observer records must be delivered within five days (excluding Saturdays, Sundays and Federal holidays) after the observer returns to San Diego, California from the fishing trip.

* * * * *

(ix) *Operator Certificate of Inclusion Holder Performance Requirements.* (A) The National Marine Fisheries Service will determine the average rate of kill of marine mammals per ton of yellowfin tuna caught by U.S.-flag purse seine vessels in sets on marine mammals in the ETP during the most recent five calendar-year period. This mortality rate will be provided to certificate of inclusion holders on or before July 1 of each year and will apply to fishing trips beginning between July 1 and the following June 30.

(B) The National Marine Fisheries Service Southwest Regional Director shall immediately suspend the certificate of inclusion of any operator who makes one or more sets on marine mammals resulting in a kill per ton for a fishing trip which exceeds five times the fleet average mortality rate for the previous five calendar-year period. Such suspension shall be effective upon notification and shall be for a period of six months. If the operator exceeds five times the fleet average for a subsequent trip within three years of reinstatement, the Regional Director shall immediately suspend the certificate. Such suspension shall be effective upon notification and shall be for a period of one year. If the operator exceeds five times the fleet average for a subsequent trip within five years of the second reinstatement, the Regional Director shall immediately revoke the certificate. The revocation, shall be effective upon notification and shall be permanent. An operator who is subject to a suspension or revocation under this paragraph may appeal that suspension or revocation to the Assistant Administrator as provided in § 216.24(d)(2)(ix)(J).

(C) Fishing trips with five or fewer sets on marine mammals and a kill-per-ton of less than five times the fleet average for the previous five calendar-year period are not subject to further action under the operator performance system. Such trips neither count as trips meeting the performance standard nor as failing to meet the performance standard for the purpose of determining actions based on performance in consecutive fishing trips.

(D) Fishing trips with more than five sets on marine mammals are subject to review under the operator performance system as follows:

(*1*) The operator's kill of marine mammals and the catch of yellowfin tuna in sets on marine mammals will be determined from observer records.

(*2*) The kill-per-ton will be determined by dividing the total kill of marine mammals by the weight of yellowfin tuna caught in sets involving marine mammals during the fishing trip.

(*3*) If the calculated kill-per-ton for the trip is equal to or less than 1.5 times the five-year fleet average performance, the operator has met the performance standard and is not subject to further action under the performance system based on the current trip.

(*4*) If the calculated kill-per-ton for the trip exceeds 1.5 times the five-year average fleet performance, the operator failed to meet the mortality performance standard and is subject to further action under the performance system.

(E) An operator shall not serve as a certifcated operator until the Southwest Regional Director has determined under this subpart that the opesator's marine mammal mortality rate performance met or failed to meet the applicable performance standard on the previous observed trip. The Southwest Regional Director will make the determination within five days (excluding Saturdays, Sundays and Federal holidays) after receiving the observer data from the trip.

(F) An operator who does not meet the mortality performance standard for a trip must have observer data and other pertinent records reviewed by the Southwest Regional Director and the General Permit holder for the purpose of determining the causes of higher than acceptable mortality, must participate in supplemental marine mammal safety training as ordered by the Southwest Regional Director and must comply with actions recommended for reducing marine mammal mortality which may be offered by the General Permit holder and ordered by the Southwest Regional Director. The operator must carry an observer on the next trip for which he serves as the certificated operator. If the Southwest Regional Director determines that the required training or other ordered action has not been completed satisfactorily, the Regional Director shall suspend the operator's certificate of inclusion for six months.

(G) An operator who does not meet the mortality performance standard on two consecutive trips must have observer data and other pertinent records reviewed by the Southwest Regional Director and the General Permit holder for the purpose of determining the causes of higher than acceptable mortality, must participate in supplemental marine mammal safety training as ordered by the Southwest Regional Director and must comply with recommendations for reducing marine mammal mortality which may be offered by the General Permit holder and ordered by the Southwest Regional Director. The operator must carry an expert fisherman, if required to do so by the Southwest Regional Director, to assist in perfecting marine mammal safety techniques and must also carry an observer on the next trip for which he serves as the certificated operator. The expert fisherman will be provided by the General Permit holder. The operator must carry an observer assigned by National Marine Fisheries Service on the next trip for which he serves as the certificated operator. If the Southwest Regional Director determines that the required training or other ordered action has not been completed satisfactorily, the Regional Director shall suspend the operator's certificate of inclusion for six months.

(H) If an operator exceeds the performance standard kill rate of three consecutive trips, the Regional Director shall immediately suspend the operator's certificate of inclusion for six months, effective upon notification to the operator.

(I) If an operator does not meet the mortality performance standard for a subsequent trip within three years of reinstatement, the Regional Director shall immediately suspend the operator's certificate of inclusion for one year, effective upon notification to the operator.

(J) An operator may appeal suspension or revocation of a certificate of inclusion to the Assistant Administrator. The Assistant Administrator will reinstate an operator's certificate within thirty days of receiving an appeal if the cause of the high kill rate is determined to have been due to unforeseeable equipment breakdown beyond the operator's control, based on observer records, the advice of the General Permit holder, and whatever other information is presented to the Southwest Regional Director by the operator or the General Permit holder.

(K) An operator must carry an observer on the operator's first trip after a suspension under this performance system has expired.

(L) A person obtaining an operator certificate of inclusion for the first time must carry an observer on the operator's first trip.

DEPARTMENT OF AGRICULTURE

Forms Under Review by Office of Management and Budget

October 27, 1989.

The Department of Agriculture has submitted to OMB for review the following proposals for the collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35) since the last list was published. This list is grouped into new proposals, revisions, extensions, or reinstatements. Each entry contains the following information:

(1) Agency proposing the information collection; (2) Title of the information collection; (3) Form number(s), if applicable; (4) How often the information is requested; (5) Who will be required or asked to report; (6) An estimate of the number of responses; (7) An estimate of the total number of hours needed to provide the information; (8) An indication of whether section 3504(h) or Public Law 96-511 applies; (9) Name and telephone number of the agency contact person.

Questions about the items in the listing should be directed to the agency person named at the end of each entry. Copies of the proposed forms and supporting documents may be obtained from: Department Clearance Officer, USDA, OIRM, Room 404-W Admin. Bldg., Washington, DC 20250, (202) 447-2118.

Commodity Credit Corporation

Proposed Determinations With Regard to the 1990 Rice Program

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Proposed determinations.

SUMMARY: The Secretary of Agriculture proposes to make the following determinations with respect to the 1990 crop of rice: (a) The loan and purchase level; (b) loan rate adjustments; (c) whether the Secretary should require producers to purchase marketing certificates as a condition of permitting loan repayment at a reduced level; (d) whether the Secretary should make loan deficiency payments available to producers; (e) established (target) price level; (f) whether an acreage limitation program (ALP) should be implemented and, if so, the percentage reduction under such ALP; (g) whether an optional land diversion program (LDP) should be established and, if so, the percentage of diversion under the program; (h) the national program acreage (NPA); (i) whether a voluntary reduction percentage should be proclaimed and, if so, the level of such percentage; (j) whether a portion of the deficiency or diversion payments should be made in the form of commodity certificates or other in-kind compensation; (k) the provisions of a marketing certificate program; (l) whether an inventory reduction program (IRP) should be implemented; and (m) other related determinations. These determinations are to be made in accordance with the Agricultural Act of 1949, as amended (hereinafter referred to as the "1949 Act"), the Food Security Act of 1985, as amended, and the Commodity Credit Corporation Charter Act, as amended.

EFFECTIVE DATE: Comments must be received on or before December 5, 1989 in order to be assured of considerations.

ADDRESS: Bruce R. Weber, Director, Commodity Analysis Division, USDA-ASCS, Room 3741, South Building, P.O. Box 2415, Washington, DC 20013.

FOR FURTHER INFORMATION CONTACT: Gene Rosera, Agricultural Economist, Commodity Analysis Division, USDA-ASCS, P.O. Box 2415, Washington, DC 20013 or call (202) 447-7923. The Preliminary Regulatory Impact Analysis describing the options considered in developing these proposed determinations and the impacts of implementing each option is being prepared and will be available soon.

SUPPLEMENTARY INFORMATION: This notice has been reviewed under USDA procedures established in accordance with Executive Order 12291 and Departmental Regulation No. 1512-1 and has been designated as "major". It has been determined that these program provisions will result in an annual effect on the economy of $100 million or more.

The title and number of the Federal assistance programs to which this notice applies are: Title-Rice Production Stabilization: Number 10.065 and Title-Commodity Loans and Purchases: Number 10.051, as found in the catalog of Federal Domestic Assistance.

It has been determined that the Regulatory Flexibility Act is not applicable to this notice since CCC is not required by 5 U.S.C. 553 or any other provision of the law to publish a notice of proposed rulemaking with respect to the subject of this notice.

This program is not subject to the provisions of Executive Order 12372 which requires intergovernmental consultation with State and local officials. See the Notice related to 7 CFR part 3015, subpart V, published at 48 FR 29115 (June 24, 1983).

On April 5, 1989, (54 FR 13706) a notice of proposed determinations was published which set forth provisions common to the 1990 wheat, feed grain, cotton (extra long staple and upland), and rice price support and production adjustment programs. Any comments that were received with respect to such notice which are applicable to the 1990 crop of rice and any comments received with respect to this notice of proposed determinations will be reviewed in determining the provisions of the 1990 Rice Program.

Accordingly, the following program determinations with respect to the 1990 crop of rice are to be made by the Secretary.

Proposed Determinations

a. *Loan and Purchase Level:* Section 101A(a) of the 1949 Act provides that the Secretary shall make loans and purchases available to producers for the 1990 crop of rice at a level that is not less than the higher of: (1) 85 percent of the simple average price received by producers, as determined by the Secretary, during the marketing years for the immediately preceding 5 crops of rice, excluding the year in which the average price was the highest and the year in which the average price was the lowest; or (2) $6.50 per hundredweight. Under that subsection the loan level for a crop of rice may not be reduced by more than 5 percent from the loan level determined for the preceding crop. Further, section 101A(a) requires that the Secretary determine and announce the loan and purchase level for the 1990 crop of rice not later than January 31, 1990. A loan shall have a term of not more than 9 months beginning after the month in which the application for the loan is made.

Comments are requested as to the level of the loan and purchase rate for the 1990 crop of rice.

b. *Loan Rate Adjustments:* Section 403 of the 1949 Act provides that appropriate adjustments may be made in the level of the support price for rice for differences in grade, type, quality, location, and other factors. Section 403 further provides that such adjustments shall, insofar as practicable, be made in such manner that the average support price will, on the basis of the anticipated incidence of such factors, equal the statutory support level.

Comments, along with supporting data, are requested as to: (1) The loan and purchase rate for different classes of whole kernels; (2) the loan and purchase rate for broken kernels; (3) appropriate State or national average milling outturns for use in determining class loan rates; and (4) appropriate grade discounts.

c. *Marketing Loan Certificates:* Section 101A(a)(5)(A) of the 1949 Act provides that the Secretary shall permit a producer to repay a loan at a level that is the lesser of (1) the loan level determined for such crop or (2) the higher of the loan level multiplied by 70 percent of the loan level or the prevailing world market price for rice, as determined by the Secretary. Further this section provides that as a condition of permitting a producer to repay a loan, the Secretary may require a producer to purchase marketing certificates equal in value to an amount that does not exceed one-half the difference, as determined by the Secretary, between the amount of the loan obtained by the producer and the amount of the loan repayment. Such certificates shall be negotiable and shall be redeemable for rice owned by the CCC valued at the prevailing market price, as determined by the Secretary. If CCC-owned rice is not available in the State in which the rice pledged as collateral for the loan was produced or at such other location outside of such State as may be approved by the owner of such certificate, such certificate shall be redeemable for cash. If any such certificate is not presented for marketing within a reasonable number of days after issuance, as determined by the Secretary, reasonable costs of storage and other carrying charges shall be deducted from the value of the certificate.

Comments are requested on whether the Secretary should require producers to purchase certificates and, if so, for what percentage of the difference in value between the loan level and the loan repayment rate.

d. *Loan Deficiency Payments:* Section 101A(b)(1) of the 1949 Act provides that the Secretary may make payments available to producers who, although eligible to obtain a loan or purchase agreement, agree to forgo obtaining such loan or agreement in return for such payments.

Such payments shall be computed by multiplying (1) the loan payment rate by (2) the quantity of rice the producer is eligible to place under loan. The quantity of rice eligible to be placed under loan may not exceed the product obtained by multiplying the individual farm program acreage for the crop by the farm program payment yield established for the farm. The loan payment rate is the amount by which the loan level determined for such crop exceeds the level at which a loan may be repaid.

Comments are requested with respect to whether loan deficiency payments should be made available.

e. *Established (Target) Price:* Section 101A(c)(1)(A) of the 1949 Act provides that the Secretary shall make payments available to producers for the 1990 crop of rice in an amount computed by multiplying (1) the payment rate, by (2) the individual from program acreage, by (3) the farm program payment yield.

Section 101A(c)(1)(C) provides that the payment rate for the 1990 crop of rice shall be the amount by which the established (target) price for the crop exceeds the higher of (1) the national average market price received by producers during the first five months of the marketing year for such crop or (2) the loan level for such crop.

Section 101A(c)(1)(D) of the 1949 Act provides that the established (target) price for rice shall be not less than $10.71 per hundredweight for the 1990 crop.

Comments are requested as to the level of the established price for 1990-crop rice.

f. *Acreage Limitation Program:* Section 101A(f)(1)(A) of the 1949 Act provides that if the Secretary determines that the total supply of rice, in the absence of an ALP, will be excessive taking into account the need for an adequate carryover to maintain reasonable and stable supplies and prices and to meet a national emergency, the Secretary may implement an ALP. The section provides that in making such a determination the Secretary shall take into consideration the number of acres placed in the conservation acreage reserve established under section 1231 of the Food Security Act of 1985. If the Secretary elects to implement an ALP for 1990, the Secretary shall announce any such program not later than January 31, 1990.

The Secretary shall, to the maximum extent practicable, carry out an ALP for a crop of rice in a manner that will result in a carryover of 30 million hundredweight of rice. If an ALP is announced for a crop of rice such reduction in production shall be achieved by applying a uniform percentage reduction (not to exceed 35 percent) to the rice crop acreage base for the crop for each rice-producing farm. Except as provided under the IRP, producers who knowingly produce rice in excess of the permitted rice acreage for the farm, shall be ineligible for rice loans, purchases, and payments with respect to that farm.

Comments are requested with respect to the need for an ALP, the appropriate level of reduction under an ALP, and other provisions of such program.

g. *Land Diversion Program:* Section 101A(f)(4)(A) of the 1949 Act provides that the Secretary may make land diversion payments to producers of rice,

whether or not an ALP is in effect, if the Secretary determines that such land diversion payments are necessary to assist in adjusting the total national acreage of rice to desirable goals. Such determination shall be based on the following factors:

1. Estimated domestic use, 1990/91.	87.3 million cwt.
2. Plus estimated exports, 1990/91.	85.0 million cwt.
3. Equals total estimated use, 1990/91.	172.3 million cwt.
4. Plus desirable ending stocks, 1990/91.	30.0 million cwt.
5. Equals total desirable supply, 1990/91.	202.3 million cwt.
6. Less estimated beginning stocks, 1990/91.	32.3 million cwt.
7. Equals total desirable production, 1990/91.	170.0 million cwt.
8. Divided by estimated yield, 1990/91.	6,400 pounds per acre.
9. Equals total desirable harvested acreage, 1990/91.	5.31 million acres.
10. Divided by estimated planted acreage, 1990/91.	5.90 million acres.
11. Equals desirable harvested/planted ratio, 1990/91.	0.90.

Comments are requested as to the appropriate level of land diversion under an ALP, and other provisions of such program.

h. *National Program Acreage:* Section 101A(f)(2)(A) of the 1949 Act provides that the Secretary shall establish a national program acreage (NPA) for the 1990 crop of rice. The NPA shall be the number of acres that the Secretary determines will be sufficient to produce the quantity of rice needed to meet domestic and export requirements and to maintain reasonable and adequate carryover stocks of rice.

Comments are requested as to the appropriate level of the NPA.

i. *Voluntary Reduction Percentage:* Section 101A(f)(2)(B) of the 1949 Act provides that the Secretary may proclaim a voluntary reduction percentage for the 1990 crop of rice. Such percentage shall be the percentage by which the Secretary determines that the total acreage of rice planted for harvest should be reduced in order to meet the NPA. Such percentage may not exceed 35 percent.

Comments are requested as to the appropriate level of the voluntary reduction percentage.

j. *Commodity Certificates:* Section 101A(f)(3)(A) of the 1949 Act provides that the Secretary may make land diversion payments in the form of commodity certificates or other in-kind compensation.

Comments are requested as to the appropriate form of land diversion payments.

k. *Marketing Certificate Program:* Section 101A(g) of the 1949 Act provides that the Secretary may implement a marketing certificate program for the 1990 crop of rice. Under such program, the Secretary may make available to producers marketing certificates that may be redeemed for rice owned by the CCC valued at the prevailing market price, as determined by the Secretary. If CCC-owned rice is not available in the State in which the rice pledged as collateral for the loan was produced or at such other location outside of such State as may be approved by the owner of such certificate, such certificate shall be redeemable for cash. If any such certificate is not presented for marketing within a reasonable number of days after issuance, as determined by the Secretary, reasonable costs of storage and other carrying charges shall be deducted from the value of the certificate.

Comments are requested as to whether the Secretary should implement a marketing certificate program and, if so, for what percentage of the difference in value between the loan level and the loan repayment rate.

l. *Inventory Reduction Program:* Section 101A(h) of the 1949 Act provides that the Secretary may implement an IRP for the 1990 crop of rice. Under such program, the Secretary may make available to producers marketing certificates that may be redeemed for rice owned by the CCC valued at the prevailing market price, as determined by the Secretary. If CCC-owned rice is not available in the State in which the rice pledged as collateral for the loan was produced or at such other location outside of such State as may be approved by the owner of such certificate, such certificate shall be redeemable for cash. If any such certificate is not presented for marketing within a reasonable number of days after issuance, as determined by the Secretary, reasonable costs of storage and other carrying charges shall be deducted from the value of the certificate.

Comments are requested as to whether the Secretary should implement an IRP and, if so, for what percentage of the difference in value between the loan level and the loan repayment rate.

m. *Other Related Determinations:* Comments are requested as to other related determinations that should be made with respect to the 1990 crop of rice.

(3) do not plant rice for harvest in excess of the crop acreage base reduced by one-half of any acreage required to be diverted from production under the announced ALP. Such payments shall be made in the form of rice owned by CCC valued at the prevailing market price, as determined by the Secretary. If CCC-owned rice is not available in the State in which the rice pledged as collateral for the loan was produced or at such other location outside of such State as may be approved by the owner of such certificate, such certificate shall be redeemable for cash. If any such certificate is not presented for marketing within a reasonable number of days after issuance, as determined by the Secretary, reasonable costs of storage and other carrying charges shall be deducted from the value of the certificate.

Comments are requested as to whether the Secretary should make such payments and, if so, for what percentage of the difference in value between the loan level and the loan repayment r

VOL 54 ISS 210 NO 1 1989 UMI

whether or not an ALP is in effect, if the Secretary determines that such land diversion payments are necessary to assist in adjusting the total national acreage of rice to desirable goals. Such land diversion payments shall be made available to producers who, to the extent prescribed by the Secretary, devote to approved conservation uses an acreage of cropland on the farm in accordance with land diversion contracts entered into by the Secretary with such producers.

The amounts payable to producers under land diversion contracts may be determined through the submission of bids for such contracts by producers in such manner as the Secretary may prescribe or through such other means as the Secretary determines appropriate. In determining the acceptability of contract offers, the Secretary shall take into consideration the extent of the diversion to be undertaken by the producers and the productivity of the acreage diverted. The Secretary shall limit the total acreage to be diverted under agreements in any county or local community so as not to affect adversely the economy of the county or local community. Any acreage reduction under an LDP would be at a producer's option.

Comments are requested with respect to the need for an optional paid LDP, appropriate payment rates, and the other provisions of such program.

h. *National Program Acreage:* Section 101A(d) of the 1949 Act provides that the Secretary shall proclaim an NPA for the 1990 crop of rice not later than January 31, 1990. The NPA shall be the number of harvested acres the Secretary determines (on the basis of the weighted national average of the farm program payment yields for the crop for which the determination is made) will produce the quantity (less imports) that the Secretary estimates will be utilized domestically and for export during the marketing year 1990/91. If the Secretary determines that carryover stocks of rice are excessive or that an increase in stocks is needed to assure desirable carryover, the Secretary may adjust the NPA by the amount the Secretary determines will accomplish the desired increase or decrease in carryover stocks. The Secretary may later revise the NPA if the Secretary determines it to be necessary based upon the latest information. If an ALP is implemented for the 1990 crop of rice, the NPA shall not be applicable to such crop. If required, the likely NPA for the 1990 crop of rice would be:

1. Estimated domestic use, 1990/91.	87.3 million cwt.
2. Plus estimated exports, 1990/91.	85.0 million cwt.
3. Minus imports	6.0 million cwt.
4. Plus stock adjustment.	8.0 million cwt.
5. Divided by national weighted average Farm Program Payment yield.	48.00 cwt./acre.
6. Equals 1990-crop NPA.	3.63 million acres.

Comments on the NPA and the appropriate carryover level for the 1990 crop of rice, along with supporting data, are required.

i. *Whether a Voluntary Reduction Percentage Should Be Proclaimed and, if so, the level of Such Voluntary Reduction Percentage.* Section 101A(d)(3)(B) of the 1949 Act provides that the 1990 individual farm program acreage of rice may not be further reduced by application of an allocation factor (not less than 80 percent nor more than 100 percent) if the producer voluntarily reduces the acreage of rice planted for harvest on the farm from the 1990-crop rice acreage base established for the farm by at least the percentage recommended by the Secretary in the proclamation of the NPA for the 1990 crop.

If an ALP is implemented for the 1990 crop of rice, the voluntary reduction percentage shall not be applicable to such crop. If required, the likely national recommended voluntary reduction percentage for the 1990 crop of rice would be:

1. 1990 established rice acreage base.	4.10 million acres
2. Minus 1990 preliminary NPA.	3.63 million acres
3. Equals acreage reduction needed from acreage base.	.47 million acres
4. Divided by 1990 rice acreage base.	4.10 million acres
5. Equals 1990-crop recommended voluntary reduction percentage.	11.5 percent

Comments from interested persons with respect to the voluntary reduction percentage, if any, are requested.

j. *Commodity Certificates:* Section 107E of the 1949 Act provides that, in making in-kind payments under any rice program, other than those programs which provide for payments in the form of negotiable marketing certificates, the Secretary may (1) acquire and use commodities that have been pledged to CCC as security for price support loans, including loans made to producers under the farmer-owned reserve program and (2) use other commodities owned by CCC.

The Secretary may make such in-kind payments by: (1) Delivery of the commodity to the producer at a warehouse or other similar facility, as determined by the Secretary; (2) the transfer of negotiable warehouse receipts; (3) the issuance of certificates which CCC shall redeem for a commodity; and (4) such other methods as the Secretary determines appropriate to enable the producer to receive payments in an efficient, equitable, and expeditious manner so as to ensure that the producer receives the same total return as if the payments had been made in cash.

Accordingly, comments are required with respect to the use of commodity certificates in making payments under the 1990 rice program.

k. *Marketing Certificates:* Section 603 of the Food Security Act of 1985 provides that whenever, during the period beginning August 1, 1986, and ending July 31, 1991, the world price for a class of rice (adjusted to United States qualities and location), as determined by the Secretary of Agriculture, is below the current loan repayment rate for that class of rice, to make United States rice competitive in world markets and to maintain and expand exports of rice produced in the United States, under such regulations as the Secretary may prescribe, CCC shall make payments to persons who have entered into an agreement with CCC to participate in the program established by this section. Such payments shall be made in the form of negotiable marketing certificates. Such certificates shall be in such monetary amounts and subject to such terms and conditions as the Secretary determines will make rice produced in the United States available at competitive prices.

The value of each certificate shall be based on the difference between the loan repayment rate for the class of rice and the prevailing world market price for the class of rice, as determined by the Secretary.

Comments are requested with respect to the provisions of the marketing certificate program for rice.

l. *Inventory Reduction Program:* Section 101A(g) of the 1949 Act provides that the Secretary may make payments available to producers who: (1) Agree to forgo obtaining a loan or purchase agreement; (2) agree to forgo receiving deficiency and disaster payments; and (3) do not plant rice for harvest in excess of the crop acreage base reduced by one-half of any acreage required to be diverted from production under the announced ALP. Such payments shall be made in the form of rice owned by CCC and shall be subject to the availability of such rice. Payments under this program shall be determined in the same manner as loan deficiency payments.

Comments are requested on whether the IRP should be implemented for the 1990 crop of rice.

m. *Other Related Provisions:* A number of other determinations such as commodity eligibility and other provisions must be made in order to carry out the rice loan and purchase programs.

Consideration will be given to any data, views and recommendations that may be received relating to these issues.

Authority: 7 U.S.C. 1441-1, 1441-1a, 1445c; 15 U.S.C. 714b and 714c.

Signed at Washington, DC on October 20, 1989.

Keith D. Bjerke,

Executive Vice President, Commodity Credit Corporation.

BILLING CODE 3410-05-M

Cooperative State Research Service

Committee of Nine; Meeting

In accordance with the Federal Advisory Committee Act of October 6, 1972 (Pub. L. 92-463, 86 Stat. 770-776), the Cooperative State Research Service announces the following meeting:

Name: Committee of Nine.

Date and Time: November 30, 1989—8:30 a.m.–5:00 p.m.; December 1, 1989—8:30 a.m.–5:00 p.m.

Place: U.S. Department of Agriculture, Room 338C, Aerospace Building, Washington, DC 20250-2200.

Type of Meeting: Open to the public. Persons may participate in the meeting as time and space permit.

Comments: The public may file written comments before or after the meeting with the contact person listed below.

Purpose: To evaluate and recommend proposals for cooperative research on problems that concern agriculture in two or more States, and to make recommendations for allocation of regional research funds appropriated by Congress under the Hatch Act for research at the State agricultural experiment stations.

Contact Person for Agenda and More Information: Dr. John A. Naegele, Executive Secretary, U.S. Department of Agriculture, Cooperative State Research Service, Room 328, Aerospace Building, Washington, DC 20250-2200, Telephone: 202-447-4587.

Done at Washington, DC this 25th day of October 1989.

John Patrick Jordan,

Administrator, Cooperative State Research Service.

BILLING CODE 3410-22-M

Federal Grain Inspection Service

Request for Comments on the Designation Applicant in the Geographic Area Currently Assigned to the Columbus (OH) Agency

AGENCY: Federal Grain Inspection Service (Service).

ACTION: Notice.

SUMMARY: This notice requests comments from interested parties on the applicant for official agency designation in the geographic area currently assigned to Columbus Grain Inspection, Inc. (Columbus).

DATE: Comments must be postmarked on or before December 18, 1989.

ADDRESS: Comments must be submitted in writing to Lewis Lebakken, Jr., RM, FGIS, USDA, Room 0628 South Building, P.O. Box 96454, Washington, DC 20090-6454.

Telemail users may respond to [LLEBAKKEN/FGIS/USDA] telemail.

Telex users may respond as follows: TO: Lewis Lebakken, TLX:7807351, ANS:FGIS UC.

All comments received will be made available for public inspection at the above address located at 1400 Independence Avenue, SW., during regular business hours (7 CFR 1.27(b)).

FOR FURTHER INFORMATION CONTACT: Lewis Lebakken, Jr., telephone (202) 475-3428.

SUPPLEMENTARY INFORMATION: This action has been reviewed and determined not to be a rule or regulation as defined in Executive Order 12291 and Departmental Regulation 1512-1; therefore, the Executive Order and Departmental Regulation do not apply to this action.

The Service requested applications for official agency designation to provide official services within specified geographic areas in the September 1, 1989, **Federal Register** (54 FR 36365). Applications were to be postmarked by October 2, 1989. Columbus was the only applicant for designation in that area, and applied for the entire area currently assigned to that agency.

This notice provides interested persons the opportunity to present their comments concerning the applicant for designation. Commenters are encouraged to submit reasons for support or objection to this designation action and include pertinent data to support their views and comments. All comments must be submitted to the Resources Management Division, at the above address.

Comments and other available information will be considered in making a final decision. Notice of the final decision will be published in the **Federal Register**, and the applicant will be informed of the decision in writing.

Authority: Pub. L. 94-582, 90 Stat. 2867, as amended (7 U.S.C. 71 *et seq.*).

Dated: October 20, 1989.

J.T. Abshier,

Director, Compliance Division.

Request for Designation Applicants to Provide Official Services in the Geographic Area Currently Assigned to the Chattanooga Grain Inspection Company, Inc. (TN) Agency

AGENCY: Federal Grain Inspection Service (Service).

ACTION: Notice.

SUMMARY: Pursuant to the provisions of the U.S. Grain Standards Act, as Amended (Act), official agency designations shall terminate not later than triennially and may be renewed according to the criteria and procedures prescribed in the Act. This notice announces that the designation of one agency will terminate, in accordance with the Act, and requests applications from parties interested in being designated as the official agency to provide official services in the geographic area currently assigned to the specified agency. The official agency is Chattanooga Grain Inspection Company, Inc. (Chattanooga).

DATE: Applications must be postmarked on or before December 1, 1989.

ADDRESS: Applications must be submitted to James R. Conrade, Chief, Review Branch, Compliance Division, FGIS, USDA, Room 1647 South Building, P.O. Box 96454, Washington, DC 20090-6454. All applications received will be made available for public inspection at this address located at 1400 Independence Avenue, SW., during regular business hours.

BEST COPY AVAILABLE

FOR FURTHER INFORMATION CONTACT: James R. Conrade, telephone (202) 447-8525.

SUPPLEMENTARY INFORMATION: This action has been reviewed and

Applications and other available information will be considered in determining which applicant will be designated to provide official services in a geographic area.

The Service evaluated all available information regarding the designation criteria in section 7(f)(1)(A) of the Act

concerning the designation renewal of Amarillo was received. No comments concerning Wisconsin were received.

The Service evaluated all available

Conservationist, has determined that the preparation and review of an Environmental Impct Statement are not needed for this measure.

This critical area treatment measure

Matters To Be Considered:

Update on Americans With Disabilities Act (ADA); Fiscal Year 1990 Budget Reprogramming; Board 1990 Retreat; complaint status report;

the Foreign-Trade Zones Act of June 18, 1934, as amended (19 U.S.C. 81a–81u), the Foreign-Trade Zones Board has adopted the following Resolution and Order:

VOL 54 ISS 210 NO 1 1989 UMI

FOR FURTHER INFORMATION CONTACT: James R. Conrade, telephone (202) 447–8525.

SUPPLEMENTARY INFORMATION: This action has been reviewed and determined not to be a rule or regulation as defined in Executive Order 12291 and Departmental Regulation 1512–1; therefore, the Executive Order and Departmental Regulation do not apply to this action.

Section 7(f)(1) of the Act specifies that the Administrator of the Service is authorized, upon application by any qualified agency or person, to designate such agency or person to provide official services after a determination is made that the applicant is better able than any other applicant to provide official services in an assigned geographic area.

Chattanooga, located at Judd Road, Chattanooga, TN 37416, was designated under the Act as an official agency on May 1, 1987, to provide official inspection and Class X or Y weighing functions.

The official agency's designation terminates on April 30, 1990. Section 7(g)(1) of the Act states that designations of official agencies shall terminate not later than teriennially and may be renewed according to the criteria and procedures prescribed in the Act.

The geographic area presently assigned to Chattanooga, in the State of Tennessee, pursuant to section 7(f)(2) of the Act, which may be assigned to the applicant selected for designation is as follows:

Bounded on the North by the northern Tennessee State line for Sumner County east;

Bounded on the East by the eastern Tennessee State line southwest;

Bounded on the South by the sourthern Tennessee State line west to Interstate 65; and

Bounded on West by Interstate 65 north to the northern Williamson County line; the northern Williamson County line east; the western Rutherford, Wilson and Sumner county lines north.

Interested parties, including Chattanooga, are hereby given opportunity to apply for official agency designation to provide the official services in the geographic area, as specified above, under the provisions of section 7(f) of the Act and § 800.196(d) of the regulations issued thereunder. Designation in the specified geographic area is for the period beginning May 1, 1990, and ending April 30, 1993. Parties wishing to apply for designation should contact the Review Branch, Compliance Division, at the address listed above for forms and information.

Applications and other available information will be considered in determining which applicant will be designated to provide official services in a geographic area.

Authority: Pub. L. 94–582, 90 Stat. 2867, as amended (7 U.S.C. 71 *et seq.*)

Dated: October 20, 1989.

BILLING CODE 3410–EN–M

Designation Renewal of the Amarillo (TX) Agency and the State of Wisconsin (WI)

AGENCY: Federal Grain Inspection Service (Service).

ACTION: Notice.

SUMMARY: This notice announces the designation renewal of Amarillo Grain Exchange, Inc. (Amarillo) and the Wisconsin Department of Agriculture, Trade and Consumer Protection (Wisconsin), as official agencies responsible for providing official services under the U.S. Grain Standards Act, as Amended (Act).

EFFECTIVE DATE: December 1, 1989.

ADDRESS: James R. Conrad, Chief, Review Branch, Compliance Division, FGIS, USDA, Room 1647 South Building, P.O. Box 96454, Washington, DC 20090–6454.

FOR FURTHER INFORMATION CONTACT: James R. Conrad, telephone (202) 447–8525.

SUPPLEMENTARY INFORMATION: This action has been reviewed and determined not to be a rule or regulation as defined in Executive Order 12291 and Departmental Regulation 1512–1; therefore, the Executive Order and Departmental Regulation do not apply to this action.

The Service announced that Amarillo's and Wisconsin's designations terminate on November 30, 1989, and requested applications for official agency designation to provide official services within specified geographic areas in the June 1, 1989, **Federal Register** (54 FR 23498). Applications were to be postmarked by July 3, 1989. Amarillo and Wisconsin were the only applicants for designation in their area and each applied for designation renewal in the entire area currently assigned to that agency. The Service announced the applicant names in the August 1, 1989, **Federal Register** (54 FR 31712) and requested comments on the applicants for designation. Comments were to be postmarked by September 15, 1989. One favorable comment concerning the designation renewal of Amarillo was received. No comments concerning Wisconsin were received.

The Service evaluated all available information regarding the designation criteria in section 7(f)(1)(A) of the Act; and in accordance with section 7(f)(1)(B), determined that Amarillo and Wisconsin are able to provide official services in the geographic areas for which the Service is renewing their designations. Effective December 1, 1989, and terminating November 30, 1992, Amarillo is designated to provide official inspection functions and Wisconsin is designated to provide official inspection and Class X or Y weighing functions in their specified geographic areas, as previously described in the June 1 **Federal Register**.

Interested persons may obtain official services by contacting the agencies at the following telephone numbers: Amarillo at (806) 372–8511 and Wisconsin at (608) 266–7100.

Authority: Pub. L. 94–582, 90 Stat. 2867, as amended (7 U.S.C. 71 *et seq.*)

Dated: October 20, 1989.

J.T. Abshier,

Director, Compliance Division.

BILLING CODE 3410–EN–M

Soil Conservation Service

Carbon Arroyo Critical Area Treatment RC&D Measure, Colorado

AGENCY: Soil Conservation Service, USDA.

ACTION: Notice of a finding of no significant impact.

SUMMARY: Pursuant to section 102(2)(C) of the National Environmental Policy Act of 1969; the Council on Environmental Quality Guidelines (40 CFR part 1500); and the Soil Conservation Service, U.S. Department of Agriculture, gives notice that an Environmental Impact Statement is not being prepared for the Carbon Arroyo Critical Area Treatment RC&D Measure, Las Animas County, Colorado.

FOR FURTHER INFORMATION CONTACT: Mr. Sheldon G. Boone, State Conservationist, USDA—Soil Conservation Service, 655 Parfet Street, Rm E200C, Lakewood, Colorado 80215–5517, telephone (303) 236–2886.

SUPPLEMENTARY INFORMATION: The Environmental Assessment of this federally assisted action indicates that the measure will not cause significant local, regional or national impacts on the environment. As a result of these findings, Mr. Sheldon G. Boone, State Conservationist, has determined that the preparation and review of an Environmental Impct Statement are not needed for this measure.

This critical area treatment measure concerns a plan to prevent erosion and sediment damage to the Community Center site. The planned works of improvement include grading and shaping two acres, rock lining five gullied areas, installing two rock diversions, and top-soiling and seeding one acre.

The Notice of Finding of No Significant Impact (FONSI) has been forwarded to the Environmental Protection Agency and to various federal, state and local agencies and interested parties. A limited number of copies of the FONSI are available at the above address to fill single-copy request. Basic data developed during the environmental evaluation are on file and may be reviewed by contacting Mr. Sheldon G. Boone. No Administrative action on implementation of the proposal will be taken until 30 days after the date of this publication in the **Federal Register**.

Dated: October 20, 1989.

(This activity is listed in the Catalog of Federal Domestic Assistance under No. 10.901, Resource Conservation and Development, and is subject to the provisions of Executive order 12372 which requires intergovernmental consultation with state and local officials.)

Sheldon G. Boone,

State Conservationist.

BILLING CODE 3410–16–M

ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD

Meeting of the Access Board

AGENCY: Architectural and Transportation Barriers Compliance Board (ATBCB).

ACTION: Notice of ATBCB meeting.

SUMMARY: The Architectural and Transportation Barriers Compliance Board (ATBCB or Access Board) has scheduled a business meeting to take place from 3:00 p.m. to 5:00 p.m., on Tuesday, November 14, 1989, at the Westin Galleria Hotel, Houston, Texas; and a public forum from 1:00 p.m. to 5:00 p.m., on Wednesday, November 15, 1989, at the Houston Metropolitan Multi-Service Center, 1475 West Gray, Houston, Texas.

DATE: Tuesday, November 14, 1989—3:00 p.m. to 5:00 p.m. (Business Meeting); Wednesday, November 15, 1989—1:00 p.m. to 5:00 p.m. (Public Forum).

Matters To Be Considered:

Update on Americans With Disabilities Act (ADA); Fiscal Year 1990 Budget Reprogramming; Board 1990 Retreat; complaint status report; resolution on providing access to meetings and information for the public; Americans With Disabilities Act implementation plan: proposed amendments to the Architectural Barriers Act (ABA); proposed amendments to the Board's Statement of Operating Procedures (SOP) and Authorities and Delegations (A&D); proposed amendments to the Board's Ethics Regulations; and, approval of January 1990 Board meeting agenda.

The ATBCB will hold a public forum from 1:00 to 5:00 p.m., on Wednesday, November 15. Public participation is invited to discuss issues relevant to the Architectural Barriers Act and the Access Board. Individuals or organizations interested in testifying must contact Larry Allison, Special Assistant for External Affairs, (202) 653–7834.

FOR FURTHER INFORMATION CONTACT: For information regarding committee meetings and the business portion of the Board meeting, contact Barbara A. Gilley, Executive Officer. For information regarding the public forum, contact Larry Allison. Both individuals may be reached at (202) 653–7834 (voice or TDD).

SUPPLEMENTARY INFORMATION: All Committee meetings will be held on Tuesday, November 14, 1989, at the Westin Galleria Hotel, Houston, Texas. The schedules are as follows: Planning and Budget Committee: 9:00 a.m.–10:00 a.m.; Technical Programs Committee: 10:00 a.m.–12 noon; Executive Committee: 1:00 p.m.–3:00 p.m.

Lawrence W. Roffee,

Executive Director.

BILLING CODE 6820–BP–M

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

Order No. 443

Resolution and Order Approving the Application of the Puerto Rico International Distribution Center and Free Zone, Inc. for a Foreign Zone in Ponce, Puerto Rico; Proceedings of the Foreign-Trade Zones Board, Washington, DC

Resolution and Order

Pursuant to the authority granted in the Foreign-Trade Zones Act of June 18, 1934, as amended (19 U.S.C. 81a–81u), the Foreign-Trade Zones Board has adopted the following Resolution and Order:

The Board, having considered the matter, hereby orders:

After consideration of the application of the Puerto Rico International Distribution Center and Free Zone, Inc., a non-profit corporation involving the City of Ponce and the Ponce Chamber of Commerce, filed with the Foreign-Trade Zones Board (the Board) on January 20, 1988, requesting a grant of authority for establishing, operating, and maintaining a general-purpose foreign-trade zone in Ponce, Puerto Rico, within the Ponce Customs port of entry, the Board, finding that the requirements of the Foreign-Trade Zones Act, as amended, and the Board's regulations would be satisfied, and that the proposal would be in the public interest, approves the application.

As the proposal involves open space on which buildings may be constructed by parties other than the grantee, this approval includes authority to the grantee to permit the erection of such buildings, pursuant to § 400.815 of the Board's regulations, as are necessary to carry out the zone proposal, providing that prior to its granting such permission it shall have the concurrences of the local District Director of Customs, the U.S. Army District Engineer, when appropriate, and the Board's Executive Secretary. Further, the grantee shall notify the Board for approval prior to the commencement of any manufacturing operation within the zone. The Secretary of Commerce, as Chairman and Executive Officer of the Board, is hereby authorized to issue a grant of authority and appropriate Board Order.

Grant of Authority; To Establish, Operate, and Maintain a Foreign-Trade Zone in Ponce, Puerto Rico

Whereas, by an Act of Congress approved June 18, 1934, an Act "To provide for the establishment, operation, and maintenance of foreign-trade zones in ports of entry of the United States, to expedite and encourage foreign commerce, and for other purposes," as amended (19 U.S.C. 81a–81u) (the Act), the Foreign-Trade Zones Board (the Board) is authorized and empowered to grant to corporations the privilege of establishing, operating, and maintaining foreign-trade zones in or adjacent to ports of entry under the jurisdiction of the United States;

Whereas, the Puerto Rico International Distribution Center and Free Zone, Inc., (the Grantee) has made application (filed January 20, 1988, FTZ Docket 4–88, 53 FR 3411) in due and proper form to the Board, requesting the establishment, operation, and maintenance of a foreign-trade zone in Ponce, Puerto Rico, within the Ponce Customs port of entry;

VOL 54 ISS 210 NO 1 1989 UMI

Whereas, notice of said application has been given and published, and full opportunity has been afforded all interested parties to be heard; and,

Whereas, the Board has found that the requirements of the Act and the Board's regulations (15 CFR part 400) are satisfied;

Now, therefore, the Board hereby grants to the Grantee the privilege of establishing, operating, and maintaining a foreign-trade zone, designated on the records of the Board as Zone No. 163, at the location mentioned above and more particularly described on the maps and drawings accompanying the application in Exhibits IX and X, subject to the provisions, conditions, and restrictions of the Act and the regulations issued thereunder, to the same extent as though the same were fully set forth herein, and also the following express conditions and limitations:

Operation of the foreign-trade zone shall be commenced by the Grantee within a reasonable time from the date of issuance of the grant, and prior thereto, any necessary permits shall be obtained from Federal, State, and municipal authorities.

The Grantee shall allow officers and employees of the United States free and unrestricted access to and throughout the foreign-trade zone site in the performance of their official duties.

The grant does not include authority for manufacturing operations, and the Grantee shall notify the Board for approval prior to the commencement of any manufacturing operations within the zone.

The grant shall not be construed to relieve the Grantee from liability for injury or damage to the person or property of others occasioned by the construction, operation, or maintenance of said zone, and in no event shall the United States be liable therefor.

The grant is further subject to settlement locally by the District Director of Customs and Army District Engineer with the Grantee regarding compliance with their respective requirements for the protection of the revenue of the United States and the installation of suitable facilities.

In witness whereof, the Foreign-Trade Zones Board has caused its name to be signed and its seal to be affixed hereto by its Chairman and Executive Officer at Washington, DC, this 18th day of October, 1989, pursuant to Order of the Board.

Foreign-Trade Zones Board.

Robert A. Mosbacher,

Secretary of Commerce, Chairman and Executive Officer.

Attest:

John J. Da Ponte, Jr.,

Executive Secretary.

BILLING CODE 3510-DS-M

Foreign-Trade Zones Board

[Order No. 444]

Approval for Expansion of Foreign-Trade Zone 62, Brownsville, TX

Pursuant to the authority granted in the Foreign-Trade Zones Act of June 18, 1934, as amended (19 USC 81a-81u), the Foreign-Trade Zones Board adopts the following Resolution and Order:

Whereas, the Brownsville Navigation District, Grantee of Foreign-Trade Zone No. 62, has applied to the Board for authority to expand its general-purpose zone to include two sites near Valley International Airport in Harlingen, Texas, within the Brownsville Customs port of entry;

Whereas, the application was accepted for filing on February 24, 1988, and notice inviting public comment was given in the **Federal Register** on March 8, 1988 (Docket 12-88, 53 FR 7382);

Whereas, an examiners committee has investigated the application in accordance with the Board's regulations and recommends approval;

Whereas, the expansion is necessary to improve and expand zone services in the Brownsville-Harlingen area; and,

Whereas, the Board has found that the requirements of the Foreign-Trade Zones Act, as amended, and the Board's regulations are satisfied, and that approval of the application is in the public interest;

Now, therefore, the Board hereby orders:

That the Grantee is authorized to expand its zone in accordance with the application filed February 24, 1988. The grant does not include authority for manufacturing operations, and the Grantee shall notify the Board for approval prior to the commencement of any manufacturing or assembly operations. The authority given in this Order is subject to settlement locally by the District Director of Customs and the District Army Engineer regarding compliance with their respective requirements relating to foreign-trade zones.

Signed at Washington, DC, this 24th day of October 1989.

Eric I. Garfinkel,

Assistant Secretary of Commerce for Import Administration, Chairman, Committee of Alternates, Foreign-Trade Zones Board.

Attest:

John J. Da Ponte, Jr.,

Executive Secretary.

BILLING CODE 3510-DS-M

International Trade Administration

Certain Textiles and Textile Products From Argentina Intent To Revoke Countervailing Duty Order

AGENCY: International Trade Administration/Import Administration, Department of Commerce.

ACTION: Notice of intent to revoke countervailing duty order.

SUMMARY: The Department of Commerce is notifying the public of its intent to revoke the countervailing duty order on certain textiles and textile products from Argentina, specifically men's and boys' woolen garments. Interested parties who object to this revocation must submit their comments in writing not later than November 30, 1989.

EFFECTIVE DATE: November 1, 1989.

FOR FURTHER INFORMATION CONTACT: Lorenza Olivas or Anne D'Alauro, Office of Countervailing Compliance, International Trade Administration, U.S. Department of Commerce, Washington, DC 20230; telephone: (202) 377-2786.

SUPPLEMENTARY INFORMATION:

Background

On November 16, 1978, the Depatment of Commerce ("the Department") published a countervailing duty order on certain textiles and textile products from Argentina (48 FR 53421). The Department has not received a request to conduct an administrative review of the countervailing duty order on certain textiles and textile products from Argentina for four consecutive annual anniversary months. This is the fifth anniversary.

The Department may revoke an order if the Secretary of Commerce concludes that an order is no longer of interest to interested parties. Accordingly, as required by § 355.25(d)(4) of the Commerce Department's regulations published in the **Federal Register** of December 27, 1988 (53 FR 50358) (to be codified at 19 CFR 355.25(d)(4)), the Department is notifying the public of its intent to revoke this order.

Opportunity to Object

Not later than November 30, 1989, interested parties, as defined in § 355.2(i) of the Department's regulations, may object to the Department's intent to revoke this countervailing duty order.

Seven copies of any such objections should be submitted to the Assistant Secretary for Import Administration, International Trade Administration, Room B-099, U.S. Department of Commerce, Washington, DC. 20230.

If interested parties do not request an administrative review or object to the Department's intent to revoke by November 30, 1989, we shall conclude that the order is no longer of interest to interested parties and shall proceed with the revocation.

This notice is in accordance with § 355.25(d) of the Department's regulations.

Dated: October 30, 1989.

Joseph A. Spetrini,

Deputy Assistant Secretary for Import Administration.

BILLING CODE 3510-DS-M

Export Trade Certificate of Review; Application for Amendment

AGENCY: International Trade Administration, Commerce.

ACTION: Notice of application for an amendment to an export trade certificate of review.

SUMMARY: The Office of Export Trading Company Affairs, International Trade Administration, Department of Commerce, has received an application for an amendment to an Export Trade Certificate of Review. This notice summarizes the amendment and requests comments relevant to whether the amended Certificate should be issued.

FOR FURTHER INFORMATION CONTACT: Douglas J. Aller, Director, Office of Export Trading Company Affairs, International Trade Administration, 202/377-5131. This is not a toll-free number.

SUPPLEMENTARY INFORMATION: Title III of the Export Trading Company Act of 1982 (15 U.S.C. 4001-21) authorizes the Secretary of Commerce to issue Export Trade Certificates of Review. A Certificate of Review protects the holder and the members identified in the Certificate from state and federal government antitrust actions and from private, treble damage antitrust actions for the export conduct specified in the Certificate and carried out in compliance with its terms and conditions. Section 302(b)(1) of the Act and 15 CFR 325.6(a) require the Secretary to publish a notice in the Federal Register identifying the applicant and summarizing its proposed export conduct.

Request for Public Comments

Interested parties may submit written comments relevant to the determination whether the Certificate should be amended. An original and five (5) copies should be submitted not later than 20 days after the date of this notice to: Office of Export Trading Company Affairs, International Trade Administration, Department of Commerce, Room 1223H, Washington, DC 20230. Information submitted by any person is exempt from disclosure under the Freedom of Information Act (5 U.S.C. 552). Comments should refer to this application as "Export Trade Certificate of Review, application number 85-2A015."

OETCA has received the following application for an amendment to Export Trade Certificate of Review No. 85-00015, which was issued on January 27, 1986 (51 FR 3996, January 31, 1986) and amended December 22, 1987 (52 FR 49183, December 30, 1987).

Summary of Application

Applicant: California Dried Fruit Export Trading Company ("CDFETC"), 64 North Fulton Street, P.O. Box 12148, Fresno, California 93776. Contact: Kermit W. Almstedt, Legal Counsel. Telephone: 202/383/5300.

Application No.: 85-2A015.

Date Deemed Submitted: October 23, 1989.

Request For Amended Conduct: CDFETC seeks to amend its Certificate to:

1. Add "Dole Dried Fruit and Nut Company" of Bakersfield, California as a "Member" of the Certificate.

2. Delete each of the following companies as a "Member" of the Certificate: "Bonner Packing Company" (acquired by Dole Dried Fruit and Nut Company August 31, 1988), and "California Prune Packing Company."

Dated: October 25, 1989.

Douglas J. Aller,

Director, Office of Export Trading Company Affairs.

[FR Doc. 89-25640 Filed 10-31-89; 8:45 am]

BILLING CODE 3510-DR-M

National Oceanic and Atmospheric Administration

Public Hearings on the Draft Environmental Impact Statement and Draft Management Plan for the Proposed Chesapeake Bay National Estuarine Research Reserve in Maryland

AGENCY: Marine and Estuarine Management Division, Office of Ocean and Coastal Resource Management, National Ocean Service, National Oceanic and Atmospheric Administration, U.S. Department of Commerce.

ACTION: Public hearing notice.

SUMMARY: Notice is hereby given that the Marine and Estuarine Management Division, of the Office of Ocean and Coastal Resource Management (OCRM), National Ocean Service (NOS), National Oceanic and Atmospheric Administration (NOAA), U.S. Department of Commerce, will hold public hearings for the purpose of receiving comments of the Draft Environmental Impact Statement and Draft Management Plan (DEIS/DMP) prepared on the proposed designation of Jug Bay and Otter Point Creek as additional components of the Chesapeake Bay National Estuarine Research Reserve in Maryland. The initial component, Monie Bay in Somerset County was designated in May 1985.

A public hearing will be held with regard to the Monie Bay component since it is being incorporated into this DEIS/DMP as part of the multi-site reserve which will total three components.

The Office of Ocean and Coastal Resource Management will hold public hearings at the following times and places:

Tuesday, November 14, 1989 at 7:00 p.m.—Somerset County Building Complex (Old Washington High School), 424 North Somerset Avenue, Room 109, Princess Anne, Maryland 21853.

Wednesday, November 15, 1989 at 7:00 p.m.—Prince Georges County Administration Building, Council Hearing Room, First Floor, Upper Marlboro, Maryland 20772.

Thursday, November 16, 1989 at 7:00 p.m.—Harford County Council Chambers, Harford County Courthouse, Level A, 20 West Courtland Street, Bel Air, Maryland 21014.

The views of interested persons and organizations on the adequacy of the DEIS/DMP are solicited, and may be expressed orally and/or in written

VOL 54 ISS 210 NO 1 1989 UMI

statements. Presentations will be scheduled on a first-come, first-heard basis, and may be limited to a maximum of five (5) minutes. The time allotment may be extended before the hearing when the number of speakers can be determined. All comments received at the hearing will be considered in the preparation of the Final Environmental Impact Statement (FEIS) and Draft Management Plan.

The comment period for the DEIS/DMP will end on Monday, November 27, 1989. All written comments received by this deadline will include in the FEIS.

FOR FURTHER INFORMATION CONTACT: Cheryl A. Graham, (202) 673–5122, Marine and Estuarine Management Division, Office of Ocean and Coastal Resource Management, National Ocean Service, NOAA, 1825 Connecticut Avenue NW., Room 714, Washington, DC 20235. Copies of the draft environmental impact statement/draft management plan are available upon request to the Marine and Estuarine Management Division.

(Federal Domestic Assistance Catalog Number 11.420 Coastal Zone Management Estuarine Sanctuaries)

Dated: October 27, 1989.

Virginia K. Tippie,

Assistant Administrator for Ocean Services and Coastal Zone Management.

[FR Doc. 89–25754 Filed 10–31–89; 8:45 am]

BILLING CODE 3510–08–M

Groundfish of the Gulf of Alaska, Groundfish of the Bering Sea and Aleutian Islands Area

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Notice of intent to prepare a supplemental environmental impact statement (SEIS) and request for scoping comments.

SUMMARY: NOAA announces its intention to prepare an SEIS to assess the potential effects of allocating groundfish harvests between inshore and offshore processors. Such action would be achieved by amending the Fishery Management Plan for Groundfish of the Gulf of Alaska and the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Area (FMPs). If such amendments to the FMPs are approved by the Secretary of Commerce (Secretary), implementation of such action is expected no sooner than January 1991.

In addition, NOAA announces a public process for determining the scope of issues to be addressed and for identifying the significant issues relating to allocating a public fishery resource. The intended effect of this notice is to alert the interested public of the commencement of a scoping process and to provide for public participation. This action is necessary to comply with Federal environmental documentation requirements.

DATE: Scoping comments are invited until December 8, 1989, when the scoping process will end at the conclusion of the December Council meeting.

ADDRESS: Send scoping comments to Steven Pennoyer, Director, Alaska Region, NMFS, P.O. Box 21668, Juneau, AK 99802–1668. Information on times and locations of scoping meetings may be requested from the North Pacific Fishery Management Council, P.O. Box 103136, Anchorage, AK 99510, or telephone 907–271–2809.

FOR FURTHER INFORMATION CONTACT: Jay J.C. Ginter, Fishery Management Biologist, Alaska Region, NMFS, 907–586–7229.

SUPPLEMENTARY INFORMATION: The commercial harvest of groundfish in the U.S. exclusive economic zone of the Gulf of Alaska and the Bering Sea and Aleutian Islands Area is governed by Federal regulations at 50 CFR 611.92 and 611.93, and 50 CFR parts 672 and 675, which implement the FMPs.

The FMPs and their accompanying environmental impact statements (EISs) were developed by the North Pacific Fishery Management Council and approved by the Secretary under the Magnuson Fishery Conservation and Management Act (Magnuson Act). Under the National Environmental Policy Act of 1969 (NEPA) and NOAA policy, a fishery management regulatory action which significantly affects the human environment requires preparation of an EIS or SEIS. This notice of intent to prepare an SEIS complies with NEPA implementing regulations at 40 CFR 1508.22. In addition, this notice announces a scoping process pursuant to 40 CFR 1501.7 and 1508.25.

The Problem: Domestic harvesting and processing capacity in the groundfish fishery currently exceeds available fish for all species in the Gulf of Alaska and most species in the Bering Sea. The seafood industry is composed of different geographic, social, and economic components which have differing needs and capabilities, particularly within the inshore and offshore components of the industry. These components may be defined as follows: (1) Inshore: includes fishing vessels that deliver product for processing to inshore and offshore (stationary or minimally mobile) processing facilities, and small catcher/processor vessels which may be dependent upon frequent shoreside logistical support. (2) Offshore: includes highly mobile fishing vessels which have onboard facilities to process their own catch, mothership processors which are sufficiently mobile to pursue groundfish species throughout their ranges, and those processors which do not depend upon frequent shoreside logistical support.

The finite availability of fishery resources, combined with current and projected levels of harvesting and processing capacity, and the differing capabilities of the inshore and offshore components of the industry, have generated concern for the future ecological, social, and economic health of the resource and the industry. These concerns include, but are not limited to, localized depletion of stocks or other behavioral impacts to stocks, shortened seasons, increased waste, harvests which exceed the TAC, and possible pre-emption of one industry component by another with the attendant social and economic disruption.

The Council must determine whether or not to address these concerns through the adoption of appropriate measures while protecting the conservation needs of the groundfish resources in the North Pacific.

The public is hereby notified that the NMFS, in cooperation with the Council, intends to prepare an SEIS on the potential effects of amending the FMPs to provide for allocating groundfish resources between inshore and offshore processors. This action is not intended to prejudice a decision by the Council on whether to recommend any change in the FMPs to the Secretary, but instead is designed to provide the Council with the best scientific information on which to base such a decision.

The Proposed and Possible Alternative Actions: The proposed action is to amend the FMPs to provide authority to allocate groundfish resources between inshore and offshore processors. Alternatives to this action include: (1) Status quo with no change in regulations to address the problem. (2) Allocate the total allowable catch (TAC) between inshore and offshore components of the industry. This could be done with or without specific operational areas. (3) A. Prohibit fishing by factory/trawlers in the Gulf of Alaska. In the Bering Sea/Aleutian Islands, allocate a portion of the TAC between inshore and offshore components of the industry and define operational areas. B. Prohibit fishing by

catcher/processors in the Gulf of Alaska. In the Bering Sea/Aleutian Islands, allocate a portion of the TAC between inshore and offshore components of the industry and define operational areas. C. Prohibit fishing by factory/trawlers in the Gulf of Alaska except as specifically provided for by the Council. In the Bering Sea/Aleutian Islands, prohibit factory/trawlers from the area between 165° and 163°W. longitude and south of 56°N. latitude except as specifically provided for by the Council. D. In addition to the above, at the discretion of the Council, provide for future management options for disadvantaged communities. (4) Use traditional management tools including, but not limited to: trip limits, periodic allocations, super-exclusive registration areas, and gear sizes.

Scoping Process: Because of extensive public testimony at the June and September 1989 Council meetings, public participation at several committee meetings, and a call for proposals, the Council has already initiated the amendment process for the inshore-offshore issue. Additionally, the Council's Fishery Planning Committee will meet on November 8, 1989 (time and location to be announced), to further discuss the problem statement and suggested alternatives. The public may provide comments relevant to these issues at that time. All persons affected by or otherwise interested in a decision to amend the FMPs to provide for allocations of groundfish resources between inshore and offshore components of the industry are invited to participate in determining the scope and the significant issues to be analyzed in the SEIS by submitting written comments to the above address. Scope consists of the range of actions, alternatives, and impacts to be considered in the SEIS. Actions include those which may be closely related, cumulative, or similar. Alternatives include the no action alternative, other reasonable courses of action, and mitigation measures. Impacts may be direct, indirect, and cumulative. The scoping process also will identify and eliminate from detailed study issues which are not significant or which have been covered in prior environmental review. This scoping process will end on December 8, 1989, at the conclusion of the December Council meeting.

Timetable for SEIS Preparation and Decisionmaking

The Council has adopted a tentative amendment preparation, review, and approval schedule for the inshore-offshore issue. Under this schedule, the draft SEIS is planned for completion prior to the Council's June 1990 meeting. If an acceptable draft is completed, the Council would decide at this meeting whether to submit the draft SEIS for public review. Oral comments to the Council on their decision could be made at that meeting. If the Council's decision is affirmative, public review of the draft SEIS would occur during 45 days in July and August 1990. At its September 1990 meeting, the Council would decide whether to recommend inshore-offshore allocations to the Secretary. Again, oral comments on this decision could be made to the Council at that meeting. If the Council's decision is affirmative, the SEIS would be made final and submitted with the amendment recommendation and other rulemaking documents to the Secretary for review and approval. The Council reserves the right to modify or abandon this schedule if determined necessary.

Under the Magnuson Act, Secretarial review and approval of a proposed amendment is completed in 95 days and includes concurrent public comment periods on the amendment and proposed rule. If approved by the Secretary under this schedule, inshore-offshore allocations and final implementing rule would be effective early in 1991.

Dated: October 25, 1989.

David S. Crestin,

Acting Director, Office of Fisheries Conservation and Management, National Marine Fisheries Service.

BILLING CODE 3510–22–M

Gulf of Mexico Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service, NOAA, Commerce.

The Gulf of Mexico Fishery Management Council will hold a public meeting of the Florida/Alabama Habitat Protection Advisory Panel on November 16, 1989, from 9 a.m. to 4 p.m. The meeting will be held at the Council's office (address below). The panel will discuss: (1) Sea grass problems in Florida and Tampa Bays; (2) National Marine Fisheries Service (NMFS) sea grass restoration efforts; (3) National Oceanic and Atmospheric Administration (NOAA) responsibility in handling hazardous spills into marine waters; (4) water quality standards in Alabama estuaries from point and non-point discharges; (5) sea level rise and impact on resource agencies' policies; (6) nutrification impact on fishery habitats; (7) issues surrounding Canal C–111 and the South Florida Water Management District's role, responsibility, and actions concerning Canal C–111; and (8) the live rock collecting issue—the extent of reefs and state actions in the Gulf of Mexico.

BILLING CODE 3510–22–M

North Pacific Fishery Management Council; Public Meetings

AGENCY: National Marine Fisheries Service, NOAA, Commerce.

The North Pacific Fishery Management Council's Fishery Planning Committee will hold a public meeting and a group of invited fishery economists will hold a one-day public workshop.

On November 15, 1989, at 9 a.m., P.s.t., the Fishery Planning Committee will meet at the Alaska Fisheries Science Center, National Marine Fisheries Service, 7600 Sand Point Way NE., Building 4, Room 2039, Seattle, WA. The Committee will review public comments on the draft inshore/offshore problem statement, and discuss management alternatives. The Committee also will develop recommendations for the North Pacific Council on further development of the subject, and design a work schedule.

On November 21 at 10 a.m., P.s.t., a group of invited fishery economists will hold a public workshop to discuss analytical issues associated with the inshore/offshore management issue. The group also will review the problem statement and the alternatives presented by the Fishery Planning Committee, and provide advice on how the alternatives might be analyzed. The workshop will be held at the Alaska Fisheries Science Center, National Marine Fisheries Service, 7600 Sand Point Way NE., Building 4, Room 2079, Seattle, WA.

BILLING CODE 3510-22-M

Pacific Fishery Management Council; Public Meetings

AGENCY: National Marine Fisheries Service, NOAA, Commerce.

The Pacific Fishery Management Council and its advisory entities will meet on November 13-17, 1989, at the Red Lion Inn-Columbia River, 1401 North Hayden Island Drive, Portland OR. Except as noted below, the meetings are open to the public.

The Council will meet on November 15 at 8 a.m., to address anchovy and groundfish management, and halibut allocation. The Council will reconvene on November 16 at 8 a.m., in closed session (not open to the public), to discuss litigation and personnel matters. The open session will start at 9 a.m., and the Council will continue consideration of groundfish management issues for the remainder of the day. On November 17 the Council will address habitat matters, salmon management, and administrative matters.

With regard to anchovy management, the Council will review preliminary options for a plan amendment that would provide for a limited reduction fishery at low spawning biomass levels. The halibut discussions will focus on development of a proposed harvest sharing agreement for 1990 that will be distributed for public review.

Groundfish management issues are numerous and include: (1) Limited entry; (2) Canadian groundfish management in 1990; (3) adoption of harvest levels for 1990; (4) necessary management measures for 1990; (5) long-term sablefish management; (6) measures to extend the joint venture whiting season; (7) adoption of a plan amendment for public review; (8) scoping for a future plan amendment, and (9) discussion of other matters. Principal salmon management agenda items include: (1) Klamath River chinook salmon spawning escapement goal; (2) deviations from the non-treaty harvest allocation north of Cape Falcon; (3) preseason process for adopting management measures; (4) Washington, coho salmon escapement estimation methodologies; (5) inseason regulation adjustment proposal; (6) scoping for a future plan amendment, and (7) discussion of other matters.

The *Scientific and Statistical Committee* will meet on November 13 at 11 a.m., to address scientific issues on the Council's agenda, and will reconvene on November 14 at 8 a.m.

The *Groundfish Select Group* will meet on November 13 at 8 a.m., and the *Groundfish Advisory Subpanel* will meet on November 14 at 8 a.m., to address certain groundfish items on the Council's agenda.

Enforcement consultants will meet on November 13 at 1 p.m., to discuss enforcement issues related to Council fishery management plans.

The *Budget Committee* will meet on November 14 at 1 p.m., to review the status of the 1989/90 Council budgets.

The *Habitat Committee* will meet on November 14 at 3 p.m., to consider timely and relevant habitat matters impacting fisheries within the Council's jurisdiction.

The *Halibut Select Group* will meet on November 14 to consider allocation between sport and commercial halibut fisheries in 1990.

The *Salmon Advisory Subpanel* will meet on November 16 at 8 a.m., and the *Salmon Technical Team* will meet on November 16 at 1 p.m., to address salmon items on the Council's agenda.

Detailed agendas for the above meetings will be made available to the public after November 2, 1989. For further information contact Lawrence D. Six, Executive Director, Pacific Fishery Management council, 2000 SW., First Avenue, Room 420, Portland, OR 97201; telephone: (503) 326-6352.

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Announcement of an Import Limit for Certain Cotton, Wool and Man-Made Fiber Sweaters Assembled in Guam from Imported Parts

October 26, 1989.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs establishing a limit for a new agreement year.

EFFECTIVE DATE: November 1, 1989.

FOR FURTHER INFORMATION CONTACT: Anne Novak, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 377-4212. For information on the quota status of this limit, refer to the Quota Status Reports posted on the bulletin boards of each Customs port. For information on embargoes and quota re-openings, call (202) 377-3715.

SUPPLEMENTARY INFORMATION:

Authority: Executive Order 11651 of March 3, 1972, as amended; section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854).

The provision for sweaters assembled in Guam from imported parts and exported from Guam to the United States is being continued for the period November 1, 1989 through October 31, 1990. The limit established for the previous period is being increased to 188,926 dozen.

A certification will continue to be required and will be issued by the authorities in Guam prior to exportation as verification of assembly in Guam. A facsimile of the certification stamp was published in the **Federal Register** on March 4, 1985 (50 FR 8649).

For those sweaters properly certified, no export visa or license will be required from the country of origin of the merchandise, and imports entered under this procedure will not be charged to limits established for exports from the country of origin. Exports of sweaters in Categories 345, 445, 446, 645 and 646, which are not accompanied by a certification and those in excess of 188,926 dozen, will require the appropriate visa or export license from the country of origin and will be subject to any other applicable restriction.

A description of the textile and apparel categories in terms of HTS numbers is available in the Correlation: Textile and Apparel Categories with the Tariff Schedule of the United States (see **Federal Register** notice 53 FR 44937, published on November 7, 1988). Also see 53 FR 44063, published on November 1, 1988.

Auggie D. Tantillo,
Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

October 26, 1989.

Commissioner of Customs,
Department of the Treasury,
Washington, D.C. 20229

Dear Mr. Commissioner:

Under the terms of section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854), and in accordance with the provisions of Executive Order 11651 of March 3, 1972, as amended, effective on November 1, 1989, you are directed to permit entry or withdrawal from warehouse for consumption in the United States of 188,926 dozen cotton, wool and man-made fiber textile products in Categories 345, 445, 446, 645 and 646, the product of any foreign country of foreign territory, as determined under Customs Regulation Part 12, Section 12.130 and which have been certified as assembled in Guam and exported to the United States during the twelve-month period beginning on November 1, 1989 and extending through October 31, 1990. You are directed not to require any otherwise applicable export visa or license and not to charge against any otherwise applicable import restriction sweaters subject to this provision. A certification will be issued by the authorities in Guam prior to exportation as verification of assembly in Guam. A facsimile of the certification stamp has been provided.

Imports of cotton, wool and man-made fiber textile products in Categories 345, 445, 446, 645 and 646 assembled in Guam, but not of Guam origin, which are not accompanied by a certification and those in excess of 188,926 dozen exported during the twelve-month period beginning on November 1, 1989 and extending through October 31, 1990 will require the appropriate visa or export license from the country of origin and will be charged to any applicable quota.

Imports charged to the category limit for the period November 1, 1988 through October 31, 1989 shall be charged against the level of restraint to the extent of any unfilled balance. In the event the limit established for that period has been exhausted by previous entries, such goods shall be subject to the level set forth in this directive.

In carrying out the above directions, the Commissioner of Customs should construe entry into the United States for consumption to include entry for consumption into the Commonwealth of Puerto Rico.

The Committee for the Implementation of Textile Agreements has determined that this action falls within the foreign affairs exception to the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

Auggie D. Tantillo,
Chairman, Committee for the Implementation of Textile Agreements.

(202) 377–4212. For information on the quota status of this limit, refer to the Quota Status Reports posted on the bulletin boards of each Customs port or call (202) 566–5810. For information on embargoes and quota re-openings, call (202) 377–3715.

SUPPLEMENTARY INFORMATION:

Authority. Executive Order 11651 of March 3, 1972, as amended; section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854).

Under the terms of section 204 of the Agricultural Act of 1956 and the current bilateral textile agreement between the Governments of the United States and the Socialist Republic of Romania, a limit is being established for silk blend and other vegetable fiber textile products in Category 844.

A description of the textile and apparel categories in terms of HTS numbers is available in the Correlation: Textile and Apparel Categories with the Tariff Schedule of the United States (see **Federal Register** Notice 53 FR 44937, published on November 7, 1988). Also see 53 49344, published on December 7, 1988.

Auggie D. Tantillo,

Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

October 27, 1989.

Commissioner of Customs,
Department of the Treasury,
Washington, DC 20229

Dear Mr. Commissioner:

This directive amends, but does not cancel, the directive issued to you on December 2, 1988 by the Chairman, Committee for the Implementation of Textile Agreements. That directive concerns imports of certain cotton, silk blend and other vegetable fiber textiles and textile products, produced or manufactured in Romania and exported during the period which began on January 1, 1989 and extends through December 31, 1989.

Effective on November 3, 1989, the directive of December 2, 1988 is being amended further to establish a limit of 155,556 numbers [1] for silk blend and other vegetable fiber textile products in Category 844 in Group I. Category 844 shall remain subject to the group limit.

Import charges already made to Group I for Category 844 shall be applied to the limit established in this directive. In addition, you are directed to charge 40,104 numbers, for goods exported in 1988, to the limit established in this directive for Category 844.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception of the rulemaking provisions of 5 U.S.C. 553(a)(1).

[1] The limit has not been adjusted to account for any imports exported after December 31, 1988.

Sincerely,

Auggie D. Tantillo,

Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–DR–M

Announcement of a Request for Bilateral Consultations with the Government of Bangladesh on Certain Cotton and Man-Made Fiber Textile Products

October 27, 1989.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Notice.

FOR FURTHER INFORMATION CONTACT: Anne Novak, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 377–4212. For information on categories on which consultations have been requested, call (202) 377–3740.

SUPPLEMENTARY INFORMATION:

Authority. Executive Order 11651 of March 3, 1972, as amended; section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854).

On September 28, 1989, under the terms of Article 3 of the Arrangement Regarding International Trade in Textiles, the Government of the United States requested consultations with the Government of Bangladesh regarding textile products in Categories 336/636, produced or manufactured in Bangladesh.

The purpose of this notice is to advise the public that, if no solution is agreed upon in consultations with Bangladesh, the Committee for the Implementation of Textile Agreements may later establish limits for the entry and withdrawal from warehouse for consumption of textile products in Categories 336/636, produced or manufactured in Bangladesh and exported during the twelve-month period which began on September 28, 1989 and extends through September 27, 1990, at a level of 160,566 dozen.

A summary market statement concerning Categories 336/636 follows this notice.

Anyone wishing to comment or provide data or information regarding the treatment of Categories 336/636, or to comment on domestic production or availability of products included in Categories 336/636, is invited to submit 10 copies of such comments or information to Auggie D. Tantillo, Chairman, Committee for the Implementation of Textile Agreements, U.S. Department of Commerce, Washington, DC 20230.

Because the exact timing of the consultations is not yet certain, comments should be submitted promptly. Comments or information submitted in response to this notice will be available for public inspection in the Office of Textiles and Apparel, Room H3100, U.S. Department of Commerce, 14th and Constitution Avenue NW., Washington, DC.

Further comments may be invited regarding particular comments or information received from the public which the Committee for the Implementation of Textile Agreements considers appropriate for further consideration.

The solicitation of comments regarding any aspect of the agreement or the implementation thereof is not a waiver in any respect of the exemption contained in 5 U.S.C. 553(a)(1) relating to matters which constitute "a foreign affars function of the United States."

The United States remains committed to finding a solution concerning Categories 336/636. Should such a solution be reached in consultations with the Government of Bangladesh, further notice will be published in the **Federal Register**.

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 53 FR 44937, published on November 7, 1988).

Auggie D. Tantillo,

Chairman, Committee for the Implementation of Textile Agreements.

Bangladesh, September 1989.

Summary and Conclusions

U.S. imports of cotton and man-made fiber dresses (Category 336/636) from Bangladesh reached 142,495 dozen during the year ending June 1989, 41 percent above the 101,011 dozen imported a year earlier. During the first six months of 1989, imports of cotton and man-made fiber dresses (Category 336/636) from Bangladesh reached 120,121, 44 percent over the January–June 1988 level and 13 percent above the 106,043 dozen imported in calendar year 1988.

The sharp and substantial increase in Category 336/636 imports from Bangladesh is disrupting the U.S. market for cotton and man-made fiber dresses.

U.S. Production and Market Share

U.S. production of cotton and man-made fiber dresses (Category 336/636) has been on the decline, falling from 19,843,000 dozen in 1982 to 13,287,000 dozen in 1988, a decline of 33 percent. Production of the year ending March 1989 at 13,005,000 dozen was down 12 percent from the year ending March 1988 level. The domestic manufacturers' share of the cotton and man-made fiber dress market declined 20 percentage points since 1982, falling from 91 percent in 1982 to 71 percent in 1988. The domestic market share continued to decline, falling to 70 percent for the year ending March 1989.

U.S. Imports and Import Penetration

U.S. imports of cotton and man-made fiber dresses (Category 336/636) almost tripled, increasing from 1,933,000 dozen in 1982 to 5,493,000 dozen in 1988. Imports continued to increase in 1989, reaching 3,477,000 dozen in the first six months of 1989, 6 percent above the level imported during the same period in 1988. The ratio of imports to domestic production quadrupled, rising from 10 percent in 1982 to 41 percent in 1988. The import to production ration increased further, reaching 43 percent in the year ending in March 1989.

Duty-Paid Value and U.S. Producers' Price

Approximately 82 percent of Category 336/636 imports from Bangladesh during the first six months of 1989 entered under HTSUSA numbers 6204.42.3050—women's cotton woven dresses, other than of yarn dyed fabric and 6104.43.2010—women's man-made fiber knit dresses. These dresses entered the U.S. at landed duty-paid values below U.S. producers' prices for comparable dresses.

BILLING CODE 3510–DR–M

COMMODITY FUTURES TRADING COMMISSION

Financial Products Advisory Committee Meeting

This is to give notice pursuant to section 10(a) of the Federal Advisory Committee Act, 5 U.S.C. App. 1, 10(a) and 41 CFR 101–6.1015(b), that the Commodity Futures Trading Commission's Financial Products Advisory Committee will conduct a public meeting on Friday, November 17, 1989 at the Longworth House Office Building, Room 1302, Independence Avenue, S.W., Washington, D.C. The meeting will be held between 10:00 a.m. and 3:30 p.m. The agenda consists of the following:

1. Discussion of the performance of markets and systems during October 13–16, 1989;
2. Discussion of large order execution systems and proposals;
3. Discussion of proposed amendment to rule 4.5 to extend the exemption from pool registration for certain risk management purposes;
4. Discussion of the Division of Economic Analysis dual trading study; and
5. Discussion of any other business that may properly come before the Committee.

The purpose of this meeting is to solicit the views of the Committee on the above-listed agenda matters. The Advisory Committee was created by the Commodity Futures Trading Commission for the purpose of receiving advice and recommendations on financial products issues. The purposes and objectives of the Advisory Committee are more fully set forth at 54 FR 18923 (May 3, 1989).

The meeting is open to the public. The Chairman of the Advisory Committee, Commissioner Robert R. Davis, is empowered to conduct the meeting in a fashion that will, in his judgment, facilitate the orderly conduct of business. Any member of the public who wishes to file a written statement with the Advisory Committee should mail a copy of the statement to the attention of: The Commodity Futures Trading Commission Financial Products Advisory Committee, Jay Geldermann, Commodity Futures Trading Commission, 2033 K Street, NW., Washington, DC 20581, to be received prior to the date of the meeting. Members of the public who wish to make oral statements also should inform Jay Geldermann in writing at the above address at least three days prior to the meeting. Provision will be made, if time permits, for an oral presentation of reasonable duration.

Issued in Washington, DC, the 25th day October 1989, by the Commission.

Lynn K. Gilbert,

Deputy Secretary of the Commission.

DEPARTMENT OF EDUCATION

[CFDA No. 84.003A and 84.003E]

Bilingual Education and Minority Languages Affairs; Direct Grant Programs

AGENCY: Department of Education.

ACTION: Extension of deadline date for transmittal of applications for new awards for fiscal year 1990 under the Transitional Bilingual Education Program and the Special Alternative Instructional Program.

Deadline for Transmittal of Applications: The deadline date for applications is extended from November 3, 1989, to November 17, 1989.

On June 30, 1989, a notice was published that established the deadline date for transmittal of applications for the fiscal year 1990 competition for new awards under the Transitional Bilingual Education Program and the Special Alternative Instructional Program (54 FR 27672-27675). Detailed information concerning this competition was included in that notice. The purpose of this notice is to extend the deadline date for transmittal of applications because potential applicants may not have sufficient time to develop their proposals due to the disruption caused by the recent earthquake in California.

For Applications or Information Contact: Office of Bilingual Education and Minority Languages Affairs, U.S. Department of Education, 400 Maryland Avenue SW., Room 5086, Switzer Building, Washington, DC 20202-6510. Telephone: (202) 732-1843.

Program Authority: 20 U.S.C. 3291(a)(1) and 3291(a)(3)

Dated: October 20, 1989.

Federal Energy Regulatory Commission

[Project No. 9230-002 Connecticut]

Jewett City Electric Light Plant; Availability of Environmental Assessment

October 25, 1989.

In accordance with the National Environmental Policy Act of 1969 and the Federal Energy Regulatory Commission's (Commission's) regulations, 18 CFR part 380 (Order No. 486, 52 FR 47897), the Office of Hydropower Licensing has reviewed the application for minor license for the proposed Pachaug River Hydroelectric Project located on the Pachaug River in New London County near Jewett City, Connecticut, and has prepared an Environmental Assessment (EA) for the proposed project. In the EA, the Commission's staff has analyzed the potential environmental impacts of the proposed project and has concluded that approval of the proposed project, with appropriate mitigative measures, would not constitute a major federal action significantly affecting the quality of the human environment.

Copies of the EA are available for review in the Public Reference Branch, Room 1000, of the Commission's offices at 825 North Capitol Street NE., Washington, DC 20426.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket Nos. CP90-83-000 et al.]

United Gas Pipe Line Co., et al.; Natural Gas Certificate Filing

Take notice that the following filings have been made with the Commission.

1. United Gas Pipe Line Co.

[Docket Nos. CP90-83-000]

October 24, 1989.

Take notice that on October 20, 1989, United Gas Pipe Line Company (United), P.O. Box 1478, Houston, Texas 77251-1478, filed in Docket No. CP90-83-000, a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to provide an interruptible transportation service on behalf of Loutex Energy, Inc. (Loutex), a producer and marketer of natural gas, under United's blanket certificate issued in Docket No. CP88-6-000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

United states that it would transport a maximum daily quantity of 480,236 MMBtu for Loutex pursuant to an Interruptible Gas Transportation Agreement, dated November 17, 1988, as amended May 22, 1989, between United and Loutex. United further states that it would receive the natural gas at existing points of receipt in offshore Louisiana and in the states of Louisiana, Mississippi and Texas and would redeliver the natural gas at existing points of delivery in the states of Alabama, Florida, Louisiana and Mississippi. United indicates that the estimated average day and annual quantities to be transported for Loutex would be 480,236 MMBtu and 175,286,140 MMBtu, respectively.

United states that it commenced the transportation of natural gas for Loutex on June 5, 1989, as reported in Docket No. ST90-62-000, for a 120-day period pursuant to § 284.223(a) of the Commission's Regulations (18 CFR 284.223(a)).

Comment date: December 8, 1989, in accordance with Standard Paragraph G at the end of this notice.

2. ANR Pipeline Co.

[Docket No. CP90-57-000]

October 24, 1989.

Take notice that on October 13, 1989, ANR Pipeline Company (ANR) 500 Renaissance Center, Detroit, Michigan 48243, filed in Docket No. CP90-57-000 a request pursuant to §§ 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act, to transport, on an interruptible basis, 5,970 dth per day of natural gas under its blanket certificate issued in Docket No. CP88-532-000 for Steelcase, Inc. (Steelcase), a marketer, all as more fully set forth in the request on file with the Commission and open to public inspection.

ANR states that it would receive the gas at its' existing points of receipt located in the states of Louisiana, Kentucky, Indiana, Ohio and Michigan and the Offshore Louisiana and Texas gathering areas and redeliver the gas for the account of Steelcase at existing interconnections located in the state of Michigan. ANR indicates that it commenced service on August 21, 1989, for Steelcase under § 284.223 as reported in Docket No. ST90-46-000.

ANR states that peak day and average day deliveries would be 5,970 dth and annual deliveries would be 2,179,000 dth.

Comment date: December 8, 1989, in accordance with Standard Paragraph G at the end of this notice.

3. Tennessee Gas Pipeline Co.

[Docket No. CP90-68-000]

October 24, 1989.

Take notice that on October 17, 1989, Tennessee Gas Pipeline Company (Tennessee), P.O. Box 2511, Houston, Texas 77252, filed in Docket No. CP90-68-000 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon partially sales service to CNG Transmission Corporation (CNG), an existing jurisdictional sales customer, all as more fully set forth in the application which is on file with the Commission and open for public inspection.

Tennessee states that on June 9, 1989, CNG requested that conversion of 55,000 dt per day of its current firm sales entitlements under Tennessee's Rate Schedule CD-3 to firm transportation pursuant to § 284.10 of the Commission's Regulations, effective August 9, 1989. Tennessee further states that this will result in a revised firm sales entitlement of 173,660 dt per day of natural gas and a firm transportation quantity of 55,000 dt of natural gas per day for CNG at the Cornwell interconnection in Kanawha County, West Virginia.

Comment date: November 14, 1989 in accordance with Standard Paragraph F at the end of the notice.

4. United Gas Pipe Line Co.

[Docket No. CP90-84-000]

October 24, 1989.

Take notice that on October 20, 1989, United Gas Pipe Line Company (United), P.O. Box 1478, Houston, Texas 77251-1478, filed in Docket No. CP90-84-000, a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to provide an interruptible transportation service on behalf of LEDCO INC. (LEDCO), a producer of natural gas, under United's blanket certificate issued in Docket No. CP88-6-000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

United states that it would transport a maximum daily quantity of 480,236 MMBtu for LEDCO pursuant to an Interruptible Gas Transportation Agreement, dated November 17, 1988, as amended July 27, 1989, between United and LEDCO. United further states that it would receive the natural gas at existing points of receipt in offshore Louisiana and in the states of Louisiana, Mississippi and Texas and would redeliver the natural gas at existing points of delivery in the states of Alabama, Florida, Louisiana and Mississippi. United indicates that the estimated average day and annual quantities to be transported for LEDCO would be 480,236 MMBtu and 175,286,140 MMBtu, respectively.

United states that it commenced the transportation of natural gas for LEDCO on September 7, 1989, as reported in Docket No. ST90-81-000, for a 120-day period pursuant to Section 284.223(a) of the Commission's Regulations (18 CFR 284.223(a)).

Comment date: December 8, 1989, in accordance with Standard Paragraph G at the end of this notice.

5. Texas Gas Transmission Corp.

[Docket No. CP90-85-000]

October 25, 1989.

Take notice that on October 23, 1989, Texas Gas Transmission Corporation (Texas Gas), 3800 Frederica Street, Owensboro, Kentucky 42301, filed in Docket No. CP90-85-000 an application pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to transport natural gas on behalf of EnTrade Corporation (EnTrade), under Texas Gas' blanket certificate issued in Docket No. CP86-686-000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

Texas Gas proposes to transport, on an interruptible basis, up to 300,000 MMBtu per day for EnTrade. Texas Gas states that construction of facilities would not be required to provide the proposed service.

Texas Gas further states that the maximum day, average day, and annual transportation volumes would be approximately 300,000 MMBtu, 30,000 MMBtu and 109,500,000 MMBtu respectively.

Texas Gas advises that service under § 284.223(a) commenced September 16, 1989, as reported in Docket No. ST90-11.

Comment date: December 11, 1989, in accordance with Standard Paragraph G at the end of this notice.

6. Niagara Mohawk Power Corp.

[Docket Nos. CP89-1571-000 and CP89-1571-001

October 25, 1989.

Take notice that on June 5, 1989, Niagara Mohawk Power Corporation (Niagara Mohawk), 300 Erie Boulevard West, Syracuse, New York 13202, filed an application in Docket No. CP89-1571-000 pursuant to §§ 153.10 through 153.12 of the Commissions Regulations for a Presidential Permit and on October 17, 1989, filed an application in Docket No. CP89-1571-001 pursuant to section 3 of the Natural Gas Act (NGA), 15 U.S.C. 717(b), and Executive Order No. 10485, as amended by Executive Order No. 12038 and Delegation Order No. 0204-112 of the Secretary of Energy. Niagara Mohawk seeks the issuance of a Presidential Permit to connect a natural gas facility at a point of entry on the

VOL 54 ISS 210 NO 1 1989 UMI

United States/Canadian border near the Town of Clayton, New York. Niagara Mohawk also seeks NGA section 3 authorization from the Commission to construct, operate and maintain such facilities at the point of entry for the importation of natural gas. All as more fully set forth in the application which is on file with the Commission and open to public inspection.

Niagara Mohawk proposes to purchase 51,000 Mcf of natural gas per day from TransCanada Pipelines Limited (TransCanada). Niagara Mohawk further proposes to import such gas through the Trans York Extension it proposes to build as an extension of its local distribution system within the state of New York from the United States/Canadian border near the Town of Clayton, Jefferson County, New York to Watertown, New York. The Trans York Extension will interconnect at the border with the facilities of TransCanada known as the Gananoque Extension.

Niagara Mohawk states that the proposed facilities are essential for Niagara Mohawk to import natural gas from Canada under its contract with TransCanada. Under that contract Niagara Mohawk will purchase up to 51,000 Mcf per day on a firm basis to enhance Niagara Mohawk's ability to meet its system requirements.

Comment date: November 15, 1989, in accordance with the first subparagraph of Standard Paragraph F at the end of this notice.

7. United Gas Pipe Line Co.

October 25, 1989.

[Docket No. CP90-89-000]

Take notice that on October 17, 1989, United Gas Pipe Line Company (United), P.O. Box 1478, Houston, Texas 77251-1478, filed a request with the Commission in Docket No. CP90-89-000 pursuant to § 157.205 of the Commission's Regulations (18 CFR 157.205) for authorization to add an Alabama delivery point for service to Mobile Gas Service Corporation (Mobile), under the blanket certificate issued in Docket No. CP82-430-000 pursuant to Section 7 of the Natural Gas Act (NGA), all as more fully set forth in the request which is open to public inspection.

United proposes to add the existing Bayou La Batre, Alabama, city gate station as a delivery point for its natural gas service to Mobile, which purchased the Bayou La Batre gas system. United proposes to deliver 5,208 Mcf on peak days and 257 Mcf on average days, and 113,015 Mcf per year at the Bayou La Batre delivery point. United would provide service to Mobile's Bayou La Batre gas system under its Rate Schedule DG-N. United states that its tariff permits the addition of delivery points. United also states that Mobile's total certificated entitlements would not increase under this proposal.

Comment date: December 11, 1989, in accordance with Standard Paragraph G at the end of this notice.

8. Panhandle Eastern Pipe Line Co.

October 25, 1989.

[Docket No. CP90-97-000]

Take notice that on October 23, 1989, Panhandle Eastern Pipe Line Company (Panhandle), P.O. Box 1642, Houston, Texas 77251, filed in Docket No. CP90-97-000 a request pursuant to § 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act for authorization to transport natural gas under the blanket certificate issued in Docket No. CP86-585-000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

Panhandle proposes to transport natural gas on an interruptible basis for Associated Natural Gas, Inc. (Associated). Panhandle explains that service commenced September 1, 1989, under § 284.223(a) of the Commission's Regulations, as reported in Docket No. ST89-4803. Panhandle explains that the peak day quantity would be 100,000 Dt., the average daily quantity would be 100,000 Dt., and that the annual quantity would be 36,500,000 dekatherms. Panhandle explains that it would receive natural gas for Associated's account at various existing receipt points on its system. Panhandle states that it would redeliver the gas to Haven Pool in Reno County, Kansas.

Comment date: December 11, 1989, in accordance with Standard Paragraph G at the end of this notice.

9. Panhandle Eastern Pipe Line Co.

October 25, 1989.

[Docket No. CP90-82-000]

Take notice that on October 19, 1989, Panhandle Eastern Pipe Line Company (Panhandle), P.O. Box 1642, Houston, Texas 77001, filed in Docket No. CP90-82-000 an applicant pursuant to section 7(b) of the Natural Gas Act for permission and approval to partially abandon natural gas sales service to Central Illinois Light Company (CILCO), an existing jurisdictional sales customer, all as more fully set forth in the application on file with the Commission and open to public inspection.

Panhandle states that it has entered into a sales agreement dated September 20, 1989, with CILCO which reduces the sales contract demand (CD) level effective January 1, 1990. Specifically, Panhandle seeks authority for partial abandonment of CILCO's current sales CD, to be effective January 1, 1990. The proposed abandonment will reduce the annualized total CD from 49,498,840 Mcf to 35,845,663 Mcf under Rate Schedule G-2.

Comment date: November 15, 1989, in accordance with Standard Paragraph F at the end of this notice.

10. CNG Transmission Corp.

[Docket No. CP90-89-000]

October 25, 1989.

Take notice that on October 20, 1989, CNG Transmission Corporation (CNG) 445 West Main St., Clarksburg, West Virginia 26302-2450, filed in Docket No. CP90-89-000 a request pursuant to §§ 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) and the Natural Gas Policy Act (18 CFR 284.223) for authorization to provide transportation service for various shippers under CNG's blanket certificate issued in Docket No. CP86-311-000 pursuant to section 7(c) of the Natural Gas Act, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

CNG proposes to transport gas for shippers on an interruptible basis from various receipt points on its system to various interconnections between CNG and certain local distribution companies and pipelines. CNG lists for each shipper the receipt and delivery points, the maximum daily, average daily and annual volumes, as well as the docket number related to the 120-day transportation service initiated by CNG (see attached appendix).

Comment date: December 11, 1989, in accordance with Standard Paragraph G at the end of this notice.

11. Viking Gas Transmission Co.

[Docket No. CP90-79-000]

October 25, 1989.

Take notice that on October 19, 1989, Viking Gas Transmission Company (Viking), 1010 Milam, Houston, Texas 77002, filed in Docket No. CP90-79-000 an application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation of natural gas for Poco Petroleum Ltd. (Poco), all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Viking proposes to transport on an interruptible basis up to 207,450 dt equivalent of natural gas per day for Poco in order to enable Poco to meet its existing market requirements and anticipated market growth. It is stated that Viking would receive the gas for Poco's account at an interconnection with TransCanada Pipelines Ltd. at the U.S.-Canada border near Emerson, Manitoba, and would deliver equivalent volumes for Poco's account at an interconnection with ANR Pipeline Company (ANR) near Marshfield, Wisconsin. It is asserted that Viking would charge Poco the rate set forth in Viking's Rate Schedule IT-2. It is explained that existing facilities would be used for the transportation service and that no construction of additional facilities would be required. It is asserted that Poco has the necessary authorization to import gas from Canada into the United States. It is further asserted that the authorization for any downstream transportation by ANR would be provided under either section 311 of the Natural Gas Policy Act or pursuant to ANR's blanket certificate.

Comment date: November 15, 1989 in accordance with Standard Paragraph F at the end of the notice.

12. Mississippi River Transmission Corp.

October 25, 1989.

[Docket No. CP90-78-000

Take notice that on October 16, 1989, Mississippi River Transmission Corporation (MRT), 9900 Clayton Road, St. Louis Missouri 63124, filed in Docket No. CP90-78-000 an application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing MRT to provide increased firm gas sales service for Associated Natural Gas Company (Associated) and Pfizer Pigments, Inc. (Pfizer) and to provide new firm gas sales service for ASARCO, Inc. (ASARCO), GAF Corporation (GAF) Amoco Petroleum Additives Company (Amoco) and River Cement Company (River Cement), all as more fully set forth in the application which is on file with the Commission and open to public inspection.

MRT states that Associated, a local distribution company, currently purchases firm natural gas service under MRT's Rate Schedule SGS-1. MRT states that Associated's existing service agreement with MRT provides for a contract demand of 2,190 Mcf per day (Mcfd). Under its new service agreement, MRT states that Associated's firm contract demand under Rate Schedule SGS-1 would be increased to 3,000 Mcfd. MRT avers that the new service agreement will be effective until December 31, 1993, unless extended by mutual agreement of the parties. MRT states that the additional contract demand is required by Associated to serve the current peak day firm requirements of its existing residential, commercial and industrial customers. MRT further states that since 1985, the number of customers served by Associated has increased by eight percent, and peak day requirements are currently in excess of Associated's existing contract demand.

MRT states that Pfizer is a non-jurisdictional direct sales customer of MRT which currently purchases firm natural gas service from MRT up to a maximum daily volume (MDV) of 950 Mcf. Under its amended contract with MRT, it is stated that Pfizer's firm service MDV would be increased to 3,600 Mcf.

MRT indicates that ASARCO, GAF, Amoco and River Cement are all non-jurisdictional direct sales customers of MRT which currently purchase natural gas only on an interruptible basis from MRT. MRT states that it has negotiated new firm sales contracts with these customers which provide for the following maximum daily volumes: ASARCO—1,300 Mcf, GAF—1,500 Mcf, Amoco—2,000 Mcf, and River Cement—2,000 Mcf.

MRT states that firm service proposed herein for ASARCO, GAF, Amoco and River Cement, and the additional firm service for Pfizer, will provide these customers with a secure supply of natural gas for that portion of each company's industrial's needs which cannot be met economically with any other energy source. According to MRT, these companies require gas supply security to ensure the continuance of their plant production capabilities. Absent such security, MRT states that these plants rely instead on increasingly risky interruptible gas supplies. MRT states that in the past, the risk of lengthy

VOL 54 ISS 210 NO 1 1989 UMI

disruptions of plant production has been minimal. However, MRT states that these companies now view the uncertainty of both the cost and availability of fuel supplies as creating an unacceptable risk to continued, uninterrupted operation, and so desire the firm service proposed herein.

MRT states that it will not install any new facilities to provide the 10,280 Mcfd of service contemplated by the new agreements, and that the new service will have no effect on MRT's service to any of its existing firm customers. In that regard, MRT states that it has total firm gas deliverability which will be more than sufficient to meet MRT's systemwide demands after the new agreements take effect. MRT state that it has contracted for a substantial amount of firm transportation capacity with upstream pipelines, and that it also has access to additional gas through its West Line which provides MRT direct access to a variety of gas producers in North Louisiana and East Texas. MRT adds that it has also contracted with United Gas Pipe Line Company for firm purchases for system supply. Finally, MRT states that its deliveries can be supplemented by withdrawals from its existing storage facilities. Moreover, the volumes of gas included in these service agreements are only one percent of MRT's system delivery capability of approximately one Bcf per day.

Comment date: November 15, 1989, in accordance with Standard Paragraph F at the end of this notice.

13. Stingray Pipeline Co.

[Docket No. CP90-110-000]

October 25, 1989.

Take notice that on October 23, 1989, Stingray Pipeline Company (Stingray), 701 East 22nd Street, Lombard, Illinois 60148, filed in Docket No. CP90-110-000 a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to provide an interruptible transportation service for EP Operating Company (EP), a producer, under the blanket certificate issued by the Commission's Order No. 509, pursuant to section 7 of the Natural Gas Act, corresponding to the rates, terms and conditions filed in Docket No. RP89-70-000, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

Stingray states that pursuant to a transportation service agreement dated July 17, 1989, under its Rate Schedule ITS, it proposes to receive up to 20,000 Mcf per day from EP at a specified point located in the East Cameron Area, offshore Louisiana and to redeliver the gas at specified points located in Louisiana and offshore Texas. Stingray estimates that the peak day, average day, and annual volumes would be 20,000 million Btu, 10,000 million Btu, and 3,650,000 million Btu, respecitvely. It is stated that on September 1, 1989, Stingray initiated a 120-day transportation service for EP under § 284.223(a), as reported in Docket No. ST90-17-000.

Stingray further states that no facilities need be constructed to implement the service. Stingray states that the service would continue on a month-to-month basis until terminated by 30 days written notice. Stingray proposes to charge rates and abide by the terms and conditions of its Rate Schedule ITS.

Comment date: December 11, 1989, in accordance with Standard Paragraph G at the end of this notice.

14. Tennessee Gas Pipeline Co.

[Docket No. CP90-90-000]

October 25, 1989.

Take notice that on October 23, 1989, Tennessee Gas Pipeline Company (Tennessee), 1010 Milam, Houston, Texas 77002, filed in Docket No. CP90-90-000 a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to transport natural gas for American Central Gas Marketing Company (American Central), a marketer of natural gas, under Tennessee's blanket certificate, issued in Docket No. CP87-115-000, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

Tennessee proposes to transport, on an interruptible basis, up to 200,000 dt equivalent of natural gas on a peak day, 200,000 dt equivalent on an average day and 73,000,000 dt equivalent on an annual basis. It is stated that Tennessee would receive the gas for American Central's account as designated points on Tennessee's system in Louisiana, Texas, offshore Louisiana, offshore Texas, Mississippi, Alabama, New Jersey, West Virginia, Kentucky, Massachusetts, New York, Pennsylvania, Connecticut, Ohio and Arkansas and would deliver equivalent volumes at designated points on Tennessee's system in Texas, Louisiana, Alabama, Tennessee, Mississippi, Kentucky, West Virginia, Ohio, Pennsylvania, New York, New Jersey, Massachusetts and Connecticut. It is asserted that the transportation service would be effected using existing facilities and would require no construction of additional facilities. It is explained that the service commenced September 29, 1989, under the self-implementing authorization provisions of § 284.223 of the Commission's Regulations, as reported in Docket No. ST90-156.

Comment date: December 11, 1989, in accordance with Standard Paragraph G at the end of this notice.

15. Texas Gas Transmission Corp.

[Docket No. CP90-94-000]

October 25, 1989.

Take notice that on October 23, 1989, Texas Gas Transmission Corporation (Texas Gas), 3800 Frederica Street, Owensboro, Kentucky 42301, filed in Docket No. CP90-94-000 a request pursuant to §§ 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205 and 284.223) for authorization to perform an interruptible transportation service for Brooklyn Interstate Natural Gas Corporation (Brooklyn Interstate), under Texas Gas's blanket certificate issued in Docket No. CP88-686-000, pursuant to section 7(c) of the Natural Gas Act, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

Texas Gas states that pursuant to a transportation agreement dated September 8, 1989, it proposes to receive up to 100,000 million Btu of natural gas per day from Brooklyn Interstate at specified points located in offshore and onshore Louisiana, Texas, Illinois, Indiana, Ohio, Arkansas, and Kentucky and redeliver the gas at three specified points located in Acadia Parish, Louisiana. Texas Gas estimates that the peak day volumes, average day volumes, and annual volumes would be 100,000 million Btu, 40,000 million Btu, and 36,500,000 million Btu, respectively. It is stated that on September 16, 1989, Texas Gas commenced a 120-day transportation service for Brooklyn Interstate under § 284.223(a), as reported in Docket No. ST90-14-000.

Texas Gas further states that no facilities need be constructed to implement the service. Texas Gas states that the contract term would continue on a month-to-month basis until terminated by either party on thirty days written notice. Texas Gas proposes to charge rates and abide by the terms and conditions of its Rate Schedule IT.

Comment date: December 11, 1989, in accordance with Standard Paragraph G at the end of this notice.

16. Tennessee Gas Pipeline Co.

[Docket No. CP90-67-000]

October 25, 1989.

Take notice that on October 17, 1989, Tennessee Gas Pipeline Company (Tennessee), P.O. Box 2511, Houston, Texas 77252, filed in Docket No. CP90-67-000 an application pursuant to section 7(b) of the Nautral Gas Act for permission and approval to abandon partially sales service to Columbia Gas Transmission Corporation (Columbia), an existing jurisdictional sales customer, all as more fully set forth in the application which is on file with the Commission and open for public inspection.

Tennessee states that on April 28, 1989, Columbia indicated that it desired to convert 385,860 dt per day of its current firm slaes entitlements under Tennessee's Rate Schedules CD-2, CD-3, and CD-4 to firm transportation pursuant to § 284.10 of the Commission Regulations, effective September 1, 1989. Tennessee further states that this will result in a revised firm sales entitlement of 10,425 dt per day of natural gas and an annual firm sales quantity of 3,805,125 dt of natural gas for Columbia, based on the revised firm sales entitlements pending in Docket No. CP89-1253-000.

Comment date: November 15, 1989 in accordance with Standard Paragarph F at the end of the notice.

17. Williams Natural Gas Company

[Docket No. CP90-2188-000]

October 25, 1989.

Take notice that on September 28, 1989, Williams Natural Gas Company (WNG), P.O. Box 3288, Tulsa, Oklahoma 74101, filed a request with the Commission in Docket No. CP90-2188-000, as supplemented October 20, 1989, pursuant to § 157.205 of the Regulations under the Natural Gas Act (NGA) for authorization to transport natural gas for PSI, Inc. (PSI), a natural gas marketer, under WNG's blanket certificate issued in Docket No. CP89-631-000 pursuant to section 7 of the NGA, all as more fully set forth in the request which is open to public inspection.

WNG proposes an interruptible natural gas transportation service for PSI of 20,000 Mcf on average and peak days, and 7,300,000 Mcf per year. WNG would receive PSI's gas at various receipt points on its system in Colorado, Kansas, Missouri, Oklahoma, Texas, and Wyoming and would deliver equivalent volumes to PSI at the Transok delivery point in McClain County, Oklahoma. WNG states that it originally installed the Transok delivery point under the provisions of section 311(a) of the Natural Gas Policy Act of 1978. WNG also states that it has not begun to transport for PSI under the self-implementing authorization provisions of § 284.223 of the Commission's Regulations.

Comment Date: December 11, 1989, in accordance with Standard Paragraph G at the end of this notice.

Standard Paragraphs:

F. Any person desiring to be heard or make any protest with reference to said filing should on or before the comment date file with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a motion to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to jurisdiction conferred upon the Federal Energy Regulatory Commission by sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this filing if no motion to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a motion for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for the applicant to appear or be represented at the hearing.

G. Any person or the Commission's staff may, within 45 days after the issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and pursuant to § 157.205 of the Regulations under the Natural Gas Act (18 CFR 157.205) a protest to the request. If no protest is filed within the time allowed therefore, the proposed activity shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to section 7 of the Natural Gas Act.

Lois D. Cashell,

Secretary.

[FR Doc. 89-25065 Filed 10-31-89; 8:45 am]

BILLING CODE 6717-01-M

[Docket Nos. PR89-9B-007 and RP89-133-004]

Colorado Interstate Gas Co.; Compliance Filing

October 25, 1989.

Take Notice that Colorado Interstate Gas Company ("CIG"), on October 23, 1989, tendered for filing the following tariff sheets to revise its FERC Gas Tariff, Original Volume No. 1:

First Revised Sheet No. 61G9
Second Revised Sheet No. 61G11

CIG states that the above-referenced tariff sheets are being filed in compliance with the Commission's Order issued September 22, 1989. Specifically, the filing reflects the elimination of all costs associated with transportation discounts as included in Docket No. RP89-98-000 and the elimination of the associated annual reconciliation procedures.

CIG states that copies of the filing were served upon all of the parties to this proceeding and affected state commissions.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with §§ 385.214 and 385.211 of the Commission's Rules and Regulations. All such protests should be filed on or before November 1, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Persons who are already parties to this proceeding need not file a motion to intervene in this matter. Copies of this

filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

[Docket No. TQ89-1-51-000]

Great Lakes Gas Transmission Co.; Proposed Changes in FERC Gas Tariff

October 25, 1989.

Take notice that on October 23, 1989, Great Lakes Gas Transmission Company ("Great Lakes") tendered for filing the following tariff sheets to its FERC Gas Tariff, Original Volume No. 1:

October 1, 1989
Second Substitute Twenty-Fourth Revised Sheet No. 12

November 1, 1989
Second Substitute Twenty-Fifth Revised Sheet No. 12

Great Lakes states that the purpose of this filing is to track rate changes attributable to its purchased gas cost adjustment provisions for the period November 1, 1989 through December 31, 1989.

Great Lakes states that the above tariff sheets reflect a decrease in the commodity rate of 0.0 cents per dekatherm and a decrease in the GRI surcharge of 0.0 cents per dekatherm.

Great Lakes states that copies of the filing were served upon its customers and interested state regulatory agencies.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All such motions or protests should be filed on or before November 1, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room.

Lois D. Cashell,

Secretary.

Memorandum of Understanding dated June 5, 1989 which sets forth, among other things, the basic principles upon which definitive agreements shall be reached with respect to the purchase,

to the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, on or before November 16, 1989. Copies of the

VOL 54 ISS 210 NO 1 1989 UMI

filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. TQ90-2-6-000]

Granite State Gas Transmission, Inc.; Proposed Changes in Rates

October 25, 1989.

Take notice that on October 20, 1989, Granite State Gas Transmission, Inc. (Granite State), 120 Royall Street, Canton, Massachusetts 02021 tendered for filing with the Commission Twenty-Ninth Revised Sheet No. 7 in its FERC Gas Tariff, First Revised Volume No. 1 for effectiveness on October 20, 1989.

According to Granite State, the changes in rates reflect an increase in projected gas costs because of recent increases in the cost of spot market gas purchased for system supply that were not anticipated when Granite State filed its prior purchased gas cost adjustment for effectiveness October 1, 1989 (Docket No. TA90-1-4). It is stated that the costs for Granite State's spot market purchases have recently increased approximately $0.27 from an average of $2.04, reflected in the prior filing, to an average of $2.31, reflected in the instant filing.

Granite State further states that copies of its filing were served upon its customers, Bay State Gas Company and Northern Utilities, Inc., and the regulatory commissions of the States of Maine, Massachusetts and New Hampshire.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with sections 211 and 214 of the Commission's Rules of Practice and Procedure [18 CFR 385.211, 385.214]. All such motions or protests should be filed on or before November 1, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

[FR Doc. 89-25669 Filed 10-31-89; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. TQ90-1-51-000]

Great Lakes Gas Transmission Co.; Proposed Changes in FERC Gas Tariff Purchased Gas Adjustment Clause Provisions

October 25, 1989.

Take notice that Great Lakes Gas Transmission Company ("Great Lakes") on October 20, 1989 tendered for filing First Revised Second Substitute Twenty-Fourth Revised Sheet Nos. 57(i) and 57(ii), Third Revised Third Substitute Tenth Revised Sheet No. 57(v) and Substitute Second Revised Third Substitute Tenth Revised Sheet No. 57(v) to its FERC Gas Tariff, First Revised Volume No. 1.

First Revised Second Substitute Twenty-Fourth Revised Sheet Nos. 57(i) and 57(ii) and Third Revised Third Substitute Tenth Revised Sheet No. 57(v) reflected revised current PGA rates for the month of October, 1989. The tariff sheets were filed as an Out of Cycle PGA to reflect the latest estimated gas cost as provided to Great Lakes by its sole supplier of natural gas, TransCanada PipeLines Limited ("TransCanada"). These pricing arrangements were the result of contract renegotiation between each of Great Lakes' resale customers and the supplier.

Substitute Second Revised Third Substitute Tenth Revised Sheet No. 57(v) was filed to reflect the addition of an interruptible transportation service for Northern Minnesota Utilities under Rate Schedule T-26. Initial tariff sheets reflecting Rate Schedule T-26 were filed on October 9, 1989.

Great Lakes requested waiver of the notice requirements of the provisions of § 154.039 of the Commission's Regulations and any other necessary waivers so as to permit the above tariff sheets to become effective October 1, 1989, in order to implement the gas pricing agreements between Great Lakes' resale customers and TransCanada on a timely basis.

And person desiring to be heard or to protest said filing should file a Motion to Intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC, 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure. All such petitions or protests should be filed on or before November 1, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room.

Lois D. Cashell,

Secretary.

[FR Doc. 89-25671 Filed 10-31-89; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. RP87-34-009]

Northwest Alaskan Pipeline Co., Extension of Tariff Provisions

October 25, 1989.

Take notice that on October 24, 1989, Northwest Alaskan Pipeline Company ("Northwest Alaskan") tendered for filing in Docket No. RP87-34-009 the following tariff sheets:

Rate schedule	Tariff sheets No.
X-3	Original Sheet No. 308BBB.2. Original Sheet No. 308FFF.2. Original Sheet No. 358VV.2. Original Sheet No. 358AAA.2.

Northwest Alaskan proposed that these tariff sheets be effective on November 1, 1989.

Northwest Alaskan states that these tariffs sheets would continue in effect certain aspects of the current interim agreement among Northwest Alaskan, United Gas Pipe Line Company ("United") and Pan-Alberta Gas Ltd. ("Pan-Alberta"), which would otherwise expire on Octobers 31, 1989, from November 1, 1989 through December 31, 1989 (the "Extended Interim Period"). The current interim agreement (the "Interim Agreement") consists of the Tenth Amendment to the Gas Purchase Agreement between United and Northwest Alaskan, the Twentieth Amending Contract to the Gas Sales Contract between Northwest Alaskan and Pan-Alberta, and the Marketing and Transportation Agreement between United and Pan-Alberta, which are contained in Northwest Alaskan's FERC Gas Tariff Original Volume No. 2, Rate Schedule X-3 at tariff sheets numbered 30800 through 308FFF and 356HH through 358AAA.

Northwest Alaskan states that the provisions of the Interim Agreement to be extended for the Extended Interim Period are paragraphs 5(b), 7, 7(a), 7(b), 7(c), 7(d), 7(e), 7(f), 7(h), 7(i), 8, 9, 9(b), 11, 12, 13, 14, 17 and 18 of the Tenth Amendment and the Twentieth Amending Contract and paragraphs 3(a), 3(b), 5(a), 5(b), 6, 7, and 8 of the Marketing and Transportation Agreement.

Northwest Alaskan states that United and Pan-Alberta have entered into a Memorandum of Understanding dated June 5, 1989 which sets forth, among other things, the basic principles upon which definitive agreements shall be reached with respect to the purchase, sale and transportation of Canadian gas subsequent to the expiration of the Interim Agreement.

The purpose of the requested extension is to preserve the status quo and to grant the parties an opportunity to finalize and obtain necessary approvals of those definitive agreements.

Northwest Alaskan has requested that the Commission approve the requested extension of the Interim Agreement provisions of Northwest Alaskan's tariff to be effective on November 1, 1989 and find that the extension is in the public interest.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 or 385.214). All such motions or protests should be filed on or before November 1, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

[FR Doc. 89-25666 Filed 10-31-89; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. TM90-2-55-001]

Questar Pipeline Co.; Proposed Changes in FERC Gas Tariff

October 25, 1989.

Take notice that on October 20, 1989, Questar Pipeline Company (Questar Pipeline) tendered for filing the following substitute tariff sheets to revise First Revised Volume No. 1 of its FERC Gas Tariff to be effective as noted. These tariff sheets are submitted to replace those originally filed on September 29, 1989, in this same docket, and are proposed to be effective as follows:

July 1, 1989

Substitute Original Sheet No. 17-D

September 1, 1989

Second Substitute Twenty-Third Revised Sheet No. 12

October 1, 1989

Second Substitute Twenty-Fourth Revised Sheet No. 12

November 1, 1989

Twenty-Fifth Revised Sheet No. 12

Questar Pipeline also requested that the following tariff sheets, filed September 29, 1989, in this proceeding be withdrawn:

First Revised Sheet No. 17-D
Fiet Revised Substitute Twenty-Second Revised Sheet No. 12
Substitute Twenty-Third Revised Sheet No. 12
Substitute Twenty-Fourth Revised Sheet No. 12

Questar Pipeline states that these substitute tariff sheets are being filed solely to establish corrected effective dates to track buyout and buydown costs charged to Questar Pipeline from Northwest Pipeline Corporation previously discussed in the September 29, 1989, filing. Question Pipeline is not proposing to revise the level of its proposed pipeline supplier charges.

Any person desiring to protest this filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with §§ 385.214 and 385.211 of the Commission's Rules and Regulations. All such protests should be filed on or before Nov. 1, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Persons that are already parties to this proceeding need not file a motion to intervene in this matter. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

[Docket No. SA88-13-003, et al.]

Valero Interstate Transmission Co., et al.; Filing of Pipeline Refund Reports

October 26, 1989.

Take notice that the pipelines listed in the Appendix hereto have submitted to the Commission for filing proposed refund reports. The date of filing and docket number are also shown on the Appendix.

Any person wishing to do so may submit comments in writing concerning the subject refund reports. All such comments should be filed with or mailed to the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, on or before November 16, 1989. Copies of the respective filings are on file with the Commission and available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. RP89-121-001

West Texas Gathering Co.; Proposed Changes in FERC Gas Tariff

October 26, 1989.

Take notice that on October 23, 1989, West Texas Gathering Company (West Texas) tendered for filing its First Revised Sheet No. 93c to revise Original Volume No. 1 of its FERC Gas Tariff to be effective as noted.

West Texas states that its tariff sheet is being filed solely to implement a 1980-1985 base period in West Texas' Order No. 500 buyout/buydown cost recovery proposal, as required by Commission order dated September 22, 1989.

Any person desiring to protest this filing should file a protest with the Federal Energy Regulatory Commission, 825 N. Capitol Street NE., Washington, DC 20426, in accordance with §§ 385.214 and 385.211 of the Commission's Rules and Regulations. All such protests should be filed on or before November 2, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Persons that are already parties to this proceeding need not file a motion to intervene. Copies of this filing

VOL 54 ISS 210 NO 1 1989 UMI

are on file with the Commission and are available for public inspection.

BILLING CODE 6717-01-M

[Docket No. RP89-179-003]

Western Gas Interstate Co.; Compliance Filing

October 25, 1989.

Take notice that on October 20, 1989, Western Gas Interstate Company ("Western"), in compliance with the Commission's Order in this proceeding of June 21, 1989 (47 FERC Para. 61,423) filed Eighteenth Revised Sheet No. 10 and Tenth Revised Sheet No. 11 to First Revised Volume No. 1 of its FERC Gas Tariff. The proposed effective date of the tariff sheets is November 21, 1989.

Western states that the filing proposes new rates for service under Rate Schedules G–N and G–S. The rates which appear on the filed tariff sheet are three-part demand/commodity rates and are derived using the same cost of service, volumes and allocation and rate of return which formed the basis of Western's original filing in this proceeding.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance with Rules 214 and 211 of the Commission's Rules of Practice and Procedure (18 CFR 385.214, 385.211). All such protests should be filed on or before November 1, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Persons who are already parties to this proceeding need not file a motion to intervene in this matter. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

[FR Doc. 89-25674 Filed 10-31-89; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. TM90-3-43-000]

Williams Natural Gas Co.; Proposed Changes in FERC Gas Tariff

October 25, 1989.

Take notice that Williams Natural Gas Company (WNG) on October 18, 1989, tendered for filing the following tariff sheets to its FERC Gas Tariff, Original Volume No. 1:

Revised First Revised Sheet Nos. 6B-6D
Second Revised Sheet Nos. 6B-6D

The proposed effective date of Revised First Revised Sheet Nos. 6B–6D is August 1, 1989. The proposed effective date of Second Revised Sheet Nos. 6B–6D is November 1, 1989.

WNG states that Revised First Revised Sheet Nos. 6B–6D are being filed to reflect the revised deficiency allocation made by Transwestern Pipeline Co. on September 1, 1989 in Docket Nos. RP88-198-004 and 005, *et al.* Transwestern extended its deficiency period to include the first six months of 1989.

WNG states that Second Revised Sheet Nos. 6B–6D are being filed to reflect the allocation of additional take-or-pay settlement costs to WNG by Arkla Energy Resources made in a September 1, 1989 filing in Docket Nos. TQ90-1-31-000 and TM90-1-31-000.

Any person desiring to be heard or to protest said filing should file a motion to intervene or a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with §§ 385.211 and 385.214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All such motions or protests should be filed on or before November 1, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

BILLING CODE 6717-01-M

ENVIRONMENTAL PROTECTION AGENCY

[FRL-3677-2]

Agency Information Collection Activities Under OMB Review

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), this notice announces that the Information Collection Requests (ICRs) abstracted below have been forwarded to the Office of Management and Budget (OMB) for review and comment. The ICRs describe the nature of the information collection and their expected costs and burdens; where appropriate, they include the actual data collection instructions.

DATE: Comments must be submitted on or before December 1, 1989.

FOR FURTHER INFORMATION CONTACT: Sandy Farmer at EPA, (202) 382–2740.

SUPPLEMENTARY INFORMATION:

Office of Air and Radiation

Title: Evaluation of Utility Boiler Life Extension/Repowering as pertains to NSPS Determinations. (ICR # 1545.01). This is a new collection.

Abstract: Owners or operators of utility steam generating units that were built before 1975 and use coal or No. 6 fuel oil as their primary fuel, are asked to provide information regarding the life extension of the units achieved by reboilering, restoring, rehabilitating, or repowering. EPA uses the information to determine if any violations of the modification or reconstruction provision of the Clean Air Act have occurred.

Burden Statement: The public reporting burden for this collection of information is estimated to average 14.25 hours per response. This estimate includes the time needed to review instructions, search existing data sources, gather the data needed and review the collection of information.

Respondents: Owners/operators of utility steam generating units.

Estimated No. of Respondents: 233.

Estimated Total Annual Burden on Respondents: 3320 hours.

Frequency of Collection: One time only.

Title: Survey of Car Owners in the On-Board Diagnostics Program. (ICR # 1546.01). This is a new collection.

Abstract: The Office of Mobile Sources (OMS) is conducting this telephone survey of a sample of the principal operators of automobiles with on-board diagnostic equipment, to evaluate this equipment as a means of reducing emissions. The operators will provide information about their use of the automobiles and their experiences with the equipment. EPA will use these data to determine regulatory directions and to examine the Agency's Inspection and Maintenance (I&M) program.

Burden Statement: The public reporting burden for this collection of information is estimated to average 3 minutes.

Respondents: Individual car owners.

Estimated No. of Respondents: 2500.

Estimated Total Annual Burden on Respondents: 125 hours.

Frequency of Collection: One time only.

Send comments regarding the burden estimates, or any other aspect of the information collections, including suggestions for reducing the burdens, to:

Sandy Farmer, U.S. Environmental Protection Agency, Information Policy Branch, 401 M Street, SW., Washington, DC 20460

and

Nicolas Garcia, Office of Management and Budget, Office of Information and Regulatory Affairs, 726 Jackson Place, NW., Washington, DC 20530.

Dated: October 27, 1989.

Paul Lapsley,

Director, Information and Regulatory Systems Division.

[FR Doc. 89-25741 Filed 10-31-89; 8:45 am]

BILLING CODE 6560-50-M

[OPP-50692; FRL-3657-1]

Issuance of Experimental Use Permits

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has granted experimental use permits to the following applicants. These permits are in accordance with, and subject to, the provisions of 40 CFR part 172, which defines EPA procedures with respect to the use of pesticides for experimental purposes.

FOR FURTHER INFORMATION CONTACT: By mail: Registration Division (H7505C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460.

In person or by telephone: Contact the product manager at the following address at the office location or telephone number cited in each experimental use permit: 1921 Jefferson Davis Highway, Arlington, VA.

SUPPLEMENTARY INFORMATION: EPA has issued the following experimental use permits.

275–EUP–83. Issuance. Abbott Laboratories, Chemical and Agricultural Products Division, 1400 Sheridan Road, North Chicago, IL 60064. This experimental use permit allows the use of 2,250 grams of the plant growth regulator gibberellic acid on 476 acres of rice to evaluate emergence and stand of semit-dwarf cultivars of rice. The program is authorized only in the States of Arkansas, California, Louisiana, Mississippi, and Texas. The experimental use permit is effective from April 3, 1989 to April 3, 1990. A temporary tolerance is not necessary since the application rate of the active ingredient is less than 20g a.i./A, and gibberellins fit the Subpart M Biorational Pesticide definition of biological origin. (Robert Taylor, PM 25, Rm. 245, CM#2, (703–557–1800))

275–EUP–84. Issuance. Abbott Laboratories, Chemical and Agricultural Products Division, 1400 Sheridan Road, North Chicago, IL 60064. This experimental use permit allows the use of 41.2 pounds of the plant growth regulator gibberellins on 250 acres of apples to evaluate the control of russetting in golden delicious apples and improve typiness of red delicious apples. The program is authorized only in the States of New Jersey, North Carolina, Pennsylvania, Virginia, and West Virginia. The experimental use permit is effective from April 13, 1989 to April 13, 1990. A permanent tolerance for residues of the active ingredient in or on apples has been established (40 CFR 180.234(b)). (Robert Taylor, PM 25, Rm. 245, CM#2, (703–557–1800))

275–EUP–85. Issuance. Abbott Laboratories, Chemical and Agricultural Products Division, 1400 Sheridan Road, North Chicago, IL 60064. This experimental use permit allows the use of 11,355 grams of the plant growth regulator gibberellic acid on 760 acres of peppermint and spearmint to evaluate its ability to delay maturity of mint. The program is authorized only in the States of Idaho, Oregon, and Washington. The experimental use permit is effective from June 1, 1989 to June 1, 1990. A temporary tolerance is not necessary since the application rate of the active ingredient is less than 20g a.i./A, and gibberellins fit the subpart M Biorational Pesticide definition of biological origin. (Robert Taylor, PM 25, Rm. 245, CM#2, (703–557–1800))

241–EUP–120. Issuance. American Cyanamid Company, P.O. Box 400, Princeton, NJ 08540. This experimental use permit allows the use of 830 pounds of the hybridizing agent potassium 3,4-dichloro-5-isothiazolecarboxylate on 350 acres of cotton to evaluate its effects as an hybridizing agent. The program is authorized only in the States of Arizona. The experimental use permit is effective from April 12, 1989 to April 12, 1990. (Robert Taylor, PM 25, Rm. 245, CM#2, (703–557–1800))

42545–EUP–1. Extension. Agrolinz, Inc., 1755 North Kirby Parkway, Suite 300, Memphis, TN 38119–4367. This experimental use permit allows the use of 5,456.25 pounds of the herbicide O-(6-chloro-3-phenyl-4-pyridazinyl)-S-octyl-carbonothioate on 3,900 acres of corn to evaluate the control of broadleaf weeds. The program is authorized only in the States of Colorado, Connecticut, Delaware, Illinois, Indiana, Iowa, Kansas, Maryland, Michigan, Minnesota, Missouri, Nebraska, New Jersey, New York, North Carolina, Ohio, Oregon, Pennsylvania, South Carolina, South Dakota, Virginia, Washington, and Wisconsin. The experimental use permit is effective from May 1, 1989 to May 1, 1990. A temporary tolerance for residues of the active ingredient in or on corn (fodder, forage, grain, and silage) has been established. (Robert Taylor, PM 25, Rm. 245, CM#2, (703–557–1800))

42545–EUP–2. Extension. Agrolinz, Inc., 1755 North Kirby Parkway, Suite 300, Memphis, TN 38119–4367. This experimental use permit allows the use of 7,125 pounds of the herbicide O-(6-chloro-3-phenyl-4-pyridazinyl)-S-octyl-carbonothioate on 3,800 acres of peanuts to evaluate the control of broadleaf weeds. The program is authorized only in the States of Alabama, Florida, Georgia, New Mexico, North Carolina, Texas, and Virginia. The experimental use permit is effective from May 1, 1989 to May 1, 1990. A temporary tolerance for residues of the active ingredient in or on peanuts (hay, hulls, and meat) has been established. (Robert Taylor, PM 25, Rm. 245, CM#2, (703–557–1800))

7969–EUP–26. Extension. BASF Corporation, Chemicals Division, Agricultural Chemicals Group, 100 Cherry Hill Road, Parsippany, NJ 07054. This experimental use permit allows the use of 21 pounds of the herbicide 2-[(1-ethoxyimino)butyl]-5-[(ethylthio)propyl]-3-hydroxyl-2-cyclohexen-1-one on 150 acres of rice to evaluate the control of weeds. The program is authorized only in the States of Arkansas, California, Louisiana, Mississippi, Missouri, and Texas. The experimental use permit is effective from March 30, 1989 to April 30, 1990. This permit is issued with the limitation that all treated crops are destroyed or used for research purposes only. (Robert Taylor, PM 25, Rm. 245, CM#2, (703–557–1800))

239–EUP–113. Issuance. Chevron Chemical Company, P.O. Box 4010, San Pablo, CA 94804-0010. This experimental use permit allows the use of 284 pounds of the growth regulator uniconazole-P on 14,200 trees to evaluate the retardation of undesirable regrowth. The program is authorized only in the States of Nebraska, New York, North Carolina, Ohio, Oregon, Pennsylvania, South Carolina, Tennessee, Texas, Washington, West Virginia, and Wisconsin. The experimental use permit is effective from April 28, 1989 to March 1, 1990. This permit is issued with the limitation that fruit-bearing trees and trees that could be tapped for sugar not be treated. (Robert Taylor, PM 25, Rm. 245, CM#2, (703–557–1800))

BEST COPY AVAILABLE

VOL 54 ISS 210 NO 1 1989 UMI

100–EUP–83. Issuance. Ciba-Geigy Corporation, Agricultural Division, P.O. Box 18300, Greensboro, NC 27419. This experimental use permit allows the use of 1,200 pounds of the insecticide 0-(5-chloro-1-[methylethyl]-1H-1,2,4-triazol-3-yl) 0,0-diethy phosphorothioate on 2,400 acres of corn to evaluate avian toxicity in corn fields. The insecticide is intended for the control of corn rootworms, cutworms, seedcorn maggots, and wireworms. The program is authorized only in the States of Iowa, Ohio, and Wisconsin. The experimental use permit is effective from April 11, 1989 to December 31, 1990. Temporary tolerances for residues of the active ingredient in or on corn (fodder, forage, grain, and silage) have been established. (William Miller, PM 16, CM#2, Rm. 211, CM#2 (703–557–2600))

352–EUP–150. Issuance. E.I. duPont deNemours and Company, Inc., Agricultural Products Department, Barley Mill Plaza, Walker's Mill Building, Wilmington, DE 19880–0038. This experimental use permit allows the use of 76.25 pounds of the insecticide phosphorothioic acid, 0,0-diethyl 0-(1,2,2,2,-tetrachloroethyl) ester on 305 acres of corn to evaluate the control of corn rootworms, cutworms, seedcorn maggots, white grub, and wireworms. The program is authorized only in the States of Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Nebraska, Ohio, South Dakota, and Wisconsin. The experimental use permit is effective from April 10, 1989 to April 15, 1990. This permit is issued with the limitation that all treated crops are destroyed or used for research purposes only. (Dennis H. Edwards, Jr., PM 12, Rm. 202, CM#2 (703–557–2386))

352–EUP–151. Issuance. E.I. duPont deNemours & Company, Inc., Agricultural Products Department, Barley Mill Plaza, Walker's Mill Building, Wilmington, DE 19880–0038. This experimental use permit allows the use of 25 pounds of the herbicide 3-pyridinecarboxamide,2-(((((4,6-dimethoxypyrimidin-2-yl)aminocarbonyl))aminosulfonyl))-N,N,-dimethyl on 400 acres of corn to evaluate the control of weeds. The program is authorized only in the States of Indiana, Illinois, Iowa, Kentucky, Michigan, Minnesota, Missouri, Nebraska, Ohio, Pennsylvania, Tennessee, Virginia, and Wisconsin. The experimental use permit is effective from May 11, 1989 to May 11, 1990. This permit is issued with the limitation that all treated crops are destroyed or used for research purposes only. (Robert Taylor, PM 25, Rm. 245, CM#2, (703–557–1800))

279–EUP–107. Renewal. FMC Corporation, 200 Market St., Philadelphia, PA 19103. This experimental use permit allows the use of 202.2 pounds of the insecticide/miticide 2-methyl[1,1'-biphenyl]-3-yl)methyl-3-(2-chloro-3,3,3-trifluoro-1-propenyl)-2,2-dimethylcyclopropanecarboxylate on 260 acres of various crops to evaluate various insects. The program is authorized in the States of Alabama, Arizona, Arkansas, California, Colorado, Florida, Georgia, Idaho, Illinois, Indiana, Louisiana, Michigan, Mississippi, Missouri, Nebraska, New Jersey, New Mexico, New York, North Caolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, Texas, Virginia, Washington, and Wisconsin. The experimental use permit was previously effective from November 10, 1986 to November 10, 1987; the permit is now effective from March 17, 1989 to March 17, 1990. This permit is renewed with the limitation that all treated crops are destroyed or used for research purposes only. (George LaRocca, PM 15, Rm. 204, CM#2 (703–557–2400))

524–EUP–70. Issuance. Monsanto Agricultural Company, 800 North Lindberg Boulevard, St. Louis, MO 63167. This experimental use permit allows the use of 54,900 pounds of the herbicide N-(phosphonomethyl) glycine, in the form of isopropylamine salt on 7,320 acres of forestry and right-of-ways to evaluate its use at higher dosage rates to control woody plants. The program is authorized in the states of Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Maryland, Michigan, Mississippi, North Carolina, Oregon, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, and West Virginia. The experimental use permit is effective from April 13, 1989 to April 13, 1991. (Robert Taylor, PM 25, Rm. 245, CM#2 (703–557–1800))

45639–EUP–33. Extension. Nor-Am Chemical Company, 3509 Silverside Road, P.O. Box 7495, Wilmington, DE 19803. This experimental use permit allows the use of 412.5 pounds of the miticide 3,6-bis(2-chlorophenyl)-1,2,4,5-tetrazine on 1,650 acres of almonds, peaches, and nectarines to evaluate the control of various mites. The program is authorized only in the States of California, Illinois, Indiana, Michigan, New Jersey, New York, North Carolina, Oregon, Pennsylvania, South Carolina, Virginia, and West Virginia. The experimental use permit is effective from April 5, 1989 to April 5, 1990. Temporary tolerances for residues of the active ingredient in or on almond hulls, almont nutmeat, nectarines, and peaches have been established. (Dennis Edwards, Jr., PM 12, Rm. 200, CM#2 (703–557–2386))

34704–EUP–9. Extension. Platte Chemical Company, P.O. Box 667, Greeley, CO 80632. This experimental use permit allows the use of 8,700 pounds of each of the insecticides ethoprop and phorate on 2,900 acres of potatoes to evaluate the control of aphids, flea beetle larvae, leaf hoppers, leaf miners, psyllids, early session Colorado potato beetles and the reduction of flea beetle adults. The program is authorized in the States of California, Colorado, Idaho, Maine, Michigan, Minnesota, New York, North Carolina, North Dakota, Oregon, Washington, and Wisconsin. The experimental use permit is effective from March 1, 1989 to October 1, 1989. Permanent tolerances for residues of the active ingredients in or on potatoes have been established (40 CFR 180.206 and 180.262). (William Miller, PM 16, Rm. 211 CM#2 (703–557–2600))

34704–EUP–10. Issuance. Platte Chemical Company, Box 667, Greeley, Co 80632. This experimental use permit allows the use of 3,261.56 pounds of each of the insecticides ethoprop and phorate on 2,995 acres of corn to evaluate control of corn rootworm larvae, cutworms, mites, nematodes, seedcorn beetles, symphylans, wireworms, and the suppression of white grubs. The program is authorized only in the States of Illinois, Indiana, Iowa, Kansas, Minnesota, Missouri, Nebraska, North Carolina, Ohio, Texas, and Wisconsin. The experimental use permit is effective from March 23, 1989 to March 23, 1990. Permanent tolerances for residues of the active ingredients in or on corn have been established (40 CFR 180.206 and 180.262) (William Miller, PM 16, Rm. 211, CM#2, (703–557–2600))

34704–EUP–11. Issuance. Platte Chemical Company, P.O. Box 667, Greeley, CO 80632. This experimental use permit allows the use of 6,728 pounds of the insecticide fonofos and 10,092 pounds of the insecticide phorate on potatoes to evaluate control of aphids, flea bettle larvae, leafhoppers, lead miners, psyllids, wireworms, and the reduction of flea beetle adults and early season Colorado potato beetles. The program is authorized only in the States of California, Colorado, Idaho, Maine, Michigan, Minnesota, New York, North Carolina, North Dakoa, Oregon, Washington, and Wisconsin. The experimental use permit is effective from April 21, 1989 to April 21, 1990. Permanent tolerances for residues of the active ingredients in or on potatoes have been established (40 CFR 180.206 and 180.221). (William Miller, PM 16, Rm. 211, CM#2, (703–557–2600))

11312–EUP–33. Extension. U.S. Department of Agriculture, Tropical Fruits and Vegetable Research Laboratory, Agricultural Research Service, Honolulu, HI 96804. This experimental use permit allows the use of 250 pounts of the insecticide malathion and 1,000 pounds of the insecticide cue lure on 21,250 acres on the Island of Rota to evaluate the control of the melon fly. (William Miller, PM 16, Rm. 211, CM#2, (703–557–2600))

11312–EUP–34. Extension. U.S. Department of Agriculture, Tropical Fruits and Vegetable Research Laboratory, Agricultural Research Service, Honolulu, HI 96804. This experimental use permit allows the use of 250 pounts of the insecticide malathion and 1,000 pounds of the insecticide cue lure on 21,250 acres on the Island of Rota to evaluate the control of the melon fly. This program and the one above are only authorized on the Island of Rota, a commonwealth of the Northern Mariana Islands. Both experimental use permits are effective from September 30, 1988 to September 30, 1989. The permits will use the same active ingredients but different formulations. (William Miller, PM 16, Rm. 211, CM#2, (703–557–2600))

239–EUP–112. Issuance. Valent USA Corporation, P.O. Box 8025, Walnut Creek, CA 94596–8025. This experimental use permit allows the use of 767 pounds of the fungicide diniconazole on 1,130 acres of apples and peanuts to evaluate the control of powdery mildew and cedar apple rust for apples and early leafspot, late leafspot, limb rot, rust, white mold, and southern blight for peanuts. The program is authorized only in the States of Alabama, California, Florida, Georgia, Michigan, New York, North Carolina, Oklahoma, Pennsylvania, South Carolina, Texas, Virginia, and Washington. The experimental use permit is effective from May 5, 1989 to May 5, 1991. A temporary tolerance for residues of the active ingredient in or on apples and peanuts has been established. (Susan Lewis, PM 21, Rm. 227, CM#2, (703–557–1900))

Persons wishing to review these experimental use permits are referred to the designated product managers. Inquiries concerning these permits should be directed to the persons cited above. It is suggested that interested persons call before visiting the EPA office, so that the appropriate file may be made available for inspection purposes from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays.

Authority: 7 U.S.C. 136c.

Dated: September 19, 1989.

Anne E. Lindsay,

Director, Registration Division, Office of Pesticide Programs.

Extension of Temporary Tolerances; Correction

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice; correction.

SUMMARY: EPA is correcting a notice that renewed temporary tolerances for residues of the herbicide pyridate to reinstate an inadvertently omitted entry.

EFFECTIVE DATE: November 1, 1989.

FOR FURTHER INFORMATION CONTACT: By mail: Robert J. Taylor, Product Manager (PM) 25, Registration Division (H–7505C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460.

Office location and telephone number: Rm. 207, CM #2, 1921 Jefferson Davis Hwy., Arlington, VA 22202, (703–557–1000).

SUPPLEMENTARY INFORMATION: In the Federal Register of August 2, 1989 (54 FR 31880), EPA issued an extension of temporary tolerances for residues of the herbicide pyridate [O-(6-chloro-3-phenyl-4-pyridazinyl)-S-octyl-carbonothioate] derived from its application in or on corn grain, corn silage, and corn fodder at 0.03 part per million (ppm). The raw agricultural commodity corn forage was inadvertently omitted from the list of commodities, and this notice hereby reinstates corn forage at 0.03 ppm.

Authority: 21 U.S.C. 346(j).

Dated: September 30, 1989.

Anne E. Lindsay,

Director, Registration Division, Office of Pesticide Programs.

Emergency Exemptions; Colorado et al.

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has granted specific exemptions for the control of various pests to the 18 States as listed below, and 11 crisis exemptions were initiated by various States. These exemptions, issued during the months May, June, and July, are subject to application and timing restrictions and reporting requirements designed to protect the environment to the maximum extent possible. Information on these restrictions is available from the contact persons in EPA listed below.

DATES: See each specific and crisis exemption for its effective date.

FOR FURTHER INFORMATION CONTACT: See each emergency exemption for the name of the contact person. The following information applies to all contact persons:

By mail: Registration Division (H7505C), Office of Pesticide Programs, Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460.

Office location and telephone number: Room 716, CM#2, 1921 Jefferson Davis Highway, Arlington, VA, (703–557–1806).

SUPPLEMENTARY INFORMATION: EPA has granted specific exemptions to the:

1. Colorado Department of Agriculture for the use of bifenthrin on field corn to control mites; July 26, 1989, to August 31, 1989. (Jim Tompkins)

2. Idaho Department of Agriculture for the use of chlorpyrifos on hops to control hop aphids; July 28, 1989, to September 15, 1990. (Robert Forrest)

3. Kansas State Board of Agriculture for the use of bifenthrin on field corn to control Banks and two-spotted spider mites; July 3, 1989, to September 30, 1989. (Jim Tompkins)

4. Kansas State Board of Agriculture for the use of bifenthrin on field corn to control mites; July 30, 1989, to September 15, 1989. (Jim Tompkins)

5. Louisiana Department of Agriculture and Forestry for the use of clomazone on sweet potatoes to control annual broadleaf weeds; July 18, 1989, to September 30, 1989. (Libby Pemberton)

6. Mississippi Department of Agriculture and Commerce for the use of clomazone on sweet potatoes to control annual broadleaf weeds; July 18, 1989, to September 30, 1989. (Libby Pemberton)

7. Montana Department of Agriculture for the use of fenvalerate on wheat and barley to control Russian wheat aphids and on small grains to control army and pale western cutworms; July 12, 1989, to October 10, 1989. Montana had initiated a crisis exemption for the use of cutworms only. (Libby Pemberton)

VOL 54 ISS 210 NO 1 1989 UMI

8. Montana Department of Agriculture for the use of fluvalinate on alfalfa for seed to control grasshoppers, spotted alfalfa aphids, and lygus bugs; July 5, 1989, to August 31, 1989. (Robert Forrest)

9. Nebraska Department of Agriculture for the use of bifenthrin on field corn to control Banks grass mites and two-spotted spider mites; July 3, 1989, to September 15, 1989. (Jim Tompkins)

10. New Jersey Department of Environmental Protection for the use of clomazone on squash to control broadleaf weeds; July 13, 1989, to October 31, 1989. (Libby Pemberton)

11. New Jersey Department of Environmental Protection for the use of linuron on parsley to control broadleaf weeds; July 6, 1989, to September 15, 1989. (Jim Tompkins)

12. New Jersey Department of Environmental Protection for the use of linuron on parsley to control broadleaf weeds; July 6, 1989, to September 15, 1989. EPA completed a rebuttable presumption against registration (RPAR) on this chemical; the final determination under review was returned to registration for processing. (Jim Tompkins)

13. New Mexico Department of Agriculture for the use of bifenthrin on field corn to control mites; July 26, 1989, to August 31, 1989. (Jim Tompkins)

14. North Dakota Department of Agriculture for the use of mancozeb on sunflowers to control Puccinia helianthi; July 26, 1989, to August 31, 1989. North Dakota had initiated a crisis exemption for this use. EPA completed a rebuttable presumption against registration (RPAR) on this chemical; the final determination is under review and a PD 2/3 is being drafted. (Jim Tompkins)

15. Ohio Department of Agriculture for the use of linuron on parsley to control broadleaf weeds; July 6, 1989, to September 15, 1989. EPA completed a rebuttable presumption against registration (RPAR) for this chemical; the final determination under review was returned to registration for processing. (Jim Tompkins)

16. Ohio Department of Agriculture for the use of linuron on parsley to control broadleaf weeds; July 6, 1989, to September 15, 1989. (Jim Tompkins)

17. Oklahoma Department of Agriculture for the use of DCNA (Botran) on peanuts to control sclerotinia blight; July 26, 1989, to October 30, 1989. (Susan Stanton)

18. Oregon Department of Agriculture for the use of chlorpyrifos on hops to control hop aphids; July 26, 1989, to September 5, 1990. (Robert Forrest)

19. Texas Department of Agriculture for the use of DCNA (Botran) on peanuts to control sclerotinia blight; July 26, 1989, to October 21, 1989. (Susan Stanton)

20. Virginia Department of Agriculture and Consumer Services for the use of clomazone on sweet potatoes to control various weeds; July 13, 1989, to September 30, 1989. (Libby Pemberton)

21. Washington Department of Agriculture for the use of vinclozolin on snap beans to control botrytis gray mold and sclerotinia white mold; July 13, 1989, to September 30, 1989. (Libby Pemberton)

Crisis exemptions were initiated by the:

1. Indiana State Chemist and Seed Commissioner on June 19, 1989, for the use of thiodicarb on no-till corn to control slugs. This program has ended. (Jim Tompkins)

2. Kansas State Board of Agriculture on May 26, 1989, for the use of metsulfuron-methyl as a harvest aid on winter wheat. This program has ended. (Jim Tompkins)

3. Kansas State Board of Agriculture on June 19, 1989, for the use of diquat dibromide as a harvest aid on winter wheat. This program has ended. (Jim Tompkins)

4. Minnesota Department of Agriculture on July 17, 1989, for the use of fenvalerate on wildlife management areas to control the grasshopper. This program has ended. (Libby Pemberton)

5. North Dakota Department of Agriculture on June 23, 1989, for the use of benomyl on canola to control sclerotinia. This program has ended. (Libby Pemberton)

6. Ohio Department of Agriculture on June 8, 1989, for the use of thiodicarb on no-till corn to control slugs. This program has ended. (Jim Tompkins)

7. Oklahoma Department of Agriculture on May 31, 1989, for the use of metsulfuron-methyl as a harvest aid on winter wheat. This program has ended. (Jim Tompkins)

8. Oklahoma Department of Agriculture on June 15, 1989, for the use of diquat dibromide as a harvest aid on winter wheat. This program has ended. (Jim Tompkins)

9. Pennsylvania Department of Agriculture on June 23, 1989, for the use of thiodicarb on corn to control slugs. This program has ended. (Jim Tompkins)

10. Texas Department of Agriculture on June 19, 1989, for the use of diquat dibromide as a harvest aid on winter wheat. This program has ended. (Jim Tompkins)

11. Wisconsin Department of Agriculture, Trade, and Consumer Protection on June 11, 1989, for the use of sethoxydim on processed peas to control various annual and perennial grasses. This program has ended. (Susan Stanton)

Authority: 7 U.S.C. 136.

Dated: October 17, 1989.

Pesticide Tolerance Petitions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces the filing of pesticide petitions proposing the establishment of tolerances and/or regulations for residues of certain pesticide chemicals in or on certain agricultural commodities.

ADDRESS:

By mail, submit written comments to:

Public Docket and Freedom of Information Section, Field Operations Division (H-7506C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460.

In person, bring comments to: Rm. 246, CM#2, 1921 Jefferson Davis Highway, Arlington, VA 22202.

Information submitted as a comment concerning this notice may be claimed confidential by marking any part or all of that information as "Confidential Business Information" (CBI). Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the comment that does not contain CBI must be submitted for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice. All written comments will be available for public inspection in Rm. 246 at the address given above, from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays.

FOR FURTHER INFORMATION CONTACT: By mail: Registration Division (H7505C), Attention: Product Manager (PM) named in the petition, Environmental Protection Agency, Office of Pesticide Programs, 401 M Street, SW., Washington, DC 20460.

In person, contact the PM named in each petition at the following office location/telephone number:

Product manager	Office location/ telephone No.	Address
Dennis Edwards (PM 12).	Rm. 202, CM #2, 703-557-2386.	1921 Jefferson Davis Hwy., Arlington, VA.
George LaRocca (PM 15).	Rm. 204, CM #2, 703-557-2400.	Do.
Bill Miller (PM 16).	Rm. 211, CM #2, 703-557-2600.	Do.
Phil Hutton (PM 17).	Rm. 207, CM #2, 703-557-2690.	Do.
Susan Lewis (PM 21).	Rm. 227, CM #2, 703-557-1900.	Do.
Joanne Miller (PM 23).	Rm. 237, CM #2, 703-557-1830.	Do.
Robert Taylor (PM 25).	Rm. 237, CM #2, 703-557-1800.	Do.
Hoyt Jamerson (PM 43).	Rm. 716, CM #2, 703-577-7700.	Do.

SUPPLEMENTARY INFORMATION: EPA has received pesticide (PP) and/or food/feed additive (FAP) petitions as follows proposing the establishment and/or amendment of tolerances or regulations for residues of certain pesticide chemicals in or on certain agricultural commodities.

Initial Filings

1. *PP 9F3766.* Sandoz Crop Protection Corp., 1300 East Touhy Ave., Des Plaines, IL 60018, proposes to amend 40 CFR 180.356 by establishing a regulation to permit the residues of the herbicide norflurazon (4-chloro-5-(methylamino)-2-(*alpha, alpha, alpha*-trifluoro-*m*-tolyl)-3-(2*H*)-pyridazinone) and its desmethyl metabolite 4-chloro-5-(amino)-2-(*alpha, alpha, alpha*-trifluoro-*m*-tolyl)-3(2*H*)-pyridazinone in or on alfalfa forage at 3.0 ppm, alfalfa hay at 5.0 ppm, alfalfa seed at 0.1 ppm, and asparagus at 0.05 ppm. The proposed analytical method for determining residues is gas chromatography. (PM 23)

2. *PP 9F3770.* Coopers Animal Health, Inc., P.O. Box 419167, Kansas City, MO 64141-0167, proposes to amend 40 CFR part 180 by establishing a regulation to permit the residues of the insecticide lambda-cyhalothrin in or on cattle fat at 1.0 ppm and cattle meat and meat byproducts at 0.1 ppm. The proposed analytical method for determining residues is gas chromatography. (PM 15)

3. *PP 9F3772.* Nor-Am Chemical Co., 3509 Silverside Rd., (Wilmington, DE 19803, proposes to amend 40 CFR 180.287 by establishing a regulation to permit the residues of the insecticide amitraz [*N*'-[2,4-dimethylphenyl]-*N*-[[(2,4-dimethyl-phenyl)imino]methyl]-*N*-methylmethanimidamide) and its metabolites containing the 2,4-dimethylaniline moiety (calculated as parent compound) in or on sheep meat and meat byproducts at 0.3 ppm, sheep fat at 0.5 ppm, goat meat and meat byproducts at 0.3 ppm, and goat fat at 0.5 ppm. The proposed analytical method for determining residues is gas liquid chromatography. (PM 12)

4. *PP 9F3773.* Chevron Chemical Co., 15049 San Pablo Ave., P.O. Box 4010, Richmond, CA 94804-0010, proposes to amend 40 CFR 180.215 by establishing a regulation to permit the residues of the insecticide naled (1,2,-dibromo-2,2-dichloro-ethyl dimethylphosphate) and its metabolite, dichlorvos (2,2-dichloroethenyl dimethylphosphate), in or on alfalfa (forage) at 5.0 ppm and alfalfa (hay) at 1.0 ppm. The proposed analytical method for determining residues is gas chromatography. (PM 16)

5. *PP 9F3775.* Monsanto Co., 1101 17th St. NW., Washington, DC 20036, proposes to amend 40 CFR 180.249 by establishing a regulation to permit the residues of the herbicide alachlor (2-chloro-2',6'-diethyl-*N*-(methoxymethyl)acetanilide) and its metabolites (calculated as alachlor) in or on sunflower seed at 1 ppm. The proposed analytical method for determining residues is gas chromatography. (PM 25)

6. *PP 9F3776.* Monsanto Co., 1101 17th St. NW., Washington, DC 20036, proposes to amend 40 CFR 180.249 by establishing a regulation to permit the residues of the herbicide alachlor (2-chloro-2',6'-diethyl-*N*-(methoxymethyl) acetanilide) and its metabolites (calculated as alachlor) in or on soybean grain at 1 ppm. The proposed analytical method for determining residues is gas chromatography. (PM 25)

7. *PP 9F3782.* BASF Corp., Chemicals Division, Parsippany, NJ 07054, proposes to amend 40 CFR 180.355 by establishing a regulation to permit the combined residues of the herbicide bentazon (3-isopropyl 1*H*-2,1,3-benzothiadiazin-4(3*H*)-one-2, 2-dioxide) and its 6- and 8-hydroxy metabolites in or on beans, dried, vine hay (except soybeans) at 8.0 ppm; beans, forage (except soybeans) at 8.0 ppm; beans, dried (except soybeans) at 1.0 ppm; peas, dried, vine hay at 8.0 ppm; peas, forage at 8.0 ppm; peas, dried at 1.0 ppm; soybeans, forage at 8.0 ppm; and soybeans, hay at 8.0 ppm. The proposed analytical method for determining residues is a multistep procedure involving extraction, hydrolysis of conjugates and derivatization by quantitation by gas chromatography. (PM 25)

8. *PP 9F3787.* Merck Sharp & Dohme Research Laboratories. Division of Merck & Co., Inc., Hillsborough Rd., Three Bridges, NJ 08887, proposes to amend 40 CFR 180.449 by establishing a regulation to permit the combined residues of avermectin B1 and its 8,9-isomer in or on pears at 0.035 ppm. The proposed analytical method for determining residues is HPLC. (PM 15)

9. *PP 9F3788.* BASF Corp., Chemicals Division, Parsippany, NJ 07054, proposes to amend 40 CFR 180.380 by establishing a regulation to permit the combined residues of the fungicide 3-(3,5-dichlorophenyl)-5-ethenyl-5-methyl-2,4-oxazolidinedione and its metabolites containing the 3,5-dichloroaniline moiety in or on almond nuts at 0.2 ppm and almond hulls at 3.0 ppm. The proposed analytical method for determining residues is BWC method number 25F. (PM 21)

10. *PP 9F3793.* NOR-AM Chemical Co., 3509 Silverside Rd., P.O. Box 7495, Wilmington, DE 19803, proposes to amend 40 CFR 180.446 by establishing a regulation to permit the residues of the herbicide clofentezine (3,6-bis(2-chlorophenyl)-1,2,4,5-tetrazine) in or on walnuts at 0.02 ppm, almond nutmeat at 0.5 ppm, and almond hulls at 5.0 ppm, and combined residues of clofentezine (3,6-bis (2-chlorophenyl)-1,2,4,5-tetrazine) and the 4-hydroxyclofentezine metabolite in or on meat, fat, and meat byproducts of cattle, goats, hogs, horses, and sheep at 0.05 ppm, cattle liver at 0.2 ppm, and milk at 0.01 ppm. The proposed analytical method for determining residues is HPLC. (PM 12)

11. *PP 9F3794.* Monsanto Co., 1101 17th St. NW., Washington, DC 20036, proposes to amend 40 CFR 180.314 by establishing a regulation to reexpress the tolerances as written to include the metabolite 2,3,3-trichloro-2-propene-sulfonic acid (TCPSA) and propose tolerances with regional registrations. In addition, Monsanto proposes to amend the tolerance level for residues of S-2,3,3-trichloroallyl diisopropylthiocarbamate and its TCPSA metabolite in barley, straw to 0.5 ppm; peas, forage to 1.0 ppm; peas, hay to 1.0 ppm; wheat, straw to 0.5 ppm; and wheat, forage to 0.5 ppm. (PM 25)

12. *FAP 9H5573.* Zoecon Corp., A Sandoz Company, 12200 Denton Drive, Dallas, TX 75234, proposes to amend 40 CFR part 185 by establishing a regulation to permit residues of the insecticide hydroprene in food commodities exposed during treatment of food-handling establishments at 1.5 ppm. (PM 17)

13. *FAP 9H5586.* Rutgers, The State University of New Jersey, Cook College, Office of IR-4, New Brunswick, NJ 08903-0231, proposes to amend 40 CFR

parts 185 and 186 by establishing a regulation to permit the residues of the insecticide permethrin [(3-phenoxyphenyl) methyl 3-(2,2-dichloro-ethenyl)-2,2-

5(a)(1) premanufacture notices are discussed in the final rule published in the **Federal Register** of May 13, 1983 (48 FR 21722). This notice announces receipt of 53 such PMNs and provides a

DC 20460 (202) 554-1404, TDD (202) 554-0551.

SUPPLEMENTARY INFORMATION: The following notice contains information

Use/Import. (G) Functional component of solder mask resin solution. Import range: Confidential.

Chemical. (G) Modified hydroxy functional acrylic resin.

Use/Production. (S) Coatings. Prod. range: Confidential.

Chemical. (G) Modified hydroxy functional acrylic resin.

Use/Production. (S) Coatings. Prod. range: Confidential.

VOL 54 ISS 210 NO 1 1989 UMI

parts 185 and 186 by establishing a regulation to permit the residues of the insecticide permethrin [(3-phenoxyphenyl) methyl 3-(2,2-dichloroethenyl)-2,2-dimethylcyclopropanecarboxylate] when used in accordance with the following conditions:

A. On the outer ply of multiwall paper bags of 50 pounds or more capacity consisting of an outer permethrin-coated ply, followed by one ply of greaseproof paper weighing 54.5g/m², and one or more plies of paper or polymer film. Amounts of permethrin on the outer ply cannot exceed 50 milligrams per square meter of paper. Such treated bags are to be used only for the storage of dried foods and feeds.

B. Residues in foods and feeds resulting from this use shall not exceed 0.05 ppm for the residues of the insecticide permethrin [(3-phenoxyphenyl) methyl 3-(2,2-dichloroethenyl)-2, 2-dimethylcyclopropanecarboxylate] in or on dried foods and feeds when used on the outer ply of multiwall paper bags of 50 pounds or more capacity containing a greaseproof liner. (PM 43)

14. *FAP 9H5588.* Zoecon Corp., A Sandoz Company, 12005 Ford Rd., Suite 800, LB 44, Dallas, TX 75234-7296, proposes to amend 40 CFR 185.4150 by establishing a regulation to permit the residues of the insecticide (*S*)-methoprene (isopropyl (2*E*,4*E*,7*S*)-11-methoxy-3,7,11-trimethyl-2,4-dodecadienoate) in food commodities exposed during treatment of food-handling establishments at 3 ppm. (PM 17).

Authority: 7 U.S.C. 136a.

Dated: October 5, 1989.

Frank Sanders,

Acting Director, Registration Division, Office of Pesticide Programs.

Toxic and Hazardous Substances; Certain Chemicals Premanufacture Notices

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Section 5(a)(1) of the Toxic Substances Control Act (TSCA) requires any person who intends to manufacture or import a new chemical substance to submit a premanufacture notice (PMN) to EPA at least 90 days before manufacture or import commences. Statutory requirements for section 5(a)(1) premanufacture notices are discussed in the final rule published in the **Federal Register** of May 13, 1983 (48 FR 21722). This notice announces receipt of 53 such PMNs and provides a summary of each.

ADDRESS: Written comments, identified by the document control number "(OPTS-51741)" and the specific PMN number should be sent to: Document Processing Center (TS-790), Office of Toxic Substances, Environmental Protection Agency, 401 M Street SW., Room L-100, Washington, DC 20460 (202) 382-3532.

FOR FURTHER INFORMATION CONTACT: Michael M. Stahl, Director, Environmental Assistance Division (TS-799), Office of Toxic Substances, Environmental Protection Agency, Rm. EB-44, 401 M Street SW., Washington, DC 20460 (202) 554-1404, TDD (202) 554-0551.

SUPPLEMENTARY INFORMATION: The following notice contains information extracted from the nonconfidential version of the submission provided by the manufacturer on the PMNs received by EPA. The complete nonconfidential document is available in the Public Reading Room NE-G004 at the above address between 8:00 a.m. and 4:00 p.m., Monday through Friday, excluding legal holidays.

P 89-1096

Importer. Confidential.
Chemical. (G) Silicone imide black copolymer.
Use/Import. (G) Electronics, separation membrane, coating. Import range: Confidential.
Toxicity Data. Mutagenicity: negative.

P 89-1097

Manufacturer. Miranol Inc.
Chemical. (S) Pentaerythritol, partial esters with lauric/myristic acid blend, oligopolymerized.
Use/Production. (S) Waterless hand cleaner ingredient. Prod. range: 20,000-50,000 kg/yr.
Toxicity Data. Acute oral toxicity: LD50 > 20 g/kg species (Rat). Eye irritation: none species (Rabbit). Skin irritation: moderate species (Rabbit).

P 89-1098

Manufacturer. Confidential.
Chemical. (G) Modified cresol/formaldehyde resin.
Use/Production. (G) Coating resin for electronic applications. Prod. range: Confidential.

P 89-1099

Manufacturer. Baker Performance Chemical, Inc.
Chemical. (G) Quaternary salt of adipamide.
Use/Production. (S) This compound is to be used as a demulsifier to aide oil and water separation in oil field applications. Prod. range: Confidential.

P 89-1100

Importer. Ciba-Geiey Corp.
Chemical. (G) Iron arene antimonate complex.
Use/Import. (G) Functional component of solder mask resin solution. Import range: Confidential.

P 89-1101

Importer. Ciba-Geigy Corp.
Chemical. (G) Iron arene sulfonate complex.

Use/Import. (G) Functional component of solder mask resin solution. Import range: Confidential.

P 89-1102

Manufacturer. E.I. du Pont de Nemours & Co., Inc.
Chemical. (G) Siloxytitanate.
Use/Production. (G) Surface coating. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 5,000 mg/kg species (Rat). Static acute toxicity LC50 > 1,000 mg/1 time 96h species (Fathead Minnow). Skin irritation: negligible species (Rabbit).

P 89-1103

Manufacturer. E.I. du Pont de Nemours & Co., Inc.
Chemical. (G) Merocyanine dye.
Use/Production. (G) Sensitizing dye. Prod. range: Confidential.

Toxic and Hazardous Substances; Certain Chemicals Premanufacture Notices

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Section 5(a)(1) of the Toxic Substances Control Act (TSCA) requires any person who intends to manufacture or import a new chemical substance to submit a premanufacture notice (PMN) to EPA at least 90 days before manufacture or import commences. Statutory requirements for section 5(a)(1) premanufacture notices are discussed in the final rule published in the **Federal Register** of May 13, 1983 (48 FR 21722). In the **Federal Register** of November 11, 1984, (49 FR 46066) (40 CFR 723.250), EPA published a rule which granted a limited exemption from certain PMN requirements for certain types of polymers. Notices for such polymers are reviewed by EPA within 21 days of receipt. This notice announces receipt of 4 such PMN(s) and provides a summary of each.

FEDERAL EMERGENCY MANAGEMENT AGENCY

Agency Information Collection Submitted to the Office of Management and Budget for Clearance

The Federal Emergency Management Agency (FEMA) has submitted to the Office of Management and Budget the following information collection package for clearance in accordance with the Paperwork Reduction Act (44 U.S.C. chapter 35).

Type: Revision of 3067-0123.

Title: State and Local Emergency Operations Plans.

Abstract: The Federal Emergency Management Agency (FEMA) administers the Civil Defense Program which implements the Civil Defense Act of 1950, as amended. The program provides a system of civil defense for the protection of life and property in the United States from attack and from natural disasters. The responsibility for civil defense is vested jointly in the Federal Government and the States and their political subdivisions. The Act authorizes FEMA to make financial contributions to the States for administrative expenses, on the basis of approved plans * * * for the civil defense of the States. Section 205(a) of the Act states that "plans submitted under this section shall * * * (3) provide for the development of State and local civil defense operations plans, pursuant to the standards approved by the Director;" The Emergency Management Assistance and Population Protection Planning program elements, which are funded through FEMA's Comprehensive Cooperative Agreement, are designed to fund personnel, administrative expenses, and plan development and maintenance. To fulfill FEMA's mission to guide the development and maintenance of a national system for civil defense, FEMA must collect, review, and recommend necessary corrections to State and local Emergency Operations Plans, which are necessary to facilitate a coordinated and effective response and recovery from major natural, technological, and attack-related hazards.

Type of Respondents: State and local governments.

Estimate of Total Annual Reporting and Recordkeeping Burden: 402,780.

Number of Respondents: 959.

Estimated Average Burden Hours Per Response: 420.

Frequency of Response: Other. During the update cycle, plans will be submitted once every 4 years.

Copies of the above information collection request and supporting documentation can be obtained by calling or writing the FEMA Clearance Officer, Linda Shiley, (202) 646-2624, 500 C Street SW., Washington, DC 20472.

Direct comments regarding the burden estimate or any aspect of this information collection, including suggestions for reducing this burden, to the FEMA Clearance Officer at the above address; and to Pamela Barr, (202) 395-7231, Office of Management and Budget, 3235 NEOB, Washington, DC 20503 within two weeks of this notice.

Dated: October 10, 1989.

Agency Information Collection Submitted to the Office of Management and Budget for Clearance

The Federal Emergency Management Agency (FEMA) has submitted to the Office of Management and Budget the following information collection package for clearance in accordance with the Paperwork Reduction Act (44 U.S.C. chapter 35).

Type: Reinstatement of 3067-0018.

Title: National Flood Insurance Program Annual Report (Biennial Report).

Abstract: The Federal Emergency Management Agency (FEMA) requires that communities participating in the National Flood Insurance Program submit a biennial report on progress made in local floodplain management, including implementation and enforcement of floodplain management regulations. The use of three simple, standard formats facilitate FEMA's reporting of response, thus enhancing the reports value as a management tool. The report enables FEMA to be more responsive to the on-going changes

which occur in each participating community; to evaluate the effectiveness of a community's floodplain management activities; to assist in allocating scarce program resources to

application form will enable FEMA to continue to rapidly process new community applications and to thereby more quickly provide flood insurance

increased to $10,400 for all disasters declared after October 1, 1989.

Notice is also hereby given that the amount of any grant made to the State,

Mayra N. Cruz, Contracts Supervisor, Autoridad De Los Puertos De P.R., G.P.O. Box 2829, San Juan, Puerto Rico 00936.

B. Federal Reserve Bank of Chicago (David S. Epstein, Vice President) 230 South LaSalle Street, Chicago, Illinois [illegible]

Board of Governors of the Federal Reserve System, October 26, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

VOL 54 ISS 210 1989 NO 1 UMI

which occur in each participating community; to evaluate the effectiveness of a community's floodplain management activities; to assist in allocating scarce program resources to the eligible participating communities; and to assess floodplain development on a national scale, for allocating resources and for establishing priorities.

Type of Respondents: State and local governments.

Estimate of Total Annual Reporting and Recordkeeping Burden: 7,637.

Number of Respondents: 17,132.

Estimated Average Burden Hours Per Response: .4457.

Frequency of Response: Biennially.

Copies of the above information collection request and supporting documentation can be obtained by calling or writing the FEMA Clearance Officer, Linda Shiley, (202) 646–2624, 500 C Street, SW., Washington, DC 20472.

Direct comments regarding the burden estimate or any aspect of this information collection, including suggestions for reducing this burden, to the FEMA Clearance Officer at the above address; and to Pamela Barr, (202) 395–7231, Office of Management and Budget, 3235 NEOB, Washington, DC 20503 within two weeks of this notice.

Dated: October 10, 1989.

BILLING CODE 6718–01–M

Agency Information Collection Submitted to the Office of Management and Budget for Clearance

The Federal Emergency Management Agency (FEMA) has submitted to the Office of Management and Budget the following information collection package for clearance in accordance with the Paperwork Reduction Act (44 U.S.C. chapter 35).

Type: Extension 3067–0020.

Title: Application for Participation in the National Flood Insurance Program

Abstract: The Federal Emergency Management Agency's (FEMA's) National Flood Insurance Program provides Federally-backed flood insurance to those communities which make the commitments to adopt and enforce land use control measures that will guide land development in flood-prone areas in order to avoid or reduce future flood damage. The data collected on FEMA Form 81–64, Application for Participation in the National Flood Insurance Program, is the minimum information necessary to establish eligibility for a community. This application form will enable FEMA to continue to rapidly process new community applications and to thereby more quickly provide flood insurance protection to the residents of the communities.

Type of Respondents: State and local governments.

Estimate of Total Annual Reporting and Recordkeeping Burden: 400.

Number of Respondents: 100.

Estimated Average Burden Hours Per Response: 4.

Frequency of Response: One-time.

Copies of the above information collection request and supporting documentation can be obtained by calling or writing the FEMA Clearance Officer, Linda Shiley, (202) 646–2624, 500 C Street SW., Washington, DC 20472.

Direct comments regarding the burden estimate or any aspect of this information collection, including suggestions for reducing this burden, to the FEMA Clearance Officer at the above address; and to Gary Waxman, (202) 395–7231, Office of Management and Budget, 3235 NEOB, Washington, DC 20503 within two weeks of this notice.

Dated: October 11, 1989.

Adjustment of Disaster Grant Amounts

AGENCY: Federal Emergency Management Agency.

ACTION: Notice.

SUMMARY: The Robert T. Stafford Disaster Relief and Emergency Assistance Act, Public Law 93–288, as amended by Public Law 100–707, prescribes that grants made under section 411, Individual and Family Grant Programs, and grants made under section 422, Simplified Procedure, relating to the Public Assistance program, shall be adjusted annually to reflect changes in the Consumer Price Index for All Urban Consumers published by the Department of Labor.

EFFECTIVE DATE: October 1, 1989.

FOR FURTHER INFORMATION CONTACT: Neva K. Elliott, Disaster Assistance Programs, Federal Emergency Management Agency, Washington, DC 20472, (202) 646–3614.

NOTICE: Notice is hereby given that the maximum amount of any grant made to an individual or family for disaster-related serious needs and necessary expenses under section 411 of the Act, with respect to any single disaster, is increased to $10,400 for all disasters declared after October 1, 1989.

Notice is also hereby given that the amount of any grant made to the State, local government, or the owner or operator of an eligible private nonprofit facility, under section 422 of the Act, is increased to $36,500 for all disasters declared after October 1, 1989.

The increase is based on a rise in the Consumer Price Index for All Urban Consumers of 4.3 percent for the prior 12-month period. The information was published by the Department of Labor on October 19, 1989.

(Catalog of Federal Domestic Assistance No. 83–516, Disaster Assistance)

Robert H. Morris,

Acting Director, Federal Emergency Management Agency.

FEDERAL MARITIME COMMISSION

Agreement(s) Filed; Puerto Rico Ports Authority Terminal

The Federal Maritime Commission hereby gives notice that the following agreement(s) has been filed with the Commission for approval pursuant to section 15 of the Shipping Act, 1916, as amended (39 Stat. 733, 75 Stat. 763, 46 U.S.C. 814).

Interested parties may inspect and may request a copy of each agreement and the supporting statement at the Washington, DC Office of the Federal Maritime Commission, 1100 L Street NW., Room 10325. Interested parties may submit protests or comments on each agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days after the date of the **Federal Register** in which this notice appears. The requirements for comments and protests are found in § 560.7 of title 46 of the Code of Federal Regulations. Interested persons should consult this section before communicating with the Commission regarding a pending agreement.

Any person filing a comment or protest with the Commission shall, at the same time, deliver a copy of that document to the person filing the agreement at the address shown below.

Agreement No.: 224–200298.

Title: Puerto Rico Ports Authority Terminal Agreement.

Parties:

Puerto Rico Ports Authority,
Luis Ayala Colon Sucrs., Inc.

Filing Party:

Mayra N. Cruz, Contracts Supervisor, Autoridad De Los Puertos De P.R., G.P.O. Box 2829, San Juan, Puerto Rico 00936.

Synopsis: The Agreement provides for the five-year lease of 22,800 square feet at Pier "C", Puerto Nuevo to be used for the berthing, loading and discharging of vessels, the handling and temporary storage of cargo and the handling of passengers.

By Order of the Federal Maritime Commission.

Dated: October 27, 1989.

Joseph C. Polking,

Secretary.

BILLING CODE 6730–01–M

FEDERAL RESERVE SYSTEM

Bankers Corp., et al.; Formations of; Acquisitions by; and Mergers of Bank Holding Companies

The companies listed in this notice have applied for the Board's approval under section 3 of the Bank Holding Company Act (12 U.S.C. 1842) and § 225.14 of the Board's Regulation Y (12 CFR 225.14) to become a bank holding company or to acquire a bank or bank holding company. The factors that are considered in acting on the applications are set forth in section 3(c) of the Act (12 U.S.C. 1842(c)).

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank or to the offices of the Board of Governors. Any comment on an application that requests a hearing must include a statement of why a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute and summarizing the evidence that would be presented at a hearing.

Unless otherwise noted, comments regarding each of these applications must be received not later than November 23, 1989.

A. Federal Reserve Bank of New York (William L. Rutledge, Vice President) Liberty Street, New York, New York 10045:

1. *Bankers Corp.*, Perth Amboy, New Jersey; to become a bank holding company by acquiring 100 percent of the voting shares of Bankers Savings, Perth Amboy, New Jersey.

B. Federal Reserve Bank of Chicago (David S. Epstein, Vice President) 230 South LaSelle Street, Chicago, Illinois 60690:

1. *First State Bancorp of Princeton, Illinois, Inc.*, Princeton, Illinois; to acquire 88.50 percent of the voting shares of First Bank and Trust Company of Gridley, Gridley, Illinois.

2. *Lincoln Financial Corporation*, Fort Wayne, Indiana; to acquire 100 percent of the voting shares of Signal Bancorp, Monticello, Indiana, and thereby indirectly acquire State and Savings Bank, Monticello, Indiana.

3. *Security Chicago Corp.*, Chicago, Illinois; to acquire 88.50 percent of the voting shares of First Bank and Trust Company of Gridley, Gridley, Illinois.

4. *Valley Bancorporation*, Appleton, Wisconsin; to acquire 100 percent of the voting shares of First National Bank of Chippewa Falls, Chippewa Falls, Wisconsin.

5. *Valley Bancorporation*, Appleton, Wisconsin; to acquire 100 percent of the voting shares of Peoples State Bank, Three Lakes, Wisconsin.

C. Federal Reserve Bank of St. Louis (Randall C. Sumner, Vice President) 411 Locust Street, St. Louis, Missouri 63166:

1. *First Malden Bancshares, Inc.*, Malden, Missouri; to become a bank holding company by acquiring at least 95.8 percent of the voting shares of First National Bank of Malden, Malden, Missouri. Comments on this application must be received by November 17, 1989.

2. *FMS Bancorp, Inc.*, Poplar Bluff, Missouri; to become a bank holding company by acquiring at least 99.9 percent of the voting shares of First Missouri State Bank, Poplar Bluff, Missouri. Comments on this application must be received by November 17, 1989.

D. Federal Reserve Bank of Kansas City (Thomas M. Hoenig, Vice President) 925 Grand Avenue, Kansas City, Missouri 64198:

1. *The Columbian Financial Corporation*, Overland Park, Kansas; to acquire 100 percent of the voting shares of The Columbian Trust Company, Overland Park, Kansas, which proposes to convert to a commercial bank charter from its existing trust company charter. Comments on this application must be received by November 16, 1989.

2. *Northern Missouri Bancshares, Inc.*, Unionville, Missouri; to acquire 100 percent of the voting shares of Harrison County Bancshares, Inc., Bethany, Missouri, and thereby indirectly acquire The First National Bank of Bethany, Bethany, Missouri.

Board of Governors of the Federal Reserve System, October 26, 1989.

Huntington Bancshares Inc., et al.; Acquisitions of Companies Engaged in Permissible Nonbanking Activities

The organizations listed in this notice have applied under § 225.23(a)(2) or (f) of the Board's Regulation Y (12 CFR 225.23(a)(2) or (f)) for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843 (c)(8)) and § 225.21(a) of Regulation Y (12 CFR 225.21(a)) to acquire or control voting securities or assets of a company engaged in a nonbanking activity that is listed in § 225.25 of Regulation Y as closely related to banking and permissible for bank holding companies. Unless otherwise noted, such activities will be conducted throughout the United States.

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated for the application or the offices of the Board of Governors not later than November 17, 1989.

A. Federal Reserve Bank of Cleveland (John J. Wixted, Jr., Vice President) 1455 East Sixth Street, Cleveland, Ohio 44101:

1. *Huntington Bancshares Incorporated*, Columbus, Ohio; to acquire Farragut Mortgage Co., Inc.,

Waltham, Massachusetts, and thereby engage in making, acquiring, and servicing loans or other extensions of credit pursuant to §225.25(b)(1) of the Board's Regulation Y.

Massachusetts, for a total of 19.88 percent, and thereby indirectly acquire Neworld Bank for Savings, Boston, Massachusetts.

B. Federal Reserve Bank of

Francisco, California ("SPLC"), or any of SPLC's subsidiaries, in certain leasing activities involving the leasing of personal property, and/or acting as agent, broker, or advisor in leasing such

the proposed activity; or that banks generally provide services that are so integrally related to the proposed activity as to require their provision in a specialized form. *National Courier Ass'n*

VOL 54 ISS 210 NO 1 1989 UMI

Waltham, Massachusetts, and thereby engage in making, acquiring, and servicing loans or other extensions of credit pursuant to §225.25(b)(1) of the Board's Regulation Y.

B. **Federal Reserve Bank of Richmond** (Lloyd W., Bostian, Jr., Vice President) 701 East Byrd Street, Richmond, Virginia 23261:

1. *First Union Corporation,* Charlotte, North Carolina; to acquire First Union Futures Corporation, Charlotte, North Carolina, and thereby engage in acting for nonaffiliated persons as a futures commission merchant registered with the Commodities Futures Trading Commission in order to execute and clear options on bullion, foreign exchange, U.S. Government securities and money market instruments on established commodity exchanges, and options on futures in such commodities and instruments; and providing advisory services to institutional customers consisting of general research and advice on market conditions and trading strategies, client account information and reconciliation of trades, and communication linkages between clients and commodity exchange floors in connection with the proposed futures commission merchant activities pursuant to §§ 225.25(b)(18) and (b)(19) of the Board's Regulation Y. These activities will be conducted in Charlotte, North Carolina.

Board of Governors of the Federal Reserve System, October 26, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 6210-01-M

Integra Financial Corp., et al.; Applications To Engage de Novo in Permissible Nonbanking Activities

The companies listed in this notice have filed an application under § 225.23(a)(1) of the Board's Regulation Y (12 CFR 225.23(a)(1)) for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.21(a) of Regulation Y (12 CFR 225.21(a)) to commence or to engage *de novo,* either directly or through a subsidiary, in a nonbanking activity that is listed in § 225.25 of Regulation Y as closely related to banking and permissible for bank holding companies. Unless otherwise noted, such activities will be conducted throughout the United States.

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

Unless otherwise noted, comments regarding the applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than November 17, 1989.

A. **Federal Reserve Bank of Cleveland** (John J. Wixted, Jr., Vice President) 1455 East Sixth Street, Cleveland, Ohio 44101:

1. *Integra Financial Corporation,* Pittsburg, Pennsylvania; to engage *de novo* through its subsidiary, Integra Leasing Company, Washington, Pennsylvania, in nonbanking activities permissible pursuant to § 225.25(b)(5) of the Board's Regulation Y. Specifically, the Company will engage in commercial equipment leasing which is the functional equivalent of an extension of credit. The Company intends to engage in such transactions in amounts up to $5,000,000. The leases will be originated by Integra Leasing Company or acquired from brokers and other third parties. All property held by the Company will be acquired specifically for a leasing transaction or will have been acquired specifically for an earlier leasing transaction. All leases held by the Company will be non-operating leases. At the inception of any lease, the Company's return will compensate it for not less than its full investment in the property plus the estimated total cost of financing the property over the term of the lease taking into account the items enumerated in § 225.25(b)(5)(iv) of the Board's Regulation Y. The Company expects that most of its leases will have terms of three (3) to ten (10) years; however, in no event will the term of any lease exceed forty (40) years. At the expiration of its leases (including any renewals or extensions with the same lessee), all of the Company's interest in leased property will be either liquidated or released on a non-operating basis as soon as practicable but in no event later than two years from the expiration of any lease. In no case, will the Company retain any interest beyond fifty (50) years after its acquisition of the property.

B. **Federal Reserve Bank of Dallas** (W. Arthur Tribble, Vice President) 400 South Akard Street, Dallas, Texas 75222:

1. *Ford Bank Group, Inc.,* Lubbock, Texas; to engage *de novo* in providing a single line of credit to an unaffiliated company for the purpose of purchasing distressed loans pursuant to § 225.25(b)(1) of the Board's Regulation Y.

2. *United New Mexico Financial Corporation,* Albuquerque, New Mexico; to engage *de novo* through its subsidiary, United New Mexico Fin Corp., Albuquerque, New Mexico, in providing a single line of credit to an unaffiliated company for the purpose of purchasing distressed loans pursuant to § 225.25(b)(1) of the Board's Regulation Y.

Board of Governors of the Federal Reserve System, October 26, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 6210-01-M

Change in Bank Control Notices, Acquisitions of Shares of Banks or Bank Holding Companies; John A. Kaneb et al.

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. Once the notices have been accepted for processing, they will also be available for inspection at the offices of the board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than November 15, 1989.

A. **Federal Reserve Bank of Boston** (Robert M. Brady, Vice President) 600 Atlantic Avenue, Boston, Massachusetts 02106:

1. *John A. Kaneb,* Chelsea, Massachusetts; to acquire an additional 8.87 percent of the voting shares of Neworld Bancorp, Inc., Boston, Massachusetts, for a total of 19.88 percent, and thereby indirectly acquire Neworld Bank for Savings, Boston, Massachusetts.

B. **Federal Reserve Bank of Philadelphia** (Thomas K. Desch, Vice President) 100 North 6th Street, Philadelphia, Pennsylvania 191095:

1. *John W. Troxell, Jr.,* Allentown, Pennsylvania; to acquire an additional 1.35 percent of the voting shares of First Bath Corp, Bath, Pennsylvania, for a total of 11.30 percent, and thereby indirectly acquire First National Bank of Bath, Bath, Pennsylvania.

C. **Federal Reserve Bank of Chicago** (David S. Epstein, Vice President) 239 South LaSalle Street, Chicago, Illinois 60690:

1. *Timothy J. Brown,* Storm Lake, Iowa; John C. Brown, Storm Lake, Iowa; F. Day Welterlen, Edgewood, Iowa; and Robert A. Mullen, West Des Moines, Iowa; to acquire at least 81.025 percent of the voting shares of The Commercial Trust & Savings Bank, Storm Lake, Iowa.

D. **Federal Reserve Bank of Kansas City** (Thomas M. Hoenig, Vice President) 925 Grand Avenue, Kansas City, Missouri 64198:

1. *The Bingman Trust,* John and Sally Bingman, Co-trustees, Sapulpa, Oklahoma; to acquire an additional 0.62 percent of the voting shares of Security National Bancshares of Sapulpa, Sapulpa, Oklahoma, for a total of 13.10 percent, and thereby indirectly acquire Security National Bank of Sapulpa, Sapulpa, Oklahoma.

2. *Robert W. Moore,* Oklahoma City, Oklahoma; to acquire an addtional 14.4 percent of the voting shares of Founders Bancorporation, Inc., Oklahoma City, Oklahoma, for a total of 17.9 percent, and thereby indirectly acquire Founders Bank & Trust Company, Oklahoma City, Oklahoma.

Board of Governors of the Federal Reserve System, October 26, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

[FR Doc. 89-25667 Filed 10-31-89; 8:45 am]

BILLING CODE 6210-01-M

Security Pacific Corp., Los Angeles, CA; Application to Engage in Leasing Activities

Security Pacific Corporation, Los Angeles California, ("Security Pacific"), has applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) ("BHC Act") and § 225.23(a)(3) of the Board's Regulation Y (12 CFR 225.23(a)(3)), for permission to engage *de novo,* directly or indirectly, through its existing subsidiary Security Pacific Leasing Corporation, San Francisco, California ("SPLC"), or any of SPLC's subsidiaries, in certain leasing activities involving the leasing of personal property, and/or acting as agent, broker, or advisor in leasing such property, pursuant to the Board's Regulation Y (12 CFR 225.25(b)(5)). These activities will be conducted nationwide.

Security Pacific has also applied, pursuant to section 4(c)(13) of the BHC Act and § 211.5 of the Board's Regulation K (12 CFR 211.5)) to engage in certain leasing activities with respect to foreign leasing subsidiaries. Security Pacific currently engages in leasing activities through SPLC for which it has received prior Board approval under Regulation Y and Regulation K. (12 CFR 225.25(b)(5) and 211.5).

In this application, Security Pacific proposes to expand its leasing activities to include leasing transactions that comply with all of the conditions of Regulation Y except as set out below. Security Pacific is requesting the Board's prior approval to engage in leasing transactions the terms of which will allow SPLC to rely for its compensation on the estimated residual value of the property at the expiration of the initial term of the lease up to 100 percent of the acquisition cost of the property. Security Pacific has stated that it will limit such leases with estimated residual values in excess of 25 percent of acquisition cost to no more than 10 percent of Security Pacific's total consolidated assets. Security Pacific will also limit leases with estimated residual values in excess of 70 percent of acquisition cost to no more than the lesser of (1) 0.5 percent of Security Pacific's total consolidated assets, or (2) 10 percent of Security Pacific's consolidated net worth. Regulation Y currently limits residual value reliance to no more than 20 percent of the acquisition cost of the property to the lessor. 12 CFR 225.25(b)(5)(iv)(C).

Security Pacific has committed to conform its leasing activities to any future Board rulemaking regarding leasing.

Section 4(c)(8) of the BHC Act provides that a bank holding company may engage in any activity which the Board has determined to be "so closely related to banking or managing or controlling banks as to be a proper incident thereto." A particular activity may be found to meet the "closely related to banking" test if it is demonstrated that banks have generally provided the proposed activity; that banks generally provide services that are operationally or functionally so similar to the proposed activity so as to equip them particularly well to provide the proposed activity; or that banks generally provide services that are so integrally related to the proposed activity as to require their provision in a specialized form. *National Courier Ass'n v. Board of Governors,* 516 F.2d 1229, 1237 (D.C. Cir. 1975). In addition, the Board may consider any other basis that may demonstrate that the activity has a reasonable or close relationship to banking or managing or controlling banks. Board Statement Regarding Regulation Y 49 FR 806 (1984).

Security Pacific believes that its proposed leasing activities, including the less restrictive residual value requirement, are closely related to banking, and cites as authority for this the expanded statutory authority for national banks to engage in leasing transactions on a net lease basis. 12 U.S.C. 24 (Tenth). The Office of the Comptroller of the Currency has interpreted this provision as authorizing national bank leases that rely on a residual value of up to 70 percent of the original cost of the property to the lessor.

In determining whether an activity meets the second, or proper incident to banking test of section 4(c)(8), the Board must consider whether the performance of the activity by an affiliate of a holding company "can reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices."

Security Pacific contends that SPLC's conduct of the proposed activities will result in significant public benefits that will outweigh any possible adverse effects. Security Pacific states that such public benefits will take the form of increased competition in the leasing industry, improved services to leasing customers, increased safety and soundness through strengthening of Security Pacific's portfolio and increased earnings, and gains in efficiency.

Comments regarding the application must be received at the offices of the Board of Governors not later than November 24, 1989.

Board of Governors of the Federal Reserve System, October 26, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 6210-01-M

VOL 54 ISS 210 NO 1 1989 UMI

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

Advisory Committee; Meeting

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: This notice announces a forthcoming meeting of a public advisory committee of the Food and Drug Administration (FDA). This notice also summarizes the procedures for the meeting and methods by which interested persons may participate in open public hearings before FDA's advisory committees.

MEETING: The following advisory committee meeting is announced:

Drug Abuse Advisory Committee; Efficacy Guidelines Subcommittee

Date, time and place. November 22, 1989, 10 a.m., Maryland Room, Parklawn Bldg., 5600 Fishers Lane, Rockville, MD.

Type of meeting and contact person. Open public hearing, 10 a.m. to 11 a.m., unless public participation does not last that long; open committee discussion, 11 a.m. to 4 p.m.; Thomas E. Nightingale, Center for Drug Evaluation and Research (HFD-9), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, (301) 443-5455.

General function of the committee. The committee reviews and evaluates available data on the safety and effectiveness of marketed and investigational human drugs which possess stimulant, depressant, or analgesic properties including those aspects of safety related to the potential of these drugs to produce dependence and to be abused.

Agenda—Open public hearing. Interested persons may present data, information, or views, orally or in writing, on issues pending before the committee. Those desiring to make formal presentations should notify the committee contact person before November 7, 1989, and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, and an indication of the approximate time required to make their comments.

Open committee discussion. The committee will discuss the development of guidelines for the clinical evaluation of medications for the treatment of drug addiction.

FDA public advisory committee meetings may have as many as four separable portions: (1) An open public hearing, (2) an open committee discussion, (3) a closed presentation of data, and (4) a closed committee deliberation. Every advisory committee meeting shall have an open public hearing portion. Whether or not it also includes any of the other three portions will depend upon the specific meeting involved. There are no closed portions for the meetings announced in this notice. The dates and times reserved for the open portions of each committee meeting are listed above.

The open public hearing portion of each meeting shall be at least 1 hour long unless public participation does not last that long. It is emphasized, however, that the 1 hour time limit for an open public hearing represents a minimum rather than a maximum time for public participation, and an open public hearing may last for whatever longer period the committee chairperson determines will facilitate the committee's work.

Public hearings are subject to FDA's guideline (subpart C of 21 CFR part 10) concerning the policy and procedures for electronic media coverage of FDA's public administrative proceedings, including hearings before public advisory committees under 21 CFR part 14. Under 21 CFR 10.205, representatives of the electronic media may be permitted, subject to certain limitations, to videotape, film, or otherwise record FDA's public administrative proceedings, including presentations by participants.

Meetings of advisory committees shall be conducted, insofar as is practical, in accordance with the agenda published in this Federal Register notice. Changes in the agenda will be announced at the beginning of the open portion of a meeting.

Any interested person who wishes to be assured of the right to make an oral presentation at the open public hearing portion of a meeting shall inform the contact person listed above, either orally or in writing, prior to the meeting. Any person attending the hearing who does not in advance of the meeting request an opportunity to speak will be allowed to make an oral presentation at the hearing's conclusion, if time permits, at the chairperson's discretion.

Persons interested in specific agenda items to be discussed in open session may ascertain from the contact person the approximate time of discussion.

Details on the agenda, questions to be addressed by the committee, and a current list of committee members are available from the contact person before and after the meeting. Transcripts of the open portion of the meeting will be available from the Freedom of Information Office (HFI-35), Food and Drug Administration, Rm. 12A-16, 5600 Fishers Lane, Rockville, MD 20857, approximately 15 working days after the meeting, at a cost of 10 cents per page. The transcript may be viewed at the Dockets Management Branch (HFA-305), Food and Drug Administration, Rm. 4-62, 5600 Fishers Lane, Rockville, MD 20857, approximately 15 working days after the meeting, between the hours of 9 a.m. and 4 p.m., Monday through Friday. Summary minutes of the open portion of the meeting will be available from the Freedom of Information Office (address above) beginning approximately 90 days after the meeting.

This notice is issued under section 10(a) (1) and (2) of the Federal Advisory Committee Act (5 U.S.C. App. I), and FDA's regulations (21 CFR part 14) on advisory committees.

Dated: October 25, 1989.

Ronald G. Chesemore,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4160-01-M

Alcohol, Drug Abuse, and Mental Health Administration

Current List of Laboratories Which Meet Minimum Standards To Engage in Urine Drug Testing for Federal Agencies

AGENCY: National Institute on Drug Abuse, HHS.

ACTION: Notice.

SUMMARY: The Department of Health and Human Services notifies Federal agencies of the laboratories currently certified to meet standards of subpart C of Mandatory Guidelines for Federal Workplace Drug Testing Programs (53 FR 11989). A similar notice listing all currently certified laboratories will be published bi-monthly, and updated to include laboratories which subsequently apply and complete the certification process. If any listed laboratory fails to maintain its certification, it will be omitted from updated lists until such time as it is restored to full certification under the Guidelines.

FOR FURTHER INFORMATION CONTACT: Division of Applied Research (formerly the Office of Workplace Initiatives), National Institute on Drug Abuse, Room 9A-53, 5600 Fishers Lane, Rockville, Maryland 20857.

SUPPLEMENTARY INFORMATION: Mandatory Guidelines for Federal Workplace Drug Testing were developed in accordance with Executive Order 12564 and section 503 of Public Law 100-71. Subpart C of the Guidelines, "Certification of Laboratories Engaged in Urine Drug Testing for Federal Agencies," sets strict standards which laboratories must meet in order to conduct urine drug testing for Federal agencies. To become certified an applicant laboratory must undergo three rounds of performance testing plus an on-site inspection. To maintain that certification a laboratory must participate in an every-other-month performance testing program plus periodic, on-site inspections. In accordance with subpart C of the Guidelines, the following laboratories meet the standards set forth in the Guidelines:

Health Resources and Services Administration

Final Funding Priorities for Grants for Faculty Development in General Internal Medicine and General Pediatrics

The Health Resources and Services Administration announces the final funding priorities for Fiscal Year 1990 Grants for Faculty Development in General Internal Medicine and General Pediatrics authorized under the authority of section 784 of the Public Health Service Act, as amended by Public Law 100-607.

Section 784 of the Public Health Service Act authorizes Federal assistance to schools of medicine and osteopathic medicine, public or private nonprofit hospitals or other public or private nonprofit entities for planning, developing and operating programs for the training of physicians who plan to teach in general internal medicine or general pediatrics training programs. These grants are intended to promote the development of faculty skills in physicians who are currently teaching or who plan teaching careers in general internal medicine or general pediatrics training programs. These grants also provide financial assistance in meeting the cost of supporting physicians who are trainees in such programs.

In addition, section 784 authorizes the award of grants to support general internal medicine or general pediatrics residency training programs. A separate grant program exists for this purpose.

The Administration's budget request for Fiscal Year 1990 does not include funding for this program. Applicants should be advised that this program announcement is a contingency action being taken to ensure that should funds become available for this purpose, they can be awarded in a timely fashion

VOL 54 ISS 210 NO 1 1989 UMI

consistent with the needs of the programs as well as provide for even distribution of funds throughout the fiscal year. This notice regarding applications does not reflect any change in this policy.

To receive support, applicants must meet the requirements of final regulations as specified in 42 CFR part 57, subpart FF.

Review Criteria

The review of applications will take into consideration the following criteria:

(1) The degree to which the applicant demonstrates a commitment to general internal medicine or general pediatrics;
(2) The degree to which the proposed project adequately provides for the project requirements;
(3) The administrative and management capability of the applicant to carry out the proposed project in a cost-effective manner;
(4) The qualifications of the proposed staff and faculty; and
(5) The potential of the project to continue on a self-sustaining basis.

Special Consideration

Special consideration will be given to applicants demonstrating a commitment to general internal medicine or general pediatrics.

Proposed funding priorities were published in the **Federal Register** of July 5, 1989 (FR 54 28122), for public comment.

No comments were received during the 30-day comment period. The funding priorities as proposed will be retained as follows:

Final Funding Priorities for Fiscal Year 1990

In determining the order of funding of approved applications, a funding priority will be given to the following:

1. Projects which satisfactorily demonstrate enrollment of underrepresented minorities in proportion to or greater than their percentage in the general population or can document an increase in the number of underrepresented minorities (i.e., Black, Hispanic and American Indian/Alaskan Native minority trainees);
2. Applications proposing to develop faculty competence for teaching ambulatory and inpatient case management of those with HIV infection-related diseases; and
3. Applications designed to develop faculty competence for teaching quality assurance/risk management activities, monitoring and evaluation of health care services and utilization of peer-developed guidelines and standards.

This program is listed at 13.900 in the *Catalog of Federal Domestic Assistance*. It is not subject to the provisions of Executive Order 12372 Intergovernmental Review of Federal Programs, (as implemented through 45 CFR part 100).

Dated: October 26, 1989.

John H. Kelso,

Acting Administrator.

[FR Doc. 89-25632 Filed 10-31-89; 8:45 am]

BILLING CODE 4160-15-M

Final Funding Priority for Nursing Education Opportunities for Individuals From Disadvantaged Backgrounds

The Health Resources and Services Administration announces the final funding priority for Fiscal Year 1990 Grants for Nursing Education Opportunities for Individuals from Disadvantaged Backgrounds, authorized under section 827 of the Public Health Service Act, as amended by Public Law 100-607.

Section 827 of the Public Health Service Act authorizes grants to increase opportunities for individuals from disadvantaged backgrounds to pursue a nursing education. This provision was previously provided under Purpose 1, Nursing Special Projects, section 820 of the PHS Act.

Grants may be awarded to eligible applicants to meet the costs of special projects to increase nursing education opportunities for individuals from disadvantaged backgrounds.

The Administration's budget request for Fiscal Year 1990 does not include funding for this program. Applicants should be advised that this program announcement is a contingency action being taken to ensure that should funds become available for this purpose, they can be awarded in a timely fashion consistent with the needs of the programs as well as provide for even distribution of funds throughout the fiscal year. This notice regarding applications does not reflect any change in this policy.

Review Criteria

The review of applications will take into consideration the following criteria:

(1) The national or special local need which the particular project proposes to serve;
(2) The potential effectiveness of the proposed project in carrying out such purposes;
(3) The administrative and managerial capability of the applicant to carry out the proposed project;
(4) The adequacy of the facilities and resources available to the applicant to carry out the proposed project;
(5) The qualifications of the project director and proposed staff;
(6) The reasonableness of the proposed budget in relation to the proposed project; and
(7) The potential of the project to continue on a self-sustaining basis after the period of grant support.

The following funding priority was proposed in the **Federal Register** of May 12, 1989 (54 FR 20642) for public comment: Priority will be given to schools that have a minority and low income student enrollment of 35 percent or more, or can document a 20 percent annual increase in the number of minority and low income students matriculating into the nursing major for the past three years.

Two comments were received during the 30-day comment period.

One comment was in support of the funding priority, urging the Administration to make funds available for this program.

The second comment did not suport the funding priority because the respondent felt that if applied, it would support only those nursing programs that were already serving a high percentage of minority or low income students and would fail to recognize those nursing schools with lower disadvantaged student enrollment percentages, but with a firm commitment to recruit and enroll more minority and low income students.

The Department recognizes the respondent's concern. However, the funding priority has been retained as proposed in order to motivate those schools which have not yet succeeded in signifcantly increasing their enrollment and graduation of minority and low income students. The Administration has determined that these population groups continue to be underrepresented in the nursing profession. Their representation should be increased to ensure equitable opportunities for a career in nursing.

Dated: October 26, 1989.

John H. Kelso,

Acting Administrator.

[FR Doc. 89-25633 Filed 10-31-89; 8:45 am]

BILLING CODE 4160-15-M

Program Announcement for Grants for Two-Year Programs of Schools of Medicine or Osteopathic Medicine

The Health Resources and Services Administration announces that applications for Fiscal Year 1990 Grants for Two-Year Programs of Schools of Medicine or Osteopathic Medicine are now being accepted under the authority of section 788(a), Public Health Service Act and section 631 of Public Law 100-607.

The Administration's budget request for Fiscal Year 1990 does not include funding for this program. Applicants should be advised that this program announcement is a contingency action being taken to ensure that should funds become available for this purpose, they can be awarded in a timely fashion consistent with the needs of the program as well as to provide for even distribution of funds throughout the fiscal year. This notice regarding applications does not reflect any changes in this policy.

Section 788(a) authorizes the award of grants to maintain and improve schools which provide the first or last two years of education leading to the degree of doctor of medicine or osteopathic medicine. Grants provided under this authority to schools that were in existence on September 30, 1985, may also request support for construction and purchase of equipment.

To be eligible for a grant under this authority, the applicant must be a public or nonprofit private school providing the first or last two years of education leading to the degree of doctor of medicine or osteopathic medicine and be accredited or be operated jointly with a school that is accredited by a recognized body or bodies approved for such purposes by the Secretary of Education.

Review Criteria

Approval of all applications will be based on an analysis of the following factors:

(1) The extent to which the project meets the intent of section 788(a) legislation;
(2) The administrative and management ability of the applicant to carry out grant supported objectives in a cost effective manner;
(3) The adequacy of the qualifications and experience of the staff and faculty;
(4) The relative effectiveness of the proposed project in improving the quality of and/or access to medical education; and
(5) The extent to which the project is effective in its recruitment and retention of minority and disadvantaged students.

In addition, the following mechanisms may be applied in determining the funding of approved applications:

1. Funding preferences—funding of a specific category or group of approved applications ahead of other categories or groups of applications, such as competing continuations ahead of new projects.

2. Funding priorities—favorable adjustment of review scores when applications meet specified objective criteria.

3. Special consideration—enhancement of priority scores by merit reviewers based on the extent to which applicants address special areas of concern.

The Administration is proposing no funding preferences or special considerations in the review of applications for the grant program in Fiscal Year 1990.

Funding Priority for Fiscal Year 1990

The following funding priority was established in Fiscal Year 1989 and the Administration is extending this priority in Fiscal Year 1990.

In determining the order of funding of approved applications, a funding priority will be given to: Projects which satisfactorily demonstrate an enrollment of underrepresented minorities in proportion to or greater than their percentage in the general population or can document an increase in the number of underrepresented minorities (i.e., Black, Hispanic, American Indian, Alaskan Native minority trainees) that have been recruited, retained and completed training.

Requests for application materials, questions regarding grants policy and completed applications should be directed to: Grants Management Officer (D-31), Bureau of Health Professions, Health Resources and Services Administration, Parklawn Building, Room 8C-22, 5600 Fishers Lane, Rockville, Maryland 20857, Telephone: (301) 443-6960.

Should additional programmatic information be required, please contact: Primary Care Medical Education Branch, Division of Medicine, Bureau of Health Professions, Health Resources and Services Administration, Parklawn Building, Room 4C-18, 5600 Fishers Lane, Rockville, Maryland 20857, Telephone: (301) 443-3614.

The standard application form PHS 6025-1, HRSA Competing Training Grant Application, General Instructions and supplement for this program have been approved by the Office of Management and Budget under the Paperwork Reduction Act. The OMB clearance number if 0915-0060.

The application deadline is December 15, 1989. Applications shall be considered as meeting the deadline if they are either: 1. *Received on* or before the deadline date, or 2. *Postmarked on* or before the deadline and received in time for submission to the independent review group. A legibly dated receipt from a commercial carrier or the U.S. Postal Service will be accepted in lieu of a postmark. Private metered postmarks shall not be acceptable as proof of timely mailing. Applications received after the deadline will be returned to the applicant.

This program is listed at 13.149 in the *Catalog of Federal Domestic Assistance*. Applications submitted in response to this announcement that request construction assistance are subject to the Intergovernmental Review under provisions of Executive Order 12372, as supplemented by 42 CFR part 100, Intergovernmental Review of Federal Programs. Applications submitted for program support only are not subject to intergovernmental review under these provisions.

Dated: October 6, 1989.

John H. Kelso,

Acting Administrator.

BILLING CODE 4160-15-M

National Institutes of Health

National Center for Nursing Research; Meeting: Nursing Science Review Committee

Pursuant to Public Law 92-463, notice is hereby given of the meeting of the Nursing Science Review Committee, National Center for Nursing Research, November 7-9, 1989, Building 31C, Conference Room 7, National Institutes of Health, Bethesda, Maryland 20892.

Due to unforeseen complications, this notice is not being published within the 15 day timeframe.

This meeting will be open to the public on November 7 from 9 a.m. to 10 a.m. Agenda items to be discussed will include the NCNR Director's Report and the Chairman's Report.

Attendance by the public will be limited to space available.

In accordance with the provisions set forth in secs. 552b(c)(4) and 552b(c)(6), title 5, U.S.C. and sec. 10(d)) of Public Law 92–463, the meeting will be closed to the public on November 7, 10 a.m., to adjournment on November 9 for the review, discussion, and evaluation of individual grant applications. The applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Dr. Janet Heinrich, Director, Division of Extramural Programs, National Center for Nursing Research, National Institutes of Health, Building 31, Room 5B09, Bethesda, Maryland 20892, (301) 496–0523, will provide a summary of the meeting, roster of committee members, and substantive program information upon request.

Dated: October 27, 1989.

Betty J. Beveridge,

Committee Management Officer, NIH.

Committee on Nutrition Components of Food Labeling of the Institute of Medicine's Food and Nutrition Board; Public Meeting

AGENCY: Office of the Assistant Secretary for Health, Public Health Service, Department of Health and Human Services.

ACTION: Notice of public meeting.

SUMMARY: As part of contract No. 282–88–0022 jointly sponsored by the Department of Health and Human Services and the Department of Agriculture, the Committee on Nutrition Components of Food Labeling of the Institute of Medicine's Food and Nutrition Board will hold a public meeting to solicit scientific information and comments pertaining to current nutrition and relation information used in food labeling. The Committee will assess the implications for nutrition labeling of current knowledge of nutrition and health, determine the most appropriate content and format of food labels, and examine the implications for changes in the current legislative and regulatory statutes. Registration for the meeting is free and no preregistration is required.

DATES: The meeting will be held on December 4, 1989, at 10 a.m. Individuals who wish to make a presentation or submit material for the Committee's consideration should forward written statements by November 10, 1989.

ADDRESSES: The meeting will be held at the National Academy of Sciences, 2101 Constitution Avenue NW., Washington, DC 20418. Attendees are asked to register at the C Street entrance (parking unavailable).

Written statements should be sent to Dr. Donna V. Porter at the above address.

FOR FURTHER INFORMATION CONTACT: Dr. Donna V. Porter, 202–334–2587.

James A. Harrell,

Deputy Director, Office of Disease Prevention and Health Promotion, Office of the Assistant Secretary for Health.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of the Assistant Secretary for Community Planning and Development

[Docket No. N–89–2075; FR2702–N–01]

Community Development Block Grant Program for Indian Tribes and Alaskan Native Villages

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice of application deadline for funds under the CDBG Program for Indian tribes and Alaskan Native Villages for fiscal year 1990.

SUMMARY: This Notice sets the deadline dates for filing applications for funds under the Community Development Block Grant Program for Indian Tribes and Alaskan Native Villages for Fiscal Year 1990. Applications are required in order to provide HUD with the information necessary to rate the proposed project(s) and to assure HUD that the necessary citizen participation has taken place.

FOR FURTHER INFORMATION CONTACT: Mr. Leroy P. Gonnella, Office of Program Policy Development, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street SW., Washington, DC 20410, (202) 755–6092. (This is not a toll-free number.)

SUPPLEMENTARY INFORMATION: This Notice sets the deadline dates for submitting applications for the Community Development Block Grant Program for Indian Tribes and Alaskan Native Villages. HUD will use the information furnished in these applications to rate the proposed project(s) and to assure the Department that there has been the necessary citizen participation. These dates apply only to applications submitted by Indian Tribes and Alaskan Native Villages for Fiscal Year 1990.

The field responsibility for the administration of the program is divided among the following offices: Region V Office of Indian Programs (OIP) in Chicago, responsible for all HUD Indian program activities within Regions I–V, pluys the State of Iowa; Oklahoma City Office, responsible for all HUD Indian program activities in the States of Arkansas, Texas, Oklahoma, Kansas, Louisiana, and Missouri; Region VIII OIP in Denver, responsible for all HUD Indian program activities in Region VIII, plus the State of Nebraska; Region IX OIP in Phoenix, responsible for all HUD Indian program activities in Region IX, plus the State of New Mexico; Region X OIP in Seattle, responsible for all HUD Indian program activities in Region X, with the exception of the State of Alaska; and the Anchorage Office, responsible for all HUD Indian and Alaskan Native program activities in the State of Alaska.

Applications will be accepted by HUD as of the publication date of this Notice.

FINAL DATES FOR SUBMISSION OF APPLICATIONS

Offices	Applications must be submitted no later than
Anchorage Office	Nov. 30, 1989.
Oklahoma City Office	Nov. 30, 1989.
Region X, OIP	Jan. 10, 1990.
Region VIII, OIP	Jan. 19, 1990.
Region V, OIP	Feb. 05, 1990.
Region IX, OIP	Feb. 23, 1990.

Applications must be received or postmarked no later than the closing date specified above. Applications received or postmarked after the deadline will not be considered.

Tribes and Villages submitting applications for this program must do so on HUD forms approved by the Office of Management and Budget under OMB Control Number 2506–0043. These forms request information which assures HUD that the necessary citizen participation has taken place. Forms will be provided by the appropriate HUD Field Offices.

Authority: Sec. 107, Housing and Community Development Act of 1974 (42 U.S.C. 5307); Sec. 7(d), Department of Housing and Urban Development Act (42 U.S.C. 3535(d)).

Dated: October 20, 1989.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

Closure Modification of Public Lands to Camping and Off-Road Vehicle Use; Painted Rocks State Park Area, Arizona

AGENCY: Bureau of Land Management, Department of the Interior.

ACTION: Notice of Closure Modification Re: AZ–020–4332–01 Published in the Federal Register Vol. 53, No. 165, August 25, 1988.

SUMMARY: This notice is to inform the public that the Bureau of Land Management (BLM) will limit off-road vehicle use to existing roads, and/or designated trails and vehicle routes located on the following public lands:

T. 4 S., R. 7 W.,
secs. 30, 31, 32
T. 4 S., R. 8 W.,
secs. 13, 14, 24, 25
T. 5 S., R. 7 W.,
secs. 5, 6, 7, 8, 17, 20
T. 5 S., R. 8 W.,
secs. 1, 2, 3, 10, 11, 12.

Public camping on the previously described lands will be limited to the BLM designated areas on the following public lands:

T. 5 S., R. 7 W.,
secs. 5, 8, 17, 20
T. 4 S., R. 7 W.,
secs. 31, 32, 33.

EFFECTIVE DATE: November 1, 1989.

FOR FURTHER INFORMATION CONTACT: Carole Hamilton, Area Manager, Lower Gila Resource Area, Phoenix District Office, 2015 West Deer Valley Road, Phoenix, Arizona 85027.

SUPPLEMENTARY INFORMATION: Authority for this action is contained in 43 CFR 8364.1. This action is being taken to provide additional recreation opportunities for existing and increased recreation visitor needs.

Dated: October 24, 1989.

Henri R. Bisson,

District Manager.

[OR–050–4212–13: GPO–033]

Prineville District, Oregon; Realty Action

October 24, 1989.

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The following described public lands have been determined to be suitable for disposal by exchange under sec. 206 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1716:

Willamette Meridian

T. 15 S., R. 12 E.,
Sec. 14: Lots 1 and 2, NW¼NW¼, S½ NW¼, W½SW¼;
Sec. 15: S½NE¼, SE¼;
Sec. 22: N½NE¼, SE¼NE¼;
Sec. 23: Lot 2.

The area described aggregates approximately 653 (±) acres in Deschutes County, Oregon.

In exchange for these lands, the Federal Government will acquire the following described private lands from William Smith Properties, Inc.:

Willamette Meridian

T. 5 S., R. 19 E.,
Sec. 5: Those portions of the SE¼ and the SE¼SW¼ lying west of the John Day River;
Sec. 8: Those portions of the SW¼NW¼, the E½NW¼, the NE¼SW¼ and the SE¼ lying west of the John Day River;
Sec. 15: N½, N½S½, S½SW¼, SE¼SE¼;
Sec. 16: That part of the N½ lying east of the John Day River, W½SW¼, SE¼;
Sec. 22: N½, N½S½, S½SE¼;
Sec. 27: W½NE¼, E½NW¼, NW¼NW¼.

The area described above aggregates approximately 2,101 (±) acres in Sherman and Wheeler Counties, Oregon.

A portion of the land described below will be used to equalize values and will also be acquired by the Federal Government.

T. 10 S., R. 19 E.,
Sec. 13: S½S½;
Sec. 24: All;
T. 10 S., R. 20 E.,
Sec. 18: Lot 4, N½NE¼, SE¼NE¼, E½ SW¼, SE¼;
Sec. 19: All;
Sec. 20: W½;
Sec. 30: N½.

The area described above aggregates approximately 2,718 acres in Wheeler County, Oregon.

The purpose of the land exchange is to

VOL 54 ISS 210 NO 1 1989 UMI

The area described above aggregates approximately 2,718 acres in Wheeler County, Oregon.

The purpose of the land exchange is to facilitate resource management opportunities in the John Day River area, as identified in the Two Rivers Resource Management Plan. The private lands being offered have very important values for recreation, wildlife, habitat, watershed and fisheries management. The public interest will be highly served by making this exchange.

The value of the lands to be exchanged is approximately equal and the acreage will be adjusted to equalize the values upon completion of the final appraisal.

The exchange will be subject to:

1. The reservation to the United States of a right-of-way for ditches and canals constructed by the authority of the United States, Act of August 30, 1890 (43 U.S.C. 945).

2. Oil and gas rights may be reserved in the final patent. All existing oil and gas leases will remain in effect until expiration.

3. All other valid existing rights, including but not limited to, any right-of-way, easement or lease of record.

The publication of this notice in the **Federal Register** will segregate the public lands described above to the extent that they will not be subject to appropriation under the public land laws including the mining laws. As provided by the regulations of 43 CFR 2201.1(b) any subsequently tendered application, allowance of which is discretionary, shall not be accepted, shall not be considered as filed and shall be returned to the applicant.

Detailed information concerning the exchange is available for review at the Prineville District Office, 185 E. Fourth Street, Prineville, OR 97754.

For a period of 45 days from the date of publication of this notice in the **Federal Register**, interested parties may submit comments to the Prineville District Manager at the above address.

Objections will be reviewed by the State Director who may sustain, vacate, or modify this realty action. In the absence of any objections, this realty action will become the final determination of the Department of the Interior.

Dated: October 24, 1989.

James L. Hancock,

District Manager, Prineville District Office.

BILLING CODE 4310-33-M

INTERNATIONAL TRADE COMMISSION

[Investigation No. 332-281]

Estimated Tariff Equivalents of U.S. Quotas on Agricultural Imports and Analysis of Competitive Conditions in U.S. and Foreign Markets for Sugar, Meat, Peanuts, Cotton, and Dairy Products

AGENCY: United States International Trade Commission.

ACTION: Institution of investigation.

SUMMARY: Following receipt on September 21, 1989, of a request from the U.S. Trade Representative pursuant to authority delegated by the President, the Commission instituted investigation No. 332-281 under section 332(g) of the Tariff Act of 1930 (19 U.S.C. 1332(g)) for the purpose of providing the following:

(1) A calculation of the tariff equivalents of U.S. import quotas on dairy products, peanuts, cotton and sugar and sugar-containing products for the individual years 1986, 1987, and 1988;

(2) A calculation of the tariff equivalent of the voluntary export restraint agreements the United States negotiated on meat imports in 1987 and 1988; and

(3) An analysis of competitive and economic factors affecting the performance of the sugar, meat, peanut, cotton, and dairy industries in the domestic market and in foreign markets.

The USTR requested that the Commission furnish such advice not later than February 28, 1990.

EFFECTIVE DATE: October 25, 1989.

FOR FURTHER INFORMATION CONTACT: For information on other than the legal aspects of the study, contact Roger Corey (202-252-1327) or David Ingersoll (202-252-1309), Agriculture Division, Office of Industries, U.S. International Trade Commission. For information on the study's legal aspects, contact William Gearhart (202-252-1091), Office of the General Counsel, U.S. International Trade Commission. Hearing-impaired persons can obtain information on this study by contacting our TDD terminal on (202) 252-1810.

Written submission: Interested persons may submit written statements concerning the investigation. To be assured of consideration, written statements must be received by the close of business on December 29, 1989. Commercial or financial information that a submitter desires the Commission to treat as confidential must be submitted on separate sheets of paper, each clearly marked "Confidential Business Information" at the top. All submissions requested confidential treatment must conform to the requirements of § 201.6 of the Commission's Rules of Practice and Procedure (19 CFR 201.6). All written submissions, except for confidential business information, will be made available for inspection by interested persons. All submissions should be addressed to the Secretary at the Commission's office in Washington, DC.

By order of the Commission.

Certain Novelty Teleidoscopes; Initial Determination Terminating Respondent on the Basis of Settlement Agreement

AGENCY: U.S. International Trade Commission.

ACTION: Notice is hereby given that the Commission has received an initial determiation from the presiding officer in the above-captioned investigation terminating the following respondent on the basis of a settlement agreement: Imperial Toy Corporation.

SUPPLEMENTARY INFORMATION: This investigation is being conducted pursuant to section 337 of the Tariff Act of 1930 (19 U.S.C. S1337). Under the Commission's rules, the presiding officer's initial determination will become the determination of the Commission thirty (30) days after the date of its service upon the parties, unless the Commission orders review of the initial determination. The initial determination in this matter was served upon the parties on October 26, 1989.

Copies of the initial determination, the settlement agreement, and all other nonconfidential documents filed in connection with this investigation are available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone 202-252-1000. Hearing impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on 202-252-1810.

WRITTEN COMMENTS: Interested persons may file written comments with the Commission concerning termination of the aforementioned respondent. The original and 14 copies of all such comments must be filed with the Secretary to the Commission, 500 E Street SW., Washington, DC 20436, no later than 10 days after publication of this notice in the **Federal Register.** Any person desiring to submit a document (or portion thereof) to the Commission in confidence must request confidential treatment. Such requests should be directed to the Secretary to the Commission and must include a full statement of the reason why confidential treatment should be granted. The Commission will either accept the submission in confidence or return it.

DEPARTMENT OF JUSTICE

Notice of Lodging of Consent Decree Pursuant to the Comprehensive Environmental Response, Compensation and Liability Act

In accordance with Departmental policy, 28 CFR 50.7, notice is hereby given that on October 16, 1989, a proposed Consent Decree in *United States* v. *NVF Company,* Civ. Action No. 89-561 was lodged with the United States District Court for the District of Delaware. The Consent Decree requires defendant to pay $1.175 million in response costs incurred and to be incurred by the United States with respect to environmental cleanup at the Tybouts Corner Landfill Site in New Castle County, Delaware.

The Department of Justice will receive for a period of thirty (30) days from the date of publication comments relating to the proposed Consent Decree. Comments shall be addressed to the Assistant Attorney General, Land and Natural Resources Division, U.S. Department of Justice, Washington, DC 20530, and should refer to *United States* v. *NVF Company,* DOJ Ref. 90-7-1-143A.

The proposed Consent Decree may be examined at the Office of the United States Attorney, Federal Building, 844 King Street, Wilmington, Delaware 19801 and at the Region III Office of the Environmental Protection Agency, 841 Chestnut Street, Philadelphia, Pennsylvania, 19107. Copies of the Consent Decree may be examined at the Environmental Enforcement Section, Land and Natural Resources Division of the U.S. Department of Justice, Room 1517, Ninth Street and Pennsylvania Avenue NW., Washington, DC 20530. A copy of the proposed Consent Decree may be obtained in person or by mail

BILLING CODE 4410-01-M

DEPARTMENT OF JUSTICE

Antitrust Division

Notice Pursuant to the National Cooperative Research Act of 1984 Applicance Industry-Government CFC Replacement Consortium, Inc.

Notice is hereby given that, pursuant to section 6(a) of the National Cooperative Research Act of 1984, 15 U.S.C. 4301 *et seq.* ("the Act"), the Appliance Industry-Government CFC Replacement Consortium, Inc. ("the Corporation"), has filed a written notification on September 19, 1989, simultaneously with the Attorney General and the Federal Trade Commission disclosing (1) the identities of the parties to the Corporation and (2) the nature and objectives of the Corporation. The notification was filed for the purpose of invoking the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Pursuant to section 6(b) of the Act, the identities of the parties to the Corporation and its general areas of planned activity are given below.

The parties to the Corporation are: Association of Home Appliance Manufacturers, 20 North Wacker Drive, Chicago, Illinois 60606; White Consolidated Industries, 11770 Berea Road, Cleveland, Ohio 44111; GE Appliances, Appliance Park, Louisville, Kentucky 40225; Maytag Corporation, One Dependability Square, Newton, Iowa 50208; Amana Refrigeration, Inc., subsidiary of Raytheon Company, Amana, Iowa 42204; W.C. Wood Company Limited, 5 Arthur Street South, Guelph, Ontario, Canada N1H6L9; Whirlpool Corporation, Benton Harbor, Michigan 49022; and, Sub-Zero Freezer Company, Inc., Box 4130, Madison, Wisconsin 53711. The United States Environmental Protection Agency and the United States Department of Energy have each signed a memorandum of understanding to cooperate with the Corporation in accomplishing its goals.

The purpose of the Corporation is to provide an organization through which manufacturers of refrigerators, refrigerator-freezers and freezers ("refrigerator/freezers") marketed in the United States may cooperate with allied industries, government agencies, public and private laboratories and other institutions or organizations concerned with the replacement of two chlorofluorocarbons ("CFC"), CFC 11 and 12, to identify, test and develop safe, reliable and environmentally preferable replacements for CFC 11 and 12 in refrigerator/freezers.

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

National Endowment for the Arts; Availability

AGENCY: National Endowment for the Arts.

ACTION: Notification of availability.

SUMMARY: The National Endowment for the Arts is requesting proposals leading to the award of a Cooperative Agreement to establish baseline information regarding arts education for each of the 56 states and U.S. territories to serve as a standard against which to measure future changes, and as a guide or starting point for responsible planning in order to effect intelligent, qualitative change for arts education in American schools. The specific tasks are to research, develop, and compile comprehensive state-by-state arts education profiles. The profile data (to be collected and set up in such a fashion to be able to be periodically updated) will establish trend lines concerning the extent to which education programs in each of the arts are in fact established in state and school districts and the quality of materials, supplies, equipment, facilities, and personnel support for arts education. Those interested in receiving the Solicitation package should reference Program Solicitation PS 90-02 in their written request and include two (2) self-addressed labels. Verbal requests for the Solicitation will not be honored.

DATES: Program Solicitation PS 90-02 will be available approximately November 8, 1989 with proposals due on December 8, 1989.

ADDRESS: Requests for the Solicitation should be addressed to National Endowment for the Arts, Contracts Division, Room 217, 1100 Pennsylvania Ave., NW., Washington, DC 20506.

FOR FURTHER INFORMATION CONTACT: Anna Mott or William L Hummel, Contracts Division, National Endowment for the Arts, 1100 Pennsylvania Ave., NW Washington, DC 20506, (202/682-5482).

William L Hummel,

Director, Contracts and Procurement Division.

BILLING CODE 7537-01-M

NATIONAL SCIENCE FOUNDATION

Intention to Prepare a Supplemental Environmental Impact Statement on the U.S. Antarctic Program and to Conduct a Public Scoping Meeting

AGENCY: National Science Foundation (NSF).

AUTHORITY: Executive Order 12114 of January 4, 1979, at 44 FR 1957, 3 CFR, 1979 Comp., p. 356.

ACTION: Notice of intent to prepare a Supplemental Environmental Impact Statement (EIS) on the U.S. Antarctic Program.

SUMMARY: The National Science Foundation announces its intention to prepare a supplemental EIS in accordance with the Antarctic Treaty, its recommendations, and Executive Order 12114, Environmental Effects Abroad of Major Federal Actions. The supplemental EIS will update the original EIS on the U.S. Antarctic Program published in 1980, and will concentrate on activities and impacts in the Antarctic Treaty Area. Marine and air operations to and from the Antarctic Treaty Area and removal of wastes from the Treaty Area will be taken into account. The supplemental EIS will describe primary and secondary impacts and will identify situations where sufficient information is unavailable.

DESCRIPTION OF PROPOSED ACTION: The proposed action is to continue the U.S. Antarctic Program with environmental protection increased to a level necessary to comply with international law, the Antarctic Conservation Act, other clearly applicable U.S. environmental laws and regulations, and sound environmental practices.

ALTERNATIVES TO THE PROPOSED ACTION: Alternatives to the proposed action that are being considered for evaluation in the Supplemental EIS include the following: (1) No action: continue the U.S. Antartic Program with no change in the level of environmental protection (all provisions of the Antartic Treaty would continue to be met); (2) implement an improved program tailored to meet the intent of international law, the Antarctic Conservation Act, other clearly applicable U.S. environmental laws and regulations, and sound environmental practices to the extent that available resources, existing technology and antarctic conditions permit; and, (3) completely remove and cleanup all U.S. Antarctic Program facilities and operations so that no environmental impacts would occur in the future and past environmental contamination would be removed (this alternative would require terminating the current U.S. Antarctic Program and removing all facilities on the continent and restoring the environment).

IDENTIFICATION OF ENVIRONMENTAL ISSUES: The following environmental issues have been identified for evaluation in the supplemental EIS: (1) Impacts of discharging wastewater; (2) effects of solid waste disposal, including the use of open burning, incineration, retrograding, and ocean dumping; (3) impacts of spills from transportation, storage, handling, and use of fuels; (4) impacts of air emissions; (5) the conduct of environmental monitoring; (6) effects of human activities on specially designated protected areas and near-pristine areas; and, (7) effects of past human activities in the areas where U.S. facilities are located and in areas where research activities are conducted.

DESCRIPTION OF THE SCOPING PROCESS: A scoping process, guided by the Council on Environmental Quality's regulations at 40 CFR 1501.7, will be implemented to involve Federal, state, and local agencies and other interested parties in determining the scope of issues to be addressed and for identifying the significant issues related to the proposed action. A scoping meeting will be held in Washington, DC, on December 13, 1989, to solicit comments on the scope of the supplemental EIS and on the significant environmental issues that should be addressed in that document. Written comments can be submitted to NSF at the scoping meeting or within 30 days of the scoping meeting. A draft supplemental EIS will be published in early July 1990, for agency and public comment, and a final supplemental EIS containing responses to those comments will be published in early December 1990.

ADDRESS: Questions about the proposed action and the supplemental EIS should be directed to: Dr. Sidney Draggan, Office of Safety, Environment and Health, Division of Polar Programs, National Science Foundation, 1800 G Street NW., Washington, DC 20550. Telephone: 202/357-7766.

Sidney Draggan,

Environmental Officer.

VOL 54 ISS 210 NO 1 1989 UMI

NUCLEAR REGULATORY COMMISSION

Biweekly Notice Applications and Amendments to Operating Licenses Involving No Significant Hazards Considerations

I. Background

Pursuant to Public Law (P.L.) 97-415, the Nuclear Regulatory Commission (the Commission) is publishing this regular biweekly notice. P.L. 97-415 revised section 189 of the Atomic Energy Act of 1954, as amended (the Act), to require the Commission to publish notice of any amendments issued, or proposed to be issued, under a new provision of section 189 of the Act. This provision grants the Commission the authority to issue and make immediately effective any amendment to an operating license upon a determination by the Commission that such amendment involves no significant hazards consideration, notwithstanding the pendency before the Commission of a request for a hearing from any person.

This biweekly notice includes all notices of amendments issued, or proposed to be issued from October 6, 1989 through October 20, 1989. The last biweekly notice was published on October 18, 1989 (54 FR 42855).

NOTICE OF CONSIDERATION OF ISSUANCE OF AMENDMENT TO FACILITY OPERATING LICENSE AND PROPOSED NO SIGNIFICANT HAZARDS CONSIDERATION DETERMINATION AND OPPORTUNITY FOR HEARING

The Commission has made a proposed determination that the following amendment requests involve no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendments would not (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety. The basis for this proposed determination for each amendment request is shown below.

The Commission is seeking public comments on this proposed determination. Any comments received within 30 days after the date of publication of this notice will be considered in making any final determination. The Commission will not normally make a final determination unless it receives a request for a hearing.

Written comments may be submitted by mail to the Regulatory Publications Branch, Division of Freedom of Information and Publications Services, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and should cite the publication date and page number of this Federal Register notice. Written comments may also be delivered to Room P-223, Phillips Building, 7920 Norfolk Avenue, Bethesda, Maryland from 7:30 a.m. to 4:15 p.m. Copies of written comments received may be examined at the NRC Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC. The filing of requests for hearing and petitions for leave to intervene is discussed below.

By December 1, 1989, the licensee may file a request for a hearing with respect to issuance of the amendment to the subject facility operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written petition for leave to intervene. Requests for a hearing and petitions for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR Part 2. Interested persons should consult a current copy of 10 CFR 2.714 which is available at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC 20555 and at the Local Public Document Room for the particular facility involved. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding, and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) the nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene which must include a list of the contentions which are sought to be litigated in the matter. Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the petitioner shall provide a brief explanation of the bases of the contention and a concise statement of the alleged facts or expert opinion which support the contention and on which the petitioner intends to rely in proving the contention at the hearing. The petitioner must also provide references to those specific sources and documents of which the petitioner is aware and on which the petitioner intends to rely to establish those facts or expert opinion. Petitioner must provide sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact. Contentions shall be limited to

matters within the scope of the amendments under consideration. The contention must be one which, if proven, would entitle the petitioner to relief. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

If a hearing is requested, the Commission will make a final determination on the issue of no significant hazards consideration. The final determination will serve to decide when the hearing is held.

If the final determination is that the amendment request involves no significant hazards consideration, the Commission may issue the amendment and make it immediately effective, notwithstanding the request for a hearing. Any hearing held would take place after issuance of the amendment.

If the final determination is that the amendment involves a significant hazards consideration, any hearing held would take place before the issuance of any amendment.

Normally, the Commission will not issue the amendment until the expiration of the 30-day notice period. However, should circumstances change during the notice period such that failure to act in a timely way would result, for example, in derating or shutdown of the facility, the Commission may issue the license amendment before the expiration of the 30-day notice period, provided that its final determination is that the amendment involves no significant hazards consideration. The final determination will consider all public and State comments received before action is taken. Should the Commission take this action, it will publish a notice of issuance and provide for opportunity for a hearing after issuance. The Commission expects that the need to take this action will occur very infrequently.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Service Branch, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1-(800) 325-6000 (in Missouri 1-(800) 342-6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to (*Project Director*): petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this Federal Register notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to the attorney for the licensee.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the presiding Atomic Safety and Licensing Board, that the petition and/or request should be granted based upon a balancing of factors specified in 10 CFR 2.714(a)(1)(i)-(v) and 2.714(d).

For further details with respect to this action, see the application for amendment which is available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, and at the local public document room for the particular facility involved.

Arkansas Power & Light Company, Docket No. 50-313, Arkansas Nuclear One, Unit 1, Pope County, Arkansas

Date of amendment request: August 9, 1989

Description of amendment request: The proposed amendment would (1) add the Seismic Monitoring Instrumentation with a measurement range of 0.01 to 1.0 g to Technical Specifications (TS) Section 3.5.1, Operational Safety Instrumentation; (2) add a basis and an appropriate FSAR reference to the corresponding TS basis section; (3) add the specific instrumentation required (Triaxial Time-History Accelerographs, Triaxial Peak Accelerographs and Triaxial Response-Spectrum Recorders) to TS Table 3.5.1-1 (with the annotation, "with Unit 1 control room indication/or alarm" and "with one or more seismic monitoring instruments inoperable for more than 30 days, prepare and submit a Special Report to the Commission pursuant to Specification 6.12.2 within the next 10 days outlining the cause of the malfunction and the plans for restoring the instrument(s) to Operable status. The provisions of Specifications 3.0.3 and 3.0.4 are not applicable."); and (4) change the current surveillance requirements of TS Table 4.1-1, Item 42, for clarity and to achieve consistency with the Arkansas Nuclear One, Unit 2 (ANO-2) TS requirements. The proposed Technical Specification change will upgrade the ANO-1 Technical Specifications to be consistent with the revision of Regulatory Guide 1.12 applicable to ANO-2 and NUREG-0800.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists as stated in 10 CFR 50.92(c). A proposed amendment to an operating license for a facility involves no significant hazards consideration if operation of the facility in accordance with the proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety. Arkansas Power and Light Company (AP&L) has reviewed the proposed change and has determined that it involves no significant hazards consideration, in that operation of the facility in accordance with the proposed amendment would not:

(1) Involve a Significant Increase in the Probability or Consequence of an Accident Previously Evaluated. This change adds a Limiting Condition for Operation and reporting requirements not previously included in the ANO-1 Technical Specifications. The changes proposed to testing requirements are consistent with ANO-2 requirements, vendor recommendations, and NUREG-0800. This will not impact the accident-initiating events described in Chapter 14 of the ANO-1 SAR. The proposed change simply adds reporting requirements for inoperability and provides testing consistent with vendor recommendations designed to extend the instrument lifetime.

(2) Create the Possibility of a New or Different Kind of Accident from any Previously Evaluated. The proposed amendment will not change the overall design and system function of the Seismic Monitoring Instrumentation. The proposed change simply adds a Limting Conditon for Operation (LCO) and reduces the possibility of a missed surveillance by providing consistency in testing with ANO-2 surveillance requirements. The surveillance for systems that have only a passive monitoring function does not create the possibility of a new or different kind of accident.

(3) Involve a Significant Reduction in a Margin of Safety. This change does not involve a significant reduction in the margin of safety; rather, it constitutes an additional LCO requirement not

proposed change and has determined that it involves no significant hazards considerations, in that operation of the facility in accordance with the proposed amendment would not:

Description of amendment request: The proposed amendment would modify Technical Specification Section 3/4.9, "Auxiliary Electrical System," by adding

7.2 states that the power of each of the two reactor protection trip systems is supplied, via a separate bus, by its own high-inertia, a-c motor generator set. The inertia is provided

North Street, Plymouth, Massachusetts 02360

Attorney for licensee: W. S. Stowe, Esq., Boston Edison Company, 800

not initiators of any previously analyzed accidents. The new battery chargers are operated in a similar manner to the existing chargers which were previously

(3) Involve a Significant Reduction in a Margin of Safety. This change does not involve a significant reduction in the margin of safety; rather, it constitutes an additional LCO requirement not presently included in the ANO-1 TS. The changes to testing frequency in accordance with vendor recommendations will increase the margin of safety by reducing the potential of the equipment being damaged.

The staff has reviewed AP&L's no significant hazards consideration determination analysis and agrees with its conclusion. Therefore, the staff proposed to determine that the application for amendment involves no significant hazards considerations.

NRC Project Director: Frederick J. Hebdon

Arkansas Power & Light Company, Docket No. 50-313, Arkansas Nuclear One, Unit 1, Pope County, Arkansas

Date of amendment request: September 26, 1989

Description of amendment request: The proposed amendment would restore the limit on maximum steady state reactor core power level to the originally licensed value of 2568 megawatts thermal (100% of full power). Power has been limited since May 16, 1989, to 80% of full power (Amendment No. 120) because of a design error in the High Pressure Safety Injection (HPI) System. The proposed amendment presumes that a pending modification will restore the HPI system capabilities to within the assumptions of the previous safety analysis.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists as stated in 10 CFR 50.92(c). A proposed amendment to an operating license for a facility involves no significant hazards consideration if operation of the facility in accordance with the proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety. Arkansas Power and Light Company (AP&L) has reviewed the proposed change and has determined that it involves no significant hazards considerations, in that operation of the facility in accordance with the proposed amendment would not:

(1) Involve a Significant Increase in the Probability or Consequences of an Accident Previously Evaluated. The modified HPI System will satisfy the emergency core cooling system flow requirements of 100% power, which are bounded by previously evaluated accident assumptions. Since the reactor will still trip from the established setpoint for 100% full power, the effect on previously analyzed accidents will remain unchanged.

(2) Create the Possibility of a New or Different Kind of Accident from any Previously Evaluated. The proposed change does not create the possibility of a new or different kind of accident from any previously evaluated since the HPI system performance is not adversely affected but, instead, improved to provide enhanced HPI injection flow distribution during postulated events at full power operation. The HPI modifications will be installed and post-installation testing will be performed in accordance with applicable ASME Code requirements. The testing will verify the system-level HPI performance analysis assumptions.

(3) Involve a Significant Reduction in a Margin of Safety. The proposed change does not involve a significant reduction in a margin of safety since the margins of safety associated with the proposed increase in power level remain consistent with the margins of safety which were determined by the previous safety analyses and accepted in the original licensing of Arkansas Nuclear One, Unit 1.

The staff has reviewed AP&L's no significant hazards consideration determination analysis and agrees with its conclusion. Therefore, the staff proposes to determine that the application for amendment involves no significant hazards considerations.

Local Public Document Room location: Tomlinson Library, Arkansas Tech University, Russellville, Arkansas 72801

Attorney for licensee: Nicholas S. Reynolds, Esq., Bishop, Cook, Purcell, & Reynolds, 1400 L Street, NW., Washington, DC 20005-3502

NRC Project Director: Frederick J. Hebdon

Boston Edison Company, Docket No. 50-293, Pilgrim Nuclear Power Station, Plymouth County, Massachusetts

Date of amendment request: September 11, 1989

Description of amendment request: The proposed amendment would modify Technical Specification Section 3/4.9, "Auxiliary Electrical System," by adding Sections 3.9.A.7 and 4.9.A.4. These sections include limiting conditions of operations and surveillance requirements reflecting the installation of Electrical Protection Assemblies to the Reactor Protection System power supplies at the Pilgrim Nuclear Power Station. The bases for Section 3/4.9 are also modified to reflect the proposed changes.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists (10 CFR 50.92(c)). A proposed amendment to an operating license for a facility involves no significant hazards considerations if operation of the facility in accordance with a proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; (2) Create the possibility of a new or different kind of accident from an accident previously evaluated; or (3) Involve a significant reduction in a margin of safety.

The licensee addressed the above three standards in the amendment application. In regard to the three standards, the licensee provided the following analysis.

(1) Operation of the facility in accordance with the proposed amendment would not involve a significant increase in the probability or consequences of an accident previously evaluated.

A modification to Pilgrim installed redundant Class 1E Electrical Protection Assemblies (EPAs) between the non-Class 1E Reactor Protection System (RPS) power supplies and the Class 1E RPS power supplies. These EPAs consist of a contactor that is opened by (1) an overvoltage greater than or equal to 132 volts, (2) an undervoltage less than or equal to 106 volts, or (3) an underfrequency less than or equal to 57Hz.

The cabinets and conduits for the EPAs are located in a seismic Category 1 structure providing protection from the effects of tornadoes, tornado missiles, and external floods. The components of each monitoring system are also seismically qualified for Class 1E application as required by General Design Criterion (GDC) 2.

There are two physically independent and fully redundant circuit interrupters provided for each RPS bus, including the alternate supply, complying with GDC 21 requirements. This redundancy provides single failure protection in case one EPA does not function properly, and also provides sufficient reliability to ensure the RPS performs its intended safety function.

The Pilgrim Nuclear Power Station (PNPS) Final Safety Analysis Report (FSAR) Section 7.2 states that the power of each of the two reactor protection trip systems is supplied, via a separate bus, by its own high-inertia, a-c motor generator set. The inertia is provided by a high inertia flywheel. The inertia is sufficient to maintain voltage and frequency within 5% of rated values and a frequency of not less than 55 Hz for at least 1.0 second following total loss of power to the MG set. The selection of the proposed EPA trip level settings at 2710% of nominal voltage and -5% of nominal frequency allows the MG set to function within its intended and designed time, voltage and frequency range before the EPAs trip. These settings support the design and function of the high-inertia MG sets, and therefore, support the assumptions made in the FSAR.

Therefore, the design, trip level settings, and intended function of the EPAs are both bounded and support the current PNPS FSAR accident analysis.

(2) Use of the modified specification would not create the possibility of a new or different kind of accident from any accident previously evaluated.

The proposed change does not effect the operation or intended function of any currently installed safety related equipment. If all the EPAs at one MG fail to open, the redundant train of RPS is still available to mitigate any design basis accident. The EPAs themselves do not perform any specific safety function, however, they provide additional assurance the RPS can preform its safety function; therefore, their failure is bounded by the current Pilgrim Final Safety Analysis.

(3) Use of the modified specification would not involve a significant reduction in a margin of safety.

As noted, the EPAs provide no direct safety functions. They isolate non-Class 1E RPS power supplies form Class 1E power distribution buses upon detection of overvoltage, undervoltage, or underfrequency at the RPS power supplies.

Incorporating surveillance requirements for the EPAs into Technical Specifications does not involve a significant reduction in a margin of safety because the surveillances are performed to ensure the EPAs are operable and calibrated to specified values. Ensuring operability and calibration provides confidence that the EPAs can perform their intended function of protecting RPS components from degradation due to overvoltage, undervoltage or underfrequency. Confidence in the EPAs operability increases overall assurance that the RPS can perform its intended safety function. Increasing confidence in an intended safety function being properly performed does not reduce the margin of safety.

The staff has reviewed the licensee's no significant hazards consideration determination analysis. As the result of this review, the staff agrees with the licensee's analysis. Therefore, based on its review, the staff proposes to determine that the proposed change does not involve a significant hazards consideration.

NRC Project Director: Richard H. Wessman

Carolina Power & Light Company, Docket No. 50-261, H. B. Robinson Steam Electric Plant, Unit No. 2, Darlington County, South Carolina

Date of amendment request: May 8, 1989, as supplemented September 20, 1989

Description of amendment request: The proposed amendment would change the Technical Specifications (TS) to: (1) add operability and associated surveillance requirements for battery chargers, (2) add provision of an action statement and clarify surveillance requirements related to the station batteries, and (3) provide editorial clarifications in Section 3.7.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a no significant hazards consideration exists as stated in 10 CFR 50.92(c). A proposed amendment to an operating license involves no significant hazards consideration if operation of the facility in accordance with the proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety. Carolina Power & Light Company has reviewed the subject TS change request in accordance with the standards set forth in 10 CFR 50.92 and determined that this change does not constitute a significant hazard based upon the following considerations:

1. Operation of the facility, in accordance with the proposed amendment, would not involve a significant increase in the probability or consequences of an accident previously analyzed.

Addition of battery chargers to the TSs will not increase the probability of an accident as the battery chargers are not initiators of any previously analyzed accidents. The new battery chargers are operated in a similar manner to the existing chargers which were previously reviewed during initial licensing. The availability of the new backup chargers would, therefore, tend to decrease the probability of a malfunction of the charging system from impacting the battery mitigating safety function. Accident consequences would not increase since the battery mitigation function would be enhanced by the new TSs in that the new specifications provide limits on unavailability of the charger where no previous limits existed. The addition of backup chargers would further limit charger unavailability thereby enhancing battery availability for its accident mitigation function.

The existing TS required both batteries to be available for criticality. With no specific action statement for loss of a battery, the action required would be that of TS 3.0, i.e., place the unit in hot shutdown within the next 8 hours and cold shutdown within the next 30 hours. Specifically calling this action out at TS 3.7 only clarifies the required action.

Regulatory position C.5 of Regulatory Guide 1.93, December 1974, "Availability of Electric Power Sources" provides the NRC's bases for allowing a 2-hour unavailability time for redundant DC power supplies. This position is the industry standard basis for redundant DC electrical power supply out-of-service times. Since the new action statement incorporated the presently existing shutdown requirement, and the regulatory position is that a 2-hour unavailability for a redundant train is acceptable, no increase in the probability of occurrence or consequences of an accident exists. Since this is a restatement of an existing shutdown requirement for existing equipment, no malfunction of equipment can be introduced.

The proposed TS 4.6.3.5 and 4.6.3.6 imposes the requirement to load test the battery and perform a service test to assess the battery design duty cycle following a battery change or a significant load change. The accepted standard guidance for this test is IEEE 450-1980 and was committed to by CP&L. The procedures implementing these TSs conform to that guidance. Since they are performed based on an accepted standard, there is no increase in the probability of occurrence or consequences of an accident or malfunction of equipment important to safety previously analyzed.

VOL 54 ISS 210 NO 1 1989 UMI

2. Operation of the facility in accordance with the proposed amendment would not create the possibility of a new or different kind of accident from any accident previously evaluated.

The new chargers are operated in a manner similar to the existing chargers which were previously reviewed. Therefore, no accident or malfunction of a different type than previously evaluated is created.

As noted in 1 above, an existing shutdown requirement is restated in a different place for clarification. The unavailability time is that allowed by NRC per Regulatory Guide 1.93. Since this is a restatement of an existing shutdown requirement for existing equipment. This item can not create the possibility for an accident or malfunction of a different type.

For the same reasons stated in 1 above, this item cannot create the possibility for an accident or malfunction of a different type.

3. Operation of the facility, in accordance with the proposed amendment, would not involve a significant reduction in a margin of safety.

The TSs Bases state the margin of safety as follows: "One battery charger shall be in service so that the batteries will always be at full charge in anticipation of a loss-of-AC power incident. This ensures that adequate DC power will be available for emergency uses." In addition, "station batteries will deteriorate with time, but precipitous failure is extremely unlikely. The surveillance specified is that which has been demonstrated over the years to provide an indication of a cell becoming unserviceable...."

The changes to the TS as proposed provide limiting conditions and actions where none previously existed or clarify the testing to be performed to assure adequacy. The margin of safety as expressed above is embodied in the 1-hour duty cycle of the batteries and the capability of the plant to be shut down with one of the redundant batteries unavailable as documented in the FSAR.

A recent modification assured that the backup chargers provided were adequately sized to supply the duty cycle noted. Carolina Power & Light Company's commitment to IEEE 450-1980 assures the testing performed will assess the capacity of the batteries. Since none of the changes noted diminish the duty cycle nor the plant's shutdown capability, the margin of safety is preserved.

The NRC staff has made a preliminary review of the licensee's no significant hazards consideration determination and agrees with the licensee's analysis. Accordingly, the Commission proposes to determine that the requested amendment does not involve a significant hazards consideration.

Local Public Document Room location: Hartsville Memorial Library, Home and Fifth Avenues, Hartsville, South Carolina 29535

NRC Project Director: Elinor G. Adensam

Carolina Power & Light Company, Docket No. 50-261, H. B. Robinson Steam Electric Plant, Unit No. 2, Darlington County, South Carolina

Date of amendment request: August 24, 1989

Description of amendment request: The request amendment the Technical Specifications (TS) Figures 3.10-4 and 3.10-5. The proposed amendment to those Figures would result in less restrictive power distribution limitations. The proposal would incorporate the results of analyses using new three dimensional analytical technique that more explicitly models the plant-specific core power distributions.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a no significant hazards consideration exists as stated in 10 CFR 50.92(c). A proposed amendment to an operating license involves no significant hazards consideration if operation of the facility in accordance with the proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety. Carolina Power & Light Company (the licensee) has reviewed the subject TS change request in accordance with the standards set forth in 10 CFR 50.92 and determined that this change does not constitute a significant hazards consideration based upon the following:

A. Evaluation of Figure 3.10-4, V(Z) Curves

1. Would the operation of the facility involve a significant increase in the probability or consequences of an accident previously evaluated?

a. Operation of the reactor using the PDC-3 V(Z) curves illustrated in Figure 3.10-4 insures compliance with all previously established limitations assumed in Chapter 15 on power distribution. Specifically, the proposed V(Z) curves predict the potential increase in FQ(Z) due to normal routine, Technical Specification-allowed, core maneuvers and as a result of accumulated exposure effects.

As in the NRC-approved PDC-II methodology, application of V(Z) to the steady state values of FQ(Z), obtained via monthly flux maps, assures that the UFSAR Chapter 15 post-accident peak clad temperatures will not exceed 2200° F. Since implementation of the new PDC-3 V(Z) curves will not compromise compliance with limits on the maximum FQ(Z), the consequences of a previously evaluated accident will not be increased.

b. Implementation of the PDC-3 V(Z) curves will involve no changes in equipment, systems, or setpoints used in determining the probability of an evaluated accident. Therefore, no increase in the probability of a previously evaluated accident will result.

2. Would the operation of the facility create the possibility of a new or different kind of accident from any accident previously evaluated?

Implementation of the PDC-3 V(Z) curves will not allow operation of the plant outside any of the parameters or conditions assumed in UFSAR Chapter 15 analyses. No changes in equipment, systems, or setpoints designed to prevent and/or mitigate accidents will be made. Also, no changes in the plant design basis are made. Therefore, the possibility of a new or different kind of accident is not created.

3. Would the operation of the facility involve a significant reduction in the margin of safety?

The margins to safety are defined by TS limits on power distribution, specifically FQ(Z), as developed by the Chapter 15 safety analysis. The V(Z) curves currently in the TSs were developed using the NRC-approved PDC-2 methodology; the proposed V(Z) curves were developed using PDC-3 methodology. The differences in the two PDC versions is [sic] due to the analytic method of generating data. PDC-2 is based on synthesis of 1-D axial and radial power distributions while PDC-3 is based upon 3-D simulations of core power distributions. Additionally, PDC-2 is based on evaluations of the behavior of a generic PWR core. The results were determined to bound H. B. Robinson. The proposed PDC-3 curves were generated by a plant-specific analysis and the conservatisms necessary to make PDC-2 generic were not included in PDC-3.

As a result of these differences, the PDC-2 V(Z) curves were found to over predict the potential increases in FQ(Z) during allowed core maneuvers. The over predictions prevent the use of available operating margin and, therefore, could unnecessarily restrict plant operations. Quantitatively, the PDC-3 V(Z) penalties in the central and upper axial regions of the core will be reduced by about 3.5% for the 275% axial flux difference bands and by 2.5% to 3.0% for the 273% bands. This reduction in penalty allows for greater utilization of the 275% axial flux difference bands which will provide improved capability to respond to plant transient and off normal behavior.

Since the PDC-3 V(Z) curves are less restrictive than the PDC-2 V(Z) curves, an expanded set of core transient maneuvers (relative to PDC-2) was used to develop the new curves. This expanded set was run to insure the less restrictive curve remained conservative relative to the margin of safety.

As a direct result of the reduction in penalties, PDC-3 will allow operation with slightly higher total peaking factors (relative to PDC-2) during steady state operation. However, the power distribution limitations provided by PDC-3 insure compliance with the 2.32 power adjusted Technical Specification limit on total peaking factor FQ(S) during all allowed plant maneuvers. Since PDC-3 is related to LOCA analyses through the total peaking factor limit, and since PDC-3 continues to show compliance with the present thermal limits, the existing Chapter 15 LOCA analyses remain valid. This provides the basis for the determination the the margin of safety has not been significantly reduced.

B. Evaluation of Figure 3.10-5, Target Flux Difference

1. Would the operation of the facility involve a significant increase in the probability or consequences of an accident previously evaluate?

a. PDC-3 procedures, like PDC-2, allow operation outside the 273 or 275% bands for a limited amount of time for power levels at 90% or below. The increased operational flexibility is due to the increase in TS FQ(Z) limits as power decreases. For power levels between 50 and 90% (inclusive), the deviation outside the target bands is defined by the "doghouse" curves illustrated in Figure 3.10-5. The magnitudes of the allowed variations are set so that the resulting reduced power V(Z) curves are still bounded by the full power curves, that is, the expected increases in FQ(Z) at lower power levels are bounded by the expected increases at full power. These variations are necessarily determined for both the 273% and 275% bands. Consistent with current TSs, operation outside the target bands is limited to one hour cumulative in any 24-hour period, after which corrective actions are required. The one-hour time limit is imposed to preserve the equilibrium xenon distribution and avoid axial xenon oscillations which may induce power distribution oscillations that cause unacceptable peaking.

As with the V(Z) curves, Figure 3.10-5 was developed using the 3-D XTG Nodal Simulator, the expanded set of core transient maneuvers, and the specific characteristics of H. B. Robinson as opposed to a generic plant. Also, since the Chapter 15 analyses define the thermal peaking margins to safety, and the limitations on variations outside the target bands insure compliance with thermal limits, the consequences of an accident previously evaluated will not be increased.

b. Implementation of PDC-3 Figure 3.10-5 will involve no changes in equipment, systems, or setpoints used in determining the probability of an evaluated accident. Therefore, no increase in the probability of a previously evaluated accident will occur.

2. Would the operation of the facility create the possibility of a new or different kind of accident from any accident previously evaluated?

Implementation of the PDC-3 Figure 3.10-5 curves will not allow operation of the plant outside any of the parameters or conditions assumed in Chapter 15 analyses, particularly those dealing with power distribution limitations. No changes in equipment, systems or setpoints designed to prevent and/or mitigate accidents will be made. Also, no changes in the plant design basis are made. Therefore, the possibility of a new or different kind of accident is not created.

3. Would the operation of the facility involve a significant reduction in the margin of safety?

The curves illustrated in Figure 3.10-5 were developed using the improved PDC-3 methodology described earlier. The margins to safety are defined by Chapter 15 analyses related to power distribution and are defined in terms of thermal peaking limits, specifically F [delta] H and FQ(Z). PDC-3 methodology is designed to insure compliance with FQ(Z) limits by controlling the variation in axial offset about a target, thus controlling the axial power distribution, and by preserving the equilibrium axial xenon distribution, to prevent localized power perturbations. Compliance with F [delta] H limits is controlled by TSs unrelated to PDC-3.

At power levels at and below 90% additional flexibility in plant operations beyond the target, bands is needed to allow for tests and calibrations. The "doghouse" curves in Figure 3.10-5 provide this flexibility while limiting its duration. In Figure 3.10-5, the maximum allowable deviations outside the target bands are illustrated for both the 273% and 275% target bands. Basically, the curves indicate that axial flux differences outside the target bands, but within the "doghouse" curves, will not result in unacceptable axial power distributions and will not initiate unacceptable xenon oscillations if the AFD is returned to the target bands within one hour. Note that thermal limits on FQ(Z) increase with decreasing power and that the one-hour time limit is cumulative for any 24-hour period.

Since the curves in Figure 3.10-5 insure compliance with FQ(Z) limits as defined in Chapter 15, they were developed with improved PDC-3 analyses, and they are based on PDC-3 V(Z) curves, which were shown not to significantly reduce the margin of safety, no significant reductions in the margins to safety will occur because of their implementation.

The NRC staff has made a preliminary review of the licensee's no significant hazards consideration determination and agrees with the licensee's analysis. Accordingly, the Commission proposes to determine that the requested amendment does not involve a significant hazards consideration.

Effective date: October 18, 1989
Amendment No. 14

Facility Operating License No. NPF-63. Amendment revised the Technical Specifications.

Date of initial notice in Federal Register: April 19, 1989 (54 FR 15823) and renoticed on September 26, 1989 (54 FR 39485) The Commission's related evaluation of the amendment, finding of emergency circumstances, and final determination of no significant hazards consideration is contained in a Safety Evaluation dated October 18, 1989

No significant hazards consideration comments received: No

Local Public Document Room location: Cameron Village Regional Library, 1930 Clark Avenue, Raleigh, North Carolina 27605.

Commonwealth Edison Company, Docket No. 50-454, Byron Station, Unit No. 1 Ogle County, Illinois

Date of application for amendment: October 13, 1989

Description of amendment request: These amendments would allow a one-time extension of the interval for performance of the visual inspection of inaccessible snubbers.

Basis for proposed no significant hazards consideration determination: The staff has evaluated this proposed amendment and determined that it involves no significant hazards consideration. According to 10 CFR 50.92, a proposed amendment to an operating license involves no significant hazards consideration if operation of the facility in accordance with the proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety. This proposed amendment involves a one-time extension of the Technical Specification surveillance interval for performing the inaccessible snubbers visual inspection on Unit 1. This amendment would permit the visual inspection to be performed during the third refueling outage rather than within 12 months 2725% from the last time the surveillances were performed.

Accident initiating events where snubbers must keep systems operable are independent of the frequency of performing visual inspection of the snubbers. Therefore, extending the surveillance interval does not affect the probability of an accident occurring. The consequences of an accident should not be significantly increased for several reasons. The extensions to the surveillance interval is short so the probability of a seismic or transient event occurring that requires snubber response is extremely small. Prior to startup after the last refueling, all Unit 1 snubbers were determined operable as required by the Technical Specification surveillances. Since startup, containment access has been limited so damage from personnel in containment is minimized. Also, the snubbers are early in their design life of approximately 40 years so their operation is anticipated to be reliable. The Station is not aware of any seismic or transient events since the last refueling that may have made any snubbers inoperable. Therefore, there is a high degree of confidence that the snubbers should be capable of performing their intended safety function during the short surveillance extension period.

The extension of the snubber inspection surveillance interval does not involve any equipment additions or modifications at the station or cause the station to be operated in a different manner. Therefore, the possibility of a new or different kind of accident from any accident previously evaluated is not created.

The purpose of installed snubbers is to ensure structural integrity of the system following a seismic event or other events initiating dynamic loads. Since the probability of a seismic or transient event occurring during the surveillance extension period is remote, and the probability that a snubber will not function and impact system integrity is small, the proposed Technical Specification amendment has minimal impact on the safe operation of the plant. The snubbers were determined operable following their last inspection interval and no events have occurred at the plant to suspect they may be inoperable. The possibility of a common mode failure or serious degradation in snubber performance which would affect more than one component or system is highly unlikely. The plant is designed to mitigate the consequences of an accident with a single failure of a component or a system. Therefore, the proposed amendment should not significantly impact the margin of safety.

Therefore, based upon the above analysis, the staff concludes that the proposed amendment to the Technical Specification does not involve a significant hazards consideration.

Local Public Document Room location: Rockford Public Library, 215 N. Wyman Street, Rockford, Illinois 61103.

Attorney to licensee: Michael Miller, Esquire, Sidley and Austin, One First National Plaza, Chicago, Illinois 60603.

NRC Project Director: Paul C. Shemanski, Acting

Consumers Power Company, Docket No. 50-255, Palisades Plant, Van Buren County, Michigan

Date of amendment request: September 12, 1988, supplemented on September 22, 1989 and September 25, 1989

Description of amendment request: The proposed amendment would revise certain provisions in the Palisades Plant Technical Specifications (TS) relating to the Primary Coolant System (PCS) operable components, PCS heatup and cooldown rates, PCS pressure/temperature limits, PCS overpressure protection system set points and operating requirements, and Emergency Core Cooling System (ECCS) operability requirements.

Additionally, it is proposed to modify certain surveillance requirements associated with certain of the above changes. Specifically, the proposed amendment would modify TS Sections 3.1.2, 3.1.6, 3.3.1, 3.3.2, 4.1.1, and 4.6.1, and Figures 3-1, 3-2, 3-3, and 3-4. These changes are proposed to permit the operation of a variable set point control system for low-temperature overpressure protection system, and to account for the use of Regulatory Guide 1.99 (Rev. 2) for the determination of reactor vessel heatup and cooldown limits. Additionally, the revised curves permit extending the range of operability of the ECCS.

Basis for proposed no significant hazards consideration determination: The Commission has made a proposed determination that the amendment involves no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92(c) this means that the operation of the facility in accordance with the proposed amendment would not (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety.

The licensee has evaluated the proposed changes against the above standards as required by 10 CFR 50.91(a). The Commission has reviewed the licensee's evaluation and agrees with it. The licensee concluded that:

A. The changes do not involve a significant increase in the probability or consequences of an accident previously evaluated in (10 CFR 50.92(c)(1)). The previously postulated conditions which could result in exceeding the limits of 10 CFR Part 50, Appendix G are mass injection by the charging and/or high pressure safety injection pump(s) or heat injection by startup of an idle loop while the steam generator temperature is higher than the PCS cold-leg temperature. Analyses of these conditions assuming the proposed TS changes are in effect show that the Appendix G limits are not exceeded. Furthermore, although the range of operability of the ECCS has been extended, inadvertent operation of the high pressure safety injection pump(s) will not violate Appendix G limits.

B. The changes do not create the possibility of a new or different kind of accident from any accident previously evaluated (10 CFR 50.92(c)(2)) because the proposed changes only alter the PCS temperature/pressure relationships in specified temperature ranges and allows for extending the operability range of the ECCS.

C. The changes do not involve a significant reduction in a margin of safety (10 CFR 50.92(c)(3)) because the required margins for safety are specified by Appendix G and are unchanged by the proposed amendment.

Local Public Document Room location: Van Zoeren Library, Hope College, Holland, Michigan 49423.

NRC Project Director: John O. Thoma, Acting.

Detroit Edison Company, Docket No. 50-341, Fermi-2, Monroe County, Michigan

Date of amendment request: July 24, 1989

Description of amendment request: Amend the license to reflect the purchase by Detroit Edison of Wolverine Power Supply Cooperative, Inc's ownership in Fermi-2.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists in 10 CFR 50.92(c). A proposed amendment to an operating license for a facility in accordance with 10 CFR 50.92(c) would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety.

The licensee has evaluated the proposed change against the requirements of 10 CFR 50.92. We have reviewed the licensee's evaluation and concur with it. The licensee concluded that:

1. The change does not involve a significant increase in the probability or consequences of an accident previously evaluated (10 CFR 50.92(c)(1)) because there will be no physical changes to the facility and all operating procedures, limiting conditions for operation, limiting safety system settings, and safety limits currently delineated in the Technical Specifications remain unchanged.

2. The change does not create the possibility of a new or different kind of accident from any accident previously analyzed or evaluated (10 CFR 50.92(c)(2)) because neither plant operation or design are affected by the proposed change. The proposed amendment creates no new accident scenario.

3. The change does not involve a significant reduction in a margin of safety (10 CFR 50.92(c)(3)) because there will be no physical changes to the facility and the requirements delineated in the current Technical Specifications for limiting conditions for operation, limiting safety system settings, and safety limits remain unchanged.

On the basis of the above consideration, the staff proposes to find that the changes do not involve a significant hazards consideration.

Local Public Document Room location: Monroe County Library System, 3700 South Custer Road, Monroe, Michigan 48161.

Attorney for licensee: John Flynn, Esq., Detroit Edison Company, 2000 Second Avenue, Detroit, Michigan 48226.

NRC Project Director: John O. Thoma, Acting.

Duke Power Company, et al., Docket Nos. 50-413 and 50-414, Catawba Nuclear Station, Units 1 and 2, York County, South Carolina

Date of amendment request: April 6, 1989, as supplemented September 6, 1989

Description of amendment request: The proposed amendments would revise Technical Specifications (TSs) 3/4.9.8.1 and 3/4.9.8.2, and their associated Bases to: (1) reduce the required Residual Heat Removal (RHR) system flow rate during Mode 6 (refueling) operation, when the Reactor Coolant System (RCS) is partially drained, from greater than or equal to 3000 gpm to greater than or equal to 1000 gpm, (2) add a Surveillance Requirement to ensure that the RCS temperature is maintained below 140° F, and (3) provide the technical justification for the revision in TS Bases 3/4.9.8.

The RHR flow rate ensures sufficient cooling capacity is available to remove decay heat and maintain the water in the reactor vessel below 140° F as required during refueling. The flow rate also ensures sufficient coolant circulation is maintained through the core to minimize the effect of a boron dilution incident and prevent boron stratification.

On October 17, 1988 the NRC issued Generic Letter (GL) 88-17 to licensees. The GL program enhancement recommended that licensees identify and submit appropriate changes to TSs that restrict or limit the safety benefit of actions identified in GL 88-17. Allowing the flow rates to be reduced will aid in preventing vortexing and air entrainment into the RCS and RHR system. As long as an RHR pump is running, even at flow rates as low as 1000 gpm, there is enough mixing in the flow to ensure no boron stratification occurs in the RCS.

The licensee also reviewed the proposed TS amendments with regard to the concerns raised by NRC Bulletin 88-04, "Potential Safety-Related Pump Loss". Specifically, operating the RHR pumps at flow rates less than 3000 gpm will increase the stress on the pump lower bearings. The licensee will monitor the bearing wear and will replace the bearings if inspection reveals significant degradation.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists (10 CFR 50.92(c)). A proposed amendment to an operating license for a facility involves no significant hazards consideration if operation of the facility in accordance with the proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety.

The proposed amendments would not involve a significant increase in the probability or consequences of an accident previously evaluated because

VOL 54 ISS 210 NO 1 1989 UMI

VOL 54 ISS 210 NO 1 1989 UMI

the reduction in flow will not keep the RHR system from fulfilling its safety functions. The system will continue to remove enough residual heat to maintain the RCS below 140° F, and prevent boron dilution and boron stratification. Two RHR trains will still be required operable when there is less than 23 feet of water above the reactor vessel flange. This will ensure that a single failure of the operating RHR train will not result in a complete loss of system capability. This revision will also reduce the probability of losing the RHR system due to vortexing or air entrainment.

The proposed amendments would not create the possibility of a new or different kind of accident from any accident previously evaluated because the lower flow rates would still allow the RHR system to fulfill its intended safety functions. Also, the requested revision would not introduce any new modes of operation and would not affect the design of the facility.

The proposed amendments would not involve a significant reduction in a margin of safety because the proposed revision would still allow the RHR system to fulfill its intended safety functions and would reduce the probability of rendering the RHR system inoperable.

Based on the above considerations, the Commission proposes to determine that the requested revision does not involve a significant hazards consideration.

Local Public Document Room location: York County Library, 138 East Black Street, Rock Hill, South Carolina 29730

Attorney for licensee: Mr. Albert Carr, Duke Power Company, 422 South Church Street, Charlotte, North Carolina 28242

NRC Project Director: David B. Matthews

Duke Power Company, Docket Nos. 50-269, 50-270 and 50-287, Oconee Nuclear Station, Units 1, 2 and 3, Oconee County, South Carolina

Date of amendment request: September 25, 1989, as supplemented October 18, 1989

Description of amendment request: The proposed amendments would revise the Technical Specifications (TS) to account for minor changes in power peaking and control rod worths resulting from the Oconee Unit 3 core reload. These TS changes are necessary to support operation of Oconee Unit 3 Cycle 12 at full rated power. In addition, the use of the VIPRE thermal hydraulic code would be referenced and all specifications associated with two reactor coolant pump operations would be deleted. The VIPRE code was previously approved by the NRC for use at Oconee Units 1, 2 and 3.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards (10 CFR 50.92(c)) for determining whether a significant hazards consideration exists. A proposed amendment to an operating license for a facility involves no significant hazards consideration if operation of the facility in accordance with the proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety.

In regard to the proposed amendments, the licensee provided an evaluation of the proposed changes with respect to these three standards:

(1) The effect of the Oconee Unit 3 Cycle 12 reload on each accident analysis addressed in the Oconee Final Safety Analysis Report (FSAR) is bounded by previously accepted analyses. Section 7 of the Oconee Unit 3 Cycle 12 Reload Report provides an analysis for accidents and transients for this core reload. This analysis determined that the proposed changes will not involve a significant increase in the probability or consequences of any accident previously evaluated.

The deletion of specifications associated with two reactor coolant pump operations results in more stringent requirements than the present TS requirements. Incorporation of the VIPRE thermal hydraulic code into TS references is an administrative change only. As such, these changes will not involve an increase in the probability or consequences of any accident previously evaluated.

(2) The fuel assemblies proposed for this reload are not significantly different from those previously found acceptable to the NRC nor significantly different to previous cores at Oconee Unit 3. The analyses performed in support of this reload were done in accordance with NRC guidance and were determined to be bounded by previously accepted analyses. As such, the proposed changes will not create the possibility of a new or different kind of accident from any kind of accident previously evaluated.

The deletion of TS associated with two reactor coolant pump operation results in more stringent operating requirements than are presently in the TS, while incorporation into TS references of the VIPRE thermal hydraulic code is an administrative change only. The VIPRE code has been previously reviewed and approved by the NRC. Thus, these changes will not create the possibility of a new or different kind of accident from any accident previously evaluated.

(3) The value limits and margins in the areas of fuel system design, nuclear design and thermal hydraulic design are well within allowable limits and requirements. Sections 4, 5, and 6 of the Oconee Unit 3 Cycle 12 Reload Report address these design areas. Therefore, these TS changes do not involve a significant reduction in a margin of safety.

Changes which delete provisions for two pump operation result in additional limitations not presently in the TS, while incorporation of the VIPRE thermal hydraulic code is administrative in nature. As such, these changes will not result in a significant reduction in a margin of safety.

The Commission's staff has considered the proposed changes and agrees with the licensee's evaluation with respect to the three standards.

On this basis, the Commission proposes to determine that the proposed amendments involve no significant hazards consideration.

Local Public Document Room location: Oconee County Library, 501 West South Broad Street, Walhalla, South Carolina 29691

Attorney for licensee: J. Michael McGarry, III, Bishop, Lieberman, Cook, Purcell and Reynolds, 1200 17th Street, NW., Washington, DC 20036

NRC Project Director: David B. Matthews

Florida Power and Light Company, Docket No. 50-335, St. Lucie Plant, Unit No. 1, St. Lucie County, Florida

Date of amendment request: October 2, 1989

Description of amendment request: The proposed amendment would revise Technical Specifications Table 4.4-5 and Bases Section 3/4.4.9 to change the reactor vessel material surveillance capsule removal schedule to comply with the requirements of ASTM E 185-82. The current surveillance program in use at Unit 1 is based on the requirements of ASTM E 185-73 which was the edition in effect when the reactor vessel was purchased. Appendix H to 10 CFR Part 50 requires that the requirements of ASTM E 185-82 be met, to the extent practical, for capsule withdrawals after July 26, 1983. This amendment application revises the surveillance program schedule for

removal of capsules to comply with the requirements of ASTM E 185-82. As proposed by the licensee, the revised surveillance program will result in better predictions of reactor vessel material embrittlement.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists (10 CFR 50.92(c)). A proposed amendment to an operating license for a facility involves no significant hazards considerations if operation of the facility in accordance with the proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety.

The licensee provided the following no significant hazards consideration analysis that addressed the above three criteria:

Criterion 1

Operation of the facility in accordance with the proposed amendment would not involve a significant increase in the probability or consequences of an accident previously evaluated.

The current St. Lucie Unit 1 surveillance capsule withdrawal schedule is based upon the original licensing withdrawal schedule. Subsequently, ASTM E 185-82 has been developed which recommends capsule removal numbers and intervals which are more representative of the reactor pressure vessel embrittlement at the 1/4 T and inner diameter (ID) locations. The proposed amendment will result in better predictions of reactor vessel material embrittlement in accordance with the requirements of 10 CFR 50 Appendix H. Additionally, the same number of surveillance capsules will be removed in the proposed removal schedule as are currently required to be removed. Accordingly, the proposed amendment will not involve a significant increase in the probability or consequences of an accident previously evaluated.

Criterion 2

Operation of the facility in accordance with the proposed amendment would not create the possibility of a new or different kind of accident from any accident previously evaluated.

The proposed amendment revises the St. Lucie Unit 1 surveillance capsule withdrawal schedule to more accurately represent vessel embrittlement at the 1/4 T and ID locations. This improved schedule follows the recommendations of ASTM E 185-82 and meets the requirements of 10 CFR 50 Appendix H. Additionally, the same number of surveillance capsules will be removed in the proposed removal schedule as are currently required to be removed. Therefore, the possibility of a new or different kind of accident from any accident previously evaluated is not created.

Criterion 3

Operation of the facility in accordance with the proposed amendment would not involve a significant reduction in a margin of safety.

The revised surveillance capsule withdrawal schedule provides for more realistic determination of reactor pressure vessel material embrittlement at the 1/4 T and ID locations. These determinations result in more refined evaluations of material transition temperature shifts to meet the requirements of 10 CFR 50 Appendix H. The more refined removal interval takes into account current neutron fluence projections which were not available at plant licensing 13 years ago. This results in a program meeting the recommendations of ASTM E 185-82. Additionally, the same number of surveillance capsules will be removed in the proposed removal schedule as are currently required to be removed. Therefore, the proposed amendment does not involve a reduction in a margin of safety.

Based on the above, we have determined that the amendment request does not (1) Involve a significant increase in the probability or consequences of an accident previously evaluated, (2) Create the probability of an new or different kind of accident from any accident previously evaluated, or (3) Involve a significant reduction in a margin of safety, and therefore does not involve a significant hazards consideration.

The NRC staff has reviewed the proposed changes and the licensee's no significant hazards consideration analysis and finds them acceptable. Therefore, the staff proposes to determine that these changes do not involve a significant hazards consideration.

Local Public Document Room location: Indian River Junior College Library, 3209 Virginia Avenue, Fort Pierce, Florida 33450

Attorney for licensee: Harold F. Reis, Esquire, Newman and Holtzinger, 1615 L Street, NW., Washington, DC 20036

NRC Project Director: Herbert N. Berkow

Georgia Power Company, Oglethorpe Power Corporation, Municipal Electric Authority of Georgia, City of Dalton, Georgia, Docket Nos. 50-321 and 50-366, Edwin I. Hatch Nuclear Plant, Units 1 and 2, Appling County, Georgia

Date of amendment request: June 22, 1989, as amended on July 31, 1989, and October 4, 1989.

Description of amendment request: The amendments would modify the Technical Specifications (TS) for Units 1 and 2 to:

1. Replace the values of cycle-specific parameter limits in core-related specifications with a reference to a Core Operating Limits Report which will contain the values of these limits. This change also would modify the Definitions sections of the TS to include a definition of the Core Operating Limits Report, and would modify the Administrative Controls sections of the TS to require that cycle-specific parameter limits be established and documented in the Core Operating Limits Report;

2. Reduce from 20% to 10% the rated thermal power level below which Control Rod Program Control function is required; and

3. Revise the Bases and Definitions to permit use of NRC-approved transition boiling correlations other than GEXL.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists (10 CFR 50.92(c)). A proposed amendment to an operating license for a facility involves no significant hazards consideration if operation of the facility in accordance with the proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety.

The licensee's June 22, 1989, submittal provided an evaluation of the proposed changes with respect to these three standards, as follows:

[Proposed Change 1] would revise Technical Specifications 3.3.F, 3.11.A, 3.11.C, 4.11.C, and associated Bases of the Unit 1 Technical Specifications and 3.1.4.3, 3/4.2.1, 3/4.2.3, and associated Bases of the Unit 2 Technical Specifications to replace the values of cycle-specific parameter limits with a reference to the Core Operating Limits Report which contains the values of those limits. In addition, the Core Operating Limits Report has been included in the Definitions Section of the Technical Specifications to note that it is the unit-specific document that provides these limits for the current operating reload cycle. Furthermore, the definition notes that the values of these cycle-specific parameter limits are to be determined in accordance with Specification 6.9.1.11. This Specification requires that the Core Operating Limits be determined for each reload cycle in accordance with the referenced NRC-approved methodology for these limits and consistent with the applicable limits of the safety analysis. Finally, this report and any mid-cycle revisions shall be provided to the NRC upon issuance. Generic Letter 88-16 dated October 4, 1988, from the NRC provided guidance to licensees on requests for removal of the values of cycle-specific parameter limits from the Technical Specifications. This proposed change is in reponse to Generic Letter 88-16. This

proposed change does not involve a significant hazards consideration for the following reasons:

1. The proposed change on the removal of the values of cycle-specific limits does not involve a significant increase in the probability or consequences of an accident previously evaluated. Establishment of these limits in accordance with an NRC-approved methodology and the incorporation of these limits into the Core Operating Limits Report will ensure that proper steps will be taken to establish the values of these limits. Furthermore, the submittal of the Core Operating Limits Report will allow the NRC to continue to trend the values of these limits.

2. The revised specifications with the removal of the values of cycle-specific parameter limits and the addition of the referenced report for these limits does not create the possibility of a new or different kind of accident from those previously evaluated.

3. The revised specifications also do not involve a reduction in the margin of safety, since this change does not alter the methods used to establish the cycle-specific parameter limits.

[Proposed Change 2 would] revise Unit 1 Technical Specifications 3.3.G and 4.3.G and Unit 2 Technical Specifications 3.1.4.1, 3/4.1.4.2, 3/4.10.2, and associated Bases to reduce the core power level below which operation of a Control Rod Program Control (CRPC) is required from 20 percent to 10 percent of rated thermal power. The change will also revise Unit 2 Technical Specifications for other plant systems which refer to this power level (i.e., Technical Specifications 4.1.3.1, 3.1.4.3, 3/4.3.5, and associated Bases) to clarify and maintain conservative operability or surveillance requirements for those systems. Appropriate changes are proposed for the Technical Specifications Bases.

This proposed change does not involve a significant hazards consideration for the following reasons:

1. The proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated because it pertains to operability requirements for equipment that blocks control rod movement (except for scrams) when conditions warrant. None of the accidents previously evaluated can be initiated as a result of any action or lack of action by that equipment. Analyses have shown that the consequences of accidents previously analyzed, including the design basis Rod Drop Accident (RDA), would not be significantly increased as a result of this change.

2. The proposed change does not create the possibility of a new or different kind of accident from any previously analyzed, because the change in plant operation associated with this change is insignificant in this respect. No accidents can be initiated as a result of any action or lack of action by the equipment involved in this change.

3. The proposed change does not involve a significant reduction in the margin of safety, because the acceptance criteria for the design basis RDA are met even when this change is implemented.

[Proposed Change 3 would] revise the Technical Specifications Definitions (Unit 2) and Bases (Units 1 and 2), replacing the references to the GEXL transition boiling correlation with references to "an NRC-approved critical power (or transition boiling) correlation." This change is intended to permit the use of approved correlations other than GEXL for determination of the Minimum Critical Ratio (MCPR).

This proposed change does not involve a significant hazards consideration for the following reasons:

1. The proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated because NRC-approved methods will continue to be applied to demonstrate compliance of Hatch fuel to all Specific Acceptable Fuel Design Limits.

2. The proposed change does not create the possibility of a new or different kind of accident from any previously evaluated. The use of other approved correlations may facilitate operation with more efficient fuel loading configurations. However, core operation will be similar enough to current practices that no new accidents could result.

3. The proposed change does not involve a significant reduction in the margin of safety because this change does not involve a change in any fuel safety or design limits.

The Commission's staff has considered the proposed changes and agrees with the licensee's evaluation with respect to the three standards.

On this basis, the Commission has determined that the requested amendments meet the three standards and, therefore, proposes to determine that the amendment application does not involve a significant hazards consideration.

Local Public Document Room location: Appling County Public Library, 301 City Hall Drive, Baxley, Georgia 31513

Attorney for licensee: Bruce W. Churchill, Esquire, Shaw, Pittman, Potts and Trowbridge, 2300 N Street, NW., Washington, DC 20037.

NRC Project Director: David B. Matthews

Georgia Power Company, Oglethorpe Power Corporation, Municipal Electric Authority of Georgia, City of Dalton, Georgia, Docket Nos. 50-321 and 50-366, Edwin I. Hatch Nuclear Plant, Units 1 and 2, Appling County, Georgia

Date of amendment request: October 20, 1989

Description of amendment request: The amendments would modify the Technical Specifications (TS) to: (1) add a definition of end-of-cycle recirculation pump trip (EOC-RPT) system response time to the Unit 2 TS as well as increase the response time acceptance criteria; and (2) add the EOC-RPT system response time acceptance criteria to the Unit 1 TS with a note defining EOC-RPT system response time.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists (10 CFR 50.92(c)). A proposed amendment to an operating license for a facility involves no significant hazards consideration if operation of the facility in accordance with the proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety.

The licensee's October 20, 1989, submittal provided an evaluation of the proposed changes with respect to these three standards. In that submittal, the licensee states that Proposed Changes 1 would add a modified Standard Technical Specification (STS) definition of EOC-RPT reponse time to the Unit 2 TS, and change the EOC-RPT response time acceptance criteria from 135 milliseconds (ms) to 155 ms for the test associated with Turbine Stop Valve (TSV) closure and to 175 ms for the test associated with Turbine Control Valve (TCV) fast closure.

They further state that the changes do not involve a significant hazards consideration because:

1. They do not involve a significant increase in the probability or consequences of an accident previously evaluated because the RPT system will not be altered in any way and will continue to function and respond as described in Unit 2 Final Safety Analysis Report (FSAR) Sections 5.5.16 and 15.1.1.1.2. The proposed changes, which are based on the STS, will result in testing that verifies the pump trip system response as currently described in the Unit 2 FSAR (Section 15.1.1.1.2). The proposed changes will result in a more complete, accurate, and meaningful test.

2. They do not create the possibility of a new or different kind of accident from any accident previously evaluated because the RPT system will not be altered by the changes. The trip system will continue to respond (trip) on the present signals at the present trip setpoints. The result of its response to a trip signal will continue to be as described in the FSAR. No other response or function will be possible because these changes will not result in physical changes to the logic system, its inputs, or its outputs.

3. They do not involve a reduction in the margin of safety because the proposed test definition and acceptance criteria match those given in Unit 2 FSAR Section 15.1.1.1.2 within the limitation of the actual EOC-RPT response time measurement. The test definition is taken from the STS and the acceptance criteria are based on the defined test. The proposed changes actually result in better and more meaningful testing of EOC-RPT. The proposed testing would better verify the RPT system's ability to perform its intended function in its intended manner as defined in the TS Bases and the Unit 2 FSAR.

The licensee also states that Proposed Change 2 would add the EOC-RPT response time acceptance criteria of 175 ms for the test associated with the TCV and 155 ms for the test associated with the TSV to the Unit 1 TS, along with a note defining EOC-RPT system response times. The note includes specification of the surveillance frequency for consistency with the Unit 2 TS and the BWR/4 STS. Further, they state that the change does not involve a significant hazards consideration because:

1. It does not involve a significant increase in the probability or consequences of an accident previously evaluated because the addition of test acceptance criteria does not reflect any changes in the physical arrangement or function of the RPT logic. The change provides additional requirements not presently in the TS and clarifies the surveillance frequency for consistency between the Unit 1, Unit 2, and BWR/4 STS requirements.

2. It does not create the possibility of a new or different kind of accident from any accident previously evaluated because the RPT system will not be altered by the change. The trip system will continue to respond (trip) on the present signals at the present trip setpoints. The result of its reponse to a trip signal will continue to be as described in the FSAR. No other response or function will be possible because this change will not result in physical changes to the logic system, its inputs, or its outputs.

3. It does not involve a reduction in the margin of safety because the EOC-RPT acceptance criteria are consistent with that currently assumed in the FSAR and subsequent reload analyses. Adding the acceptance criteria constitutes an additional limitation not presently included in the TS and clarifies the surveillance frequency allowing consistency between the testing requirements for both units.

The Commission's staff has considered the proposed changes and agrees with the licensee's evaluation with respect to the three standards.

On this basis, the Commission has determined that the requested amendments meet the three standards and, therefore, proposes to determine that the amendment application does not involve a significant hazards consideration.

Local Public Document Room location: Appling County Public Library, 301 City Hall Drive, Baxley, Georgia 31513

Attorney for licensee: Bruce W. Churchill, Esquire, Shaw, Pittman, Potts and Trowbridge, 2300 N Street, NW., Washington, DC 20037.

NRC Project Director: David B. Matthews

Georgia Power Company, Oglethorpe Power Corporation, Municipal Electric Authority of Georgia, City of Dalton, Georgia, Docket No. 50-366, Edwin I. Hatch Nuclear Plant, Unit 2, Appling County, Georgia

Date of amendment request: September 18, 1989

Description of amendment request: The amendment would modify the Technical Specifications (TS) for Unit 2 to reduce the Minimum Critical Power Ratio (MCPR) Safety Limit from the current value of 1.07 to 1.04 for two-loop operation (TLO) and from 1.08 to 1.05 for single-loop operation (SLO). In addition, the associated Bases sections will also be revised.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists (10 CFR 50.92(c)). A proposed amendment to an operating license for a facility involves no significant hazards considerations if operation of the facility in accordance with the proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety.

The licensee's September 18, 1989, submittal provided an evaluation of the proposed changes with respect to these three standards. In that submittal, the licensee states that the proposed change would reduce the MCPR Safety Limit from the current value of 1.07 to 1.04 for two-loop operation (TLO) and from 1.08 to 1.05 for single-loop operation (SLO). They further state that the change does not involve a significant hazards consideration because:

1. It does not involve a significant increase in the probability or consequences of an accident previously evaluated because the use of high bundle R-factor fuel results in increasing conservatism with respect to the current MCPR Safety Limit. Consequently, removal of this added conservatism translates into a MCPR reduction that allows for higher energy cycles and more efficient fuel utilization without compromising plant safety.

2. It does not create the possibility of a new or different kind of accident from any accident previously evaluated because it does not involve any change in plant equipment design or function.

3. It does not involve a reduction in the margin of safety because NRC-approved codes and methods were used to determine that the proposed 1.04 MCPR Safety Limit will conservatively ensure that 99.9% of the fuel rods will avoid transition boiling during the worst abnormal operational occurrence if the core contains two successive reloads of high R-factor fuel. Additional confirmatory evaluations determined that the corresponding SLO MCPR Safety Limit is 1.05.

The Commission's staff has considered the proposed changes and agrees with the licensee's evaluation with respect to the three standards.

On this basis, the Commission has determined that the requested amendment meets the three standards and, therefore, has made a proposed determination that the amendment application does not involve a significant hazards consideration.

Local Public Document Room location: Appling County Public Library, 301 City Hall Drive, Baxley, Georgia 31513

NRC Project Director: David B. Matthews

Georgia Power Company, Oglethorpe Power Corporation, Municipal Electric Authority of Georgia, City of Dalton, Georgia, Docket Nos. 50-424 and 50-425, Vogtle Electric Generating Plant, Units 1 and 2, Burke County, Georgia

Date of amendment request: July 28, 1989

Description of amendment request: The proposed amendments would revise Technical Specification 3.4.9, "Pressure/Temperature Limits," and the associated bases concerning the applicable number of effective full power years (EFPY) of plant operation for Vogtle Unit 1. Based upon an analysis performed by Westinghouse Electric Corporation in response to Generic Letter 88-11, the applicability of the Unit 1 heatup and

cooldown curves decreased from 16 EFPY to 13 EFPY.

Basis for proposed no significant hazards consideration determination:

and Ashmore, Candler Building, Suite 1400, 127 Peachtree Street, N.E., Atlanta, Georgia 30043.

NRC Project Director: David B.

introduced by the change, a new or different kind of accident cannot result.

3. The proposed change does not

not increase, and may reduce the probability or consequence of an accident previously evaluated.

2. Create the possibility of a new or

an accident previously evaluated. The proposed revisions to the MTC, and Allowable LHR limits preserve the existing acceptance criteria for the design basis accidents of concern and maintains the

Requirements on Primary Coolant Iodine Spikes," dated September 27, 1985.

Basis for proposed no significant hazards consideration determination:

VOL 54 ISS 210 NO 1 1989 UMI

cooldown curves decreased from 16 EFPY to 13 EFPY.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists as stated in 10 CFR 50.92. A proposed amendment to an operating license for a facility involves no significant hazards consideration if operation of the facility in accordance with a proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety.

In regard to the proposed amendments, the licensee has determined the following:

1. The proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated. The change in the number of effective full power years only indicates the length of time the curves in the Technical Specifications are applicable. The actual heatup and cooldown curves are not changed. As long as the heatup and cooldown curves are adhered to, there is no danger of non-ductile failure to the reactor vessel or reactor coolant system.

2. The proposed change does not create the possibility of a new or different kind of accident from any accident previously evaluated. There is no change to the existing heatup or cooldown curves. Since a new failure mode, or non-conservative curve is not introduced by the change, a new or different kind of accident could not result.

3. The proposed change does not involve a significant reduction in a margin of safety. The margin of safety is provided in the heatup and cooldown curves. The number of applicable effective full power years only indicates the number of years that the heatup and cooldown curves can be utilized. Operating within the existing curves does not reduce the level of protection.

The Commission's staff has reviewed the licensee's determination and concurs with its findings.

Accordingly, the Commission proposes to determine that the proposed change involves no significant hazards consideration.

Local Public Document Room location: Burke County Library, 412 Fourth Street, Waynesboro, Georgia 30830.

Attorney for licensee: Mr. Arthur H. Domby, Troutman, Sanders, Lockerman and Ashmore, Candler Building, Suite 1400, 127 Peachtree Street, N.E., Atlanta, Georgia 30043.

NRC Project Director: David B. Matthews

Georgia Power Company, Oglethorpe Power Corporation, Municipal Electric Authority of Georgia, City of Dalton, Georgia, Docket No. 50-424, Vogtle Electric Generating Plant, Unit 1, Burke County, Georgia

Date of amendment request: July 31, 1989

Description of amendment request: The proposed amendment would add two phrases which were incorrectly omitted from the Unit 1 Antitrust License Conditions. The changes would revise paragraph (1)(a) of Appendix C to Facility Operating License NPF-68 as follows: insert "owning, operating or proposing to own or operate equipment" in line 3 before the phrase "or facilities within the State..."; and insert "or rate schedule on file with and subject to the regulation" in line 10 before the phrase "of the Public...".

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists as stated in 10 CFR 50.92. A proposed amendment to an operating license for a facility involves no significant hazards consideration if operation of the facility in accordance with a proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety.

In regard to the proposed amendment, the licensee has determined the following:

1. The proposed change does not involve an increase in the probability or consequences of an accident previously evaluated. The change concerns the Antitrust License Conditions and therefore does not affect any plant equipment or the manner in which the plant is operated. Consequently, the proposed change can have no effect on the probability or consequences of any accident previously evaluated.

2. The proposed change does not create the possibility of a new or different kind of accident from any accident previously evaluated. The change does not introduce any new equipment or require existing equipment to operate in a manner different from that in which it was designed to operate. Since no new failure modes are introduced by the change, a new or different kind of accident cannot result.

3. The proposed change does not involve any reduction in margin of safety. No safety limits or limiting safety system settings are involved. Furthermore, the proposed change does not affect any other parameter which appears in the Technical Specifications. Therefore, margin of safety is not affected.

The Commission's staff has reviewed the licensee's analysis and concurs with the analysis.

Accordingly, the Commission proposes to determine that the proposed change involves no significant hazards consideration.

Local Public Document Room location: Burke County Library, 412 Fourth Street, Waynesboro, Georgia 30830.

Attorney for licensee: Mr. Arthur H. Domby, Troutman, Sanders, Lockerman and Ashmore, Candler Building, Suite 1400, 127 Peachtree Street, N.E., Atlanta, Georgia 30043.

NRC Project Director: David B. Matthews

GPU Nuclear Corporation, et al., Docket No. 50-289, Three Mile Island Nuclear Station, Unit No. 1, Dauphin County, Pennsylvania

Date of amendment request: September 15, 1989

Description of amendment request: The proposed request would revise the Technical Specification criteria for Once Through Steam Generator (OTSG) tube inspections by adopting the guidelines published in August 1988 by the Electric Power Research Institute (EPRI). The proposed program would increase the initial inspection scope from 3% to 20% per OTSG each refueling outage and would employ plant-specific and industry-wide experience and degradation history as the basis for expanding the scope of the testing in the event that degradation is detected.

Basis for proposed no significant hazards consideration determination: As required by 10 CFR 50.91(a), GPU Nuclear Corporation performed an analysis of the requested amendment and concluded that they do not involve a significant hazards consideration because the changes would not:

1. Involve a significant increase in the probability or consequences of an accident previously evaluated. Increasing the number of tubes inspected so that 100% inspection of every OTSG tube occurs at least once every 5 refueling outages and knowing their condition and implementing appropriate action, as applicable, will not increase, and may reduce the probability or consequence of an accident previously evaluated.

2. Create the possibility of a new or different kind of accident from any accident previously evaluated. This activity primarily changes the quantity of OTSG tubes tested during cold shutdown periods, using standard industry accepted technology.

3. Involve a significant reduction in a margin of safety. The current method calls for inspecting fewer OTSG tubes and does not guarantee 100% inspection of all tubes. The proposed method will lead to more tubes being inspected each outage and 100% of all tubes inspected over 5 refueling outages. Therefore, the overall condition of the tubes will be known and appropriate action taken, if needed, providing reasonable assurance that the margin of safety is not reduced.

The staff has reviewed the proposed amendment and agrees with the licensee's conclusion that it does not involve a significant hazards consideration.

Local Public Document Room location: Government Publications Section, State Library of Pennsylvania, Walnut Street and Commonwealth Avenue, Box 1601, Harrisburg, Pennsylvania 17105.

Attorney for licensee: Ernest L. Blake, Jr., Esquire, Shaw, Pittman, Potts, & Trowbridge, 2300 N Street, NW., Washington, DC 20037.

NRC Project Director: John F. Stolz

GPU Nuclear Corporation, et al., Docket No. 50-289, Three Mile Island Nuclear Station, Unit No. 1, Dauphin County, Pennsylvania

Date of amendment request: October 4, 1989

Description of amendment request: The proposed change would raise the Technical Specification (TS) limits on Moderator Temperature Coefficient (MTC) and linear heat rate (LHR) and make minor administrative changes to various TS and their bases. These changes would provide additional flexibility for future core designs within the assumptions and acceptance criteria of the Final Safety Analysis Report (FSAR) and 10 CFR Part 50.

Basis for proposed no significant hazards consideration determination: GPU Nuclear Corporation has determined that this proposed TS change poses no significant hazards considerations as defined in 10 CFR 50.92. That determination was as follows:

1. Operation of the facility in accordance with the proposed amendment would not involve a significant increase in the probability of occurrence or consequences of an accident previously evaluated. The proposed revisions to the MTC, and Allowable LHR limits preserve the existing acceptance criteria for the design basis accidents of concern and maintains the existing ECCS acceptance criteria. Therefore, operation in accordance with the proposed amendment does not involve a significant increase in the probability of occurrence or consequences of an accident previously evaluated.

2. Operation of the facility in accordance with the proposed amendment would not create the possibility of a new or different kind of accident from any previously evaluated. The proposed amendment ensures the plant will be operated in accordance with limits that maintain existing accident analysis and ECCS acceptance criteria and margins of safety, and is unrelated to the possibility of creating a new or different kind of accident.

3. Operation of the facility in accordance with the proposed amendment would not involve a significant reduction in a margin of safety. The proposed revisions to the MTC and the Allowable LHR limits preserve the existing margins of safety defined in the TMI-1 FSAR Chapter 14 Accident Analyses and Technical Specification Bases. Therefore, it is concluded that operation of the facility in accordance with the proposed amendment does not involve a significant reduction in a margin of safety.

The NRC staff has reviewed the GPU Nuclear Corporation determination and agrees with their analysis. Accordingly, the Commission proposes to determine that the proposed amendment involves no significant hazards consideration.

Local Public Document Room location: Government Publications Section, State Library of Pennsylvania, Walnut Street and Commonwealth Avenue, Box 1601, Harrisburg, Pennsylvania 17105.

Attorney for licensee: Ernest L. Blake, Jr., Esquire, Shaw, Pittman, Potts & Trowbridge, 2300 N Street, NW., Washington, DC 20037.

NRC Project Director: John F. Stolz

Northeast Nuclear Energy Company, Docket No. 50-245, Millstone Nuclear Power Station, Unit No. 1, New London County, Connecticut

Date of amendment request: October 6, 1989

Description of amendment request: The proposed changes to the Technical Specifications would reduce the reporting requirements in Section 3.6.C.1.a for iodine spiking from a short-term report to inclusion in the plant Annual Report (TS Section 6.9.1.5) and eliminate the requirement to shutdown the plant if primary coolant iodine activity limits are exceeded for 800 hours in a 12-month period. These changes are in conformance with Generic Letter 85-19, "Reporting Requirements on Primary Coolant Iodine Spikes," dated September 27, 1985.

Basis for proposed no significant hazards consideration determination: NNECO has reviewed the proposed changes, in accordance with 10 CFR 50.92, and has concluded that they do not involve a significant hazards consideration in that these changes would not:

1. Involve a significant increase in the probability or consequences of an accident previously evaluated, in that they do not affect the allowed plant operating conditions. Therefore, this change does not invalidate the assumptions made in the design basis analysis for the calculation of off-site dose. These proposed changes will not result in physical changes to the plant r changes in the way the plant is operated. Based on current fuel technology, the probability of operating at greater than 0.2 micro Ci/gm Dose Equivalent I-131 for more than eight hundred (800) hours/year is negligibly small such that a Technical Specification limit is no longer necessary. The probability of a main steam line break with a pre-existing iodine spike is not increased by this amendment request; therefore, there is no effect on the probability or consequences of any accident previously analyzed.

2. Create the possibility of a new or different kind of accident from any previously analyzed . The change affects only the reporting requirements and not the plant operating requirements as related to primary coolant iodine spikes. Existing reporting requirements (10 CFR 50.72(b)(1)(ii)) will ensure that appropriate actions are taken.

3. Involve a significant reduction in a margin of safety. Based on current fuel technology, the probability of excessive reactor coolant iodine levels is negligible. In addition, 10 CFR 50.72 requires NRC notification of any event or condition during operation that results in the condition of the nuclear power plant, including its principal safety barriers, being seriously degraded. This would bring attention to a fuel performance problem long before exceeding the present limit.

The staff has reviewed the licensee's no significant hazards consideration determination. Based on the review and the above discussion, the staff proposes to determine that the proposed changes do not involve a significant hazards consideration.

Local Public Document Room location: Waterford Public Library, 49 Rope Ferry Road, Waterford, Connecticut 06385.

VOL 54 ISS 210 NO 1 1989 UMI

NRC Project Director: John F. Stolz

Pacific Gas and Electric Company, Docket Nos. 50-275 and 50-323, Diablo Canyon Power Plant, Unit Nos. 1 and 2, San Luis Obispo County, California

Date of amendment request: September 25 and October 16, 1989 (Reference LAR 89-13)

Description of amendment request: The proposed amendments would revise the combined Technical Specifications (TS) for the Diablo Canyon Power Plant (DCPP) Unit Nos. 1 and 2 to incorporate organizational changes into Section 6.0, "Administrative Controls." The specific TS changes proposed are as follows:

(1) TS 6.2.3, "Onsite Safety Review Group," would be revised to change Manager, Nuclear Operations Support, to Manager, Nuclear Safety Assessment and Regulatory Affairs. This change is consistent with Nuclear Power Generation (NPG) organizational changes and consolidation of activities related to independent assessments of plant safety.

(2) TS 6.5.3.2, "GONPRAC Composition," would be revised to change the Chairman from Vice President, Nuclear Power Generation, to Manager, Nuclear Safety Assessment and Regulatory Affairs; change the Vice Chairman from Assistant to the Vice President, Nuclear Power Generation, to Manager, Nuclear Operations Support; and delete the Director, Nuclear Administration and Support Services, as a GONPRAC member. These changes are consistent with the NPG organizational changes made to consolidate and strengthen activities related to independent technical assessments of plant safety.

(3) TS 6.5, "Review and Audit," and 6.7, "Safety Limit Violation," would be revised to change reference to the President to reference to the Vice President, Nuclear Power Generation. These changes are consistent with the changes proposed for TS 6.5.3.2 regarding the composition of GONPRAC.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a no significant hazards consideration exists as stated in 10 CFR 50.92(c). A proposed amendment to an operating license involves no significant hazards consideration if operation of the facility in accordance with the proposed amendment will not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety.

The licensee, in its submittals of September 25, 1989, evaluated the proposed changes against the significant hazards criteria of 10 CFR 50.92 and against the Commission guidance concerning application of this standard. Based on the evaluation given below, the licensee has concluded that the proposed changes do not involve a significant hazards consideration. The licensee's evaluation is as follows:

a. Does the change involve a significant increase in the probability or consequences of an accident previously evaluated?

The proposed changes are administrative in nature and do not affect the probability or consequences of any accident identified in the Diablo Canyon FSAR Update.

Therefore, the proposed changes do not involve a significant increase in the probability or consequences of an accident previously evaluated.

b. Does the change create the possibility of a new or different kind of accident from any accident previously evaluated?

The proposed changes are administrative in nature and do not affect any plant systems, plant operations, or the type of accidents that might occur at Diablo Canyon.

Therefore, the proposed changes do not create the possibility of a new or different kind of accident from any accident previously evaluated.

c. Does the change involve a significant reduction in a margin of safety?

The proposed changes are administrative in nature and do not affect margin of safety.

Therefore, the proposed changes do not involve a significant reduction in a margin of safety.

The NRC Staff has reviewed the proposed changes and the licensee's no significant hazards consideration determination and finds them acceptable. Therefore, the Staff proposes to determine that these changes do not involve significant hazards consideration.

Local Public Document Room location: California Polytechnic State University Library, Government Documents and Maps Department, San Luis Obispo, California 93407.

Attorneys for licensee: Richard R. Locke, Esq., Pacific Gas and Electric Company, P.O. Box 7442, San Francisco, California 94120 and Bruce Norton, Esq., c/o Pacific Gas and Electric Company, P.O. Box 7442, San Francisco, California 94120.

NRC Project Director: George W. Knighton

Philadelphia Electric Company, Docket No. 50-353, Limerick Generating Station, Unit 2, Montgomery County, Pennsylvania

Date of amendment request: October 10, 1989

Description of amendment request: The proposed amendment revises the Plant Systems Snubber Technical Specification (TS) Surveillance Requirement (SR) 4.7.4.b. The proposed change reduces the period of time between commencement of power operation and the initial visual inspection of the snubbers.

The snubbers' current Surveillance Requirement for visual inspections requires "the first inservice visual inspection of each type of snubber shall be performed after 4 months but within 10 months of commencing Power Operation and shall include all snubbers." Limerick Generating Station, Unit 2 (LGS-2) received its full power operating license on August 25, 1989, and began Power Operation on September 1, 1989. Therefore, the first visual inspection of snubbers is required between January 1, 1990 and July 1, 1990.

The Startup Testing Program for LGS-2 originally scheduled startup testing, other than the warranty run, to be completed after January 1, 1990 and the first snubber visual inspections to be completed subsequent to that testing and before the end of the ten month window. The Startup Testing Program is currently proceeding at a pace which projects a completion of the testing, other than the warranty run, during the first week in December. This rapid completion of the testing program has also led PECo to re-evaluate the most efficient use of its resources to accomplish the necessary surveillances at LGS-2. This evaluation indicates that an outage immediately following completion of the testing, other than the warranty run, is the appropriate time to conduct the first visual inspection of the snubbers. Since this outage could begin as early as the first week of December, 1989, a change to the Technical Specifications is necessary. The basis for requiring the initial visual inspection of snubbers after four months of commencing Power Operation is to provide the snubbers a sufficient opportunity to experience various modes of operation (i.e., startups, shutdowns, transients and steady-state). Subjecting the snubbers to these various modes of operation establishes an operating history from which any major operational concerns can be identified. Since LGS Unit 2 will have completed its Startup Testing Program, the snubbers will have experienced these various modes of operation, established an operating history, and fulfilled the basis for performing the initial visual inspection within three months of commencing Power Operation instead of four months as required by TS. Changing the minimum interval for snubber visual inspection to three months eliminates one month of what would probably be steady state operation or shutdown from the operational experience of the snubber population. Since steady state operation or shutdown does not significantly affect the visual inspection results for a snubber population early in life, one month of additional inspection time is unlikely to add to the effectiveness of this requirement. This proposed change does not alter any other TS requirement. Therefore, any system that experiences an unexpected potentially damaging transient will be inspected in accordance with TS 4.7.4.d.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists (10 CFR 50.92(c)). A proposed amendment to an operating license for a facility involves no significant hazards considerations if operation of the facility in accordance with the proposed amendment would not (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety.

The licensee has provided an analysis as to whether the proposed amendment involves a significant hazards consideration. The licensee's analysis is summarized as follows:

(1) The proposed changes do not involve a significant increase in the probability or consequences of an accident previously evaluated.

The proposed revision only revises a surveillance inspection schedule. The revision does not affect the design or operation of equipment which is necessary to function to prevent an accident or to function following an accident. The snubbers in question will not be altered in any manner, nor will their required surveillances be changed. The visual inspection will be conducted in a calendar time frame consistent with the bases of the current surveillance requirement.

(2) The proposed change does not create the possibility of a new or different kind of accident from any accident previously considered.

The proposed revision does not add any new equipment, new procedures or new tests or experiments. It also does not affect the design or operation of equipment important to safety. The snubbers will remain capable of performing their function and will be verified Operable through performance of the visual inspection.

(3) The proposed change does not involve a significant reduction in a margin of safety.

The visual inspections of the snubbers are intended to be conducted as soon as practical following a sufficient period of operation for the snubbers to experience various modes of operation. The reduction of the calendar time frame from four (4) months to three (3) months will not affect the margin of safety as long as the snubbers have experienced sufficient various modes of operation. Completion of the testing program, other than the warranty run, will allow the snubbers to experience multiple startups and shutdowns, various transients and periods of steady-state operation. These various modes of operation are sufficient to establish an operating history for these snubbers and identify any major operational concerns through visual inspection.

The staff has reviewed the licensee's submittal and significant hazards consideration analysis and concurs with the licensee's determination that the proposed amendment does not involve a significant hazards consideration. Therefore, the staff proposes to determine that the proposed amendment involves no significant hazards consideration.

NRC Project Director: Walter R. Butler

Portland General Electric Company et al., Docket No. 50-344, Trojan Nuclear Plant, Columbia County, Oregon

Date of amendment request: March 1, 1988

Description of amendment request: Changes are proposed to the Trojan Technical Specifications (TTS) surveillance requirements to ensure primary containment integrity. More specifically, the following changes are proposed.

1. Surveillance Requirement 4.6.1.1:

Part a.1 would be revised to include those portions of penetrations inside containment in the exception. A new Surveillance Requirement 4.6.1.1.c would be added to describe the necessary surveillance for those portions of penetrations inside containment.

2. Surveillance Requirement 4.6.3.1.1:

Surveillance Requirement 4.6.3.1.1 would be modified to clarify that some containment isolation valves do not have a required isolation time (only automatic valves have required isolation times).

3. Table 3.6-1, "Containment Isolation Valves:" Each change proposed to be made to this table is described below.

a. The steam generator sample and blowdown valves would be moved from the heading "Containment Isolation" to the heading "Steamline Isolation".

b. Footnote psi would be added to Valve MO 8105 (normal charging isolation valve) to indicate that this valve closes on a safety injection signal.

c. Normal Charging Isolation Valve MO 8106 would be deleted from, and Normal Charging Check Valve 8381 would be added to, TTS Table 3.6-1.

d. Air Lock Test Line Valves SV 6991 and SV 6992 would be added to TTS Table 3.6-1.

e. Component Cooling Water Valves MO 3291, 3292, 3346, and 3290 would be moved from the heading "Containment Isolation" to the heading "Non-Automatic Power Operated Isolation Valves".

f. Footnote (s) would be changed to footnote phi and would be moved to the end of Table 3.6-1.

g. Footnote would be added to Containment Sump Valves MO 2069A and MO 2069B.

h. The following manual valves would be added to TTS Table 3.6-1:

1. 10610A&B, 10611A&B - Integrated Leak Rate Test (ILRT) instrument line isolation valves.

2. LD001 and LD003 - 45-foot elevation air lock test line isolation valves.

i. Identifying numbers would be added for the demineralized water and reactor coolant drain tank nitrogen supply Containment isolation valves.

j. Chemical and Volume Control System (CVCS) Letdown Relief Valve PSV 8117 and RHR Suction Relief Valve PSV 8708 would be added to TTS Table 3.6-1.

k. Safety Injection Test Line Valve CV 8843 would be added to TTS Table 3.6-1.

Basis for proposed no significant hazards consideration determination: 10 CFR 50.92 states that a proposed amendment will not involve a significant hazards consideration if the proposed amendment does not: (i) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (ii) Create the possibility

VOL 54 ISS 210 NO 1 1989 UMI

of a new or different kind of accident from any accident previously evaluated; or (iii) Involve a significant reduction in a margin of safety.

The licensee has evaluated the proposed amendment against the standards of 10 CFR 50.92, and has determined the following:

1. Revising TTS 4.6.1.1.a to exclude those portions of penetrations inside Containment from being verified closed every 31 days does not:

a. Involve a significant increase in the probability or consequences of an accident.

This change is an administrative change which clarifies the TTS. As presently written, the TTS could be interpreted to require verification of valve position by making a Containment entry and physically checking valve position every 31 days. This would result in unwarranted radiation exposure to personnel. Instead, administrative controls have been established as an alternate means of controlling valve position without making a Containment entry. This is accomplished via Administrative Order (AO) 3-13, "Control of Locked Valves and Engineered Safety Features Equipment", which is used to control the manipulation and status of these valves, in lieu of physically verifying the status of these valves every 31 days. Excluding the valves inside Containment from being verified closed every 31 days as proposed will eliminate ambiguity in the present TTS wording. No change to the administrative controls in use is proposed.

b. Create the possibility of a new or different kind of accident.

Containment isolation valves are provided to mitigate the consequences of an accident. The surveillance on these valves is not relevant to accident creation.

c. Involve a significant reduction in a margin of safety.

Since this change only clarifies the TTS as to what is presently done, and does not propose an actual change in surveillance, there is no reduction in a margin of safety.

2. Adding a new TTS 4.6.1.1.c which describes the surveillance required for those portions of penetrations inside Containment does not:

a. Involve a significant increase in the probability or consequences of an accident.

This change requires that valves which are located inside Containment be verified as closed during each cold shutdown, except that such verification need not be performed more often than once per 92 days. This change constitutes an additional restriction not presently included in the TTS, and will provide greater assurance that isolation valves inside Containment are closed.

b. Create the possibility of a new or different kind of accident.

Containment isolation valves are provided to mitigate the consequences of an accident. The additional surveillance on these valves is not relevant to accident creation.

c. Involve a significant reduction in a margin of safety.

Since this change constitutes an additional restriction not presently included in the TTS, a reduction in a margin of safety is not involved. This new surveillance is consistent with the W-STS, NUREG-0452, Revision 4.

3. The addition of the words "if applicable" to the verification of Containment isolation valve isolation time required by TTS 4.6.3.1.1 does not:

a. Involve a significant increase in the probability or consequences of an accident.

This change is an administrative change which clarifies the TTS. TTS Table 3.6-1 identifies several Containment isolation valves for which no isolation time is required. Therefore, the words "if applicable" were added to Surveillance Requirement 4.6.3.1.1 in recognition that not all Containment isolation valves have a required isolation time. No change is proposed to the actual testing of isolation valves.

b. Create the possibility of a new or different kind of accident.

Containment isolation valves are provided to mitigate the consequences of an accident. The surveillance on these valves is not relevant to accident creation.

c. Involve a significant reduction in a margin of safety.

Since this change only clarifies the TTS as to what is presently done, and does not propose an actual change in surveillance, there is no reduction in a margin of safety.

4. Moving the steam generator sample and blowdown valves in TTS Table 3.6-1 to the heading "Steamline Isolation" does not:

a. Involve a significant increase in the probability or consequences of an accident.

This change is merely administrative and will ensure that all steamline isolation valves are grouped into one portion of TTS Table 3.6-1.

b. Create the possibility of a new or different kind of accident.

Containment isolation valves are provided for accident mitigation and are not related to accident creation.

c. Involve a significant reduction in a margin of safety.

The relocation of valves in TTS Table 3.6-1 is done to improve readability and has no impact on safety margins.

5. The addition of footnote [phi] to Valve MO 8105 does not:

a. Involve a significant increase in the probability or consequences of an accident.

This change is an administrative change which clarifies the TTS. Valve MO 8105 closes on a safety injection signal to isolate normal charging flow, to allow flow to be diverted to the boron injection tank. However, TTS 4.6.3.1.2.a requires that this valve be tested on a Containment isolation test signal. The addition of footnote [phi] will clarify that this valve is actually tested on a safety injection signal.

No change is proposed to the actual testing of this valve.

b. Create the possibility of a new or different kind of accident.

Containment isolation valves are provided to mitigate the consequences of an accident. The surveillance on this valve is not relevant to accident creation.

c. Involve a significant reduction in a margin of safety.

Since this change only clarifies the TTS as to what is presently done, and does not propose an actual change in surveillance, there is no reduction in a margin of safety.

6. Revising TTS Table 3.6-1 to delete Valve MO 8106 and add Check Valve 8381 does not:

a. Involve a significant increase in the probability or consequences of accident.

General Design Criterion (GDC) 56 of Title 10, Code of Federal Regulations, Part 50 (10 CFR 50), Appendix A provides acceptable Containment isolation configurations. One of these configurations is an automatic isolation valve inside Containment and an automatic isolation valve outside Containment. Final Safety Analysis Report (FSAR) Table 6.2-1, Penetration P-8, lists a check valve (8381) as the inner valve, but lists two valves (MO 8105 and 8106) as the outer valves. Two valves outside Containment exceed the requirements of GDC 56 and, therefore, Valve MO 8106 is being deleted from the TTS. Valve 8381 is being added to the TTS not only for consistency with the FSAR, but also to satisfy the requirements of GDC 56. Since this change results in two valves still being identified as Containment isolation valves in the TTS, but in a configuration that complies with GDC 56, there is no significant increase in the probability or consequences of an accident involved.

b. Create the possibility of a new or different kind of accident.

Containment isolation valves are provided for accident mitigation and are not related to accident creation.

c. Involve a significant reduction in a margin of safety.

This change deletes a valve from the TTS that is not required by GDC 56 to be a Containment isolation valve. In addition, it adds Valve 8381 which is listed in the FSAR as a Containment isolation valve, but was not listed in the TTS. Since this change merely corrects an inconsistency, a reduction in a margin of safety is not involved.

7. The addition of Valves SV 6991 and SV 6992 to TTS Table 3.6-1 does not:

a. Involve a significant increase in the probability or consequences of an accident.

This change corrects the TTS to identify two Containment isolation valves which were not listed in Table 3.6-1. The change constitutes an additional restriction not presently included in the TTS, and will ensure that the TTS are consistent with regulatory requirements.

b. Create the possibility of a new or different kind of accident.

Containment isolation valves are provided to mitigate the consequences of an accident. Adding two Containment isolation valves to TTS Table 3.6-1 which are already in the design is not relevant to accident creation.

c. Involve a significant reduction in a margin of safety.

Since this change constitutes an additional restriction not presently included in the TTS, a reduction in a margin of safety is not involved.

8. Moving the component cooling water (CCW) valves in TTS Table 3.6-1 to the heading "Non-Automatic Power Operated Isolation Valves" does not:

a. Involve a significant increase in the probability or consequences of an accident.

This change is merely administrative and will ensure that all non-automatic power operated isolation valves are grouped into one portion of TTS Table 3.6-1.

b. Create the possibility of a new or different kind of accident.

Containment isolation valves are provided for accident mitigation and are not related to accident creation.

c. Involve a significant reduction in a margin of safety.

The relocation of valves in TTS Table 3.6-1 is done to improve readability and has no impact on safety margins.

9. Changing footnote (a) to footnote [phi], and moving it to the end TTS Table 3.6-1 does not:

a. Involve a significant increase in the probability or consequences of an accident.

This change is merely administrative and will ensure that all footnotes are grouped into one portion of TTS Table 3.6-1.

b. Create the possibility of a new or different kind of accident.

Containment isolation valves are provided for accident mitigation and, therefore, moving a footnote associated with these valves is not related to accident creation.

c. Involve a significant reduction in a margin of safety.

The relocation of this footnote in TTS Table 3.6-1 is done to improve readability and has no impact on safety margins.

10. Addition of footnote to Containment Sump Valves MO 2069A and 2069B does not:

a. Involve a significant increase in the probability or consequences of an accident.

Footnote excludes these valves from local leak testing. Valves MO 2069A&B would be open following a LOCA for operation in the recirculation mode. Since these valves would be open, local leak testing is irrelevant. In addition, since the penetrations associated with these valves would be filled with water following a LOCA, these penetrations would not provide a Containment atmosphere leak path.

b. Create the possibility of a new or different kind of accident.

Containment isolation valves are provided for accident mitigation. Therefore, excluding Valves MO 2069A&B from leak testing is irrelevant to accident creation.

c. Involve a significant reduction in a margin of safety.

The change will exclude Valves MO 2069A&B from local leak testing. This change is consistent with the exclusions presently allowed for other penetrations with a similar function following a LOCA, and so does not involve a significant reduction in a margin of safety.

11. Addition of Valves 10610A&B, 10611A&B, and LD601 and 603 do not:

a. Involve a significant increase in the probability or consequences of an accident.

This change is an administrative change in that it corrects the TTS to identify Containment isolation valves which were not listed in Table 3.6-1. This change constitutes an additional restriction not presently included in the TTS, and will ensure that the TTS are consistent with regulatory requirements.

b. Create the possibility of a new or different kind of accident.

Containment isolation valves are provided to mitigate the consequences of an accident. Adding Containment isolation valves to TTS Table 3.6-1 which are already in the design is not relevant to accident creation.

c. Involve a significant reduction in a margin of safety.

Since this change constitutes an additional restriction not presently included in the TTS, a reduction in a margin of safety is not involved.

12. Adding identifying numbers for the demineralized water and reactor coolant drain tank nitrogen supply valves does not:

a. Involve a significant increase in the probability or consequences of an accident.

This change is merely administrative and will ensure that the demineralized water and reactor coolant drain tank nitrogen supply valves are correctly identified.

b. Create the possibility of a new or different kind of accident.

Containment isolation valves are provided to mitigate the consequences of an accident. The addition of identifying numbers for these valves is not relevant to accident creation.

c. Involve a significant reduction in a margin of safety.

The addition of identifying numbers to these valves in TTS Table 3.6-1 is done to improve readability and has no impact on safety margins.

13. Addition of Relief Valves PSV 8117 and PSV 8708 does not:

a. Involve a significant increase in the probability or consequences of an accident.

This change is an administrative change in that it corrects the TTS to identify Containment isolation valves which were not listed in Table 3.6-1. This change constitutes an additional restriction not presently included in the TTS, and will ensure that the TTS are consistent with regulatory requirements.

b. Create the possibility of a new or different kind of accident.

Containment isolation valves are provided to mitigate the consequences of an accident. Adding Containment isolation valves to TTS Table 3.6-1 which are already in the design is not relevant to accident creation.

c. Involve a significant reduction in a margin of safety.

Since this change constitutes an additional restriction not presently included in the TTS, a reduction in a margin of safety is not involved.

14. Addition of Valve CV 8843 to TTS Table 3.6-1 does not:

a. Involve a significant increase in the probability or consequences of an accident.

This change is an administrative change in that it corrects the TTS to identify a Containment isolation valve which was not listed in Table 3.6-1. This change constitutes an additional restriction not presently included in the TTS, and will ensure that the TTS are consistent with regulatory requirements.

b. Create the possibility of a new or different kind of accident.

Containment isolation valves are provided to mitigate the consequences of an accident. Adding a Containment isolation valve to TTS Table 3.6-1 which is already in the design is not relevant to accident creation.

c. Involve a significant reduction in a margin of safety.

Since this change constitutes an additional restriction not presently included in the TTS, a reduction in a margin of safety is not involved.

In the March 6, 1986 Federal Register, the NRC provided certain examples of amendments that are considered not likely to involve significant hazards considerations. Example (i) is a purely administrative change to Technical Specifications, for example, a change to achieve consistency throughout the Technical Specifications, correction of an error, or a change in nomenclature. Example (ii) is a change that constitutes an additional limitation, restriction, or control not presently included in the Technical Specifications, eg. a more stringent surveillance requirement. The changes proposed within fall within these examples.

Based on the above evaluation, these changes do not pose a significant hazard.

The staff has reviewed the licensee's no significant hazards analysis and concurs with the licensee's conclusions. As such, the staff proposes to determine that the requested changes do not involve a significant hazards consideration.

Local Public Document Room location: Portland State University Library, 731 S.W. Harrison Street, Portland, Oregon 97207.

Attorney for licensee: Leonard A. Girard, Esq., Portland General Electric Company, 121 S.W. Salmon Street, Portland, Oregon 97204.

NRC Project Director: George W. Knighton

Power Authority of the State of New York, Docket No. 50-333, James A. FitzPatrick Nuclear Power Plant, Oswego, New York

Date of amendment request: July 24, 1989

Description of amendment request: The proposed amendment would eliminate the Technical Specification (TS) requirements related to the Rod Sequence Control System (RSCS) and its restraints on control rod motion, lower the Rod Worth Minimizer (RWM) cutout setpoint from 20% to 10% reactor power, require control rod movement sequences equivalent to the Banked Position Withdrawal Sequence and add more limiting operability requirements for the RWM. Additional changes, of an administrative and editorial nature, would correct minor errors and improve the legibility of Sections 3.3 and 4.3 of the TS.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists as stated in 10 CFR 50.92. A proposed amendment to an operating license for a facility involves no significant hazards consideration if operation of the facility in accordance with a proposed amendment would not: (1) Involve a significant increase in the probability or

BEST COPY AVAILABLE

consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a

established by the proposed TS amendment. Therefore, no new failure modes are created nor are any unanalyzed conditions made possible by deletion of the RSCS or reduction of the

margin of safety. In accordance with 10 CFR 50.92 the licensee has reviewed the proposed changes and has concluded as follows that they do not involve a significant hazards consideration:

assure that the acoustic monitor's setpoint accurately reflects the actual SR/V in service and as a result, this change does not involve a significant increase in the probability or consequences of an accident previously

hazards consideration and agrees with the licensee's analysis. Accordingly, the staff proposes to determine that the proposed license amendment does not involve a significant hazards

inoperable the affected penetration must be isolated. This isolation can be accomplished by either deactivating at least one automatic valve, closing at least one manual valve or installing a blind flange in the affected

VOL 54 ISS 210 NO 1 1989 UMI

consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety. The staff has reviewed the licensee's submittal and concludes:

Operation of the FitzPatrick Plant in accordance with the proposed amendment would not involve a significant hazards consideration as defined in 10 CFR 50.92 since it would not:

(1) Involve a significant increase in the probability or consequences of an accident previously evaluated. The NRC has previously evaluated the probability for a Design Basis Rod Drop Accident (RDA) which results in unacceptable consequences of approximately 10^{-13} per reactor year with neither a Rod Sequence Control System (RSCS) nor a Rod Worth Minimizer (RWM) in use (as described in the NRC letter and enclosure from B. C. Rusche, NRR, to R. Fraley, ACRS, "Generic Item IIA-2 Control Rod Drop Accident (BWRs)," dated June 1, 1976). This extremely low accident probability was the basis for the NRC not requiring an RSCS on later reactors. Replacing the hard-wired RSCS with the implementation of sequences equivalent to the Banked Position Withdrawal Sequence (BPWS) as programmed in the RWM along with tighter administrative controls on the RWM at FitzPatrick cannot significantly increase the probability of this event.

Analyses performed for the NRC and by the General Electric Co. have demonstrated that an RDA above 10% rated reactor power cannot result in an unacceptable peak fuel enthalpy. Reducing the RWM cutout setpoint from 20% to 10%, therefore, cannot increase the consequences of the accident.

The probability of the RDA itself is dependent upon the design of the control blade, its mechanical coupling to the control rod drive, and operator vigilance in detecting a potentially stuck control rod. None of these factors is changed by the proposed amendment and therefore the probability of occurrence of a RDA is not increased.

(2) Create the possibility of a new or different kind of accident from any accident previously evaluated. The RSCS or RWM setpoint reduction are not accident initiators. The RSCS and RWM restrict control rod motion such that if a control rod drop accident were to occur, its consequence in terms of peak fuel enthalpy, would not be unacceptable. These functions will be retained by the RWM enforcing control rod sequences equivalent to the Banked Position Withdrawal Sequence (BPWS) and the added RWM controls established by the proposed TS amendment. Therefore, no new failure modes are created nor are any unanalyzed conditions made possible by deletion of the RSCS or reduction of the RWM cutout setpoint.

(3) Involve a significant reduction in a margin of safety. For the purpose of the design basis RDA analysis, an acceptable margin of safety exists when the accident results in a peak fuel enthalpy of less than 280 cal/gm. As stated above, the proposed changes do not result in an unacceptable peak fuel enthalpy. The proposed changes maintain the existing margin of safety through implementation of control rod withdrawal patterns and sequences equivalent to the BPWS. These sequences are enforced by the RWM. Tighter administrative controls will reduce the amount of time the plant is operated without the RWM and also assure conformance with the sequences programmed into the RWM even if the RWM were to become inoperable. No reduction in any margin of safety results from the proposed deletion of the RSCS or reduction of the RWM cutout setpoint.

NRC Project Director: Robert A. Capra

Public Service Electric & Gas Company, Docket No. 50-354, Hope Creek Generating Station, Salem County, New Jersey

Date of amendment request: September 25, 1989

Description of amendment request: Revise Technical Specifications to delete references to and certain conditions permitted during the startup test program.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists (10 CFR 50.92(c)). A proposed amendment to an operating license for a facility involves no significant hazards consideration if operation of the facility in accordance with the proposed amendment would not (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety. In accordance with 10 CFR 50.92 the licensee has reviewed the proposed changes and has concluded as follows that they do not involve a significant hazards consideration:

Significant Hazards Consideration Evaluation

The proposed changes to the Hope Creek Generating Station (HCGS) Technical Specifications:

1. Do not involve a significant increase in the probability or consequences of an accident previously evaluated.

A. Changes 2a, 4, 6, 7, 8, 9, 10, 11, and 12 involve the deletion of footnotes which either permitted various modes of operation during some or all of the Startup Test Program or identified a setpoint as an initial value with the final value to be determined during the Startup Test Program. These conditions were permitted for the brief time associated with startup in order for the performance of testing or to determine the actual long-term operating conditions for the plant. Since these footnotes only applied during the Startup Test Program, which was completed in December 1986, they are no longer applicable and can be removed. In the case of initial versus final setpoint values, the existing Technical Specification values have been confirmed as correct and can be considered final. Accordingly, the deletion of the subject footnotes does not involve a significant increase in the probability or consequences of an accident previously evaluated.

B. Changes 1, 2b, 2c, and 3 involve the revision of setpoints, currently identified as initial values, as a result of actual plant conditions measured during the Startup Test Program and the completion of updated calculations. These changes are similar to those identified in Item A above; however, the initial setpoints do not reflect plant conditions and should be revised. The existing Technical Specifications recognized this possibility by stating in the footnote accompanying these values that final setpoints would be developed as a result of the Startup Test Program. Therefore, these changes do not involve a significant increase in the probability or consequences of an accident previously evaluated.

C. Change 5 involves the continued use of a footnote originally developed for the Startup Test Program. Namely, an acoustic monitor is provided for each Safety/Relief Valve (SRV) to monitor whether the valve is open based on noise levels. These monitors indicates the valve is open when a noise level of 30% of the valve's full open noise level is detected. A footnote is provided which permits adjustment of the full open noise level, and hence the setpoint, during the Startup Test Program. However, during the course of the operational life at HCGS, SRVs must be removed, replaced with spares and tested in accordance with Surveillance requirement 4.4.2.2.

In order to accommodate slight variances in replacement SR/Vs, it may be necessary to adjust the acoustic monitors setpoint as a result of different full open noise levels associated with different SR/Vs. Therefore, the existing footnote is being revised to permit this adjustment. This change will assure that the acoustic monitor's setpoint accurately reflects the actual SR/V in service and as a result, this change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. Do not create the possibility of a new or different kind of accident from any accident previously evaluated.

A. Changes 2a, 4, 6, 7, 8, 9, 10, 11, and 12

The removal of footnotes associated with conditions which no longer apply has no bearing on an accident analysis. Similarly, the removal of footnotes which indicate that a certain setpoint is an initial value which has subsequently been confirmed as the final value do not affect any accident analyzes. These changes are strictly administrative revisions to the Technical Specifications and involve no changes to the plant or procedures. Therefore, these changes do not create the possibility of a new or different kind of accident from any accident previously evaluated.

B. Changes 1, 2b, 2c, and 3

These changes involve the revision of setpoints based on results from the Startup Test Program. These final setpoints support system operation and satisfy the purpose of the Startup Test Program, namely to accurately test the plant for identification of the correct operational mode. Actual system function is not changing and therefore, these changes do not create the possibility of a new or different kind of accident from any accident previously evaluated.

C. Change 5

This change does not affect the ability of the SR/V to function nor affect the ability of the monitor to measure the SR/V noise level. Therefore, this changes does not create the possibility of a new or different kind of accident from any accident previously evaluated.

3. Do not involve a significant reduction in a margin of safety.

These changes are necessary to reflect the results of the Startup Test Program. The changes are either administrative in nature, in that certain TS footnotes are no longer applicable, or represent revisions based upon the completion of the construction and startup testing of HCGS. In the case of the SR/V acoustic monitor setpoint, the change permits the necessary operational flexibility to accommodate variances among spare SR/Vs. Accordingly, these changes do not involve a significant reduction in a margin of safety.

As discussed above, PSE&G has concluded that the proposed changes to the Technical Specifications do not involve a significant hazards consideration since the changes (i) do not involve a significant increase in the probability or consequences of an accident previously evaluated, (ii) do not create the possibility of a new or different kind of accident from any accident previously evaluated, and (iii) do not involve a significant reduction in a margin of safety.

The staff reviewed the licensee's determination that the proposed license amendment involves no significant hazards consideration and agrees with the licensee's analysis. Accordingly, the staff proposes to determine that the proposed license amendment does not involve a significant hazards consideration.

Local Public Document Room location: Pennsville Public library, 190 S. Broadway, Pennsville, New Jersey 08070

Attorney for licensee: Troy B. Conner, Jr., Esquire, Conner and Wetterhahn, 1747 Pennsylvania Avenue, NW., Washington, DC 20006

NRC Project Director: Walter R. Butler

Public Service Electric & Gas Company, Docket No. 50-354, Hope Creek Generating Station, Salem County, New Jersey

Date of amendment request: September 28, 1988 and supplemented on July 21, 1989

Description of amendment request: This amendment would revise Technical Specifications to resolve inconsistencies regarding allowable out-of-service times for inoperable primary containment isolation valves and their associated position indication instrumentation. This amendment was previously published in the Federal Register on November 16, 1988 (53 FR 46158) but the supplement dated July 21, 1989 (NLR-N89102) (LCR 88-02, Rev. 1) contained substantive changes to the original submittal, hence, publication is being repeated.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists (10 CFR 50.92(c)). A proposed amendment to an operating license for a facility involves no significant hazards consideration if operation of the facility in accordance with the proposed amendment would not (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety. In accordance with 10 CFR 50.92 the licensee has reviewed the proposed changes and has concluded as follows that they do not involve a significant hazards consideration:

Significant Hazards Consideration Evaluation

The proposed change to the Hope Creek Generating Station (HCGS) Technical Specifications:

1) Does not involve a significant increase in the probability or consequences of an accident previously evaluated.

As required by ACTION (a) of Technical Specification 3.6.3, should a primary containment isolation valve be declared inoperable the affected penetration must be isolated. This isolation can be accomplished by either deactivating at least one automatic valve, closing at least one manual valve or installing a blind flange in the affected penetration. Furthermore, the system for which the inoperable valve provides containment isolation must also be declared inoperable and the appropriate ACTION statements for that system performed. Assuming that the plant can continue to operate under these conditions, the concern which must be addressed as a result of this proposed change is whether or not the probability or consequences of an accident previously evaluated are significantly increased when the position indication instrumentation for an otherwise inoperable containment isolation valve is permitted to remain inoperable longer than the currently imposed 30 or 7 days, per ACTION 62(a) and 82(b) of Technical Specification Table 3.3.7.5-1, respectively.

The requirement to isolate the affected penetration due to an inoperable valve establishes containment isolation for that penetration. This action establishes a safe configuration for continued operation assuming of course that the affected system is not required to remain OPERABLE. For those systems which can be isolated without jeopardizing continued safe operation, the need for monitoring containment isolation is no longer necessary as isolation has already been achieved.

Therefore, it can be concluded that if the provisions of Technical Specification 3.6.3, ACTION a.2 or a.3 are in effect:

i) the penetration is in a safe configuration with regards to the provisions for containment isolation - closed,

ii) spurious movement of the valve is precluded by either the lack of power, the need for local manual operation, or the presence of an installed blind flange, and

iii) administrative controls and surveillance requirements exist to assure continued containment isolation.

The current requirements of ACTION 82 of Technical Specification Table 3.3.7.5-1 regarding AOT for primary containment isolation valve position indication instrumentation serve no purpose with regard to assurance of containment integrity if and only if the associated penetration is isolated pursuant to Technical Specification 3.6.3, ACTION a.2 or a.3. This function is adequately controlled under the auspices of Technical Specifications 4.6.1.1 and the administrative controls already in place. Consequently, extending the AOT for inoperable position indication in penetrations isolated as described above does not represent an increase in the probability or consequences of a previously evaluated accident since containment isolation (the accident function of concern) is already achieved and assured.

2) Does not create the possibility of a new or different kind of accident from any accident previously evaluated.

The proposed change does not negate the requirement for containment integrity or isolation but simple makes use of the existing Technical Specifications which require such.

VOL 54 NO 210 1989 UMI

By (sic) extending the provisions for isolated penetrations to the required actions for associated inoperable position indication simply takes advantage of the physical constraints and administrative controls already imposed.

Furthermore, the proposed change does not require any plant modification nor (sic) design change but merely permits a specific case of inoperability to exist while plant operation continues. This condition is well bounded in terms of the extent to which inoperability is permitted. Additionally, the flexibility provided by this proposed change will not result in a change to the operational characteristic of any system or process. The inoperability of primary containment isolation valve position indication instrumentation is already permitted for the currently identified AOT. This change simply extends the AOT as long as other compensating measures are in effect.

Therefore, it can be concluded that the proposed change does not create the possibility of a new or different kind of accident from any accident previously evaluated.

3) Does not involve a significant reduction in a margin of safety.

The increase in AOT for an inoperable primary containment isolation valve position indication instrument from either 7 or 30 days to an unlimited time does not decrease the margin of safety since a more restrictive compensating measure is in effect, namely the subject penetration is in the safe configuration with regard to containment isolation provisions - closed. Therefore, the margin of safety remains the same as that permitted by Technical Specification 3.6.3, ACTION a.2 or a.3. With the penetration in an isolated position and the assurances available that such a position will be maintained, the maximum margin of safety has been achieved, i.e. the penetration has been placed in the post accident configuration.

The length of time that either or both position indication instrumentation channels for either or both containment isolation valves remain inoperable has no bearing on the position of the valves in the subject penetration. Realizing that the information provided by the position indication instrumentation is simply indication only, i.e. no automatic isolation or actuation function results from loss of or change in position indication, further substantiates the proposed change. Therefore, it can be concluded that the proposed change does not involve a significant reduction in a margin of safety.

The staff reviewed the licensee's determination that the proposed license amendment involves no significant hazards consideration and agrees with the licensee's analysis. Accordingly, the staff proposes to determine that the proposed license amendment does not involve a significant hazards consideration.

Local Public Document Room location: Pennsville Public Library, 190 S. Broadway, Pennsville, New Jersey 08070

Attorney for licensee: Troy B. Conner, Jr., Esquire, Conner and Wetterhahn, 1747 Pennsylvania Avenue, NW., Washington, DC 20006

NRC Project Director: Walter R. Butler

Southern California Edison Company, et al., Docket Nos. 50-361 and 50-362, San Onofre Nuclear Generating Station, Units 2 and 3, San Diego County California

Date of amendment request: September 11, 1989

Description of amendment request: The licensee has requested to revise San Onofre Units 2 and 3 Radiological Effluent Technical Specifications (RETS) in accordance with the guidance provided in Generic Letter 89-01. The proposed change allows for the implementation of programmatic controls for the Radiological Effluent Technical Specifications and Radiological Environmental Monitoring Program in the administrative controls section of the Technical Specifications and the relocation of procedural details of the current RETS to the Offsite Dose Calculation Manual (ODCM) or to the Process Control Program (PCP).

Basis for proposed no significant hazards consideration determination: As required by 10 CFR 50.91(a), the licensee has provided the following no significant hazards consideration determination which is quoted below:

1. Will operation of the facility in accordance with the proposed change involve a significant increase in the probability or consequences of any accident previously evaluated?

Response: No

The proposed Technical Specifications amendment does not reduce the level of radiological effluent control. Rather, it will provide programmatic controls for RETS consistent with regulatory requirements and allow relocation of the procedural details of the current RETS to the ODCM or PCP. These procedural details are not required to be included in the Technical Specifications by 10 CFR 50.36a. Future changes to these procedural details will be controlled by the ODCM, PCP or Administrative Controls sections of the Technical Specifications. Records of reviews performed for changes made to the ODCM an [sic] PCP will be documented and retained for the duration of the operating license. Therefore, the proposed change will not involve a significant increase in the probability or consequences of any accident previously evaluated.

2. Will operation of the facility in accordance with this proposed change create the possibility of a new or different kind of accident from any accident previously evaluated?

Response: No

The proposed change does not modify the configuration of the facility or its mode of operation. Therefore, the proposed change will not create the possibility of a new or different kind of accident from any previously identified.

3. Will operation of the facility in accordance with the proposed change involve a significant reduction in a margin of safety?

Response: No

The proposed change does not affect the operation of the facility nor modify any method of radiological effluent monitoring or analysis. Therefore, the proposed change will not involve a reduction in a margin of safety.

The NRC staff has reviewed this analysis and, based on that review, it appears that the three criteria are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

Local Public Document Room location: General Library, University of California, P.O. Box 19557, Irvine, California 92713.

NRC Project Director: George W. Knighton

Tennessee Valley Authority, Docket Nos. 50-327 and 50-328, Sequoyah Nuclear Plant, Units 1 and 2, Hamilton County, Tennessee

Date of amendment requests: October 5, 1989 (TS 89-36)

Description of amendment requests: The Tennessee Valley Authority (TVA) proposed to modify Section 3/4.2.4, Quadrant Power Tilt Ratio, and Table 3.3-1, Reactor Trip System Instrumentation, of the Sequoyah Nuclear Plant (SQN), Units 1 and 2, Technical Specifications (TSs). The proposed changes are to revise the action statements in Table 3.3-1 for quadrant power tilt ratio monitoring when power range instrumentation is inoperable to provide a consistent set of actions to be taken when the quadrant power tilt ratio is not monitored or confirmed in accordance with either Surveillance Requirement (SR) 4.2.4.1 or 4.2.4.2. This would add two action statements to TS 3/4.2.4. TVA also requested a change to SR 4.2.4.2 to allow a full core map using the incore detector system, instead of only the currently required four pairs of symmetric thimble locations, to confirm the normalized symmetric power distribution in the core.

Basis for proposed no significant hazards consideration determination: TVA provided the following information in its submittal to support the proposed changes to the TS:

An NRC resident inspector identified the possibility of multiple interpretations for the actions to be taken when the quadrant power tilt ratio is not monitored or confirmed in accordance with SRs 4.2.4.1 and 4.2.4.2. This condition was identified to TVA on July 28, 1989. TVA evaluated the situation and confirmed that the SQN TSs are in general conformance with NRC's standard TSs.

TVA further evaluated the situation and identified that TS 3.2.4 does not contain specific actions to address the situation when either SR 4.2.4.1 or 4.2.4.2 cannot be performed in the timeframe specified. Possible interpretations to determine action timeframes can lead to the application of TS 3.0.3 or the most limiting action in TS 3.2.4. The final power level is not clearly specified. Possible interpretation on final power level can include power levels below which TS 3.2.4 is not applicable or power levels below which the individual SR is not applicable.

TVA also evaluated Action 2 in Table 3.3-1 for multiple interpretations. Action 2.d appears to be redundant to SR 4.2.4.2. Action 2.c has two options to perform, one of which appears to apply different requirements than 2.d when reactor power is below 75 percent. Action 2.c has also been interpreted by the NRC resident inspector to require power reduction *and* recalibration within 4 hours when Action 2.d cannot be met. TVA has interpreted the TSs that TS 3.0.3 applies when Action 2.d cannot be met because none of the conditions in Action 2 specifically address the situation. This interpretation is based on consideration of the specific wording in Action 2.c (the use of "restricted") as meaning something different from the wording in similar actions for TS 3.2.4 (the use of "reduce"). In addition, similar actions in TS 3.2.4 specify separate times for power reduction and recalibration while Action 2.c appears to assume that power is already at or below 75 percent.

Chang[ing] SR 4.2.4.2 to allow the use of a full core map to confirm power distribution will preclude an unnecessary plant derating in the event one of the thimbles, comprising the four symmetric pairs, becomes inoperable.

The Commission has provided Standards for determining whether a significant hazards determination exists as stated in 10 CFR 50.92(c). 10 CFR 50.91 requires that at the time a licensee requests an amendment, it must provide to the Commission its analyses, using the standards in Section 50.92, on the issue of no significant hazards consideration. Therefore, in accordance with 10 CFR 50.91 and 10 CFR 50.92, the licensee has performed and provided the following analysis:

TVA has evaluated the proposed TS change and has determined that it does not represent a significant hazards consideration based on criteria established in 10 CFR 50.92(c). Operation of SQN in accordance with the proposed amendment will not:

1. Involve a significant increase in the probability or consequences of an accident previously evaluated.

The proposed revisions to the action statements for TS 3.2.4, "Quadrant Power Tilt Ratio," and Action 2 of Table 3.3-1 for the reactor trip system power range channels are simply a reformatting of existing requirements in a user-friendly format to eliminate the potential for misinterpretation. Use of a full core map to confirm normalized power distribution provides information pertaining to quadrant power tilt ratio that is equivalent to that obtained using the four pairs of symmetric thimbles. These changes have no impact on the probability or consequences of an accident previously evaluated.

2. Create the possibility of a new or different kind of accident from any previously analyzed.

The proposed revisions to the action statements for TS 3.2.4, "Quadrant Power Tilt Ratio," and Action 2 of Table 3.3-1 for the reactor trip system power range channels are simply a reformatting of existing requirements in a user-friendly format to eliminate the potential for misinterpretation. Use of a full core map to confirm normalized power distribution provides information pertaining to quadrant power tilt ratio that is equivalent to that obtained using the four pairs of symmetric thimbles. These changes do not create the possibility of a new or different kind of accident from any previously analyzed.

3. Involve a significant reduction in a margin of safety.

The proposed revisions to the action statements for TS 3.2.4, "Quadrant Power Tilt Ratio," and Action 2 of Table 3.3-1 for the reactor trip system power range channels are simply a reformatting of existing requirements in a user-frie dly format to eliminate the potential for misinterpretation. Use of a full core map to confirm normalized power distribution provides information pertaining to quadrant power tilt ratio that is equivalent to that obtained using the four pairs of symmetric thimbles. These changes do not involve a reduction in any margin of safety.

The staff has reviewed the licensee's no significant hazards consideration determination and agrees with the licensee's analysis. Therefore, the staff proposes to determine that the application for amendments involves no significant hazards considerations.

Local Public Document Room location: Chattanooga-Hamilton County Library, 1001 Broad Street, Chattanooga, Tennessee 37402.

Attorney for licensee: General Counsel, Tennessee Valley Authority, 400 West Summit Hill Drive, E11 B33, Knoxville, Tennessee 37902.

NRC Assistant Director: Suzanne Black

Tennessee Valley Authority, Docket Nos. 50-327 and 50-328, Sequoyah Nuclear Plant, Units 1 and 2, Hamilton County, Tennessee

Date of amendment requests: October 5, 1989 (TS 89-39)

Description of amendment requests: The Tennessee Valley Authority (TVA) proposed to modify Sections 1.0, Definitions, and 3/4.6.1, Primary Containment, of the Sequoyah Nuclear Plant (SQN), Units 1 and 2, Technical Specifications (TSs). These proposed changes are to revise the definition of containment integrity and the Surveillance Requirements (SRs) 4.6.1.1.b and 4.6.1.2.f. The proposed changes would modify the requirements for containment air locks to be consistent with Revision 5 of NRC's NUREG-0452, "Standard Technical Specifications for Westinghouse Pressurized Water Reactors" (W STS). The containment air locks would be required to be "in compliance with the requirements of Specification 3.6.1.3" instead of being required to be "operable per Specification 3.6.1.3."

Basis for proposed no significant hazards consideration determination: TVA provided the following information in its submittal to support the proposed changes to the TS:

The definition of containment integrity and SRs 4.6.1.1.b and 4.6.1.2.f used in the SQN TSs contain the requirement that the containment air locks be operable. This wording is consistent with Revision 4 of the W STS. The wording used in Revision 5 of the [NRC's] W STS for these same TSs requires compliance with TS 3.6.1.3 for the containment air locks.

The [current] specific wording of SQN TS 3.6.1.1 may lead to an interpretation that precludes the use of the action provisions in TS 3.6.1.3 when an air lock is inoperable but still within the allowed leakage limits of TS 3.6.1.2. On the other hand, the specific wording in Revision 5 of the W STS allows the use of the action provisions in TS 3.6.1.3. The proposed change modifies the SQN TS to conform with Revision 5 of the W STS and eliminates the potential for misinterpretation.

The Commission has provided Standards for determining whether a significant hazards determination exists as stated in 10 CFR 50.92(c). 10 CFR 50.91 requires that at the time a licensee requests an amendment, it must provide to the Commission its analyses, using the standards in Section 50.92, on the issue of no significant hazards consideration. Therefore, in accordance with 10 CFR 50.91 and 10 CFR 50.92, the licensee has performed and provided the following analysis:

TVA has evaluated the proposed TS change and has determined that it does not represent a significant hazards consideration based on criteria established in 10 CFR 50.92(c). Operation of SQN in accordance with the proposed amendments will not:

(1) Involve a significant increase in the probability or consequences of an accident previously evaluated.

As described in Section 6.2 of the Final Safety Analysis Report (FSAR), the containment structure is designed to ensure that an acceptable upper limit of leakage of radioactive material is not exceeded under

VOL 54 ISS 210 NO 1 1989 UMI

design basis accident conditions. The containment air locks, which provide personnel access to both upper and lower containment, were designed and constructed and are tested to ensure that the allowable leakage limits for containment are maintained. The proposed changes to the definition of containment integrity and SRs 4.6.1.1.b and 4.6.1.2.f are made to clarify the use of the action provisions of TS 3.6.1.3. The actual acceptance criteria for primary containment and air lock leakage rates remain unchanged. As such, the proposed change[s are] administrative in nature and serves to eliminate the potential for misinterpretation of the TS requirements. The proposed change[s do] not increase the probability of a previously evaluated accident because the primary containment and air lock leakage rates are not associated with the initiation of any design basis accident. Because the acceptable limits on the primary containment and air lock leakage rates remain unchanged, the consequences of a previously evaluated accident are not increased.

(2) Create the possibility of a new or different kind of accident from any previously analyzed.

As described above, the proposed changes to the definition of containment integrity and SRs 4.6.1.1.b and 4.6.1.2.f are made to clearly allow the use of the action provisions of TS 3.6.1.3. The acceptance criteria for primary containment and air lock leakage rates remain unchanged. Thus, no radiological consequence analysis assumptions are changed. The proposed changes are administrative in nature and serve to eliminate the potential for misinterpretation of the TS requirements. Therefore, the proposed changes will not create the possibility of a new or different kind of accident from any previously analyzed.

(3) Involve a significant reduction in a margin of safety.

The proposed changes to the definition of containment integrity and SRs 4.6.1.1.b and 4.6.1.2.f are made to clarify the use of the action provisions of TS 3.6.1.3. The proposed changes are administrative in nature and serve to eliminate the potential for misinterpretation of the TS requirements. The actual acceptance criteria for primary containment and air lock leakage rates are not changed. As such, the assumptions and, consequently, the results of SQN's radiological consequences analyses remain unchanged, and the bases of TSs 3.6.1.1 and 3.6.1.3 are not altered. Therefore, the proposed changes do not reduce the margin of safety.

The staff has reviewed the licensee's no significant hazards consideration determination and agrees with the licensee's analysis. Therefore, the staff proposes to determine that the application for amendments involves no significant hazards considerations.

Local Public Document Room location: Chattanooga-Hamilton County Library, 1001 Broad Street, Chattanooga, Tennessee 37402.

Attorney for licensee: General Counsel, Tennessee Valley Authority, 400 West Summit Hill Drive, E11 B33, Knoxville, Tennessee 37902.

NRC Assistant Director: Suzanne Black

Tennessee Valley Authority, Docket Nos. 50-327 and 50-328, Sequoyah Nuclear Plant, Units 1 and 2, Hamilton County, Tennessee

Date of amendment requests: October 5, 1989 (TS 89-40)

Description of amendment requests: The Tennessee Valley Authority (TVA) proposed to modify Section 3/4.4.11, Reactor Coolant System Vents, of the Sequoyah Nuclear Plant (SQN), Units 1 and 2, Technical Specifications (TSs). The proposed changes are to revise the reactor coolant system (RCS) vent path TS and make corresponding changes to the index and affected bases of the TS. The proposed changes are to restrict the specifications in Section 3/4.4.11 to only those for the vent path for the head of the RCS pressure vessel. There are existing specifications in Section 3/4.4.3.2 on the power-operated relief valves (PORVs), which are the other RCS vent path.

Basis for proposed no significant hazards consideration determination: TVA provided the following information in its submittal to support the proposed changes to the TS:

The present RCS vent TS contains inconsistencies between the requirements in the limiting condition for operation (LCO) (with [the] footnote) and the bases with respect to the required vent paths. The RCS vent TS contains inconsistent language in the LCO, the footnote, and the bases regarding "paths" and "systems"; inconsistent action requirements with respect to removing power from the valve actuators on inoperable vent paths; and duplicate and inconsistent requirements for the pressurizer power-operated relief valve (PORV) vent paths. For example, a pressurizer PORV may be inoperable for TS 3.4.3.2, satisfy the conditions of Action a for TS 3.4.3.2, and be considered operable as an RCS vent path for TS 3.4.11.

The Commission has provided Standards for determining whether a significant hazards determination exists as stated in 10 CFR 50.92(c). 10 CFR 50.91 requires that at the time a licensee requests an amendment, it must provide to the Commission its analyses, using the standards in Section 50.92, on the issue of no significant hazards consideration. Therefore, in accordance with 10 CFR 50.91 and 10 CFR 50.92, the licensee has performed and provided the following analysis:

TVA has evaluated the proposed TS change and has determined that it does not represent a significant hazards consideration based on criteria established in 10 CFR 50.92(c). Operation of SQN in accordance with the proposed amendment will not:

(1) Involve a significant increase in the probability or consequences of an accident previously evaluated.

SQN Final Safety Analysis Report (FSAR) Section 5.5.15 describes the RCS head vent. The head vent system is designed to remove noncondensible gases or steam from the reactor vessel head through the remote manual operations from the control room. The head vent system is connected above the reactor vessel to one of the upper head injection system discharge pipes (FSAR Figure 6.3.2-10). The head vent system discharges to the pressurizer relief tank (FSAR Figure 5.1-1). Similarly, the pressurizer PORVs provide a vent path from the RCS through the pressurizer. The PORVs also discharge to the pressurizer relief tank (FSAR Figure 5.1-1).

The proposed changes to TS 3.4.11 are made to clarify the RCS head vent requirements. The deletion of the PORV vent path requirements from TS 3.4.11 will not increase the probability or consequences of any previously evaluated accidents because the requirements of TS 3.4.3.2 for PORV operability are more restrictive than those imposed by the current TS 3.4.11. The revised bases for TS 3.4.3.2 clearly identify that the PORVs provide a vent path from the pressurizer. The remaining changes to TS 3.4.11 and its bases section make the wording of the TS specific to the RCS head vent. The requirements for system operability in the revised TS are consistent with the current wording. As such, the balance of the changes to TS 3.4.11 will not increase the probability or consequences of any previously evaluated accident.

(2) Create the possibility of a new or different kind of accident from any previously analyzed.

The proposed changes to TS 3.4.11, its bases, and the bases of TS 3.4.3.2 are made to clarify the requirements for the RCS head vent. The proposed changes do not conflict with or relax the current requirements for the PORVs or the RCS head vent. The changes are administrative in nature by removing ambiguous wording and duplicate requirements. The function and operation of the PORVs and the RCS head vent system remain unchanged. Therefore, the proposed changes will not create the possibility of a new or different kind of accident from any previously analyzed.

(3) Involve a significant reduction in a margin of safety.

As described above, the proposed revisions to TS 3.4.11 and the associated bases changes are made to clarify the requirements for the RCS head vent. The requirements of TS 3.4.3.2 for PORV operability are more restrictive than the current requirements of TS 3.4.11. Additionally, the revised bases for TS 3.4.3.2 clearly identify that the PORVs provide a vent path through the pressurizer. The other changes to TS 3.4.11 and its bases make TS 3.4.11 specifically address the requirements for the RCS head vent. This serves to remove ambiguity and duplication from the TS requirements. The revised TS 3.4.11 is consistent with the current requirements for the RCS head vent. The function and operation of both the head vents and the PORVs remain unchanged. Therefore, the proposed changes do not reduce the margin of safety.

The staff has reviewed the licensee's no significant hazards consideration determination and agrees with the licensee's analysis. Therefore, the staff proposes to determine that the application for amendments involves no significant hazards considerations.

Local Public Document Room location: Chattanooga-Hamilton County Library, 1001 Broad Street, Chattanooga, Tennessee 37402.

Attorney for licensee: General Counsel, Tennessee Valley Authority, 400 West Summit Hill Drive, E11 B33, Knoxville, Tennessee 37902.

NRC Assistant Director: Suzanne Black

Union Electric Company, Docket No. 50-483, Callaway Plant, Unit 1, Callaway County, Missouri

Date of amendment request: September 6, 1989.

Description of amendment request: The proposed changes would relocate the existing procedural details of the current Radiological Effluent Technical Specifications (RETS) to the Offsite Dose Calculation Manual (ODCM), and procedural details for the solid radioactive wastes to the Process Control Program (PCP). In all cases, the programmatic controls would be incorporated into the Administrative Controls section of the Technical Specifications (TS).

Basis for proposed no significant hazards consideration determination: The proposed changes would simplify the TS, while maintaining the regulatory requirements, and would be consistent with the Commission's goals for Technical Specification Improvement and with Generic Letter 89-01, "Implementation of Programmatic Controls for Radiological Effluent Technical Specifications in the Administration Controls Section of the Technical Specifications and the Relocation of Procedural Details of RETS to the Offsite Dose Calculation Manual or to the Process Control Program." Operation of the facility in accordance with the proposed amendment would not:

(1) Involve a significant increase in the probability or consequences of an accident previously evaluated because relocating the Radiological Effluent Technical Specifications (RETS) to the Offsite Dose Calculation Manual (ODCM) or the Process Control Program (PCP) is strictly an administrative change that does not reduce or modify any existing safety requirement or procedure; or

(2) Create the possibility of a new or different kind of accident from any accident previously evaluated because no new accident scenario is created and no previously evaluated accident scenario is changed by relocating procedural requirements from one controlled document to another; or

(3) Involve a significant reduction in a margin of safety because no modification of any plant structure, system, component or operating procedure is associated with this administrative change so all safety margins remain unchanged.

The staff, therefore, proposes to determine that the proposed amendment does not involve a significant hazards consideration.

Local Public Document Room location: Callaway County Public Library, 710 Court Street, Fulton, Missouri 65251 and the John M. Olin Library, Washington University, Skinker and Lindell Boulevards, St. Louis, Missouri 63130.

Attorney for licensee: Gerald Charnoff, Esq., Shaw, Pittman, Potts & Trowbridge, 2300 N Street, NW., Washington, DC 20037.

NRC Project Director: John N. Hannon

Virginia Electric and Power Company, Docket Nos. 50-280 and 50-281, Surry Power Station, Unit Nos. 1 and 2, Surry County, Virginia

Date of amendment requests: September 1, 1989

Description of amendment requests: The proposed amendment to Facility Operating License Nos. DPR-32 and DPR-37 for Surry Power Station, Units 1 and 2, will correct an error associated with reactor trip bypass breaker testing. This proposed action, in the form of a Technical Specification change to Table 4.1-1, Item 36: "Reactor Trip Bypass Breaker," will replace the "automatic shunt trip" device test with an "automatic undervoltage trip" device test on a refueling basis. Also in the same item, the word "local" is being replaced with the word "remote" to describe the location for initiation of the monthly test of the bypass breaker prior to placing it in service. These changes would accurately reflect testing conditions as they currently apply to the bypass breakers, unlike the current Technical Specification, which mistakenly incorporated the "automatic shunt trip" attachment.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists (10 CFR 50.92(c)). A proposed amendment to an operating license for a facility involves no significant hazards considerations if operation of the facility in accordance with the proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety. The licensee has reviewed the proposed changes against the criteria of 10 CFR 50.92 and has concluded that the request does not involve significant hazards consideration in that it would not:

1. Involve a significant increase in the probability of occurrence or consequences of an accident or malfunction of equipment which is important to safety and which has been evaluated in the UFSAR.

The existing design has been reviewed and approved by the NRC in a letter dated November 25, 1984. The plant design does not include an automatic shunt trip feature for the bypass breakers. The bypass breaker trip devices are being [tested] in accordance with the Generic Letter 85-09, i.e. the undervoltage trip device is tested remotely prior to the bypass breaker being placed being placed [sic] in service for the monthly surveillance testing of the reactor trip breaker and an automatic actuation test of the undervoltage trip device is performed on a refueling frequency. The reactor protection system has not been further modified nor has system operation been changed. Eliminating test requirements which are not applicable and replacing them with applicable testing requirements does not increase the probability or the consequences of any accident or malfunction previously evaluated.

2. Create the possibility of a new or different type of accident from those previously evaluated in the safety analysis report.

The existing design has been reviewed and approved by the NRC in a letter dated November 15, 1984. As discussed above, proper testing of Surry's bypass breaker configuration is being performed. Removing testing requirements which are not applicable will not create a new or different kind of accident than previously evaluated.

3. Involve a significant reduction in the margin of safety.

The reactor trip and bypass breakers are being tested in accordance with the guidance of the Generic Letter 85-09. The test interval and the time allowed for testing have not changed, therefore,

the margin of safety has not been changed.

Based on the staff's review of the licensee's evaluation, the staff agrees with the licensee's conclusions as stated

PREVIOUSLY PUBLISHED NOTICES OF CONSIDERATION OF ISSUANCE OF AMENDMENTS TO OPERATING LICENSES AND PROPOSED NO SIGNIFICANT HAZARDS CONSIDERATION DETERMINATION AND OPPORTUNITY FOR HEARING

The following notices were previously published as separate individual notices. The notice content was the same as above. They were published as individual notices either because time did not allow the Commission to wait for this biweekly notice or because the action involved exigent circumstances. They are repeated here because the biweekly notice lists all amendments issued or proposed to be issued involving no significant hazards consideration.

For details, see the individual notice in the Federal Register on the day and page cited. This notice does not extend the notice period of the original notice.

Carolina Power & Light Company, et al., Docket No. 50-400, Shearon Harris Nuclear Power Plant, Unit 1, Wake and Chatham Counties, North Carolina

Date of amendment request: February 22, 1989, as supplemented June 7, 1989

Brief description of amendment request: The amendment changes the Harris Surveillance Requirement (SR) 4.9.8.2., which is part of Technical Specification (TS) 3.9.8.2., Refueling Operations - Low Water Level. The existing SR covers operation over the entire range of low water levels encountered for refueling operations. The requested change would divide the existing SR into two separate surveillances and reduce the minimum flow requirement to 900 gpm when the water level is below the top of the reactor vessel flange.

Date of publication of individual notices in Federal Register: September 26, 1989 (54 FR 39465)

Expiration date of individual notice: October 26, 1989

Local Public Document Room location: Cameron Village Regional Library, 1930 Clark Avenue, Raleigh, North Carolina 27605.

Consumers Power Company, Docket No. 50-255, Palisades Plant, Van Buren, County, Michigan

Date of amendment request: April 3, 1989

Brief description of amendment: The proposed amendment would revise Technical Specifications (TS) related to the applicability of limiting conditions for operation and surveillance requirements of TS Tables 3.17.1, 4.1.1, 4.1.2, and Section 4.0. The proposed change is based in part on recommendations provided by the staff in Generic Letter 87-09. Specifications 4.0.3 and 4.3 would be revised to consolidate and strengthen requirements for inservice inspection of ASME Code Class 1, 2, and 3 components. In addition, relevant Basis statements would be revised and several changes of an administrative nature would be made.

Date of Publication of Individual Notice in the Federal Register: September 13, 1989 (54 FR 37852).

Expiration Date of Individual Notice: October 13, 1989.

Local Public Document Room Location: Van Zoeren Library, Hope College, Holland, Michigan 49423.

Florida Power Corporation, et al., Docket No. 50-302, Crystal River Unit No. 3 Nuclear Generating Plant, Citrus County, Florida

Date of amendment request: August 9, 1989.

Brief description of amendment: This amendment extends, on a one-time basis, the interval for conducting a full-load test of the Emergency Diesel Generators.

Date of publication of individual notice in Federal Register: September 29, 1989 (54 FR 40221)

Expiration date of individual notice: Comment period expired October 16, 1989. Hearing period expires October 30, 1989.

Local Public Document Room location: Crystal River Public Library, 668 N.W. First Avenue, Crystal River, Florida 32629

Public Service Electric & Gas Company, Docket Nos. 50-272 and 50-311, Salem Generating Station, Unit Nos. 1 and 2, Salem County, New Jersey

Date of amendment request: October 4, 1989

Brief description of amendment request: These amendments revise the implementation schedule for License Amendments Nos. 101 and 78 for Salem, Units 1 and 2, respectively. The licensee proposes that License Amendments Nos. 101 and 78 be implemented prior to their respective reactor startup following the next plant shutdown to Mode 3, Hot Standby.

Date of publication of individual notice in Federal Register: October 12, 1989 (54 FR 41887)

Expiration date of individual notice: Comment period expired October 27, 1989; Notice period expires November 13, 1989

Local Public Document Room location: Salem Free Public Library, 112 West Broadway, Salem, New Jersey 08079.

NOTICE OF ISSUANCE OF AMENDMENT TO FACILITY OPERATING LICENSE

During the period since publication of the last biweekly notice, the Commission has issued the following amendments. The Commission has determined for each of these amendments that the application complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment.

Notice of Consideration of Issuance of Amendment to Facility Operating License and Proposed No Significant Hazards Consideration Determination and Opportunity for Hearing in connection with these actions was published in the Federal Register as indicated. No request for a hearing or petition for leave to intervene was filed following this notice.

Unless otherwise indicated, the Commission has determined that these amendments satisfy the criteria for categorical exclusion in accordance with 10 CFR 51.22. Therefore, pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment need be prepared for these amendments. If the Commission has prepared an environmental assessment under the special circumstances provision in 10 CFR 51.12(b) and has made a determination based on that assessment, it is so indicated.

For further details with respect to the action see (1) the applications for amendments, (2) the amendments, and (3) the Commission's related letters,

Safety Evaluations and/or Environmental Assessments as indicated. All of these items are available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, and at the local public document rooms for the particular facilities involved. A copy of items (2) and (3) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Director, Division of Reactor Projects.

Arkansas Power & Light Company, Docket No. 50-368, Arkansas Nuclear One, Unit 2, Pope County, Arkansas

Date of applications for amendment: June 15, 1989

Brief description of amendment: The amendment modified the Technical Specification related to control element assembly drop time requirements.

Date of issuance: October 12, 1989

Effective date: October 12, 1989

Amendment No.: 100

Facility Operating License No. NPF-6. Amendment revised the Technical Specifications.

Date of initial notice in Federal Register: July 26, 1989 (54 FR 31101) The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated October 12, 1989

No significant hazards consideration comments received: No.

Local Public Document Room location: Tomlinson Library, Arkansas Tech University, Russellville, Arkansas 72801

Arkansas Power & Light Company, Docket No. 50-368, Arkansas Nuclear One, Unit 2, Pope County, Arkansas

Date of applications for amendment: June 13, 1989

Brief description of amendment: The amendment deleted Section 4.3.1.1.4 of the Technical Specifications. The change removed a surveillance requirement for Core Protection Calculator isolation equipment based on hardware changes being made during the current refueling outage.

Date of issuance: October 17, 1989

Effective date: October 17, 1989

Amendment No.: 101

Facility Operating License No. NPF-6. Amendment revised the Technical Specifications.

Date of initial notice in Federal Register: July 26, 1989 (54 FR 31100) The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated October 17, 1989.

No significant hazards consideration comments received: No.

Local Public Document Room location: Tomlinson Library, Arkansas Tech University, Russellville, Arkansas 72801

Carolina Power & Light Company, et al., Docket No. 50-324, Brunswick Steam Electric Plant, Unit 2, Brunswick County, North Carolina

Date of application for amendment: March 28, 1989

Description of amendment: The amendment changes the Technical Specifications to implement an expanded operating domain. The expansion of the operating domain allows the fuel cycle economics to be enhanced through implementation of flow control spectral shift operation and increased core flow coast down capability.

Date of issuance: October 12, 1989

Effective date: October 12, 1989

Amendment No.: 166

Facility Operating License No. DPR-62: Amendment revises the Technical Specifications.

Date of initial notice in Federal Register: August 9, 1989 (54 FR 32706) The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated October 12, 1989.

No significant hazards consideration comments received: No.

Local Public Document Room location: University of North Carolina at Wilmington, William Madison Randall Library, 601 S. College Road, Wilmington, North Carolina 28403-3297.

Carolina Power & Light Company, et al., Docket No. 50-400, Shearon Harris Nuclear Power Plant, Unit 1, Wake and Chatham Counties, North Carolina

Date of application for amendment: December 17, 1989

Brief description of amendment: The amendment makes administrative changes to the Technical Specifications for minor corrections and clarification.

Date of issuance: October 11, 1989

Effective date: October 11, 1989

Amendment No. 13

Facility Operating License No. NPF-63. Amendment revised the Technical Specifications.

Date of initial notice in Federal Register: The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated October 11, 1989

No significant hazards consideration comments received: No

Local Public Document Room location: Cameron Village Regional Library, 1930 Clark Avenue, Raleigh, North Carolina 27605.

Carolina Power & Light Company, et al., Docket No. 50-400, Shearon Harris Nuclear Power Plant, Unit 1, Wake and Chatham Counties, North Carolina

Date of application for amendment: February 22, 1989, as supplemented June 7, 1989, August 22, 1989 and October 11, 1989

Brief description of amendment: The amendment changes the Shearon Harris Power Plant, Unit 1, (Harris) Surveillance Requirement (SR) 4.9.8.2 which is part of Technical Specification (TS) 3.9.8.2, Refueling Operations - Low Water Level. The existing surveillance requirement covers operation over the entire range of low water levels encountered for refueling operations. The requested change would divide the existing SR into two separate surveillances and reduce the minimum flow requirement when the water level is below the top of the reactor vessel flange in Mode 6 (refueling).

Date of issuance: October 16, 1989

Effective date: October 18, 1989

Amendment No. 14

Facility Operating License No. NPF-63. Amendment revised the Technical Specifications.

Date of initial notice in Federal Register: April 19, 1989 (54 FR 15823) and renoticed on September 26, 1989 (54 FR 39485) The Commission's related evaluation of the amendment, finding of emergency circumstances, and final determination of no significant hazards consideration is contained in a Safety Evaluation dated October 18, 1989

No significant hazards consideration comments received: No

Local Public Document Room location: Cameron Village Regional Library, 1930 Clark Avenue, Raleigh, North Carolina 27605.

Carolina Power & Light Company, et al., Docket No. 50-400, Shearon Harris Nuclear Power Plant, Unit 1, Wake and Chatham Counties, North Carolina

Date of application for amendment: April 17, 1989, as supplemented June 29, 1989, July 13, 1989, and October 2, 1989.

Brief description of amendment: The amendment changes the Technical Specifications to allow refueling and operation with Vantage 5 fuel design.

Date of issuance: October 18, 1989

Effective date: October 18, 1989

Amendment No. 15

Facility Operating License No. NPF-63. Amendment revised the Technical Specifications.

Date of initial notice in Federal Register: July 12, 1989 (54 FR 29399). The July 13, 1989 and October 2, 1989 letters provided clarifying information that did

VOL 54 ISS 210 NO 1 1989 UMI

not change the initial determination of no significant hazards consideration as published in the Federal Register. The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated October 18, 1989

No significant hazards consideration comments received: No

Local Public Document Room location: Cameron Village Regional Library, 1930 Clark Avenue, Raleigh, North Carolina 27605.

Commonwealth Edison Company, Docket Nos. 50-254 and 50-265, Quad Cities Nuclear Power Station, Units 1 and 2, Rock Island County, Illinois

Date of application for amendments: July 11, 1989 as supplemented August 14, 1989.

Brief description of amendments: Revision of Technical Specifications in accordance with Generic Letter 88-16 to replace core specific operating limits with references to a Core Operating Limits Report.

Date of issuance: October 20, 1989

Effective date: October 20, 1989

Amendment Nos.: 120 and 116

Facility Operating License Nos. DPR-29 and DPR-30. Amendments revised the Technical Specifications.

Date of initial notice in Federal Register: September 6, 1989 (54 FR 37042) The Commission's related evaluation of the amendments is contained in a Safety Evaluation dated October 20, 1989

Significant hazards consideration comments received: No

Local Public Document Room location: Dixon Public Library, 221 Hennepin Avenue, Dixon, Illinois 61021.

Florida Power Corporation, et al., Docket No. 50-302, Crystal River Unit No. 3 Nuclear Generating Plant, Citrus County, Florida

Date of application for amendment: July 26, 1989

Brief description of amendment: This amendment removes Figures 6.2-1, Corporate Organization, and 6.2-2, Facility Organization, from the TS and replaces them with narrative descriptions. It also removes the requirement that members of the Plant Review Committee have specific job titles and replaces it with a requirement that they be supervisors from various disciplines.

Date of issuance: October 10, 1989

Effective date: October 10, 1989

Amendment No.: 122

Facility Operating License No. DPR-72. Amendment revised the Technical Specifications.

Date of initial notice in Federal Register: September 6, 1989 (54 FR 37046) The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated October 10, 1989.

No significant hazards consideration comments received: No.

Local Public Document Room Location: Crystal River Public Library, 668 N.W. First Avenue, Crystal River, Florida 32629

Florida Power Corporation, et al., Docket No. 50-302, Crystal River Unit No. 3 Nuclear Generating Plant, Citrus County, Florida

Date of application for amendment: August 9, 1989.

Brief description of amendment: The amendment extended, on a one-time basis, the interval for conducting a full-load test of the Emergency Diesel Generators.

Date of issuance: October 17, 1989

Effective date: October 17, 1989

Amendment No.: 123

Facility Operating License No. DPR-72. Amendment revised the Technical Specifications.

Public comments requested as to proposed no significant hazards consideration: Yes (54 FR 40221 dated September 29, 1989). The notice provided an opportunity to submit comments on the Commission's proposed no significant hazards consideration determination. No comments have been received. The Notice provided for an opportunity to request a hearing (by October 30, 1989), but indicated that if the Commission makes a final no significant hazards consideration determination, any such hearing would take place after issuance of the amendment. The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated October 17, 1989.

Local Public Document Room Location: Crystal River Public Library, 668 N.W. First Avenue, Crystal River, Florida 32629

Florida Power Corporation, et al., Docket No. 50-302, Crystal River Unit No. 3 Nuclear Generating Plant, Citrus County, Florida

Date of application for amendment: July 28, 1989

Brief description of amendment: This amendment adds operability, action and surveillance requirements for core exit Thermocouples and the Reactor Coolant Inventory Tracking System to the TS. The licensee inadvertently included requirements for a monthly channel check of the Reactor Coolant Inventory Tracking System. These requirements have been deleted. This action was discussed with and agreed to by members of the licensee's staff.

Date of issuance: October 17, 1989

Effective date: October 17, 1989

Amendment No.: 124

Facility Operating License No. DPR-72. Amendment revised the Technical Specifications.

Date of initial notice in Federal Register: September 6, 1989 (54 FR 37045) The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated October 17, 1989.

No significant hazards consideration comments received: No.

Local Public Document Room Location: Crystal River Public Library, 668 N.W. First Avenue, Crystal River, Florida 32629

Georgia Power Company, Oglethorpe Power Corporation, Municipal Electric Authority of Georgia, City of Dalton, Georgia, Docket Nos. 50-424 and 50-425, Vogtle Electric Generating Plant, Units 1 and 2, Burke County, Georgia

Date of application for amendments: June 12, 1989, as supplemented July 17 and September 25, 1989

Brief description of amendments: The amendments modified the Technical Specifications to increase the maximum enrichment of reload fuel.

Date of issuance: October 10, 1989

Effective date: October 10, 1989

Amendment Nos.: 24 and 5

Facility Operating License Nos. NPF-68 and NPF-81: Amendments revised the Technical Specifications.

Date of initial notice in Federal Register: August 9, 1989 (54 FR 32711) The Commission's related evaluation of the amendments is contained in a Safety Evaluation dated October 10, 1989 and an Environmental Assessment dated August 14, 1989 (54 FR 34265, August 18, 1989).

No significant hazards consideration comments received: No.

Local Public Document Room location: Burke County Library, 412 Fourth Street, Waynesboro, Georgia 30830

Iowa Electric Light and Power Company, Docket No. 50-331, Duane Arnold Energy, Center, Linn County, Iowa

Date of application for amendment: October 13, 1987

Brief description of amendment: The amendment revised the TS Table 3.2-B to reflect a new containment high pressure trip level setting and to modify the remarks section regarding the new trip level setting.

Date of issuance: October 6, 1989

Effective date: October 6, 1989

Amendment No.: 163

Facility Operating License No. DPR-49. Amendment revised the Technical Specifications.

Date of initial notice in Federal Register: August 23, 1989 (54 FR 35104) The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated October 6, 1989.

No significant hazards consideration comments received: No.

Local Public Document Room location: Cedar Rapids Public Library, 500 First Street, S.E., Cedar Rapids, Iowa 52401.

Niagara Mohawk Power Corporation, Docket No. 50-220, Nine Mile Point Nuclear Station, Unit No. 1, Oswego County, New York

Date of application for amendment: August 25, 1987

Brief description of amendment: This amendment revises Technical Specification Table 3.2.7. The proposed amendment would (1) increase the maximum operating (closure) time of the Emergency Cooling System high vent isolation valves to 10 seconds, (2) add the Emergency Cooling System drain line vent isolation valves with a maximum operating (closure) time of 10 seconds, (3) designate more accurately the motive power of the isolation valves.

Date of issuance: October 4, 1989

Effective date: October 4, 1989

Amendment No.: 110

Facility Operating License No. DPR-63: Amendment revises the Technical Specifications.

Date of initial notice in Federal Register: June 28, 1989 (54 FR 27232) The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated October 4, 1989.

No significant hazards consideration comments received: No

NOTICE OF ISSUANCE OF AMENDMENT TO FACILITY OPERATING LICENSE AND FINAL DETERMINATION OF NO SIGNIFICANT HAZARDS CONSIDERATION AND OPPORTUNITY FOR HEARING (EXIGENT OR EMERGENCY CIRCUMSTANCES)

During the period since publication of the last biweekly notice, the Commission has issued the following amendments. The Commission has determined for each of these amendments that the application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the

VOL 54 NO 1 1989 ISS 210 UMI

Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment.

Because of exigent or emergency circumstances associated with the date the amendment was needed, there was not time for the Commission to publish, for public comment before issuance, its usual 30-day Notice of Consideration of Issuance of Amendment and Proposed No Significant Hazards Consideration Determination and Opportunity for a Hearing. For exigent circumstances, the Commission has either issued a Federal Register notice providing opportunity for public comment or has used local media to provide notice to the public in the area surrounding a licensee's facility of the licensee's application and of the Commission's proposed determination of no significant hazards consideration. The Commission has provided a reasonable opportunity for the public to comment, using its best efforts to make available to the public means of communication for the public to respond quickly, and in the case of telephone comments, the comments have been recorded or transcribed as appropriate and the licensee has been informed of the public comments.

In circumstances where failure to act in a timely way would have resulted, for example, in derating or shutdown of a nuclear power plant or in prevention of either resumption of operation or of increase in power output up to the plant's licensed power level, the Commission may not have had an opportunity to provide for public comment on its no significant hazards determination. In such case, the license amendment has been issued without opportunity for comment. If there has been some time for public comment but less than 30 days, the Commission may provide an opportunity for public comment. If comments have been requested, it is so stated. In either event, the State has been consulted by telephone whenever possible.

Under its regulations, the Commission may issue and make an amendment immediately effective, notwithstanding the pendency before it of a request for a hearing from any person, in advance of the holding and completion of any required hearing, where it has determined that no significant hazards consideration is involved.

The Commission has applied the standards of 10 CFR 50.92 and has made a final determination that the amendment involves no significant hazards consideration. The basis for this determination is contained in the documents related to this action. Accordingly, the amendments have been issued and made effective as indicated.

Unless otherwise indicated, the Commission has determined that these amendments satisfy the criteria for categorical exclusion in accordance with 10 CFR 51.22. Therefore, pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment need be prepared for these amendments. If the Commission has prepared an environmental assessment under the special circumstances provision in 10 CFR 51.12(b) and has made a determination based on that assessment, it is so indicated.

For further details with respect to the action see (1) the application for amendment, (2) the amendment to Facility Operating License, and (3) the Commission's related letter, Safety Evaluation and/or Environmental Assessment, as indicated. All of these items are available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, and at the local public document room for the particular facility involved.

A copy of items (2) and (3) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Director, Division of Reactor Projects.

The Commission is also offering an opportunity for a hearing with respect to the issuance of the amendments. By December 1, 1989, the licensee may file a request for a hearing with respect to issuance of the amendment to the subject facility operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written petition for leave to intervene. Requests for a hearing and petitions for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR Part 2. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) the nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Interested persons should consult a current copy of 10 CFR 2.714 which is available at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC 20555 and at the Local Public Document Room for the particular facility involved.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene which must include a list of the contentions which are sought to be litigated in the matter. Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the petitioner shall provide a brief explanation of the bases of the contention and a concise statement of the alleged facts or expert opinion which support the contention and on which the petitioner intends to rely in proving the contention at the hearing. The petitioner must also provide references to those specific sources and documents of which the petitioner is aware and on which the petitioner intends to rely to establish those facts or expert opinion. Petitioner must provide sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact. Contentions shall be limited to matters within the scope of the amendments under consideration. The contention must be one which, if proven, would entitle the petitioner to relief. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

Since the Commission has made a final determination that the amendment involves no significant hazards consideration, if a hearing is requested, it will not stay the effectiveness of the amendment. Any hearing held would take place while the amendment is in effect.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Service Branch, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1-(800) 325-6000 (in Missouri 1-(800) 342-6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to (*Project Director*): petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this Federal Register notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to the attorney for the licensee.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the Atomic Safety and Licensing Board, that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)-(v) and 2.714(d).

Duke Power Company, Docket Nos. 50-269, 50-270 and 50-287, Oconee Nuclear Station, Units 1, 2 and 3, Oconee County, South Carolina

Date of amendment request: September 29, 1989, as supplemented by two letters dated September 29, 1989, and a letter dated October 4, 1989.

Brief description of amendments: The amendments revised Technical Specification 4.4.1, Table 4.4-1, to require Type C (local) leak rate testing of containment penetrations 39 and 53 and to specify when Type A (integrated) and Type C testing for these penetrations is required.

Date of Issuance: October 6, 1989

Effective date: October 6, 1989

Amendments Nos.: 176, 176, and 173

Facility Operating License Nos. DPR-38, DPR-47 and DPR-55. Amendments revised the Technical Specifications.

Public comments requested as to proposed no significant hazards consideration: No. The Commission's related evaluation of the amendments, finding of emergency circumstances, and final determination of no significant hazards consideration are contained in a Safety Evaluation dated October 6, 1989

Attorney for licensee: J. Michael McGarry, III, Bishop, Cook, Purcell and Reynolds, 1400 L Street, NW., Washington, DC 20005.

Local Public Document Room location: Oconee County Library, 501 West South Broad Street, Walhalla, South Carolina 29691

NRC Project Director: David B. Matthews

Power Authority of the State of New York, Docket No. 50-333, James A. FitzPatrick Nuclear Power Plant, Oswego, New York

Date of amendment request: September 28, 1989

Description of amendment request: The amendment allows repair of Weld No. 10-14-884A on the "B" Core Spray test line without having to perform a Type A, Type B, or Type C Leak Rate Test per Appendix J to 10 CFR Part 50 prior to startup from the 1989 mid-cycle maintenance outage. This amendment is effective until the end of the next refueling outage, presently scheduled to start in March 1990.

Date of issuance: October 4, 1989

Effective date: October 4, 1989

Amendment No.: 140

Facility Operating License No. DPR-59: Amendment revised the Technical Specifications.

Public comments requested as to proposed no significant hazards consideration: No. The Commission's related evaluation of the amendment, consultation with the State, and final determination of no significant hazards consideration are contained in a Safety Evaluation dated October 4, 1989.

The Commission has prepared an Environmental Assessment related to the action and has determined not to prepare an environmental impact statement. Based upon the environmental assessment, the Commission has concluded that the issuance of this amendment will not have a significant effect on the quality of the human environment (54 FR 40759).

Local Public Document Room location: Reference and Documents Department, Penfield Library, State University of New York, Oswego, New York 13126.

Attorney for licensee: Mr. Charles M. Pratt, 1633 Broadway, New York, New York 10019.

Dated at Rockville, Maryland, this 24th day of October, 1989.

[Docket Nos. 50-259/260/296]

Tennessee Valley Authority; Browns Ferry Nuclear Power Station; Temporary Closing of Local Public Document Room

Notice is hereby given that the Athens Public Library, Athens, Alabama, which serves as the local public document room (LPDR) for the Tennessee Valley Authority's Browns Ferry Nuclear Power Station, will be temporarily closed from November 16, 1989, through January 7, 1990, in order that asbestos can be removed from the building.

Persons interested in using the LPDR collection during this period are asked to contact the NRC LPDR staff for assistance, at toll-free telephone number (800) 638-8081. Every effort will be made to meet the informational needs of patrons.

Patrons outside the service area of the LPDR may address their requests for records to the NRC's Public Document Room, 2120 L Street, NW., Lower-Level, Washington, DC 20555, telephone number (202) 634-3273.

Questions concerning the NRC's LPDR program or the availability of documents pertaining to the Browns Ferry Nuclear Power Station should be addressed to Ms. Teresa D. Linton, Information Services Librarian, Freedom of Information Act/Local Public Document Room Branch, U.S. Nuclear Regulatory Commission, Washington, DC 20555, telephone number (800) 638-8081.

Dated at Bethesda, Maryland, this 26th day of October, 1989.

For the Nuclear Regulatory Commission.

Donnie H. Grimsley,

Director, Division of Freedom of Information and Publications Services, Office of Administration.

VOL 54 ISS 210 NO 1 1989 UMI

System Energy Resources, Inc.; Louisiana Power & Light Co., Arkansas Power & Light Co.—Requests for Amendments To Designate New Operating Company Time For Filing Comments On Antitrust Matters

[Docket Nos. 50-416A; 50-417A; 50-382A; and 50-368A]

On August 15, 1989, System Energy Resources, Inc. (SERI), Arkansas Power and Light Company (AP&L) and Louisiana Power and Light Company (LP&L) submitted proposed license amendments to designate a new company, Entergy Operations, Inc. (EOI), as the licensed operator for Grand Gulf Nuclear Station Unit 1, Arkansas Nuclear One Units 1 and 2 and Waterford Steam Electric Station, Unit 3 repectively.* AP&L, LP&L and SERI are wholly-owned subsidiaries of Entergy Corporation (Entergy), formerly known as Middle South Utilities, Inc. EOI will also become a wholly-owned subsidiary of Entergy. Entergy plans for EOI to become its system-wide nuclear operating company by assuming operating and management responsibility for all of the nuclear plants currently operated by the captioned licensees.

Any person who wishes to express views pursuant to antitrust issues raised by any of these amendment requests should submit said views within 30 days of the initial publication of this notice in the **Federal Register** to the U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Chief, Policy Development and Technical Support Branch, Office of Nuclear Reactor Regulation.

Dated at Rockville, Maryland this 25th day of October 1989.

For the Nuclear Regulatory Commission.

Eileen M. McKenna,

Acting Chief, Policy Development and Technical Support Branch, Program Management, Policy Development and Analysis Staff, Office of Nuclear Reactor Regulation.

[FR Doc. 89-25713 Filed 10-31-89; 8:45 am]

BILLING CODE 7590-01-M

* A similar amendment request was submitted by SERI on August 21, 1989, to designate EOI as the entity licensed to possess and construct Grand Gulf Nuclear Station Unit 2.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-27376; File No. SR-CBOE-87-22]

Self-Regulatory Organizations; The Chicago Board Options Exchange, Inc.; Order Approving Proposed Rule Change Relating to RAES Eligibility Standards for Individuals and Groups in the Standard & Poor's 100 Index ("OEX") Option

I. Introduction

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act") [1] and Rule 19b-4 thereunder,[2] the Chicago Board Options Exchange, Incorporated ("CBOE" or "Exchange") filed with the Commission on May 8, 1987, a proposed rule change to amend the eligibility standards for individuals and groups to participate in the CBOE's Retail Automatic Execution System ("RAES" or "System") [3] for options on the Standard and Poor's 100 Index ("OEX").[4] A second amendment to the proposed rule change was filed with the February 2, 1989, that addresses issues raised in the original proposal.[5]

Currently, the eligibility requirements in effect allow all market makers registered with the Exchange to participate in RAES trading in OEX, either in an individual capacity or as a member of a group account.[6] The Index Floor Procedure Committee ("IFPC"), however, may limit the number of market makers in any one group. The proposed rule change would amend these eligibility standards on a six-month pilot basis by restricting participation in RAES to market makers who are members of the OEX or Standard & Poor's 500 Index option ("SPX") trading crowds. Moreover, the proposed pilot program establishes standards to limit the size of eligible groups and includes provisions to ensure adequate market maker participation in the System.

II. Description of the Proposed Rule Change

The CBOE proposes to amend the participation and eligibility requirements imposed on its market makers for RAES in OEX and clarify the authority of the IFPC to administer RAES in OEX.

The proposed rule change will restrict RAES participation in OEX to OEX and SPX market makers by requiring that an eligible market maker execute 50% of its market maker contracts for the preceding quarter in OEX or SPX, and execute 25% of these trades in person.[7] A member must meet these requirements before the member can participate in RAES individually or as a member of a group. Moreover, the IFPC may bar, restrict or condition a group account's participation in RAES if any member of the group fails to meet the OEX/SPX market maker requirements.

Additionally, the proposed rule change modifies the eligibility requirements for group accounts operating on RAES and imposes additional obligations on group accounts. Specifically, the proposed rule change prohibits the "purchasing" of RAES rights from an OEX or SPX market maker, and requires that all group participants be afforded a reasonable participation in the group's profits and losses. As a guideline in determining whether a RAES right has been purchased, the proposed rule change states that no RAES group participant may receive a flat fee. Moreover, with respect to the sharing of profits and losses, the minimum participation level of any group member is one quarter of an equal distribution to all group members.[8] In addition, no

[1] 15 U.S.C. 78s(b)(1) (1982).

[2] 17 CFR 240.19b-4 (1989).

[3] RAES has operated since February 1, 1985, in selected OEX series. It automatically executes public customer market and marketable limit orders of ten contracts or less against participating market makers in the CBOE trading crowd at the best bid or offer reflected in the CBOE's quotation system. For a more detailed description of the System, *see* Securities Exchange Act Release Nos. 21605 (January 28, 1985), 50 FR 4823, and 22015 (May 8, 1985), 50 FR 19832.

[4] The proposal was noticed in Securities Exchange Act Release No. 24561 (June 5, 1987), 52 FR 22871. Amendment No. 1 to the proposed rule change, filed with the Commission on October 6, 1987, contained technical clarifications to the proposed rule change only and, accordingly, was not published for notice and comment.

[5] *See* Securities Exchange Act Release No. 26573 (February 24, 1989), 54 FR 9115.

[6] The eligibility standards presently recognize three ways in which a market maker may participate as a contra-broker in RAES: as an individual, as a member of a joint account, or as the nominee of a member organization. These classifications will continue to exist under the proposed rule change. The latter two types of participants generally are referred to herein as group participants, group accounts, or groups. *See* Securities Exchange Act Release No. 23180 (April 28, 1986), 51 FR 16785 (File No. SR-CBOE-85-10).

[7] In addition, a market maker must obtain a letter of guarantee from a clearing organization and maintain its principal business on the CBOE as a market maker.

[8] For example, if there are ten group participants, a minimum participation level would be a 2.5% share in profits and losses.

member may participate directly or indirectly in more than one group, and a group only may be managed by a member of the group. Therefore, a manager of a group is limited to managing only that group.[9]

The proposed rule change also specifies the maximum number of allowable participants in any one RAES group account, and clarifies the authority of the IFPC to limit group size. The proposal states that in no event may the IFPC set a maximum number higher than 50 RAES participants in any one group account, or 25% of the average number of RAES participants for the prior quarter, whichever is smaller. The IFPC must provide groups one month notice if a reduction in group size becomes necessary due to the application of this size limit. The IFPC, however, may establish lower limits on group size and impose these limits at any time.

Under the current pilot, group account members are obligated to remain on RAES for the duration of the week in which the account was logged onto the System, and are placed automatically on the System for the entire week containing the next expiration Friday. The proposed rule change increases this obligation by requiring all members of a group account to remain on RAES until the next monthly OEX expiration, once the account has been logged onto the System.[10] Moreover, under the proposed rule change, group participants may be relieved of their RAES obligations only upon approval of the IFPC. The IFPC may condition the granting of such relief upon the imposition of time periods during which applicants for relief (including all members of a group account) will be precluded from participating in RAES.

The Exchange amended its proposal in February 1989 in several respects. First, with regard to group accounts, the amended CBOE proposal provides the IFPC with the power to establish a sign off fee of $500.00 per member when the account improperly signs off the System.[11] In addition, the proposal provides the IFPC with additional authority to ensure adequate RAES participation in OEX. Specifically, if the IFPC believes there is inadequate RAES participation in OEX, the IFPC may require market makers who are members of the OEX trading crowd to log on RAES, absent reasonable justification or excuse for nonparticipation.[12] In addition, if there continues to be inadequate RAES participation, the IFPC may request participation of all market makers whether or not they are members of the OEX trading crowd.

Additionally, the Exchange proposes a phased-in implementation of the new eligibility standards. Members currently using OEX RAES will be given a period of at least two months but not more than three months from the effective date of the rule to satisfy the eligibility standards.

III. Summary of Public Comments

The Commission received four comment letters from the Fossett Corporation ("Corporation" or "Fossett"), two on the original proposal and two on the revised proposal, that state the commentator's objections to the proposed rule change.[13] In general, the Corporation believes the proposed eligibility criteria "would markedly weaken the RAES system, particularly in periods of market volatility, would reduce competition in the OEX RAES system without counter balancing benefits, and are, in short, motivated exclusively by the self-interest of the RAES system at the expense of equity market makers who helped make the system profitable." [14] Fossett viewed the amended proposal as containing minor changes that did not affect their earlier comments to the proposed eligibility criteria. Following is a summary of Fossett's criticisms of the proposed rule change.

First, the Corporation argues that the proposed rule change, by excluding non-OEX market makers, will produce unnecessary and unjustifiable burdens on competition in the OEX market, in violation of sections 6(b)(5) and 6(b)(8) of the Act. Specifically, Fossett argues that the proposed rule change will reduce competition in RAES by reducing the number of participants on the System.[15] Fossett also maintains that the proposal could lessen competition in the equity options markets by reducing the incentives to equity options traders to remain in their less active crowds.[16]

Second, Fossett argues that the proposed rule change will weaken the overall quality of trading markets at the CBOE. In particular, Fossett argues that the proposal drastically will reduce the number of OEX RAES participants.[17] According to Fossett, this reduction in the number of market participants will deprive the OEX market of needed capital and market-making expertise, and substantially increases the risk of system shutdown during periods of market volatility.[18] In addition, Fossett argues that elimination of non-OEX market makers from RAES would increase the potential for OEX market makers to seek wider spreads in the OEX market.[19] Finally, Fossett contends

[9] The IFPC may prohibit any group from participating in RAES where its appears to the Committee that such group has purchased RAES rights from members of the group, does not afford each group participant a reasonable participation in profits and losses, or is managed by a person who is not a member of the group or who has a financial interest in another group.

[10] Individual market makers who sign onto RAES are obligated to log onto the System on the next Friday prior to Expiration, to the extent that the market maker is in the OEX pit on that date. This requirement remains the same under the proposed rule change.

[11] If the Exchange decides to require sign off fees in excess of $500 per member, such a proposal would require prior review by the Commission pursuant to section 19(b) of the Act.

[12] Members who fail to abide by a request by the IFPC to participate may be subject to disciplinary action under, among others, Rule 6.20 Chapter XVII of the Exchange Rules. Such failure also may be the subject of remedial action by the IFPC, including, but not limited to, suspending a member's eligibility for participation on RAES and such other remedies as may be appropriate and allowed under Chapter VIII of the Exchange Rules.

[13] *See* letters from J. Stephen Fossett, President, Fossett Corporation, to Jonathan G. Katz, Secretary, SEC dated July 6, 1987 and October 19, 1987 ("Fossett letters No. 1 and No. 2," respectively). The revised proposal noticed in Securities Exchange Act Release No. 26573, *supra* note 5, elicited two additional letters from Fossett. *See* letters from J. Stephen Fossett, President, Fossett Corporation, to Jonathan G. Katz, Secretary, SEC, dated March 23, 1989 and July 12, 1989 ("Fossett letters No. 3 and No. 4," respectively). At the time of the comment letters, Fossett was engaged in market making at all U.S. options exchanges.

[14] Fossett letter No. 3, at 1.

[15] Fossett letter No. 3, at 4.

[16] *Id.* at 5.

[17] Specifically, the Corporation argues that, based on the CBOE's calculations in March 1989, approximately one-half of OEX RAES participants will be automatically disqualified under the proposed requirements. Moreover, the Corporation believes that the changes in joint account requirements will drive additional joint account traders from the System because they will no longer enjoy guarantees against unlimited losses. Fossett letter No. 4, at 2.

[18] Fossett letter No. 3, at 2. With regard to the increased likelihood of system shutdown during extreme market conditions, the Corporation argued that two near-collapses of OEX RAES were avoided in the past because of participation by non-OEX market makers and that, therefore, elimination of this "safety net" would substantially increase the probability of system failure during periods of extreme market volatility. Specifically, Fossett cites the 72% decrease in the number of market makers on RAES during January 26, 1987, a day on which the Dow Jones Industrial Average fell over 110 points, and the experience of October 1987 when market maker participation on OEX RAES declined 83%. Fossett letter No. 4, at 1.

[19] Fossett letter No. 1, at 3 and Fossett letter No. 2, at 6.

that the quality of the Exchange's equity options trading markets likely would be reduced as a result of the proposed rule change because it would impose a disincentive for non-OEX market makers to remain at or join equity posts in need of additional liquidity.[20]

Third, Fossett asserts that an in-person requirement is only necessary to establish and maintain an efficient two-sided market. Fossett, therefore, argues that an in-person requirement for OEX RAES participants is not necessary because the OEX market is well-established and currently provides public customers with efficiently priced markets.[21]

Fourth, Fossett argues that there is no justification for imposing maximum limits on group sizes and that "market forces should be free to operate." [22] In particular, the Corporation argues that it is "highly unlikely that any individual or entity would want to dominate OEX RAES, or could even if they desired to." [23] Moreover, the Corporation maintains that "simply managing RAES trades, as well as position limits, puts an effective ceiling on how large a group could become." [24] In fact, Fossett argues that there is "safety in numbers" and that "the more capital that stand[s] behind the RAES system, the more likley it is to withstand major market swings." [25] Further, the Corporation argues that the limitation on group size is designed to exclude successful groups from the System.

Fifth, the Corporation argues that the CBOE proposal to bolster OEX RAES participaton during periods of market stress will not be effective. Specifically, the Corporation argues that "forcing a group to remain on the system after it has exhausted its capital provides no protection to public investors."[26] The Corporation also believes that requiring OEX market maker participation in RAES will not be helpful during periods of severe market stress because once the system begins to fail it is simply too late for the IFPC to start seeking new participants. Additionally, the Corporation argues that the $500 sign off fee will not disuade RAES participants from logging off during major market swings, but may discourage some participants from signing-on. Moreover, the Corporation argues that after-the-fact disciplinary sanctions against members will not help investors whose transactions are not executed.[27]

Sixth, Fossett argues that the proposed rule change reflects the personal interest and bias of the IFPC, a committee which the Corporation contends is composed almost entirely of OEX and SPX traders with a direct financial interest in limiting and controlling access to RAES. Fossett maintains that the proposed rule change grants too much discretion and power to the IFPC by authorizing it to set group account size limits, disallow groups that "purchase" RAES if a single member does not meet the OEX/SPX market maker requirements.

Fossett also suggested that further study is required before taking action on the CBOE's proposal. Specifically, the Corporation stated that additional data is required to determine the percentage of current OEX participants that would be automatically ineligible under the proposal and the percentage of current joint accounts that would fail to satisfy the proposed requirements. In addition, Fossett suggested that further research on other potential anti-competitive effects of the proposed rule change should be undertaken, such as the potential defection of market makers from other pits to the OEX pit.

Finally, the Corporation maintained that, in the event the Commission approves the CBOE proposal, the current OEX RAES participants should be "grandfathered in." The Corporation believes that such an accommodation to current market makers would produce only a minimal impact on OEX RAES trading and permit the System to absorb the long-term consequences of the new eligibility requirements over a period of time.

The CBOE responded to Fossett's comments on both the original proposal [28] and the amended proposal.[29] In general, the CBOE believes that the proposed eligibility standards are designed to enhance the quality of the OEX market, while assuring the availability of an adequate number of market makers on RAES in OEX.[30]

Specifically, the CBOE disagreed with Fossett's arguments that the requirements will have a detrimental effect on the quality of the Exchange's options markets. While the Exchange recognizes that certain individuals and groups will be disqualified under the new standards, the CBOE believes that there still would be sufficient participants to accommodate the System.[31] Further, the CBOE asserts that even if the number of OEX RAES participants were to decrease, the CBOE under the revised standards would have the authority to increase the number of RAES participants by requiring the paticipation of OEX market makers and, if required, allow non-OEX market makers to participate. In addition, the Exchange does not agree with Fossett's assertion that the CBOE's equity options markets will deteriorate due to the migration of equity options market makers to the OEX pit. The Exchange argues first that it is skeptical that such migration will occur, and second that it has ample regulatory authority to ensure the continued quality and viability of its equity options markets.

With regard to Fossett's argument that market makers in the OEX market may seek wider spreads due to the elimination of "independent" non-OEX market makers from RAES, the CBOE's response was that the idea of "500 traders * * * act[ing] in concert to manipulate a system that executes less than 10 percent of the customer volume in OEX is preposterous." [32]

The Exchange also belives that the proposed rule change is not anti-competitive and that it will not produce unnecessary or unjustifiable burdens on competition. The CBOE noted that any member of the Exchange can participate in OEX RAES if it chooses to become a member of the OEX trading crowd. In this regard, the Exchange stated that "if the rule were in effect today, approximately 260 market-makers would be on the system. The Exchange does not believe such numbers reflect a burden on competition." [33] With respect to the limitation on group size, the Exchange believes this restriction is justified because "appropriate regulatory assurances against

[31] CBOE letter No. 2, at 3. Moreover, the CBOE notes that Fossett has modified one of its group accounts to satisfy the new standards.

[32] CBOE letter No. 2, at 3. The Exchange also said that there was no evidence suggesting that market makers in OEX have widened or would widen quotes due to RAES. Moreover, the Exchange said that there was no evidence that the presence of non-OMEX market makers had resulted in tighter OEX spreads. *See* CBOE letter No. 1, at 6–7.

[33] CBOE letter No. 2, at 4.

domination [Of OEX RAES] must be in place" [34] and because it is critical that the System not be put in jeopardy due to the withdrawal of a small number of large groups.

In addition, the CBOE disagreed with Fossett's argument that the proposal will increase the risk of System shutdown during extreme market conditions because of the safeguards in place that would ensure adequate market participation. In particular, the Exchange notes that, under the proposal: (1) Groups may not elect to leave the System during an expiration cycle once logged on; (2) a sign-off fee will be imposed on individuals who fail to meet their obligations; and (3) the IFPC, if there is inadequate RAES participation in OEX, will have the authority to require participation in OEX RAES of OEX market makers and, if there continues to be inadequate RAES participation in OEX, to allow non-OEX market makers to participate.[35]

The Exchange also disagreed with Fossett's assertion that the proposal was motivated by the self interest of members of the IFPC. The CBOE argued that the composition of the IFPC is representative of all segments of the CBOE population and that the Office of the Chairman and the Exchange Board of Directors reviewed the proposal several times. Moreover, the Exchange believed it is appropriate to provide the IFPC with broad authority over the operation of OEX RAES because the IFPC is in the best position to determine whether market maker obligations are satisfied or additional participants are necessary to RAES.

Finally, the Exchange believed it is inappropriate to "grandfather in" existing OEX RAES participants that do not choose to meet the revised requirements. The Exchange argued that the participation of such members is not necessary for the performance of RAES.

IV. Discussion

The Commission has considered carefully the opinions of the commentator and the CBOE, and finds, for the following reasons, that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange.

The Commission believes that the proposed rule change is rationally designed to ensure adequate market maker participation in RAES while limiting the system to those market makers necessary for its operation. The Commission recognizes that the proposal may result, after the phase-in period, in an immediate reduced level of market maker participation in OEX RAES. As the Fossett Corporation pointed out, and the CBOE conceded, there is a strong likelihood that the total number of market makers who both are eligible and elect to participate in RAES will decline, perhaps by as much as one-third, as a result of the exclusion of non-OEX market makers from the System. The Commission does not believe that this potential reduction, however, will be so severe as to impact negatively the efficient functioning of the System, given the anticipated total number of market makers who still will be eligible to participate in RAES.

There are over 400 market makers in the OEX/SPX pits, providing an extremely large pool of eligible market markers. On an average day there are over 200 market makers signed onto RAES, of which two-thirds would continue to be eligible under the proposed rule change. In the past this has proven to be more than adequate to ensure the continued smooth operation of OEX RAES.

The Commission, however, has been concerned that market maker participation in automatic execution systems remain adequate during periods of market volatility. [36] In this regard, the Commission does not believe the CBOE's conclusion that the proposed rule change will ensure sufficient market maker participation in OEX RAES during volatile periods is unreasonable. In particular, the CBOE has chosen to provide the IFPC with discretion to act in a variety of ways to alleviate inadequate market maker participation. Specifically, under the proposal, the IFPC has the authority to ensure the continued operation of the System, including during periods of extreme market volatility, by requesting participation from members of the OEX trading crowd, imposing sign-off fees, and requesting participation by members outside the OEX trading crowd. Moreover, the proposed RAES eligibility standards will require all members of group accounts to remain on RAES through the next expiration cycle and relief from this obligation may be conditioned upon the imposition of restrictions on all members of a group account from further access to RAES for time periods to be determined by the IFPC. The Commission believes that this sanction, coupled with the sign-off fees, is sufficiently severe so as to deter participating RAES market makers from abandoning their commitment to the System for other than good cause. In sum, the Commission believes these Exchange proposals are reasonably designed to provide for System participation during volatile market conditions.[37] Moreover, these proposals stress the affirmative obligation of the OEX trading crowd to OEX RAES and the interrelationship between the integrity of the OEX trading crowd and the System.

In addition, the Commission finds that the proposed rule change is consistent with Sections 6(b)(5) and 6(b)(8) of the Act.[38] First, the Commission does not believe the proposal is anti-competitive because the proposed rule does not impose any restrictions on CBOE market makers becoming OEX or SPX market makers. Second, even if the proposal imposes a burden on competition, the Commission still believes that any such effect is necessary because the proposal is in furtherance of another purpose of the Act, the protection of investors and the maintenance of fair and orderly markets.[39] Specifically, the Commission finds that the proposed rule change protects investors by ensuring the continued availability of RAES to public customers.[40] Moreover, as the

[34] CBOE letter No. 1, at 6.

[35] CBOE letter No. 2, at 1.

[36] *See* Division of Market Regulation, *The October 1987 Market Break* (February 1988).

[37] On Friday, October 13, 1989, the Dow Jones Industrial Average dropped 190 points, with most of the decline coming in the last hour of trading. On Monday, October 16, there were over 200 market markers on OEX RAES, of which ¾ were OEX/SPX market makers. If the proposed rule change were in place during that period, at a minimum there would have been sufficient market maker participation for the System (and perhaps even more participation due to the proposal's requirements).

[38] Section 6(b)(5) prohibits an exchange from engaging in "unfair discrimination between customers, issuers, brokers, or dealers * * *." Section 6(b)(8) provides that the rules of an exchange should not impose a "burden on competition not necessary or appropriate in furtherance of the purposes of [the Act]."

[39] In the legislative history to the Securities Act Amendments of 1975, Congress directed "the Commission to remove existing burdens on competition and to refrain from imposing, or permitting to be imposed, any new regulatory burden on competition 'not necessary or appropriate in furtherance of the purposes' of the Act." The legislative history also states that the Commission is not required to justify its actions as being the least anti-competitive manner of achieving a regulatory objective. *See* Senate Comm. on Banking, Housing & Urban Affairs, *Report to Accompany S. 249*, S. Rep. No. 94–75, 94th Cong., 1st Sess. 13, reprinted in 1975 U.S. Code Cong. & Ad. News 179. *See also Silverman* v. *SEC*, 890 F.2d 193, 195–200 (7th Cir. 1979); and *Bradford Nat. (C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants or Others

VOL 54 ISS 210 NO 1 1989 UMI

Commission has said previously in an order approving revised market maker eligibility standards for RAES for SPX and equity options:

We believe an exchange reasonably may differentiate for certain purposes between those broker-dealers who regularly accommodate customer order flow and perform other market making responsibilities in a particular options class—*i.e.*, crowd market makers—from those who do not regularly perform these functions for that class. It is consistent with the Act for an exchange to accord to, and demand from, the former group certain privileges and responsibilities such as access to and trading with, orders entered through its automatic execution facilities, when there is a legitimate goal to be furthered thereby. In the present case we find such a purpose in the Exchange's need to ensure levels of in-person market maker participation sufficient to accommodate customer order flow in its RAES system.[41]

The Commission also does not believe, as argued by Fossett, that the proposed rule change is inconsistent with the Act because it may negatively effect the liquidity of the Exchange's equity options markets by drawing market makers to the OEX crowd. The Commission has not been presented with any evidence to indicate that this would in fact occur. In addition, the size of the OEX crowd is related directly to the order flow in that option class, and the availability of an automatic execution system would have at most a minimal effect on this relationship.

The Commission does not believe that the exclusion of non-OEX/SPX market makers from RAES will, in and of itself, result in the development of wider bid-ask spreads in the OEX market. Fossett argues that the participation of "independent" equity traders in RAES would help prevent this possibility. There is no evidence, however, to support that OEX quote spreads are positively or negatively effected by non-OEX market makers. Further, the Commission does not believe it is likely that approximately 400 OEX traders would act in concert to widen quote spreads in the OEX market to increase their profits from RAES trades, especially when only 7.8 percent of total OeX contract volume is executed through RAES.[42]

The Commission also does not agree with Fossett's argument that the limitation on group size to a maximum of 50 participants is unjustified or that it is proposed solely for the purpose of excluding successful groups. The Commission believes this limitation is justified by the CBOE's need to prevent the domination of RAES by any one group or groups and limit the risk of a System failure should a dominant group or several groups depart from the System.[43] The Commission also believes, for the same reasons, that the CBOE is justified in seeking authority to increase and decrease group size limits within the parameters imposed by the proposed rule change.[44]

Moreover, the Commission does not find that the proposed rule change is motivated by the self-interest of the index option traders on the IFPC. The CBOE has represented to the Commission that the IFPC is composed of a diverse range of CBOE members.[45] In addition, the Commission notes that the proposed rule change was duly considered, modified, and approved by the CBOE Board of Directors, a body including representatives of all CBOE constituencies, as well as public members.

The Commission does not believe that any further studies are required before the Exchange's proposal is adopted. The Exchange has provided data indicating that after the proposed changes are effective there will be sufficient OEX participants, including joint accounts, to maintain the continued performance of the System. The Commission also believes it is inappropriate to withhold approval of the pilot program so that studies can be conducted on the potential anti-competitive effects of defections of market makers from other pits to the OEX pit. The Commission notes that this proposal is being approved for only a six-month pilot basis period. During this period, the CBOE will monitor the program to determine if any of the problems highlighted by Fossett do in fact occur. In the event complications do arise, then the CBOE would need to address such problems before the pilot could be extended or approved on a permanent basis.

Finally, the Commission does not believe it is appropriate to "grandfather in" current participants who would not satisfy the new eligibility standards. The Commission believes their inclusion is not necessary for the successful operation of the System. Moreover, the Exchange proposal provides such individuals with a phase-in period to meet the new eligibility requirements if they desire to continue their participation in OEX RAES.

V. Conclusion

The Commission has reviewed carefully the proposed rule change and has concluded that the rule provides for adequate and proper regulation of RAES and the OEX market. Accordingly, the Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder and, in particular, the requirements of section 6.[46]

It is therefore ordered, pursuant to section 19(b)(2) of the Act,[47] that the proposed rule change (SR–CBOE–87–22) be and hereby is approved for a six-month period.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[48]

Dated: October 24, 1989.

[41] Securities Exchange Act Release No. 25995 (August 15, 1988). In accord with *Clement* v. *SEC*, 674, F.2d 641 (7th Cir. 1982), the Commission has considered the competitive aspects of the proposed rule change and balanced them against the need for ensuring adequate participation on OEX RAES. For the reasons contained in this order, the Commission believes that not only are any competitive concerns of the proposed rule change minimal, but that the goals of ensuring adequate OEX RAES participation far outweigh any burdens on competition.

[42] CBOE Statistics, June 1989.

[43] *See In the Matter of the Application of Fossett Corporation,* Securities Exchange Act Release No. 27125 (August 10, 1989).

[44] The CBOE has indicated that changes in group size will not be made arbitrarily. The IFPC will consider factors such as domination of RAES by a particular group, position limits, and financial risk.

[45] According to the CBOE, of the 18 members of the IFPC, 8 are individual market makers in OEX, 4 are nominees of firms that make markets in numerous option classes, 4 are floor brokers for member firms, and 2 are independent floor brokers.

Self-Regulatory Organizations; Midwest Clearing Corporation; Filing of Proposed Rule Change Establishing Procedures Regarding the Processing of Valued Positions on Mandatory and Non-Mandatory Reorganizations

October 25, 1989.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"), 15 U.S.C. 78s(b)(1), notice is hereby given that on August 3, 1989, the Midwest Clearing Corporation ("MCC") filed with the Securities and Exchange Commission the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization.[1]

---

[1] Subsequently, MCC amended the filing to provide for Commission review under section 19(b)(2) of the Act and to request accelerated approval of the proposal. Letter from Jeffrey E. Lewis, Associate Counsel, MCC, to Esther Severoon, Jr., Branch Chief, Division of Market Regulation, Commission, dated October 20, 1989.

Continued

II. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change.

The proposed rule change of MCC establishes procedures regarding the processing of valued positions on mandatory and non-mandatory reorganizations.

I. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections (A), (B) and (C) below, of the most significant aspects of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The purpose of the proposed rule change is to implement procedural changes regarding the processing of value positions on mandatory and non-mandatory reorganizations. The changes clarify MCC's current procedures in changing the status of an item from Continuous Net Settlement ("CNS") to Trade-for-Trade eligible because of the fact that the item is undergoing a reorganization. In the case of non-transferring bankruptcies (e.g., items either bankrupt or undergoing bankruptcy) or other non-transferring issues (e.g., items non-transferable because, among other reasons, of the lack of a valid transfer agent), MCC will designate positions in these items as eligible for clearance but "frozen", unless MCC possesses the required denominational breakdown to withdraw such positions to Participants. Once these items are cleared and securities are finally withdrawn, MCC will change the eligibility status from frozen to ineligible.

In the case of any reorganization involving the distribution of (or a CUSIP or item name change) an existing CNS eligible security, MCC will clear the Participant's original security via a CNS next-day settling trade (for no money) versus an internal MCC processing account. MCC will next establish the Participant's CNS value position in the distributed or new security via a CNS next-day settling trade (for no money) versus the same internal processing account. As a result of this internal processing, Participants will then have a position in the *distributed* or *new* security.

If the distributed or new security is not or will not be made CNS eligible, MCC will designate this security eligible for clearance in the Trade-for-Trade only. MCC will establish the Trade-for-Trade status similar to the procedures outlined above and the Participant's position in such security will be established via a trade versus MCC's internal processing account. (The value of the trade will be established based on the value of the original underlying securities as reflected on the prior business days' Net Position Report). MCC will also apply these procedures if it determines to change the eligibility status of a security from CNS eligible to Trade-for-Trade eligible only.

As a result of the foregoing internal processing, Participants will have a position in the security in the Trade-for-Trade System, rather than CNS. (However, if the Participant's position was originally entered and reported in the CNS System, MCC's existing Trade Guarantee Policy (dated June 26, 1987) will apply even though the position is later designated as Trade-for-Trade eligible only).

The proposed rule change also provides similar procedures relating to the processing of (i) non-mandatory reorganization offers involving the potential future distribution of a presently unknown money amount and, (ii) securities undergoing reorganization. With regard to the latter, MCC will clear the item from CNS to Trade-for-Trade through trades processed through MCC's internal processing account. As in the case of mandatory distributions or CUSIP or name changes, MCC will continue to monitor the resulting Trade-for-Trade positions and may mark such positions to the market.

MCC believes that the proposed rule changes are consistent with Section 17A of the Act in that it promotes the prompt and accurate clearance and settlement of securities value positions undergoing reorganizations.

(B) Self-Regulatory Organization's Statement on Burden on Competition

MCC does not believe that any burdens will be placed on competition as a result of the proposed rule change.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants or Others

MCC has not received any comments from Participants on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission

Within 35 days of the date of publication of this notice in the Federal Register or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and published its reason for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change or,

(B) Institute proceedings to determine whether the proposed rule change should be approved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities & Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street, NW., Washington, DC. Copies of such filing will also be available for inspection and copying at the principal office of the above-referenced self-regulatory organization. All submissions should refer to file number SR–MCC–89–8 and should be submitted by November 22, 1989.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Jonthan G. Katz,

Secretary.

BILLING CODE 8010-01-M

VOL 54 NO 1 1989 ISS 210 UMI

[Release No. 34-27361; File No. SR-NSCC-89-10]

Self-Regulatory Organizations; National Securities Clearing Corporation; Order Granting Temporary Approval of a Proposed Rule Change Concerning Telecommunications Systems

October 25, 1989.

On July 19, 1989, the National Securities Clearing Corporation ("NSCC"), pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"), filed a proposed rule change to allow NSCC to operate its telecommunications services which facilitates the automated transmission of data between members and the computer system operated by Securities Industry Automation Corporation ("SIAC"), NSCC's facilities manager. On August 15, 1989, the Commission published notice of the proposed rule change to solicit comment from interested persons.[1] No comments were received. This order approves the proposal on a temporary basis until March 31, 1990.

I. Description

The proposal would authorize NSCC to operate a data communications service, which establishes a communications link between the member's main frame computer or personal computer (PC) and SIAC's main frame computer. For members using main frame computers, NSCC will prescribe the input and output formats for the transmission or receiving of information to or from SIAC. Members may also access SIAC's main frame computer using NSCC's PC Access System for direct access between SIAC and the NSCC member [2] or the IBM information exchange communications ("information exchange") system, for input and output of data. The information exchange is a centralized service bureau that allows NSCC members to communicate with SIAC's computers by collecting data from information exchange users for retransmission to NSCC and by collecting data from NSCC for retransmission to information exchange users.

An NSCC member may connect to the SIAC computer through: (1) A dedicated telephone line, which is installed directly between the member's system and a SIAC telecommunications port and provides direct communication access; (2) a dial-up capability which allows the member to dial directly to a SIAC port dedicated to that member at SIAC; or (3) a dial-up capability that allows the member to dial into a SIAC telecommunications device that allocates the connection to one of five telecommunications ports. NSCC will allocate twenty-five members electing the last communication option to each device, known as a hunt group. Only five of twenty-five members may be connected at any point in time. Each member is provided a telephone number of his group. The call will hunt to one of four other numbers associated with the other ports in the hunt group if the first port is being utilized. In the event that a member is unable to connect with one of the ports in the hunt group because all ports are being utilized, the member may call the SIAC Help Desk and SIAC will provide temporary access to a different port, or the member may redial at a later time.

In an effort to secure access to the system, NSCC has developed a four-tier system of intruder blocks for dial-up users which prevent unauthorized access into NSCC's system. As outlined below, each block must be passed before data can actually be entered:

(a) *Level One:* (Physical Connection) There must be a match between the physical connection of the member's main frame computer of PC (modem type, line speeds and protocol) and the SIAC port accessed by the telephone number.

(b) *Level Two:* (Computer Operating System Connection) Each member is provided a unique communication ID (identifying the communication link) when first connected to SIAC's main frame. This ID is checked each time the member tries to access the SIAC Computer. The member will not be able to enter Job Control Language (JCL) (which is a programming language used to communicate with a main frame), unless this ID is correct.

(c) *Level Three:* (Job Entry System "JES" Identification) The member's system sends a unique JES identification ID and a unique password in JCL in order to log onto JES. Each member has his own version of JCL in order to define himself to the SIAC system. The JES identification ID and JCL password are checked for validity and cross checked against the communication ID stored in the SIAC system. The JES identification ID and JCL password and JES identification will only allow the member to enter JES. JES is a set of codes which allows a member to transmit data for subsequent processing or receive data that has already been processed. The member will be locked out of other SIAC systems which might allow for other tasks. Once the member is logged onto JES he can inform the system that data is forthcoming or request transmission of data to him.

(d) *Level Four:* (Data Entry) Another unique password identifying the member to the application programs is entered with this JCL and then used to allow the member access to SIAC's Datatrak system. Datatrak routes data to the appropriate application program for subsequent processing. In addition, Datatrak checks certain key data elements to assure that it contains the proper date and ID and data format. Finally, Datatrak checks the total number of records sent and compared it with a masterfile of the usual number of records sent by a particular member. If any of the information is incorrect, the data will either be rejected or held in abeyance and sent to a Datatrak control desk, where the member is contacted to investigate the problem and determine further action.

If a member fails to connect at any level in the process after three attempts, his communication ID will be invalidated and all access denied. To access the system thereafter, the member must contact SIAC security staff. Once the problem is resolved, the member will be re-activated by SIAC security.

II. NSCC's Rationale

NSCC believes the proposed rule change promotes the prompt and accurate clearance and settlement of securities transactions by providing members with automated, secure and cost effective access to NSCC's services. NSCC also believes that its data communications system provides adequate safeguards to ensure safety and security of the system and to prevent unauthorized access. Therefore, NSCC believes that the proposed rule filing is consistent with the requirements of section 17A the 1934 Act.

III. Discussion and Conclusion

The Commission has preliminarily determined that the proposal facilitates the prompt and accurate clearance and settlement of securities transactions consistent with section 17A of the Act. Moreover, section 17A(a)(1) of the Act expressly encourages the use of automated systems to make the processing of securities transactions more prompt and efficient.

Use of dial-up connections will allow greater appreciation in NSCC's automated communications system. The use of dial-up connections, however, raises safety and security concerns. Therefore, in order to assess the adequacy of NSCC's data communications service the Commission is approving the proposal on a temporary basis until March 31, 1990.

It is therefore ordered, that NSCC's proposed rule change (NSCC-89-10) be, and is hereby approved on a temporary basis until March 31, 1990.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Jonathan G. Katz,
Secretary.

BILLING CODE 8010-01-M

[1] *See* Securities Exchange Act Release No. 27143 (August 15, 1989) 54 FR 34845 (August 22, 1989).

[2] NSCC's PC Access System is a PC communication linkage which will eliminate the IBM information exchange so that data will pass directly between SIAC and the member's PC. Members are currently being converted from the IBM information exchange to NSCC PC Access. Members can utilize most types of main frame computers, but the PCs, if used, must be either IBM or IBM clones.

[Rel. No. 34-27394; File No. SR-OCC-89-12]

Self-Regulatory Organizations; Proposed Rule Change by Options Clearing Corporation Relating to the Use of the Theoretical Intermarket Margin System for Equity Options

October 26, 1989.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"), 15 U.S.C. 78s(b)(1), notice is hereby given that on October 3, 1989, The Options Clearing Corporation ("OCC") filed with the Securities and Exchange Commission the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change would allow OCC to utilize the Theoretical Intermarket Margin System, which OCC currently uses to calculate margin for non-equity options, to calculate margin for equity options. The proposed rule change would also allow OCC to eliminate the 50% haircut for product group margin credits in firm and market-marker/specialist/registered trader accounts.

II. Self-Regulatory Organization's Statement of the Purpose of and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

General

The purpose of the proposed rule change is to permit OCC to implement two of the recommendations made in the special study entitled "The Backup System," conducted by a Subcommittee (referred to herein as the "Subcommittee") of the Margin Committee of OCC's Board of Directors. The first recommendation is that OCC margin stock options using the same system (called the "Theoretical Intermarket Margin System" or "TIMS") that it currently uses for non-equity options.[1] (As applied to stock options, TIMS is sometimes referred to herein as "Equity TIMS" and, as applied to non-equity options, TIMS is sometimes referred to herein as "Non-Equity TIMS.") This recommendation is based on the Subcommittee's conclusion that the performance of Non-Equity TIMS was superior to the performance of OCC's current equity margin system during the market break of October 1987, among other reasons because Non-Equity TIMS generated a better assessment of OCC's risk exposure, with less propensity to either over- or under-margin positions.[2]

The second recommendation of the Subcommittee that would be implemented by this proposed rule change is that OCC eliminate the 50% haircut for product group margin credits in firm and market-marker/specialist/registered trader accounts. This recommendation is further described below in the discussion of rule 602(c)(3) (as redesignated).

OCC installed TIMS for non-equity options in April 1986. At that time, constraints in OCC's processing systems prohibited the nightly computation of equity option margins using TIMS in a timely and efficient manner. Those systems constraints have since been eliminated, so that OCC's systems are now capable of efficiently performing TIMS calculations for equity options overnight.

Equity TIMS would treat all of the stock options in an account as an integrated portfolio, use options price theory to project the cost of liquidating the portfolio in the event of an assumed "worst-case" change in the price of the underlying securities, and set the margin requirement at a level sufficient to cover that cost. In all of these respects, Equity TIMS is analytically identical to Non-Equity TIMS. However, Equity TIMS is less complex than Non-Equity TIMS, because all stock option class groups (a "class group" of options consists of all puts and calls relating to the same underlying asset) are combined into a single product group (a "product group" consists of all class groups whose underlying assets exhibit price correlation), whereas Non-Equity TIMS, because it is applied to a more diverse range of products, accommodates class groups that are not assigned to any product group, and also accommodates several product groups.

Equity TIMS is described in OCC's rules in a new rule 601, which would replace existing rules 601 ("Margins on Short Positions in Stock Options") and 602 ("Margins on Exercised Stock Option Contracts"). Non-Equity TIMS is described in existing rule 602A, and that Rule would be redesignated as Rule 602 as part of this rule change.

Operation of Rule 601

Revised Rule 601 is structured to parallel Rule 602 (as redesignated). Rule 601(a) contains a general statement to the effect that each Clearing Member, on each business day, must deposit margin calculated in accordance with Rule 601 on the stock option positions in each of its OCC accounts.

Paragraph (b) sets forth definitions of terms used in Rule 601. The definitions of "stock option product group" in

[1] OCC proposed to amend its rules to implement TIMS for non-equity options in File No. SR-OCC-86-21. That proposed rule change and the Commission's Release No. 34-23167 (April 22, 1986) approving the proposed rule change contain general descriptions of the operation of TIMS, and a similar description is not included in this filing.

The "Theoretical Intermarket Margin System" methodology is "theoretical" because it relies on options price theory, and "intermarket" because its focus on price movements in underlying assets permits it to margin as a single integrated portfolio all option, commodity future, and stock positions in an account. The application of TIMS to stock options, however, does not involve any intermarket margining.

[2] A more complete comparison of Non-Equity TIMS and OCC's current equity margin system is set out on pages 23-29 of "The Backup System."

BEST COPY AVAILABLE

VOL 54 ISS 210 NO 1 1989 UMI

subparagraph (b)(3) and "additional margin" in subparagraph (b)(7) are simplified in comparison to their Rule 602 counterparts because all stock option class groups are classified in one product group, as noted above. The definitions of "premium margin" in subparagraph (b)(4) and "marking price" in subparagraph (b)(6) are simplified in comparison to their Rule 602 counterparts because they need address only stock options, rather than options on several different underlying assets. The definition of "offsetting assigned short contract" is based upon the definition in existing Rule 601(a).

Rule 601(c) describes the calculation of margin for firm and market-maker/specialist/registered trader accounts. The paragraph differs from Rule 602(c) because all stock option class groups are combined into one stock option product group. A separate subparagraph describing "Class Group Margin" is therefore unnecessary, as is a sentence describing the summation of margin credits and requirements for the various product groups and class groups parallel to the first sentence of Rule 602(c)(3).

Subparagraph 601(c)(2) provides that any margin credit for the stock option product group may be applied, without a haircut, against any non-equity option margin requirement of the Clearing Member in the same account. This provision is further discussed below in the discussion of changes to Rule 602.

Rule 601(d) describes additional provisions that apply to the calculation of margin in customers' accounts and firm non-lien accounts. The paragraph contains no counterpart to Rule 602(d)(4), since there is only one stock option product group, but otherwise parallels Rule 602(d).

Subparagraph 601(d)(4) is intended to clarify that exercised options will be deemed for margin calculation purposes to be segregated (*i.e.*, not subject to an OCC lien, and so not entitled to margin credit) on and after the business day following the date of exercise, unless there are offsetting assigned short contracts in the same account. This provision is intended to assure that OCC gives no margin credit for long positions whose value might not be available to OCC if OCC were to suspend the Clearing Member prior to settlement.

Rule 601(e) states that the margin requirement for stock options terminates when OCC receives satisfactory evidence of completion of broker-to-broker settlement, or on the exercise settlement date for settlements effected through stock clearing corporations, as applicable.

Rule 601(f) provides that no margin credit will be extended in respect of pledged long positions.

Interpretation .01 to Rule 601 parallels Interpretation .01 to Rule 602. Interpretation .02 parallels Interpretation .02 to Rule 602, but reflects OCC's determination that the price correlation among stocks requires a 70% haircut of any additional margin credit calculated for a stock option class group before the credit may be taken into the calculation of the overall additional margin requirement for the stock option product group. Interpretation .03 sets out the provisions relating to "cash options" currently set out in Interpretation .01 to Rule 601.

Changes in Rule 602 (As Redesignated)

Rule 602(c)(3) is amended to implement the Subcommittee's recommendation to eliminate the 50% haircut that is currently applied to any non-equity product group margin credit before the credit is taken into the calculation of the overall non-equity margin requirement for a firm or market-maker/specialist/registered trader account. The reason for the change is that any excess long option value at the product group level has already been subjected to haircutting, in the course of combining the component class groups into the product group, to account for market risk. The haircut at the product group level is therefore unnecessary to account for market risk, and results in over-margining of accounts. Rule 602(c)(3) as amended would also permit 100% of any overall non-equity margin credit to be applied to any equity margin requirement, again because the excess long option value reflected in the margin credit has already been subjected to haircutting to account for market risk. New Rule 601(c)(2) (which addresses only the application of an Equity TIMS margin credit to a Non-Equity TIMS margin requirement, because Equity TIMS has only one product group) parallels revised Rule 602(c)(3) by permitting 100% of any overall equity margin credit to be applied to any non-equity margin requirement.

The changes in Rule 602(d)(2) are primarily to clarify that the deemed segregation described therein is effective for margin deposited from and after the opening of business on the business day after exercise, not simply for margin calculated from and after the opening of business on the business day after exercise. Subparagraph (d)(2) of new Rule 601 parallels revised subparagraph (d)(2) of Rule 602.

Changes in the By-Laws and Other Rules

Paragraph (111) of Article I, section 1 of the By-Laws is changed to conform the paragraph to the changes in Rules 602(d)(2) described above.

References in other Rules to Rule 602A are changed to reflect the redesignation of the Rule as Rule 602.

The proposed rule change is consistent with the purposes and requirements of Section 17A of the Act because I would enhance OCC's system of safeguards and further the public interest by applying TIMS, which OCC's experience has shown to generate a more accurate assessment of OCC's risk exposure and to have less propensity to over- or under-margin option positions, to stock options. In addition, by eliminating the 50% haircut at the product group level, the proposed rule change would reduce the margin requirements of Clearing Members without significantly diminishing the protection afforded to OCC by its margin system.

B. Self-Regulatory Organization's Statement of Burden on Competition

OCC does not believe that the proposed rule change would impose any burden on competition.

C. Self-Regulatory Organization's Statement of Comments on the Proposed Rule Change Received from Members, Participants or Others

Written comments were not and are not intended to be solicited by OCC with respect to the proposed rule change and none has been received by OCC.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding, or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or,

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the

Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street, NW., Washington, DC 20549. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number in the caption above (File No. SR-OCC-89-12) and should be submitted by November 22, 1989.

Jonathan G. Katz,
Secretary.

[FR Doc. 89-25745 Filed 10-31-89; 8:45 am]

BILLING CODE 8010-01-M

[Rel. No. IC-17195; 812-7280]

California Portfolio et al.; Application

October 25, 1989.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of application for exemption under the Investment Company Act of 1940 (the "Act").

Applicants: California Portfolio ("Muni California Portfolio") and New York Portfolio ("Muni New York Fund"), each a series of The Muni Bond Funds; American Capital California Tax-Exempt Trust ("American Capital Trust"); New York Municipal Portfolio ("American Capital Portfolio"), a series of American Capital Tax-Exempt Trust; Mutual Management Corp. ("Mutual"); and American Capital Asset Management, Inc. ("ACAM") (collectively, the "Applicants").

Relevant 1940 Act Sections: Exemption requested under section 17(b) of the Act from the provisions of section 17(a) of the Act.

Summary of Application: Applicants seek an order of exemption to the extent necessary to permit (1) Muni California Portfolio to acquire all or substantially all the assets of American Capital Trust in exchange for shares of Muni California Portfolio; and (2) Muni New York Fund to acquire all or substantially all the assets of American Capital Portfolio in exchange for shares of Muni New York Fund.

Filing Dates: The application was filed on March 24, 1989, and was amended and restated on September 25, 1989.

Hearing of Notification of Hearing: An order granting the application will be issued unless the SEC orders a hearing. Interested persons may request a hearing by writing to the SEC's Secretary and serving Applicants with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on November 17, 1989, and should be accompanied by proof of service on the Applicants, in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing the the SEC'S Secretary.

ADDRESSES: Secretary, SEC, 450 Fifth Street NW., Washington, DC 20549. Applicants, c/o Smith Barney, Harris Upham & Co., Incorporated, 1345 Avenue of the Americas, New York, New York 10105, Attention: Christina T. Sydor.

FOR FURTHER INFORMATION CONTACT: Stuart Horwich, (202) 272-3035, or Karen L. Skidmore, Branch Chief, (202) 272-3033 (Office of Investment Company Regulation).

SUPPLEMENTARY INFORMATION: Following is a summary of the application; the complete application is available for a fee from either the SEC's Public Reference Branch in person or the SEC's commercial copier who can be contacted at (800) 231-3282 (in Maryland (301) 258-4300).

Applicants' Representations

1. Muni California Portfolio and Muni New York Fund ("Acquiring Funds") are two of four series of The Muni Bond Funds, a Massachusetts business trust registered under the Act as an open-end, non-diversified, management investment company. Muni California Portfolio seeks to pay its shareholders as high a level of monthly income exempt from Federal income taxes and from California personal income taxes as is consistent with prudent investing. Muni New York Fund seeks to pay its shareholders as high a level of monthly income exempt from Federal income taxes and from the personal income taxes of New York State as is consistent with prudent investing. Mutual serves as the investment adviser for each of the Acquiring Funds.

2. American Capital Trust is a Massachusetts business trust registered under the Act as an open-end, diversified, management investment company. American Capital Trust seeks as high a level of income exempt from Federal and California personal income tax as is consistent with its investment policies. American Capital Portfolio (together with American Capital Trust, "Acquired Funds") is one of four series of American Capital Tax-Exempt Trust, a Massachusetts business trust registered under the Act as an open-end, diversified, management investment company. American Capital Portfolio is a non-diversified portfolio that seeks as high a level of income exempt from New York State, New York City and Federal incomes taxes as is consistent with its investment policies. ACAM serves as the investment adviser for each of the Acquiring Funds.

3. Mutual, which is registered with the Commission as an investment adviser, is a majority-owned subsidiary of Smith Barney, Harris Upham & Co. Incorporated ("SBHU") with the remaining minority interest owned by Smith Barney Inc. ("SBI"), parent company of SBHU. SBI is a wholly-owned subsidiary of Primerica Corporation ("Primerica").

4. ACAM, which is also a registered investment adviser, is a wholly-owned subsidiary of American Capital Management & Research, Inc. ("ACMR"). Approximately 83 percent of ACMR's outstanding stock is owned by Associated Madison Companies, Inc., a wholly-owned subsidiary of Primerica, and the remaining 17 percent is publically-held and traded on the New York Stock Exchange. As a result of these relationships, Mutual and ACAM are under the common control of Primerica.

5. Each Acquiring Fund proposes to acquire all or substantially all of the assets of its corresponding Acquired Fund in exchange for shares of the Acquiring Fund. The Acquired Funds will endeavor to discharge all of their known liabilities and obligations prior to the closing date, as defined in the Agreement and Plan of Reorganization. Neither of the Acquiring Funds has unamortized organizational expenses; however, each Acquired Fund presently has unamortized organizational expenses as an asset. The investment adviser of each Acquired Fund will redeem the initial shares issued at a price that will be reduced by the unamortized organizational expenses, so that immediately prior to the mergers neither the Acquiring or the Acquired Funds will have any unamortized organizational expenses. Each Acquiring Fund will assume all liabilities, expenses, costs, charges and reserves or

obligations or the corresponding Acquired Fund reflected on an unaudited statement of assets and liabilities of the corresponding Acquired

well as the performance of similar funds; (6) the terms and conditions of the Reorganizations and whether the Reorganizations would result in dilution

a majority of the outstanding shares of the Acquired Fund.

Applicants' Legal Analysis

a. The Trustees of the Acquiring Funds and the Acquired Funds, including a majority of the Trustees who are not interested persons of the Acquiring or Acquired Funds shall have determined:

Hearing requests also should be accompanied by proof of service on the Applicant in the form of affidavits or, for lawyers, certificates of service. Requests

significantly lower than would otherwise have been the case, and the remaining shareholders of the Applicant would be harmed. Following discussions

VOL 54 ISS 210 NO 1 1989 UMI

obligations or the corresponding Acquired Fund reflected on an unaudited statement of assets and liabilities of the corresponding Acquired Fund as of the close of business on the closing date. Each Acquiring Fund will assume only those liabilities reflected in that unaudited statement of assets and liabilities and will not assume any other liabilities, whether absolute or contingent, known or unknown, accrued or unaccrued. The investment adviser to the Acquired Funds will be responsible for all liabilities, if any, not assumed by the Acquiring Funds. Each of these transactions (individually, a "Reorganization," and collectively, the "Reorganizations") is a separate transaction that is unaffected by whether the other Reorganization is consummated.

6. A form of the Plan, including the consideration to be paid or received by the funds involved, has been reviewed by the Trustees of the Acquiring and Acquired Funds, including the non-interested Trustees, and they have approved going forward with the Reorganization proposals presented to them. Each of the Trustees of the Acquiring and Acquired Funds, with respect to their fund, has also concluded that the Reorganization is in the best interests of the shareholders of the fund and will not result in the dilution of the interest of any of the existing shareholders of the fund. These findings and the bases therefor have been recorded fully in the minutes of each Acquiring and Acquired Fund.

7. In determining whether to recommend approval of the Reorganizations to shareholders of the Acquired Funds and in approving the terms of the proposed Reorganizations, the Trustees of the Acquiring Funds and the Acquired Funds (including the non-interested Trustees, with the advice and assistance of independent legal counsel) made an inquiry into a number of matters and considered the following factors, among others: (1) The capabilities and resources of each Acquiring Fund's investment adviser and principal underwriter in the areas of investment management and marketing; (2) the compatibility of the funds' investment objectives, policies and restrictions, as well as service features available to shareholders in the respective funds; (3) expense ratios and published information regarding the fees and expenses of the Acquiring and the Acquired Funds; (4) sales charges, distribution fees and methods of distribution of the funds; (5) the comparative investment performance of each Acquiring and Acquired Fund, as well as the performance of similar funds; (6) the terms and conditions of the Reorganizations and whether the Reorganizations would result in dilution of shareholder interests; (7) the advantages to the Acquiring and Acquired Funds as well as to Mutual and ACAM and their respective affiliates; (8) the costs of the Reorganizations to be borne by the respective investment advisers; and (9) the tax consequences of the Reorganizations.

8. The number of shares to be issued to the Acquired Fund will be determined by dividing the aggregate value of the Acquired Fund's net assets by the net asset value per share of the Acquiring Fund computed as of the close of business on the closing date. Portfolio securities of the Acquired Fund will be valued in accordance with the valuation practices of the Acquiring Fund on the basis of bid prices provided by a pricing service.

9. As soon as practicable after the closing date, an Acquired Fund will liquidate and distribute pro rata to its shareholders of record as of the close of business on the closing date the shares of the Acquiring Fund received by the Acquired Fund in the Reorganization. As promptly as practicable after the liquidation of the Acquired Fund, and in no event later than twelve months from the date of the Plan, each Acquired Fund will be terminated pursuant to the provisions of the Agreement and Declaration of Trust.

10. The Acquiring and Acquired Funds will not bear any expenses of the Reorganizations. The respective investment advisers of the Acquiring and Acquired Fund parties to a Reorganization will each bear their respective expenses of the Reorganization. The Reorganizations are intended to be a plan of reorganization within the meaning of section 368(a)(1)(C) of the Internal Revenue Code of 1986.

11. Shareholders of each Acquired Fund will be sent a prospectus/proxy statement describing the proposed Reorganization; such prospectus/proxy statement will disclose succinctly the fees and expenses that will be borne by the shareholders of the Acquired Fund after the Reorganizations as shareholders of the Acquiring Fund. In addition, this statement will disclose the projected expense ratios of the combined funds based upon the Acquiring Fund's internally developed estimates as of a recent date. Consummation of each Reorganization is contingent upon receipt of the affirmative vote of the holders of at least a majority of the outstanding shares of the Acquired Fund.

Applicants' Legal Analysis

1. Section 17(a) of the Act generally prohibits purchases and sales between a registered investment company and affiliated persons. It was included to protect shareholders by prohibiting a purchase or sale transaction when a party to the transaction has both the ability and a pecuniary incentive to influence the actions of the investment company. In Investment Company Act Release No. 10666 (Oct. 3, 1979), the staff expressed the view that where two investment companies have in common an investment adviser, directors, or officers, the companies may be considered to be under common control and, therefore, affiliated persons of each other; thus their merging, consolidating or combining could be considered to be a prohibited purchase or sale under section 17(a) of the Act.

2. Rule 17a–8 generally exempts from the prohibitions of section 17(a) mergers involving registered investment companies that are affiliated persons solely by reason of having a common investment adviser, provided certain findings are made. However, while the Acquired and Acquiring Funds have investment advisers that are under common control, they have no common directors, officers or investment advisers, and therefore, the exemption provided by Rule 17a–8 is not available. Nevertheless, the elements which make the combinations specifically contemplated by Rule 17a–8 consistent with the policies of the Act exist with respect to the proposed Reorganizations and Applicants note that the Trustees of each fund party to these Reorganizations, including the non-interested Trustees, have made all the findings required by Rule 17a–8 and are in compliance with that rule.

3. Applicants respectfully submit that the proposed Reorganizations satisfy the standards set forth in section 17(b). The Trustees of the Acquiring and Acquired Funds have reviewed the consideration paid for the shares and concluded that the terms are fair and do not involve overreaching, and that the proposed Reorganizations are consistent with the policies of each of the funds.

Applicants' Conditions

Applicants agree to the following conditions if the requested order is granted:

1. The transactions described in the application will conform to the requirements of Rule 17a–8 under the Act, as follows:

a. The Trustees of the Acquiring Funds and the Acquired Funds, including a majority of the Trustees who are not interested persons of the Acquiring or Acquired Funds shall have determined:

(i) That participating in the transaction is in the best interests of the Acquiring and Acquired Funds; and

(ii) That the interests of existing shareholders of the Acquiring and Acquired Funds shall not be diluted as a result of effecting the transaction.

b. Such findings, and the basis upon which the findings were made, shall have been recorded fully in the minute books of the Acquiring and Acquired Funds.

2. The Acquiring and Acquired Funds shall not bear any expenses of the Reorganizations. The respective investment advisers of the Acquiring and Acquired Fund parties to a Reorganization shall each bear their respective expenses of the Reorganization, either as a result of expense undertakings or the voluntary assumption of such expenses by the respective investment advisers.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010–01–M

[Rel. No. IC–17194; 811–4162]

The OTC–100 Fund, Inc.; Application for Deregistration

October 25, 1989.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of application for deregistration under the Investment Company Act of 1940 ("1940 Act").

Applicant: The OTC–100 Fund, Inc.

Relevant 1940 Act Sections: Deregistration under section 8(f) and Rule 8f–1.

Summary of Application: The Applicant seeks an order declaring that it has ceased to be an investment company subject to the 1940 Act.

Filing Date: The application on Form N–8F was filed on September 29, 1989. Supplementary information was submitted by letter of counsel dated October 20, 1989.

Hearing or Notification of Hearing: An order granting the application will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing the SEC's Secretary and serving the Applicant with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on November 17, 1989, and should state the nature of the requester's interest, the reason for the request, and the issues contested. Hearing requests also should be accompanied by proof of service on the Applicant in the form of affidavits or, for lawyers, certificates of service. Requests for notification of a hearing may be made by writing to the SEC's Secretary.

ADDRESSES: Secretary, SEC, 450 5th Street, NW., Washington, DC 20549. Applicant, Five Piedmont Center, Atlanta, Georgia 30305.

FOR FURTHER INFORMATION CONTACT: Staff Attorney Cathey Baker (202) 272–3033 or Branch Chief Karen L. Skidmore (202) 272–3023 (Office of Investment Company Regulation).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application is available for a fee. One may obtain a copy by going to the SEC's Public Reference Branch or by telephoning the SEC's commercial copier (800) 231–3282 (in Maryland (301) 258–4300).

Applicant's Representations

1. The Applicant was organized as a corporation under Maryland law on November 13, 1984. The Applicant intends to file Articles of Dissolution with the State of Maryland as soon as practicable.

2. The Applicant registered under the 1940 Act as an open-end, diversified management investment company and filed a registration statement on Form N–8b–1 pursuant to section 8(b) on November 21, 1984. On that date, Applicant registered an indefinite number of shares of capital stock, $.10 par value, pursuant to a registration statement on Form N–1A filed under the Securities Act of 1933. The registration statement and pre-effective amendments thereto became effective on April 26, 1985, and the initial public offering commenced on May 1, 1985.

3. The liquidation of the Applicant was precipitated by its receipt on March 1, 1989 of redemption requests related to two separate shareholder accounts controlled by CIBA–GEIGY Corporation ("CIBA–GEIGY") as fiduciary. The accounts represented approximately 80% of the shares of the Applicant outstanding as of February 28, 1989. Because many of the Applicant's portfolio stocks were thinly traded at the time, the manager of the Applicant, Astrop Funds Advisor, Inc., advised that a disposition of the stocks for the purpose of obtaining cash proceeds to meet the redemption requests within seven days, as required by section 22(e) of the 1940 Act, would likely have a detrimental effect upon the market prices of the stocks. If so, the net asset value of the remaining shares of the Applicant outstanding would be significantly lower than would otherwise have been the case, and the remaining shareholders of the Applicant would be harmed. Following discussions between the Board of Directors of the Applicant and CIBA–GEIGY, the latter agreed to rescind the two redemption requests to enable the Applicant to raise redemption proceeds in an orderly manner. The agreement was conditioned upon assurances that CIBA–GEIGY would receive the net proceeds related to its shares prior to the end of March 1989, and that the Applicant would take steps to assure that its other shareholders would not redeem shares before the CIBA–GEIGY accounts.

4. The Applicant accordingly sought and obtained the order under sections 6(c) and 22(e)(3) of the 1940 Act issued in Investment Company Act Release No. 16866 (March 15, 1989), which permitted a suspension of the right of redemption through March 22, 1989 for the protection of shareholders. The order enabled the Applicant to effect an orderly sale of assets in contemplation of a liquidation and dissolution, and to distribute the proceeds of the sale to shareholders, after payment of liabilities and expenses.

5. On March 1, 1989, the Board of Directors of the Applicant unanimously approved a proposed plan of liquidation and dissolution of the Applicant ("Plan"). The Board also determined that if shareholder approval of the Plan were obtained, it would be appropriate to deregister the Applicant under the 1940 Act and to terminate its existence as a Maryland corporation. Under the Plan, the Applicant was required to forego any business activity (except for the purpose of winding up its business, preserving the value of its assets, and distributing assets to shareholders after the payment or reservation of assets for payment of all creditors of the Applicant) and to dissolve following performance of all other actions required by the Plan.

6. Definitive proxy materials concerning the proposal to liquidate and dissolve the Applicant were provided to the ten shareholders of the Applicant of record as of March 8, 1989. Preliminary copies of the proxy materials were filed with the Commission on March 3 and definitive copies were filed on March 13, 1989. At a special meeting held on March 21, 1989, the shareholders of the Applicant approved the Plan by the requisite vote.

7. Prior to shareholder approval of the Plan, the Applicant converted substantially all portfolio securities and other assets into cash proceeds, in anticipation of a liquidation. The

VOL 54 ISS 210 NO 1 1989 UMI

portfolio securities and other assets were disposed of in open market, arm's length transactions in which the best available market prices were sought. The Applicant's portfolio transactions were placed exclusively with dealers who make a market in the securities involved, with the result that the Applicant paid no brokerage commissions in connection with such transactions. A portion of the proceeds, approximately $99,175, was used to satisfy outstanding liabilities. The remaining amount of $3,286,721 was applied to the liquidation distribution to shareholders described below.

8. Pursuant to the Plan, distribution of the Applicant's assets was made in two payments. On March 22, 1989, the Applicant distributed approximately 95% of its assets to its shareholders. The amount of the first distribution was $12.19 per share, aggregating $68,331,644. As of March 31, 1989, the Applicant had 5,606,255 shares of common stock, $.10 par value, outstanding. Net asset value per share at that date was $.58, aggregating $3,248,331. After payment of expenses or reservation of assets for payment, the Applicant distributed the remaining assets to shareholders on May 22, 1989. The second distribution was $.5863 per share, aggregating $3,286,721.

9. Pursuant to the Plan, the Applicant has borne the fees and expenses associated with the liquidation. Consulting, legal and auditing fees, and certain miscellaneous expenses (including custodian and transfer agency fees and expenses and filing fees) are expected to aggregate approximately $20,000, $35,000, $28,000 and $15,000, respectively.

10. There are no shareholders of the Applicant to whom distributions in complete liquidation have not been made. The Applicant has retained $10,000 in order to pay any remaining expenses that may arise after the date of filing of the application. The retained assets are currently invested in money market securities. It is not expected that remaining expenses will exceed $10,000, with the possible exception of compensation payable to officers of the Applicant for continuing services. The officers have agreed to waive any compensation which exceeds the amount remaining after other expenses are paid. Any assets remaining after payment of expenses and officers' compensation will be distributed pro rata to shareholders of the Applicant as of the date of liquidation. No person or entity is obligated to pay any expenses other than officers' compensation which exceed $10,000. The Applicant terminated its relationship with Astrop Funds Advisor, Inc. on March 22, 1989, the date of payment of the initial liquidation distribution.

11. The Applicant is in good standing under the laws of the State of Maryland. To its knowledge, the Applicant has no debt or other liabilities outstanding. The Applicant is not a party to any litigation or administrative proceeding, and is engaged only in those business activities necessary for the winding-up of its affairs.

12. The Applicant will continue to file all reports required by Rules 30a–1 and 30b–1 under section 30 of the 1940 Act until the requested order is granted.

For the Commission, by the Division of Investment Management, under delegated authority.

Jonathan G. Katz,

Secretary.

[FR Doc. 89–25747 Filed 10–31–89; 8:45 am]

BILLING CODE 8010–01–M

[Release No. 35–24975]

Filings Under the Public Utility Holding Company Act of 1935 ("Act")

October 26, 1989.

Notice is hereby given that the following filing(s) has/have been made with the Commission pursuant to provisions of the Act and rules promulgated thereunder. All interested persons are referred to the application(s) and/or declaration(s) for complete statements of the proposed transaction(s) summarized below. The application(s) and/or declaration(s) and any amendments thereto is/are available for public inspection through the Commission's Office of Public Reference.

Interested persons wishing to comment or request a hearing on the application(s) and/or declaration(s) should submit their views in writing by November 20, 1989 to the Secretary, Securities and Exchange Commission, Washington, DC 20549, and serve a copy on the relevant applicant(s) and/or declarant(s) at the address(es) specified below. Proof of service (by affidavit or, in case of an attorney at law, by certificate) should be filed with the request. Any request for hearing shall identify specifically the issues of fact or law that are disputed. A person who so requests will be notified of any hearing, if ordered, and will receive a copy of any notice or order issued in the matter. After said date, the application(s) and/or declaration(s), as filed or as amended, may be granted and/or permitted to become effective.

System Energy Resources, Inc. (70–7534)

System Energy Resources, Inc. ("SERI"), Echelon One, 1340 Echelon Parkway, Jackson, Mississippi 39213, a subsidiary of Entergy Corporation, a registered holding company, has filed an amendment pursuant to section 12(c) of the Act and Rule 42 thereunder, restating its declaration filed pursuant to sections 6(a), 7 and 12(c) of the Act and Rules 42 and 50(a)(5) thereunder. A notice of the declaration was issued on October 20, 1988.

SERI proposes to acquire and retire from time to time through December 31, 1992, by means of tender offers, open market, negotiated or other forms of purchases, in whole or in part, prior to their respective maturities, one or more series of SERI's outstanding first mortgage bonds ("Bonds"). SERI proposes to use cash available to it from time to time from internally generated funds to acquire all or a portion of one or more series of Bonds. SERI estimates that it would acquire not in excess of $400 million of Bonds in the period ending December 31, 1992.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010–01–M

[Rel No. IC–17193; 811–3525]

Ziegler U.S. Government Securities Trust, Series I; Application for Deregistration

October 24, 1989.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of Application for Deregistration under the Investment Company Act of 1940 (the "1940 Act").

Applicant: Ziegler U.S. Government Securities Trust, Series I ("Applicant").

Relevant 1940 Act Section: Section 8(f).

Summary of Application: Applicant seeks an order declaring that it has ceased to be an investment company under the 1940 Act.

Filing Dates: The application on Form N–8F was filed on August 7, 1989.

Hearing or Notification of Hearing: An order granting the application will be issued unless the SEC orders a hearing. Interested persons may request a hearing by writing to the SEC's Secretary and serving Applicant with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on November 20, 1989, and should be accompanied by proof of service on the Applicant, in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the SEC's Secretary.

ADDRESSES: Secretary, SEC, 450 Fifth Street NW., Washington, DC 20549. Applicant, 215 North Main Street, West Bend, Wisconsin 53095.

FOR FURTHER INFORMATION CONTACT: Patricia Copeland, Legal Technician, (202) 272–3009, or Max Berueffy, Branch Chief, (202) 272–3016 (Office of Investment Company Regulation).

SUPPLEMENTARY INFORMATION: Following is a summary of the application; the complete application is available for a fee from either the SEC's Public Reference Branch in person or the SEC's commercial copier (800) 231–3282 (in Maryland (301) 258–4300).

Applicant's Representations

1. Applicant is organized under the laws of the State of Wisconsin by a Trust Indenture and Agreement between B. C. Ziegler and Company as Depositor and First Wisconsin Trust Company as Trustee. On July 23, 1982, Applicant registered as a unit investment trust under the 1940 Act. On the same date, Applicant filed a registration statement under the Securities Act of 1933 to register 5,000 Units of Applicant's securities for primary distribution. Also, Applicant registered 2,500 Units to cover possible resales by the Depositor of Units sold in primary distribution. Applicant's registration statement never became effective. Applicant never made a public offering of its securities.

2. Applicant states that it has no outstanding debts, is not a party to any litigation or administrative proceeding and its assets will not be invested in securities. The Applicant is neither engaged nor proposes to engage in any business activities, other than those necessary for the winding up of its affairs.

For the Commission, by the Division of Investment Management, under delegated authority.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010–01–M

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

[Docket No. 301–89]

Japanese Barriers to the Provision of Architectural, Engineering, and Construction Services, and Related Consulting Services

AGENCY: Office of the United States Trade Representative.

ACTION: Notice of request for public comment.

SUMMARY: The United States Trade Representative ("USTR") is seeking further public comment on acts policies and practices of the Government of Japan affecting the offering or performance in Japan by United States persons of architectural, engineering, and construction services, and related consulting services, and in particular whether such practices are unreasonable and burden or restrict United States commerce, and if so, what responsive action, if any, should be taken pursuant to section 301 of the Trade Act of 1974, as amended ("the Trade Act").

DATE: Written comments from interested persons are due November 20, 1989.

ADDRESS: Comments should be addressed to the Chairman, section 301 Committee, Office of the United States Trade Representative, Room 223, 600 17th Street NW., Washington, DC. 20506.

FOR FURTHER INFORMATION CONTACT: Bonnie Richardson, Special Assistant for Services, (202) 395–7271, Office of the U.S. Trade Representative, 600 17th Street NW., Washington, DC 20506.

SUPPLEMENTARY INFORMATION: On November 21, 1988, pursuant to section 1305 of the Omnibus Trade and Competitiveness Act of 1988 (Pub. L. No. 100–418, 102 Stat. 1182), the United States Trade Representative initiated an investigation under section 302 of the Trade Act of 1974, as amended, regarding those acts, policies and practices of the Government of Japan, and of entities owned, financed, or otherwise controlled by the Government of Japan, that are barriers in Japan to the offering or performance in Japan by United States persons of architectural, engineering and construction services, and related consulting services.

By **Federal Register** notice dated November 28, 1988 (53 FR 47897), USTRA invited written public comment on these barriers. In addition, on March 13, 1989, USTR held a public hearing on the Japanese government practices at issue (54 FR 6349), and heard testimony on practices which interested persons consider are unreasonable and a burden or restriction on U.S. commerce. Following the hearing, the United States held consultations with the Government of Japan on this matter. To date, no mutually satisfactory solution has been reached, but consultations are continuing, with the hope of resolving the issue before November 21, 1989.

Section 304 of the Trade Act requires the USTR in this case to determine by November 21, 1989, whether the Japanese practices are unreasonable and burden or restrict U.S. commerce. If that determination is affirmative, the USTR must determine what action, if any, to take under section 301 in response.

Public Comment

The USTR invites all interested persons to provide written comments on the required determinations. Comments will be considered in recommending any determination or action under section 301 to the USTR. Written and oral comments previously provided by interested persons in response to the November 28, 1988, **Federal Register** notice, or at the March 13, 1989, public hearing, need not be resubitted and will be treated as though they were provided in response to this notice unless they are modified or withdrawn.

All written submissions must be filed in accordance with 15 CFR 2006.8. Submissions are to be made in twenty (20) copies, in English, by noon on Monday, November 20, 1989, to: Chairman, Section 301 Committee, Office of the U.S. Trade Representative, Room 222, 600, 17th Street NW., Washington, DC 20506.

A. Jane Bradley,

Chairman, Section 301 Committee.

Federal Highway Administration

Environmental Impact Statement; Counties of Santa Barbara and Ventura, State of California

AGENCY: Federal Highway Administration (FHWA) DOT.
ACTION: Notice of intent.

SUMMARY: The FHWA is issuing this notice to advise the public that an environmental impact statement will be prepared for a proposed highway project in Santa Barbara and Ventura Counties, California.

FOR FURTHER INFORMATION CONTACT: Mr. John Schultz, District Engineer, Federal Highway Administration, P.O. box 1015, Sacramento, California 95809, Telephone: (916) 551-1140.

SUPPLEMENTARY INFORMATION: The FHWA, in cooperation with the California Department of Transportation, will prepare an environmental impact statement (EIS) on a proposal to replace two narrow, aging bridges and improve the alignment of a 0.9 mile segment of Highway 150 from 1.0 to 1.9 miles east of Highway 101 near Carpinteria. Alternatives under consideration include a range of highway and bridge widths, and the no project alternative. An Environmental Assessment (EA) was prepared and circulated for comment, and a public hearing was held in April of 1989. The decision to prepare an EIS was based upon input received from several of the agencies that responded to the EA circulation. No further scoping meetings are planned. To ensure that the full range of issues related to the proposed action are addressed and all significant issues identified, comments and suggestions are invited from all interested parties. Comments or questions concerning this proposed action and the EIS should be directed to the FHWA at the address provided above.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Research, Planning and Construction: The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program.)

Issued on October 24, 1989.

John Schultz,
District Engineer, Sacramento, California.

BILLING CODE 4810-40-M

Internal Revenue Service

1990 Magnetic Tape Filing; Form 1040NR, Income Taxes

AGENCY: Internal Revenue Service, Treasury.
ACTION: Form 1040NR, Magnetic Tape Filing.

SUMMARY: The Internal Revenue Service will again conduct a program during the 1990 filing period for 1040NR Returns (U.S. Nonresident Alien Income Tax Returns) with schedules D and E and Form 4797 due June 15, 1990, to be filed via magnetic tape. This program will be available without geographic limitation, although all processing will be centralized at the Internal Revenue Service Center in Philadelphia, Pennsylvania. Participants must have secured prior authorization from the Internal Revenue Service (IRS). Interested parties can obtain copies of the draft revenue procedures by writing or calling the IRS. Comments on the program are welcome.

DATES: Expressions of interests are requested by December 1, 1989. Applications to participate must be received by December 31, 1989.

ADDRESS: Director, Internal Revenue Service, Philadelphia Service Center, P.O. Box 245, Drop Point 102D, Bensalem, PA 19020. Attention: Form 1040NR Magnetic Tape Coordinator. Telephone: 215-969-2234 (not toll-free number).

SUPPLEMENTARY INFORMATION: The Internal Revenue Service is receiving an increasing number of computer prepared returns, and is exploring methods to use the flexibility provided by computer preparation to achieve efficiencies of processing. Magnetic tape filing eliminates most of the manual processes required by IRS to handle paper documents, which will increase the quality of the final product, speed up the processing and reduce unnecessary correspondence.

For those filers who file Form 1040NR returns due June 15, 1990 and are interested in participarting in the program, the draft revenue procedures should be available by November 1, 1989. However, subsequent changes to record formats may be required due to Congressional legislation on capital gains. Test tape for acceptance must be submitted at least 60 days before the due date of the returns.

Generally, the revenue procedures will call for the filing of returns on magnetic tape of all the data currently supplied on the paper return, including those schedules and forms which usually accompany the return. Additionally, filers will be required to send to the IRS a separate form with certain key information from the return and the signatures of the taxpayer and preparer. A consolidated form has been approved by the IRS enabling preparers/filers to transmit the required information covering multiple returns with a single set of signatures.

Beverly Monaco,
Assistant Director, Returns Processing and Accounting Division.

BILLING CODE 4830-01-M

UNITED STATES INFORMATION AGENCY

Exchanges of Students with USSR, Central and Eastern Europe, and Yugoslavia

The United States Information Agency (USIA) invites applications from U.S. educational cultural and other not-for-profit institutions to conduct exchanges of students and young people with the Soviet Union (including the Baltic States) and Central and Eastern Europe (Bulgaria, Czechoslovakia, the German Democratic Republic, Hungary, Poland, and Romania) and Yugoslavia. These exchanges represent part of the activities of the Samantha Smith Memorial Exchange Program and are subject to the availability of funding and to final legislation for the Fiscal Year 1990 program.

Overall authority for these exchanges is contained in the Mutual Educational and Cultural Exchanges Act of 1961, Public Law 87-256 [Fulbright-Hays Act]. The purpose of the Act is "to enable the Government of the United States to increase mutual understanding between the people of the United States and people of other countries; to strengthen the ties which unite us with other nations by demonstrating the educational and cultural interests, developments, and achievements of the people of the United States and other nations and thus to assist in the development of friendly, sympathetic, and peaceful relations between the United States and the other countries of the world." Programs under the authority of the Act should be balanced and representative of the diversity of American political, social and cultural life. Programs and projects must conform with all Agency requirements and guidelines and are subject to the requirements of the USIA contracting officer.

Summary

The Bureau of Educational and Cultural Affairs of the United States Information Agency announces a program of support for educational and cultural exchanges of students and young people between the U.S. and the USSR and between the U.S. and Yugoslavia, as well as the countries of Central and Eastern Europe, through a wide variety of substantive bilateral activities. USIA seeks to encourage participation of a broad range of sectors, institutions and geographic areas in the U.S. and in the exchange countries. Grants will be awarded to support projects of up to two years duration within the funding ceilings described below. Preference will be given to projects that expand the range of existing exchanges by scope, field of focus or institutional base, although support for ongoing activities will not be excluded.

Support is offered for two categories of exchange programs: Category A supports exchanges of undergraduate students under the age of 26 in academic programs between the U.S. and USSR, Central and Eastern Europe, and/or Yugoslavia for academically focused programs of generally no less than 3 months duration; Category B supports exchanges of young people under the age of 21 with the USSR and the countries of Central and Eastern Europe and Yugoslavia. Both existing and new projects are eligible.

Applications must be received by USIA no later than 5:00 p.m. EST on Monday, January 15, 1990.

Category A: Academic Exchanges

Grant funding under this category is intended to enhance and expand the scope of U.S. academic exchanges with the USSR, Central and Eastern Europe and Yugoslavia for undergraduate students under the age of 26. Projects should complement existing exchange programs with these countries.

Applications for substantive undergraduate academic exchange activities will be accepted from accredited, degree-granting U.S. universities or colleges and from not-for-profit organizations engaged in international educational exchange at the undergraduate level. Participants must be citizens either of the U.S. or of the partner country.

Preference will be given to exchanges with institutions located outside the capital cities overseas. New contacts with institutions under the jurisdiction of ministries or other organizations that do not usually participate in academic exchanges with U.S. institutions are also encouraged.

Priority will be given to the following areas of the arts, humanities, and social sciences: Study of the performing and visual arts (music, dance, painting, sculpture, etc.); study of the languages and literatures of the USSR (including the Baltic states), Bulgaria, Czechoslovakia, the GDR, Hungary, Poland, Romania, and Yugoslavia; environmental studies (conservation, industrial pollution problems, etc.); anthropology and archeology; cultural and historic preservation; communications (journalism, film, TV and radio); business management and finance; sociology and political science; area studies; international studies and foreign affairs.

Language Qualifications: It is desirable, but not required, that undergraduate students have sufficient fluency in the language of the country to be visited to pursue university study in that language and to converse with citizens of the country without the aid of interpreters.

Allowable Cost for Category A Projects: Project awards will be made in a wide range of amounts but will not normally exceed $75,000. Grant-funded items of expenditure will be limited to the following categories:

—International travel
—Domestic travel
—Maintenance and per diem
—Academic program costs
—Orientation costs (speaker honoraria are not to exceed $150 per day per speaker)
—Enrichment programs
—Cultural expenses
—Administration (salaries, benefits, other direct and indirect costs) may not not exceed 20 percent of the total funds requested; administrative expenses may be cost-shared.

It is expected that applications will demonstrate substantial cost sharing, including tuition waivers where applicable.

Category B. Youth Exchange

Grant funding for projects submitted under this category is intended to encourage the exchange of young people under the age of 21 between the U.S. and the USSR/the countries of Eastern and Central Europe and Yugoslavia. High school-based exchanges are eligible for

support. Programs may involve the U.S. in partnership with one or two more countries.

Organizations must document at least

—Language qualifications—Speaking ability in the language of the host country for both American and foreign participants is desirable, but not

Agency, 301 4th Street SW. Washington, DC 20547, *Telephone:* 202-485-1927

Book and Library Advisory Committee on Wednesday, November 15, 1989, 1:00 p.m.-4:00 p.m. in room 600, USIA Headquarters, 301 Fourth Street SW.,

assist USIA with its book and library programs abroad.

For additional information call Louise G. Wheeler or Patricia Gribbon at 485

VOL 54 ISS 210 NO 1 1989 UMI

support. Programs may involve the U.S. in partnership with one or two more countries.

Organizations must document at least one of the following qualifications: (1) Three years or more experience in conducting youth exchanges; (2) three years or more experience in sponsoring substantive activities for young people; (3) experience conducting youth or adult exchanges with the Soviet Union; (4) three years or more experience arranging programs for foreign students or visitors in the U.S.

In addition, organization should be able to demonstrate an adequate resource base for conducting programming in more than one location, if the project requires it. Organizations other than schools seeking funds for a year or semester high school study program model must be designated by USIA under the "Criteria for Teenager Exchange Visitors Progams" (which may be obtained by writing to the Youth Exchange Staff at the address listed below).

The purpose of non-academic exchange is interaction and interchange between foreign and American youth. Consequently, extensive interaction is a requirement. Proposals should demonstrate how foreign and American youth will interact in a way that encourages the interchange of ideas in the structured program.

Preference is given for project activities that exhibit the following features:

—Thematic focus— Eligible foci may include, but are not limited to: the arts (theater, dance, music, literature, fine arts, folklore, and film/video); language and culture; conservation and the environmental; historic preservation; museum training; political, social, and economic issues; business administration/management; math and science; agriculture (rural or farm-based exchanges); and traditional youth activities. Projects requesting support for tours of performing groups and/or sports competitions (games, meets, etc.) are ineligible.

—Orientation programs—introduction to the program theme, administrative procedures, and substantive issues likely to be raised by their U.S. or foreign counterparts.

—Minimum stay of four weeks—USIA has a preference for programs in which the duration of stay in country is longer than four weeks. Consideration will be given to those projects which for reasons or requirements of the partner country or countries, are shorter, but the length of stay in country must be no less than three weeks.

—Language qualifications—Speaking ability in the language of the host country for both American and foreign participants is desirable, but not required. Ideally some participants in each incoming delegation should be conversant in English, and some participants in each outgoing delegation should be conversant in the host country language.

—Adequate lead/planning time to ensure a successful exchange.

—Evidence that the US organization has the commitment of a counterpart organization in the host country to engage in the proposed activities.

—Two-way exchange—Proposals should provide detailed information on programming in both the sending and receiving countries.

Allowable costs for Category B projects: The average grant award will be in the range of $25,000–50,000. The primary objective of grant funding is to expand or enhance exchange programs along the lines described above. Therefore, grant-funded items of expenditure will generally be limited to the following categories:

—In-country travel and per diem.

—Orientation or preparation costs; briefing materials.

—Speaker honoraria (not to exceed $150 per day per speaker).

—Cultural enrichment allowance (not to exceed $150 per participant).

—Conference/seminar registration fees and other program admission fees.

—International travel, normally limited to partial support for Americans traveling to the USSR or East Europe, and East Europeans traveling to the U.S.; it is assumed that Soviet participants' travel will be paid from Soviet sources.

—Administration (salaries, benefits, other direct and indirect costs) may not exceed 20% of the total funds requested; administrative expenses may be cost-shared.

—It is expected that applications will demonstrate substantial cost sharing in both program and administrative expenses.

Requirements for Application [Both Categories]

Interested U.S. organizations should write or call the offices listed below to request detailed application packets, which include award criteria, all necessary forms and guidelines for preparing proposals.

For Category A Proposals

The Samantha Smith Memorial Exchange Program, Office of Academic Programs, (E/AEE) Room 208, United States Information Agency, 301 4th Street SW. Washington, DC 20547, *Telephone*: 202–485–1927

For Category B Proposals

The Samantha Smith Memorial Exchange Program, Youth Exchange Staff, E/YX Room 357, United States Information Agency, 301 4th Street SW., Washington, DC 20547, *Telephone*: 202–485–7299.

1. *Review process:* USIA will acknowledge receipt of all proposals and will review them for technical eligibility. Eligible proposals will be forwarded to committees of USIA officers for advisory review in conformity with the criteria set forth herein and in the guidelines for preparing proposals prior to funding decisions by delegated officials. All proposals will also be reviewed by the Agency's Office of the General Counsel as well as other Agency offices.

Completed applications in both categories will be reviewed according to the following criteria:

a. Quality of proposed activities and approaches.

b. Feasibility of the program plan.

c. Applicants' experience relevant to program goals.

d. Multiplier effect/impact—the likely impact of the exchange experience on the individual participants, their schools, and communities.

e. Contribution to expanding the range of U.S.-USSR/Central and Eastern European and Yugoslav exchanges. If the proposal is for support for an established activity, it should provide evidence of how USIA support would enhance the exchange relationship.

f. Cost effectiveness—Greatest return on each grant dollar.

g. Geographic and program balance—Proportional distribution of grant funds between the USSR and Central and Eastern Europe/Yugoslavia; also between categories A and B.

2. *Deadline:* Complete proposal packages must be received by USIA on or before January 15, 1990, 5:00 p.m. e.s.t. Applicants are responsible for the submission of complete applications. All required items must be received in one package by deadline.

3. *Notification:* All applicants will be notified of the results of the review process on or about April 30, 1990. Funded proposals will be subject to periodic reporting and evaluation requirements.

Dated: October 24, 1989.

SECURITIES AND EXCHANGE COMMISSION

Agency Meeting.

"FEDERAL REGISTER" CITATION OF PREVIOUS ANNOUNCEMENT: [54 FR 42885 October 18, 1989].

STATUS: Open meeting.

PLACE: 450 Fifth Street, NW., Washington, DC.

DATE PREVIOUSLY ANNOUNCED: Friday, October 13, 1989.

CHANGES IN THE MEETING: Deletion.

The following item was not considered at an open meeting on Wednesday, October 25, 1989, at 4:00 p.m.

Consideration of an application filed by T. Rowe Price Associates, Inc. on behalf of T. Rowe Price Spectrum Fund, Inc. for a conditional order of the Commisson under sections 6(c), 17(b), and 17(d) and Rule 17d-1 of the Investment Company Act of 1940 to permit the Spectrum Fund to acquire shares of funds within the T. Rowe Price group of funds in excess of the limitations imposed by Sections 12(d)(1) and to permit certain affiliated transactions otherwise prohibited by sections 17(a) and 17(d). For further information, please contact Bibb L. Strench at (202) 272-2856.

Commission Schapiro, as duty officer, determined that Commission business required the above change.

At times, changes in Commission priorities require alterations in the scheduling of meeting items. For further information and to ascertain what, if any, matters have been added, deleted or postponed, please contact: Barbara Green at (202) 272-2000.

SECURITIES AND EXCHANGE COMMISSION

Agency Meeting

Notice is hereby given, pursuant to the provisions of the Government in the Sunshine Act, Public Law 94-409, that the Securities and Exchange Commission will hold the following meeting during the week of October 30, 1989.

A closed meeting will be held on Tuesday, October 31, 1989, at 2:30 p.m.

The Commissioners, Counsel to the Commissioners, the Secretary to the Commission, and recording secretaries will attend the closed meeting. Certain staff members who are responsible for the calendared matters may also be present.

The General Counsel of the Commission, or his designee, has certified that, in his opinion, one or more of the exemptions set forth in 5 U.S.C. 552b(c) (4), (8), (9)(A) and (10) and 17 CFR 200.402(a) (4), (8), (9)(i) and (10), permit consideration of the scheduled matters at a closed meeting.

Commissioner Schapiro, as duty officer, voted to consider the items listed for the closed meeting in closed session.

The subject matter of the closed meeting scheduled for Tuesday, October 31, 1989, at 2:30 p.m., will be:

Settlement of injunctive actions.
Institution of administrative proceedings of an enforcement nature.
Settlement of administrative proceedings of an enforcement nature.
Institution of injunctive actions.
Consideration of *amicus* participation.
Regulatory matter regarding financial institution.

At times, changes in Commission priorities require alterations in the scheduling of meeting items. For further information and to ascertain what, if any, matters have been added, deleted or postponed, please contact: Daniel O. Hirsch at (202) 272-2100.

Dated: October 27, 1989.

DEPARTMENT OF JUSTICE

Office of Juvenile Justice and Delinquency Prevention

Study to Evaluate Conditions in Juvenile Detention and Correctional Facilities

AGENCY: Office of Juvenile Justice and Delinquency Prevention.

PROGRAM ANNOUNCEMENT: Study to evaluate conditions in juvenile detention and correctional facilities.

SUMMARY: The Office of Juvenile Justice and Delinquency Prevention (OJJDP) pursuant to section 248(a)(1) of the juvenile Justice and Delinquency Prevention Act of 1974, 42 U.S.C. 5601 *et seq.*, as amended by the Juvenile Justice and Delinquency Prevention Amendments of 1988, subtitle F of title VII of Public Law 100-690, November 18, 1988, announces a new research initiative to evaluate conditions in juvenile detention and correctional facilities, to determine the extent to which such facilities meet recognized national standards, and to make recommendations to improve the conditions in these facilities.

The purpose of this initiative is to review systematically the conditions of confinement in juvenile detention and correctional facilities in the United States and to determine the extent to which those conditions comply with existing recognized national standards. A major product of this project will be a summary of the results for OJJDP to use in preparing a report to the Congress of the United States on the conditions existing within juvenile detention and correctional facilities, including recommendations for the improvement of those conditions. This summary must be completed and submitted to OJJDP by September 15, 1991.

This is a research effort composed of three incremental stages:

Stage 1—Research Design: The research design should clearly articulate the problem, objectives, methodology, measures, sampling strategy and analysis plans for reviewing the conditions of confinement within juvenile detention and correctional facilities.

Stage 2—Data Collection and Data Processing: This stage involves the implementation of the design developed in Stage 1. The following tasks are to be completed: (1) Preparation of the data collection plan; (2) pilot tests of the data collection instrument(s); (3) data collection; (4) data processing; and (5) preparation of data tapes for analysis.

Stage 3—Data Analysis and Preparation of Reports: A series of reports on the existing conditions of confinement in juvenile detention and correctional facilities will be prepared. These reports will include a description and a summary of the results of the study as well as recommendations for improving conditions of confinement for juveniles.

OJJDP invites public and private agencies and organizations, or combinations thereof, to submit competitive applications to conduct the research outlined in this solicitation.

Up to $800,000 has been allocated for the initial award. One cooperative agreement will be awarded competitively, with an initial budget period of 18 months. This research program will consist of three stages (Design, Implementation, and Analysis). The initial award will provide support for stages I and II. One or more noncompeting continuation awards will be considered to complete a 30 month project period. Applicants should include in their proposal a plan to complete the analysis of the data collected for this project as well an estimate and justification of the amount required to complete the analysis.

The deadline for receipt of applications is January 8, 1990.

FOR FURTHER INFORMATION CONTACT: Douglas W. Thomas, Research and Program Development Division, (202) 724-5929. OJJDP, Room 784, 633 Indiana Avenue, NW., Washington, DC 20531.

SUPPLEMENTARY INFORMATION:

I. Introduction and Background
II. Program Goals and Objectives
III. Program Strategy
IV. Dollar Amount and Duration
V. Eligibility Requirements
VI. Application Requirements
VII. Procedures and Criteria for Selection
VIII. Deadline for Receipt of Applications
IX. Civil Rights Compliance

I. Introduction and Background

In 1986, there were approximately 716,608 admissions of juveniles to public and private residential programs housing delinquent or status offenders. These residential programs provide for the care and custody of youths placed by courts with juvenile court jurisdiction for delinquent offenses, non-criminal misbehavior, or neglect and abuse. They include detention centers, shelter care facilities, training schools, camps and ranches, group homes and community-based correctional centers. On any given day one may find many thousands of youths housed within these residential settings. Indeed, a 1987 census of Children in Custody revealed that 91,646 juveniles were in custody on a single day in the approximately 3,300 public and private juvenile residential facilities serving juvenile courts throughout the United States. (Office of Juvenile Justice and Delinquency Prevention, *OJJDP Fact Sheet on Children in Custody: 1987 Census of Public and Private Juvenile Facilities.*)

Inadequate conditions of confinement within juvenile detention and correctional facilities present major obstacles to the provision of individualized justice and effective services to meet the needs of youth in custody. At best, inadequate conditions can be counter-productive to the growth and development of juveniles in custody. At worst, they can be destructive and dehumanizing.

The JJDP Act provides for the development of comprehensive strategies to deal with the problems of juvenile delinquency and other issues pertaining to the administration of juvenile justice in the United States. A major purpose of the JJDP Act is "to develop and encourage the implementation of national standards for the administration of juvenile justice, including recommendations for administrative, budgetary, and legislative action at the Federal, State, and local level to facilitate the adoption of such standards." (Sec. 102(a)(5)).

The 1988 amendment to the JJDP Act directly addresses the issue of conditions of confinement for juveniles by requiring that the Office of Juvenile Justice and Delinquency Prevention conduct a study to review the conditions in juvenile detention and correctional facilities and assess the extent to which those conditions meet recognized national professional standards. The review of conditions in juvenile detention and correctional facilities is to result in a series of reports on the conditions existing within juvenile custodial facilities (see Stage III). This material will be used by OJJDP in preparing a report to the Congress of the United States summarizing the results of the study, and in making recommendations for improving the conditions in those facilities.

The study outlined herein is a response to this recent amendment to the JJDP Act as well as a continuation of previous efforts by the Office of Juvenile Justice and Delinquency Prevention to encourage the adoption and utilization of national juvenile justice standards. For this study, existing nationally recognized standards addressing the conditions of confinement for juveniles in custody are to be used as a basis for defining the conditions and developing the evaluation criteria to be used in

reviewing those conditions. The ultimate goal is to improve the operation of those facilities and the delivery of appropriate services to juveniles.

In addressing the extent to which conditions in juvenile detention and correctional facilities meet recognized national standards, the full range of available standards should be assessed. The legal literature, as it relates to the rights of institutionalized persons, should also be reviewed to determine the extent to which conditions of confinement have been addressed in the courts.

Standards provide a focal point for the assessment and improvement of the process of justice for juveniles by guiding policy and informing administrative actions. Standards related to the conditions of confinement in juvenile detention and correctional facilities can provide specific and measurable objectives, help define tasks to assist the accomplishment of goals, and provide guidance in developing policies and procedures to improve service delivery.

Previous efforts to establish national standards for the administration of juvenile justice have been carried out by various national professional organizations and prominent national advisory committees. Included among these efforts are the following:

(1) The Institute of Judicial Administration/American Bar Association Joint Commission on Juvenile Justice Standards (IJA/ABA).

(2) The National Advisory Committee on Criminal Justice Standards and Goals Task Force on Juvenile Justice and Delinquency Prevention (Task Force).

(3) National Advisory Committee for Juvenile Justice and Delinquency Prevention: Standards on the Administration of Juvenile Justice (NAC).

(4) American Correctional Association/Commission on Accreditation (ACA/CAC).

The standards prepared by the IJA/ABA, the Task Force, and the NAC are comprehensive and cover a wide range of issues including intervention in the lives of children, delinquency prevention, court roles and procedure, the police, planning and evaluation, as well as other areas. The standards promulgated by the ACA focus upon corrections and include community residential services, probation and aftercare, detention facilities and services, and training schools.

One of the major activities of this program is to select and operationally define the "conditions" that will be used as the evaluation criteria for this study. Applicants are to address a wide range of conditions of confinement, including but not limited to:

- Intake and release criteria;
- Judicial case review;
- Mail, telephone use, and visitation;
- Access to religious services;
- Access to legal assistance;
- Dress and personal property;
- Educational, training and treatment programs;
- Exercise and recreation;
- Medical services;
- Mental health care;
- Isolation;
- Diet and Nutrition;
- Staff qualifications and numbers;
- Sanitation, safety, and hygiene;
- Physical environment and living conditions;
- Resident rights, sanctions, and grievance procedures;
- Monitoring and reporting behavior of residents.

Standards promulgated by Federal agencies, professional organizations and national advisory committees do not, necessarily, obligate states, local jurisdictions, or private agencies to comply with those standards. It is expected, however, that the policies, procedures, and practices established at the state and local level for juvenile detention and correctional facilities will reflect, to varying degrees, recognized national standards. This study, therefore, will involve the identification of local detention and State correctional policies, procedures, practices and programs and the determination of the extent to which they are consistent with nationally recognized standards.

II. Program Goals and Objectives

A. Goals

1. To review recognized national professional standards for juvenile detention and correctional facilities for the purpose of defining conditions and developing evaluation criteria for the review of conditions in confinement.

2. To assess conditions in juvenile detention and correctional facilities and determine the extent to which those conditions meet recognized national standards.

3. To make recommendations for improving the conditions of confinement in juvenile detention and correctional facilities through the identification of model policies, procedures, practices and programs that are consistent with recognized national standards.

B. Objectives

1. Develop a research strategy to conduct an assessment of conditions of confinement in juvenile detention and correctional facilities.

2. Collect data on the conditions within juvenile detention and correctional facilities.

3. Analyze the data on the conditions of confinement within juvenile detention and correctional facilities, report on the analysis and develop specific recommendations for improving the conditions of confinement.

III. Program Strategy

OJJDP's planning and program development activities are guided by a framework that specifies four (4) sequential phases of program development: research, development, demonstration, and dissemination. This framework guides the decision-making process regarding the funding of future stages of the program.

This program is a research initiative. The purpose of the research initiative is to conduct and support research on issues that relate to the administration of juvenile justice and to the prevention of delinquency in the United States. The program will be conducted in three discrete incremental stages: (I) The research design stage, which involves the development of a research methodology for the assessment of conditions of confinement in juvenile detention and correctional facilities; (II) The data collection stage, in which data will be collected, processed and prepared for analysis using the methodology developed in the previous stage; and (III) The data analysis and reporting stage, which involves the analysis of the data and the preparation of reports that summarize the results of the study and provide recommendations for improving conditions of confinement in juvenile detention and correctional facilities.

All technical and subject matter portions of the program will be guided by recommendations of an independent project advisory committee established specifically for the program and approved by OJJDP. The project advisory committee will provide comments and recommendations regarding the strategies and activities for this program. It may be necessary to change or supplement project advisory committee members for different stages of the program. However, the objective will be to select technical and subject matter experts capable of addressing issues related to each of the program stages.

The project advisory committee members should have combined expertise in juvenile corrections, criminal/juvenile justice research and evaluation, and standards pertaining to the administration of juvenile justice,

VOL 54 ISS 210 NO 1 1989 UMI

particularly as they relate to juvenile corrections.

Each stage of the program development process detailed below is designed to result in a complete and publishable product (*e.g.*: a research design that includes a review of existing recognized national standards, the research strategy, and reports to be prepared), and a dissemination strategy to inform the field of the development of the program and the results and products of each stage. A decision to continue or to terminate the program is made at the end of each stage based on the availability of funds and the quality and utility of program products.

A. Stage I—Research Design

The first stage of the program consists of developing the research design. The research should be designed to produce recommendations that can guide the development of programs to improve the conditions within detention and correctional facilities. This will involve the identification and review of recognized national standards for detention and correctional facilities and the development of clear, well justified definitions of "conditions" and "detention and correctional facilities."

The research design should provide for the selection of an appropriate sampling strategy for each type of facility, a plan for data collection, and a plan for the dissemination of information. It is expected that site visits will be a primary component of the data collection strategy.

1. Activities

Applicants must describe how the following major activities will be undertaken:

a. Establishment of a project advisory committee;

b. Development of a research design plan;

c. Review of the literature;

d. Development of the research design;

e. Project advisory committee review; and

f. Development of a dissemination strategy to inform the field of the status of the project.

2. Products

The products to be completed during this stage are:

a. A plan for developing the research design that includes:

(1) Research objectives;

(2) Description of activities, including an integrated time/task plan; and

(3) Staff assignments.

b. A research design that specifies:

(1) Objectives;

(2) Definition of key concepts—including, but not limited to: "conditions," "secure detention and correctional facilities," and "recognized national standards";

(3) Operationalization and measurement of key concepts;

(4) Well conceived and clearly articulated sampling strategy;

(5) Data collection plan;

(6) Data analysis plans;

(7) Anticipated reports;

(8) Time/task plan for implementation; and

(9) Dissemination strategy to inform the field of the status of the program.

B. Stage II—Data Collection and Data Processing

This stage involves the collection of data on the conditions of confinement using the methodology and instruments developed in the previous stage. The data collection instruments should be pilot tested and the project advisory committee should review the results of the pilot tests. It is expected that a preliminary report on the results of the pilot tests, including comments from the project advisory committee, will be prepared and appropriate revisions to the instrument will be made.

This stage also includes the preparation of the data for analysis. Data processing involves the preparation and application of appropriate data coding strategies and entry of the data into an automated data processing system. The applicant should address how each of the activities in Stage II will be accomplished.

1. Activities

Applicants must describe how the following major activities will be undertaken:

a. Preparation of a data collection plan;

b. Pilot test of the data collection instrument(s);

c. Project advisory committee review of the results of the pilot test and appropriate adjustments to methodology and/or instrument(s);

d. Data collection;

e. Data processing; and

f. Preparation of data file for analysis.

2. Products

The major products to be completed during this stage are:

a. Data collection plan to include a detailed data collection protocol;

b. Report on results from pilot test of data collection instruments and final instruments;

c. Data tape prepared for analysis, to include all necessary documentation; and

d. Dissemination strategy to inform the field of the status of the program.

C. Stage III—Data Analysis and Reporting

The final stage of this initiative will involve the analysis of the data collected and the preparation of reports. Applicants should include a proposed set of reports that will communicate the results to a variety of audiences including policy makers, practitioners, and researchers in the juvenile justice system. These reports are to describe the study, summarize the results, and provide recommendations as they relate to improving conditions of confinement existing in juvenile detention and correctional facilities.

1. Activities

Applicants must describe how the following major activities will be undertaken:

a. Preparation of a plan for report development and dissemination;

b. Analysis of data;

c. Preparation of draft reports on analyses related to the research objectives;

d. Project advisory committee review of analysis and draft reports; and

e. Preparation of reports on existing conditions in juvenile detention and correctional facilities and the extent to which they meet existing recognized national standards, which include recommendations for policy and program development.

2. Products

The products to be completed under this stage are:

a. Plan for data analysis and preparation of reports that identifies the report or series of reports to be prepared and the purpose and audience for each report;

b. Draft reports, including a summary of the results to be used by OJJDP in preparing a report to the Congress;

c. Final report; and

d. Dissemination strategy to inform the field of the results of the program.

IV. Dollar Amount and Duration

Up to $800,000 has been allocated for the initial award.

One cooperative agreement will be awarded competitively, with an initial budget period of eighteen (18) months. This research program will consist of three stages (Design; Data Collection; and Analysis and Reporting). The initial award will provide support for stages I and II. One or more noncompeting continuation awards will be considered

to complete the thirty month project period.

Noncompetitive continuation awards for the additional budget periods may be withheld for justifiable reasons. They include: (1) The results of stage I and II do not justify further program activity; (2) the recipient is delinquent in submitting required reports; (3) adequate grantor agency funds are not available to support the project; (4) the recipient has failed to show satisfactory progress in achieving the objectives of the project or otherwise failed to meet the terms and conditions of the award; (5) a recipient's management practices have failed to provide adequate stewardship of grantor agency funds; (6) outstanding audit exceptions have not been cleared; and (7) any other reason that would indicate continued funding would not be in the best interest of the Government.

V. Eligibility Requirements

Applications are invited from public and private agencies and organizations. In order to expand the pool of eligible candidates, applications will be accepted from for-profit agencies as long as they agree to waive their profit fee and accept only allowable costs.

Applicant organizations may choose to submit joint proposals with other eligible organizations as long as one organization is designated in the application as the applicant and any co-applicants are designated as such.

Applicants and co-applicants must demonstrate that they have prior experience in the design and implementation of large scale, multiple site research on the juvenile justice system; and demonstrated knowledge of issues associated with juvenile corrections and conditions of confinement within juvenile detention and correctional facilities.

The applicants must also demonstrate that they have the management and financial capability to effectively implement a project of this size and scope. Applicants who fail to demonstrate that they have the capability to manage this program will be ineligible for funding consideration.

VI. Application Requirements

All applicants must submit a completed Application for Federal Assistance (Standard Form 424), including a program narrative, a detailed budget, and budget narrative. All applications must include the information outlined in this section of the solicitation (Section VI) in Part IV, Program Narrative of the application (SF–424). The program narrative of the application should not exceed 70 double-spaced pages in length.

In accordance with Executive Order 12549, 28 CFR 67.510, applicants must also provide a certification that they have not been debarred (voluntarily or involuntarily) from the receipt of Federal funds. Form 4062/2, which will be supplied with the application information package, must be submitted with the application.

In addition, applicants must provide a Certification Regarding Drug-Free Workplace Requirements which meets the requirements of the Drug Free Workplace Act of 1988 (Public Law 100–690, Title V, Subtitle D). Form 4061/3, which will be supplied with the application information package, must be submitted with the application.

In submitting applications that contain more than one organization, the relationships among the parties must be set forth in the application. As a general rule, organizations that describe their working relationship in the development of products and the delivery of services as primarily cooperative or collaborative in nature will be considered co-applicants. In the event of a co-applicant submission, one co-applicant must be designated as the payee to receive and disburse project funds and be responsible for the supervision and coordination of the activities of the other co-applicant. Under this arrangement, each organization would agree to be jointly and severally responsible for all project funds and services. Each co-applicant must sign the SF–424 and indicate their acceptance of the conditions of joint and several responsibility with the other co-applicant.

Applications that include non-competitive contracts for the provision of specific services must include a sole source justification for any procurement in excess of $10,000.

The following information must be included in the application:

(A) *A Statement of the Problem to be Addressed*—Applicants must include the review of the literature and a discussion of the potential contribution of this research to the field.

(B) *Program Goals and Objectives*—A succinct statement of the applicants' understanding of the goals and objectives of the program must be included, and specification of key research questions to be addressed.

(C) *Research Design and Strategy*—Applicants must describe the proposed approach for achieving the goals and objectives of the research program. Applicants must include a detailed discussion of how each of the activities in the three stages of the program will be accomplished, including a detailed discussion of the process for product preparation.

(D) *Products*—Applicants must concisely describe the interim and final products of each stage of the program, and must address the purpose, audience, and usefulness to the field of each product.

(E) *Program Implementation Plan*—Applicants must prepare a plan that outlines the major activities involved in implementing the program, describe how they will allocate available resources to implement the program, and how the program will be managed. Given the important methodological and substantive issues inherent in this study, applicants must identify key project personnel with documented skills in research design, implementation, and analysis; juvenile corrections; and juvenile justice standards.

VII. Procedures and Criteria for Selection

All applications will be evaluated and rated based on the extent to which they meet the following weighted criteria.

In general, all applications received will be reviewed in terms of their responsiveness to the program application requirements, organizational capability, goals, objectives and program strategy described in the RFP, and thoroughness and innovation in responding to strategic issues in project implementation. Applications will be evaluated by a peer review panel according to the OJJDP Competition and Peer Review Policy, 28 CFR part 34, subpart B, published August 2, 1985, at 50 FR 31366–31367. The selection criteria and their point values (weights) are as follows:

(A) The problem to be addressed by the project is clearly stated. This criterion includes—clear, concise, well justified statement of the problem. (5 Points)

(B) The objectives of the proposed project are clearly defined. This criterion includes—succinct statement of the goals and objectives of the project; operational definitions of "nationally recognized standards," "juvenile detention and correctional facilities," and "conditions of confinement"; a clearly articulated statement described how this research will improve the operation of juvenile correctional and detention facilities and assist in the provision of effective services to meet the needs of youth in custody. (10 Points)

(C) The project design is sound and contains a program elements directly linked to the achievement of project objectives. This criterion includes—

VOL
54
ISS
210
NO
1
1989
UMI

appropriateness and technical adequacy of the approach to the activities and products of each stage of the program for meeting the goals and objectives; and potential utility of proposed products. (25 Points)

(D) The project management structure is adequate to the successful conduct of the project. (30 Points): This criterion includes—(1) Adequacy and appropriateness of the activities and the project management structure, and the feasibility of the time-task plan (15 Points); (2) the qualifications of staff identified to manage and implement the program including staff to be hired through contracts, the clarity and appropriateness of position descriptions, required qualifications and selection criteria relative to the specific functions set out in the Implementation Plan. (15 Points)

(E) Organizational capability is demonstrated at a level sufficient to successfully support the project. This criterion includes—the extent and quality of organizational experience in the development, delivery and coordination of research programs that have been national in scope. (15 Points)

(F) Budgeted costs are reasonable, allowable, and cost effective for the activities proposed to be undertaken. This criterion includes—completeness, reasonableness, appropriateness and cost-effectiveness of the proposed costs, in relationship to the proposed strategy and tasks to be accomplished. (15 Points)

Applications will be evaluated by a peer review panel. The results of peer review will be a relative aggregate ranking of applications in the form of "Summary of Ratings." These will be based on numerical values assigned by individual peer reviewers. Peer review ratings, in conjunction with the results of internal review and any necessary supplementary reviews, will assist the Administrator in considering competing applications and in selection of the application for funding. The final award decision will be made by the OJJDP Administrator.

VIII. Deadline for Receipt of Applications

Applicants must submit the original signed application and three copies to OJJDP. The necessary forms for applications will be provided upon request.

Applications must be received by mail or hand delivered to the OJJDP by 5:00 p.m. e.s.t. on January 8, 1990. No applications, sections, or subsections of applications will be accepted after 5:00 p.m. e.s.t. on that date. Those applications sent by mail should be addressed to: NIJJDP/OJJDP, United States Department of Justice, 633 Indiana Avenue, NW, Washington, DC 20531. Hand delivered applications must be taken to the NIJJDP, Room 784, 633 Indiana Avenue, NW, Washington, DC, between the hours of 8:00 a.m. and 5:00 p.m. except Saturdays, Sundays or Federal holidays.

The OJJDP will notify applicants in writing of the receipt of their application. Subsequently, applicants will be notified by letter as to the decision made regarding whether or not their submission will be recommended for funding.

IX. Civil Rights Compliance

(A) All recipients of OJJDP assistance, including any contractors, must comply with the non-discrimination requirements of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended; title VI of the Civil Rights Act of 1964; section 504 of the Rehabilitation Act of 1973 as amended; title IX of the Education Amendments of 1972; the Age Discrimination Act of 1975; and the Department of Justice Non-Discrimination Regulations (28 CFR part 42, subparts C, D, E, and G).

(B) In the event a Federal or State court or Federal or State administrative agency makes a finding of discrimination, after a due process hearing, on the grounds of race, color, religion, national origin or sex against a recipient of funds, the recipient will forward a copy of the finding to the Office for Civil Rights (OCR) of the Office of Justice Programs.

(C) Applicants shall maintain such records and submit to the OJJDP upon request timely, complete and accurate data establishing the fact that no person shall be excluded from participation in, be denied the benefits of, be subjected to discrimination under, or be denied employment in connection with any program or activity funded in whole or in part with funds made available under this program because of their race, national origin, sex, religion, handicap or age. In the case of any program under which a primary financial assistance to any other recipient of Federal funds extends financial assistance to any other recipient or contracts with any other person(s) or group(s), such other recipient, person(s) or group(s) shall also submit such compliance reports to the primary recipient as may be necessary to enable the primary recipient to assure its civil rights compliance obligations under any award.

Dated: October 3, 1989.

Terrence S. Donahue,

Acting Administrator, Office of Juvenile Justice and Delinquency Prevention.

RIN 2120-AD17

Implementation of Equal Access to Justice Act

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Interim final rule.

SUMMARY: The Federal Aviation Administration (FAA) is publishing this interim final rule to implement the Equal Access to Justice Act (Pub. L. 96–481, 94 Stat. 2325, 5 U.S.C. 504 *et seq.*), as amended (Pub. L. 99–80, 99 Stat. 183) (EAJA or Act). This interim final rule will remain in effect until such time as the Department of Transportation (DOT) promulgates updated, department-wide EAJA regulations which will incorporate, for the first time, the adversary adjudications conducted by the FAA pursuant to the Civil Penalty Assessment Demonstration Program and the Rules of Practice thereunder. The updated department-wide regulations will also reflect the above-cited amendment to the Act. These interim regulations set uniform procedures under the Act for any adversary adjudication conducted pursuant to section 554 by the FAA.

EFFECTIVE DATE: This interim final rule is effective on November 1, 1989.

FOR FURTHER INFORMATION CONTACT: James S. Dillman, Assistant Chief Counsel, Litigation Division (AGC–400), Office of the Chief Counsel, Federal Aviation Administration, 800 Independence Ave., SW., Washington, DC 20591, (202) 267–3661.

SUPPLEMENTARY INFORMATION:

Availability of Interim Final Rule: Any person may obtain a copy of this interim final rule by submitting a request to the Federal Aviation Administration, Office of Public Affairs, Attn: Public Inquiry Center (APA–230), 800 Independence Avenue SW., Washington, DC 20951, or by calling (202) 267–3484. Requests must include the part number identified in this final rule. Persons interested in being placed on a mailing list for future rulemaking actions should request a copy of Advisory Circular 11–2A, Notice of Proposed Rulemaking Distribution System, which describes the application procedure.

Background: The EAJA provides for the award of attorney fees and other expenses to eligible individuals and entities who are parties to administrative proceedings before government agencies and who prevail over the government. These proceedings are conducted under section 554 of the Administrative Procedure Act (APA). 5 U.S.C. 554. Eligible prevailing parties are entitled to awards of attorney fees and other expenses, unless the adjudicative officer or judge of the proceeding finds that the position of the United States is substantially justified or that special circumstances make an award unjust.

The FAA is adopting EAJA regulations at this time because it is now, for the first time, conducting proceedings to which the EAJA applies. On August 31, 1988, the FAA implemented the provisions of section 204(g) of the Airport and Airway Safety and Capacity Expansion Act of 1987 (Pub. L. 100–223) by issuing the Rules of Practice for FAA Civil Penalty Actions (53 FR 34646; September 7, 1988). Such regulations provide the procedural framework for the FAA to assess civil penalties (not to exceed $50,000) for violations arising under the Federal Aviation Act of 1958, as amended (49 U.S.C. 1471 *et seq.*), or a rule, regulation, or order issued thereunder, after written notice and a finding of violation by an FAA Decisionmaker. Under these regulations, which were enacted to provide for effective enforcement of the FAA's safety regulations, the FAA conducts proceedings required to be conducted in accordance with section 554 of the APA. The FAA's EAJA regulations apply to those proceedings required to be brought pursuant to the FAA's "Civil Penalty Assessment Demonstration Program," as codified in 14 CFR 13.201(a)(1), and to those proceedings brought for violations of title V, or a rule, regulation, or order issued thereunder, pursuant to 49 U.S.C. App. 1471(a)(3).

On July 10, 1989, the Federal Aviation Administration (FAA) issued a Notice of Proposed Rulemaking (NPRM) requesting comments, within 30 days, on the agency's proposed EAJA regulations (54 FR 29978; July 17, 1989). Four comments were received, one of which was filed late. The agency considered, and will respond herein, to all four comments.

Separation of Functions: All four commenters express concern that the separation of functions set up in the Rules of Practice, which applies to the adjudication of EAJA applications, does not adequately safeguard the separation of prosecutorial and decisionmaking functions within the agency. The commenters fear that the separation of functions required in the Rules of Practice will impede, rather than facilitate, objective EAJA awards. The FAA recognizes that commenters have used this opportunity to once again express their general displeasure over the Rules of Practice adopted last year by the FAA. Very few of the adverse comments to this NPRM are addressed to provisions of the proposed rule; those that are ignore the similarity of the proposed rule with every other EAJA regulation in place for Federal government agencies. In fact, their displeasure seems more accurately directed at the law which authorized the Demonstration Program.

In its March 17, 1989 disposition of comments to the Rules of Practice (54 FR 11914; March 22, 1989), the FAA went to great lengths to address the concerns of eight commenters who felt that the separation of functions provisions provided in the Rules of Practice are inadequate. Based on the comments received on the proposed EAJA regulations, there remains some fundamental misunderstanding of the agency's procedural regulations, and an equal amount of misunderstanding of the Equal Access to Justice Act. In light of this continuing concern and misunderstanding, the FAA will use this opportunity once again to attempt to alleviate the fears of those individuals who believe that the Rules of Practice, in one or more respects, violate the Constitution or the APA.

All four commenters refer to the Assistant Chief Counsel for Litigation as the "FAA decisionmaker" and express doubt that he could make an objective decision on an EAJA application or the underlying civil penalty proceeding in light of his traditional role as an advocate for the agency. This position is factitious. At the outset, the FAA points out what should be obvious: the Rules of Practice designate the FAA Administrator, not the Assistant Chief Counsel for Litigation, as the FAA decisionmaker. The Administrator is to be advised on legal matters arising from his role as the FAA decisionmaker by the Chief Counsel. To the extent that the Chief Counsel requires assistance in advising the decisionmaker, he may receive such assistance from the Assistant Chief Counsel for Litigation and his staff. (See the FAA Announcement of Separation of Functions, 54 FR 1335; January 13, 1989). Consequently, the Assistant Chief Counsel for Litigation does not rule upon either an EAJA application or an enforcement action, but rather only advises the Administrator in his ruling when asked to do so by the Chief Counsel. The Assistant Chief Counsel for Litigation has no authority to decide either an EAJA award or the underlying adjudication on the merits.

All four commenters express concern that the Assistant Chief Counsel for Litigation is physically located not far from agency enforcement attorneys who will be defending the agency's enforcement action in an application for an award of attorney fees under EAJA. (Contrary to one commenter's allegation, however, the Assistant Chief Counsel for Litigation and the Manager of the Enforcement Policy Branch do not share a single office, or even have adjacent offices.) It is asserted that their proximity to one another, in and of itself, constitutes a failure to provide adequate separation of functions between those attorneys in the prosecutorial and adjudicative functions of EAJA and enforcement actions.

As noted in the disposition of comments of the Rules of Practice, "the practice of housing within one agency the functions of prosecutor, adjudicator, and decisionmaker is well-established, widespread throughout the Executive Branch of the Federal Government, and was expressly contemplated by the drafters of the APA in 1946. In fact, this practice is the rule rather than the exception." (54 FR 11914, 11915.) In addition, the FAA points out that the EAJA also contemplates that decisions on EAJA applications be made within the same agency that brought the underlying action that is the basis for the application. Other federal agencies that have EAJA regulations, including the Department of Transportation and the Department of Justice, provide for the defense and adjudication of EAJA claims to be made within the agency. The fact that individuals acting in prosecutorial and adjudicative roles are both employed by the same agency and may also have offices in the same building or on the same floor, in no way creates a conflict of interest or invalidates the separation of functions required by law. The commenters refer to no judicial decision, and we have discovered none, that has found objectionable the mere physical proximity of prosecutor and decisionmaker. So long as the required separation of functions is established within the agency by written standards, it may be assumed that federal officials adhere to those standards, at least in the absence of any specific allegation that they have been breached. Propinquity in and of itself is simply inconsequential.

One commenter suggests that the role of the Assistant Chief Counsel for Litigation to defend tort claims brought under the Federal Tort Claims Act (FTCA) prejudices any legal advice he may give to the Administrator with regard to an EAJA application or any underlying enforcement action. This commenter suggests that where a particular factual incident gives rise both to a civil penalty action by the government and a tort claim against the government, the Assistant Chief Counsel for Litigation and his staff have a vested interest in the outcome of the enforcement action or EAJA application which interferes with the objectivity necessary to consider the matter fairly. This comment is without merit, for the reasons stated below.

First, an agency final decision on an EAJA application cannot benefit the government's defense of a tort claim because the EAJA decision cannot affect the underlying enforcement action. To the extent that an application for an EAJA award is reviewed by the Assistant Chief Counsel for Litigation, a determination has already been made that there was no violation of the Federal Aviation Regulations (FAR) and that the only remaining legal issue to be decided is whether the agency was "substantially justified" in bringing the enforcement action in the first instance. Even if it is assumed that the Assistant Chief Counsel for Litigation had some interest in the initiation and resolution of an enforcement action, such action would necessarily have been decided before the filing of an EAJA application.

Second, the commenter exaggerates the role of the Assistant Chief Counsel for Litigation in the defense of tort claims against the government. Just as the Assistant Chief Counsel for Litigation is not the decisionmaker in the underlying enforcement action, so also he is not the decisionmaker in the defense of tort claims litigation. That role is exercised by the Department of Justice.

Third, with regard to enforcement actions prosecuted under the Rules of Practice, the FAA is confident that its obligations do not conflict so as to invalidate the procedural rules. Under 28 U.S.C. 515–519, Congress has obligated the Department of Justice through the Attorney General to attend to the interests of the United States in litigation, which includes the defense of claims under the FTCA. In furtherance of this obligation, the FAA assists the Justice Department in the defense of aviation accident litigation. Congress has also obligated the FAA to investigate, prosecute and, under Public Law 100–223, render decisions on violations of the FAR. These two obligations are independent of one another, even in those situations where the same factual incident results in both a tort claim against the government and an enforcement action prosecuted by the government. There is no inherent or impermissible conflict of interest in the FAA's performance of these separate functions.

Conflict of interest standards exist in part to ensure the individual loyalty of an attorney to one's client. Where the vigor of an attorney's representation is questionable as a result of the attorney's representation of another client with varying or conflicting interests, or where an attorney is in a position to use privileged information concerning the other side obtained as a result of another representation, the attorney is faced with a conflict of interest which would disqualify him from continuing to represent his client. No conflict exists, however, where an agency represents the Federal government's interests on two separate matters, even if those matters arise from the same factual incident, and even if the government has varying or conflicting interests. While disqualification guidelines for conflict of interest are strictly construed in the private bar, where a client can always find other representation, courts have held that the policy considerations behind those guidelines do not apply to government attorneys since they represent only one client, the Federal government. *In the Matter of the Grand Jury Subpoena of Jean Ford* v. *United States*, 756 F.2d 249, 254 (1985). The Supreme Court has held "[T]he Government cannot follow the fastidious standards of a private fiduciary, who would breach his duties to his single beneficiary solely by representing potentially conflicting interests without the beneficiary's consent. The Government does not 'compromise' its obligation to one interest that Congress obliges it to represent by the mere fact that it simultaneously performs another interest that Congress has obligated it by statute to do." *Nevada* v. *United States et al.*, 463 U.S. 110, 128 (1983). The law and ethical standards leave it to the Federal government to resolve any conflict of interest internally. The FAA is satisfied that it can execute its responsibilities without compromising their integrity. The above-cited court decisions support the FAA position in this regard.

Fourth, to the extent that a party who has received a final agency decision from the FAA decisionmaker believes that such decision was unduly affected by prejudiced advice, that party may raise that challenge in a petition for review of the decision in the court of appeals. In this regard, it is well-

VOL 54 ISS 210 NO 1 1989 UMI

established that courts more closely examine administrative decisions in cases where the agency head reverses the initial decision of an ALJ. Consequently, even assuming that the FAA decisionmaker arbitrarily and without basis reverses an ALJ decision, a party can be well assured of an objective and thorough review of such decision by the court of appeals.

Fifth, the fact that the agency decision under EAJA or the underlying civil penalty proceeding may be challenged in the courts also serves as an incentive for the FAA decisionmaker, and those who advise the decisionmaker, to faithfully execute their role, since the decision will be reviewed on the merits.

Sixth, if, for some reason, the Chief Counsel or Assistant Chief Counsel for Litigation or a staff attorney assisting them is called upon to advise the FAA decisionmaker on a matter about which he believes he could not be objective, he can and would recuse himself from that case.

Finally, the attorneys working for the FAA are subject to the standards of conduct promulgated by the Executive Branch and Department of Transportation. Should an agency attorney violate the ethical or professional standards he/she is sworn to uphold, official sanction could result.

EAJA Actions Subject to This Part: Two commenters express concern that individuals who prevail in FAA enforcement actions would not be as likely to receive EAJA awards from the FAA decisionmaker as they would from the National Transportation Safety Board (NTSB) or the Federal courts. The FAA notes that this rule applies only to civil penalty proceedings authorized by Congress to be adjudicated administratively; it does not apply to certificate actions. The NTSB has no authority to determine an application for a fee award under EAJA arising out of civil penalty proceedings. NTSB procedural regulations, as well as its EAJA provisions, continue to apply only to FAA certificate actions.

Similarly, one commenter requests that the FAA not promulgate EAJA regulations because, "absent an implementation of EAJA by the Agency, a pilot has the right to file a lawsuit in Federal District Court to seek an award of attorney's fees under EAJA as implemented in 28 U.S.C. 2412." With regard to whether the FAA should implement EAJA regulations at all in light of 28 U.S.C. 2412, the FAA does not have any discretion in this area. The EAJA mandates that agencies that conduct hearings pursuant to § 554 of the Administrative Procedure Act (APA) establish procedures for the submission and consideration of EAJA applications (5 U.S.C. 554(c)(1)). This is not at all surprising, for Congress, in enacting the Administrative Procedure Act of 1946, previously recognized and sanctioned administrative adjudication of disputes. Any concern that the FAA decisionmaker will dispose of EAJA applications impartially or unreasonably, in contrast (per the commenter) to the NTSB or Federal court, is eliminated by the prospect of judicial review of EAJA decisions. In any event, 28 U.S.C. 2412 by its terms applies only to EAJA awards for the legal fees associated with court review of an agency decision of the adversary adjudication. Consequently, that section cannot be used to obtain reimbursement for legal fees incurred while the matter was still before the agency decisionmaker.

Standard of Judicial Review: One commenter asserts that the FAA on its own may not provide the standard of judicial review of EAJA decisions made by the agency (§ 14.29). The standard of review to which the commenter refers was not prescribed by this regulation, but was prescribed by Congress in the EAJA (5 U.S.C. 554(c)(2)). This standard applies to all EAJA claims brought throughout the Federal government.

Standards for Awards: One commenter expresses concern that the proposed standards for awards provision, § 14.4, includes language which is not contained in other agencies' EAJA regulations. The commenter does not object to the language, but points out that it was not contained in other EAJA regulations. As stated in the NPRM, the FAA EAJA regulations incorporate the 1985 amendment to the EAJA, as it must. The language in question was taken directly from that amendment and clarifies the meaning of the term "substantially justified." The FAA has decided to adopt § 14.4 as is to comport with the law and in the absence of any specific objection to the language.

Review by FAA Decisionmaker: One commenter expresses concern that proposed § 14.28 permits the FAA decisionmaker to review an underlying EAJA decision on this own initiative. This provision is a standard EAJA provision which is included in the EAJA regulations of the Department of Transportation, the National Transportation Safety Board and the Justice Department. We do not anticipate that the FAA decisionmaker will regularly choose to review an EAJA initial decision of an administrative law judge *sua sponte*, simply because there is little chance that the Administrator will give his attention to such a matter unless one party appeals the decision. Because this provision has been adopted by many agencies, including the Department of Transportation, the National Transportation Safety Board, and the Justice Department, and because this provision apparently has not posed any problems in those agencies, the FAA will retain this provision.

What EAJA Awards Cover: One commenter suggests that proposed § 14.5(e), which states that legal fees may be awarded for work performed after the designation of a proceeding, needs to be clarified. (This provision was taken directly from the Department of Transportation and the Department of Justice EAJA regulations.) The commenter questions whether the FAA will consider a proceeding designated, for purposes of this regulation, after an Order of Civil Penalty is issued. The commenter urges the FAA to recognize that a party will be likely to have incurred legal expenses in an adversary proceeding subject to the Rules of Practice prior to the issuance of an Order. While the FAA recognizes that legal advice and associated expenses may begin to accrue as early as when a party receives a letter of investigation, the EAJA authorizes reimbursement for legal expenses incurred only in connection with an "adversary adjudication," which is defined in the EAJA as "an adjudication under section 554 of this title[.]" 5 U.S.C. 504(b)(1)(C). A section 554 adjudication is one "required by statute to be determined on the record after opportunity for an agency hearing." 5 U.S.C. 554(a). The eligibility for an EAJA award, therefore, is triggered when the party in question is offered the opportunity for an agency hearing. In terms of the FAA Rules of Practice, the opportunity for a hearing arises only when the FAA issues an Order of Civil Penalty, which serves as the complaint and which begins the adversary adjudication. Consequently, legal expenses that are incurred before that time are not incurred in connection with an adversary adjudication and thus not covered by the EAJA and this regulation. The FAA acknowledges the commenter's point that § 14.5(e) is ambiguous in its use of the term "designation of a proceeding." In order to clarify that EAJA awards are available only for legal expenses incurred after the issuance of an Order of Civil Penalty, § 14.5(e) has been changed to read as follows: "Fees may be awarded only for work performed after the issuance of an Order of Civil Penalty."

After consultation with the Department of Justice, the FAA is changing the applicability section of the EAJA rules as it was proposed by deleting paragraphs (b) and (c) of § 14.02. The FAA received no comments on these paragraphs from the public. Although an agency does not have the descretion to designate APA-type proceedings as covered by EAJA, thereby unilaterally extending the applicability of EAJA beyond that authorized by Congress, those paragraphs are included in model EAJA rules to recognize that an agency is in the best position to determine, consistent with its statutory authority, which proceedings are adversary adjudications covered by EAJA. The FAA conducts such adversary adjudications only in cases where a civil penalty may be assessed pursuant to express statutory authority. While those model EAJA paragraphs may be needed for other agencies, they are unnecessary and inappropriate for the FAA. Thus, proposed § 14.02 is changed by deleting paragraphs (b) and (c) by redesignating the remaining paragraphs, and by adding to paragraph (a) the applicable statutory citations.

Omitted Language: One commenter notes that certain language was inadvertently omitted in § 14.11(b). The FAA has remedied that omission. Section 14.11(b) now reads, "The net worth exhibit shall describe any transfers of assets from, or obligations incurred by, the applicant or any affiliate, occurring in the one-year period prior to the date on which the proceeding was initiated, that reduced the net worth of the applicant and its affiliates below the applicable net worth *ceiling. If there were no such* transactions, the applicant shall so state." (The italicized portion of the sentence was omitted in the NPRM.) The commenter also states that proposed § 14.4 does not contain the standard EAJA regulation language that an EAJA award could be received for a "significant and discrete substantive portion" of a covered proceeding. This language was included verbatim in the NPRM and is also in the final rule.

In sum, many of the comments to which this preamble has responded reflect the fundamental disagreement of the commenters with the Civil Penalty Assessment Demonstration Program authorized by Congress. The FAA proposed an EAJA regulation that in all material respects is similar to all other EAJA regulations within the federal government and is consistent with with Equal Access to Justice Act, as amended.

Reason for Immediate Adoption: The FAA's Rules of Practice, issued on August 31, 1988, enable the FAA to conduct proceedings to which the EAJA applies. Because of the need to immediately facilitate the application and award of attorney and other legal fees available pursuant to EAJA, good cause exists to make these procedural rules effective in less than 30 days.

The FAA has determined to issue this rule as an interim final rule. This rule will be superseded by the department-wide DOT EAJA regulation when the latter is updated to conform to the EAJA amendment and to include the FAA Demonstration Civil Penalty Assessment Demonstration Program, as noted in the summary.

Paperwork Reduction Act

Information collection requirements in part 14, subpart B, have been submitted to the Office of Management and Budget (OMB) for review under the provisions of the Paperwork Reduction Act of 1980 (Pub. L. 96-511). When these requirements are approved, a notice and the assigned OMB control number will be published in the **Federal Register.**

Economic Impact

The rule sets out procedures which eligible prevailing parties must follow to apply for EAJA awards. The rule facilitates filing applications for EAJA awards and, consequently, reduces costs to the applicant. Since this rule does not impose any costs on applicants, the impact of the rule is minimal and no full Regulatory Evaluation is necessary.

Trade Impact Assessment

The rule has no impact on international trade. The subject of the rule is unrelated to the manufacture or distribution of aviation-related products and services either by United States-based manufacturers and air carriers or foreign-based manufacturers and air carriers.

Regulatory Flexibility Determination

Additionally, the rule does not have a significant economic impact on the operating costs of those small entities filing applications for EAJA awards with the FAA. There may be some small benefit to small entities by facilitating filing for awards, but this will not be substantial. Therefore, the rule does not have a significant economic impact, positive or negative. Accordingly, a regulatory flexibility analysis is not required.

Federalism Impact

The regulations herein do not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

Conclusion

To the extent that this rule has an economic effect on regulated persons, it will only be a minimally beneficial one since it will facilitate the filing for EAJA awards. Therefore, the FAA has determined that this proposal involves a regulation which is not major under Executive Order 12291 or significant under the Department of Transportation Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). For this same reason, it is certified that under the criteria of the Regulatory Flexibility Act the rule does not have a significant economic impact, positive or negative, on a substantial number of small entities. Because of the absence of any costs attendant with the rule, the FAA has determined that the expected impact of the regulations is so minimal that they do not warrant a full regulatory evaluation.

List of Subjects in 14 CFR Part 14

Equal access to justice, Lawyers.

The Amendment

Accordingly, the Federal Aviation Administration hereby adds part 14 of the Federal Aviation Regulations (14 CFR part 14) to read as follows:

PART 14—RULES IMPLEMENTING THE EQUAL ACCESS TO JUSTICE ACT OF 1980

Subpart A—General Provisions

Sec.
14.01 Purpose of these rules.
14.02 Proceedings covered.
14.03 Eligibility of applicants.
14.04 Standards for awards.
14.05 Allowable fees and expenses.

Subpart B—Information Required From Applicants

14.01 Contents of application.
14.11 Net worth exhibit.
14.12 Documentation of fees and expenses.

Subpart C—Procedures for Considering Applications

14.20 When an application may be filed.
14.21 Filing and service of documents.
14.22 Answer to application.
14.23 Reply.
14.24 Comments by other parties.
14.25 Settlement.
14.26 Further proceedings.
14.27 Decision.
14.28 Review by FAA Decisionmaker.

VOL 54 ISS 210 NO 1 1989 UMI

14.29 Judicial review.
14.30 Payment of award.

Authority: Equal Access to Justice Act (Pub. L. 96-481, 94 Stat. 2325) as amended (Pub. L. 99-80, 99 Stat. 183), (5 U.S.C. 504(c)(1); 49 U.S.C. 1354 (a) and (c) (Revised, 49 U.S.C. 106(g)).

Subpart A—General Provisions

§ 14.01 Purpose of these rules.

The Equal Access to Justice Act, 5 U.S.C. 504 (the Act), provides for the award of attorney fees and other expenses to eligible individuals and entities who are parties to certain administrative proceedings (adversary adjudications) before the Federal Aviation Administration (FAA). An eligible party may receive an award when it prevails over the FAA, unless the agency's position in the proceeding was substantially justified or special circumstances make an award unjust. The rules in this part describe the parties eligible for awards and the proceedings that are covered. They also explain how to apply for awards, and the procedures and standards that the FAA Decisionmaker will use to make them. As used hereinafter, the term "agency" applies to the FAA.

§ 14.02 Proceedings covered.

(a) The Act applies to certain adversary adjudications conducted by the FAA. These are adjudications under 5 U.S.C. 554 in which the position of the FAA is represented by an attorney or other representative who enters an appearance and participates in the proceeding. This subpart applies to proceedings under 49 U.S.C. App. 1475 and 49 U.S.C. App. 1471(a).

(b) If a proceeding includes both matters covered by the Act and matters specifically excluded from coverage, any award made will include only fees and expenses related to covered issues.

(c) Fees and other expenses may not be awarded to a party for any portion of the adversary adjudication in which such party has unreasonably protracted the proceedings.

§ 14.03 Eligibility of applicants.

(a) To be eligible for an award of attorney fees and other expenses under the Act, the applicant must be a party to the adversary adjudication for which it seeks an award. The term "party" is defined in 5 U.S.C. 551(3). The applicant must show that it meets all conditions or eligibility set out in this subpart and in subpart B of this part.

(b) The types of eligible applicants are as follows:

(1) An individual with a net worth of not more than $2 million at the time the adversary adjudication was initiated;

(2) The sole owner of an unincorporated business who has a net worth of not more than $7 million, including both personal and business interests, and not more than 500 employees at the time the adversary adjudication was initiated;

(3) A charitable or other tax-exempt organization described in section 501(c)(3) of the Internal Revenue Code (26 U.S.C. 501(c)(3)) with not more than 500 employees at the time the adversary adjudication was initiated; and

(4) A cooperative association as defined in section 15(a) of the Agricultural Marketing Act (12 U.S.C. 1141j(a)) with not more than 500 employees at the time the adversary adjudication was initiated; and

(5) Any other partnership, corporation, association, or public or private organization with a net worth of not more than $7 million and not more than 500 employees at the time the adversary adjudication was initiated.

(c) For the purpose of eligibility, the net worth and number of employees of an applicant shall be determined as of the date the proceeding was initiated.

(d) An applicant who owns an unincorporated business will be considered an "individual" rather than a "sole owner of an unincorporated business" if the issues on which the applicant prevails are related primarily to personal interests rather than to business interest.

(e) The employees of an applicant include all persons who regularly perform services for remuneration for the applicant, under the applicant's direction and control. Part-time employees shall be included on a proportional basis.

(f) The net worth and number of employees of the applicant and all of its affiliates shall be aggregated to determine eligibility. Any individual, corporation, or other entity that directly or indirectly controls or owns a majority of the voting shares or other interest of the applicant, or any corporation or other entity of which the applicant directly or indirectly owns or controls a majority of the voting shares or other interest, will be considered an affiliate for purposes of this part, unless the administrative law judge determines that such treatment would be unjust and contrary to the purposes of the Act in light of the actual relationship between the affiliated entities. In addition, the administrative law judge may determine that financial relationships of the applicant, other than those described in this paragraph, constitute special circumstances that would make an award unjust.

(g) An applicant that participates in a proceeding primarily on behalf of one or more other persons or entities that would be ineligible if not itself eligible for an award.

§ 14.04 Standards for awards.

(a) A prevailing applicant may receive an award for attorney fees and other expenses incurred in connection with a proceeding, or in a significant and discrete substantive portion of the proceeding, unless the position of the agency over which the applicant has prevailed was substantially justified. Whether or not the position of the FAA was substantially justified shall be determined on the basis of the record (including the record with respect to the action or failure to act by the agency upon which the civil action is based) which was made in the civil action for which fees and other expenses are sought. The burden of proof that an award should not be made to an eligible prevailing applicant is on the agency counsel, who may avoid an award by showing that the agency's position was reasonable in law and fact.

(b) An award will be reduced or denied if the applicant has unduly or unreasonably protracted the proceeding or if special circumstances make the award sought unjust.

§ 14.05 Allowance fees and expenses.

(a) Awards will be based on rates customarily charged by persons engaged in the business of acting as attorneys, agents, and expert witnesses, even if the services were made available without charge or at a reduced rate to the applicant.

(b) No award for the fee of an attorney or agent under these rules may exceed $75 per hour. No award to compensate an expert witness may exceed the highest rate at which the agency pays expert witnesses. However, an award may also include the reasonable expenses of the attorney, agent, or witness as a separate item, if the attorney, agent, or witness ordinarily charges clients separately for such expenses.

(c) In determining the reasonableness of the fee sought for an attorney, agent, or expert witness, the administrative law judge shall consider the following:

(1) If the attorney, agent, or witness is in private practice, his or her customary fee for similar services, or if an employee of the applicant, the fully allocated cost of the services;

(2) The prevailing rate for similar services in the community in which the attorney, agent, or witness ordinarily performs services;

(3) The time actually spent in the representation of the applicant;

(4) The time reasonably spent in light of the difficulty or complexity of the issues in the proceeding; and

(5) Such other factors as may bear on the value of the services provided.

(d) The reasonable cost of any study, analysis, engineering report, test, project, or similar matter prepared on behalf of a party may be awarded, to the extent that the charge for the service does not exceed the prevailing rate for similar services, and the study or other matter was necessary for preparation of the applicant's case.

(e) Fees may be awarded only for work performed after the issuance of an Order of Civil Penalty.

Subpart B—Information Required From Applicants

§ 14.10 Contents of application.

(a) An application for an award of fees and expenses under the Act shall identify the applicant and the proceeding for which an award is sought. The application shall show that the applicant has prevailed and identify the position of the agency in the proceeding that the applicant alleges was not substantially justified. Unless the applicant is an individual, the application shall also state the number of employees of the applicant and describe briefly the type and purpose of its organization or business.

(b) The application shall also include a statement that the applicant's net worth does not exceed $2 million (if an individual) or $7 million (for all other applicants, including their affiliates) at the time the adversary adjudication was initiated. However, an applicant may omit this statement if:

(1) It attaches a copy of a ruling by the Internal Revenue Service that it qualifies as an organization described in section 501(c)(3) of the Internal Revenue Code (26 U.S.C. 501(c)(3)), or in the case of a tax-exempt organization not required to obtain a ruling from the Internal Revenue Service on its exempt status, a statement that describes the basis for the applicant's belief that it qualifies under such section; or

(2) It states that it is a cooperative association as defined in section 15(a) of the Agricultural Marketing Act (12 U.S.C. 1141j(a)).

(c) The application shall state the amount of fees and expenses for which an award is sought.

(d) The application may also include any other matters that the applicant wishes this agency to consider in determining whether and in what amount an award should be made.

(e) The application shall be signed by the applicant or an authorized officer or attorney for the applicant. It shall also contain or be accompanied by a written verification under oath or under penalty of perjury that the information provided in the application is true and correct.

(f) If the applicant is a partnership, corporation, association, organization, or sole owner of an unincorporated business, the application shall state that the applicant did not have more than 500 employees at the time the adversary adjudication was initiated, giving the number of its employees and describing briefly the type and purpose of its organization or business.

§ 14.11 Net worth exhibit.

(a) Each applicant except a qualified tax-exempt organization or cooperative association must provide with its application a detailed exhibit showing the net worth of the applicant and any affiliates when the proceeding was initiated. If any individual, corporation, or other entity directly or indirectly controls or owns a majority of the voting shares or other interest of the applicant, or if the applicant directly or indirectly owns or controls a majority of the voting shares or other interest of any corporation or other entity, the exhibit must include a showing of the net worth of all such affiliates or of the applicant including the affiliates. The exhibit may be in any form convenient to the applicant that provides full disclosure of the applicant's and its affiliates' assets and liabilities and is sufficient to determine whether the applicant qualifies under the standards in this part. The administrative law judge may require an applicant to file additional information to determine the eligibility for an award.

(b) The net worth exhibit shall describe any transfers of assets from, or obligations incurred by, the applicant or any affiliate, occurring in the one-year period prior to the date on which the proceeding was initiated, that reduced the net worth of the applicant and its affiliates below the applicable net worth ceiling. If there were no such transactions, the applicant shall so state.

(c) Ordinarily, the net worth exhibit will be included in the public record of the proceeding. However, an applicant that objects to public disclosure of information in any portion of the exhibit and believes there are legal grounds for withholding it from disclosure may submit that portion of the exhibit directly to the administrative law judge in a sealed envelope labeled "Confidential Financial Information," accompanied by a motion to withhold the information from public disclosure. The motion shall describe the information sought to be withheld and explain, in detail, why it falls within one or more of the specific exemptions from mandatory disclosure under the Freedom of Information Act, 5 U.S.C. 552(b)(1)–(9), why public disclosure of the information would adversely affect the applicant, and why disclosure is not required in the public interest. The material in question shall be served on counsel representing the agency against which the applicant seeks an award, but need not be served on any other party to the proceeding. If the administrative law judge finds that the information should not be withheld from disclosure, it shall be placed in the public record of the proceeding. Otherwise, any request to inspect or copy the exhibit shall be disposed of in accordance with the FAA's established procedures under the Freedom of Information Act as implemented by 49 CFR part 7, appendix C of the FAA's rules.

§ 14.12 Documentation of fees and expenses.

The application shall be accompanied by full documentation of the fees and expenses, including the cost of any study, analysis, engineering report, test, project or similar matter, for which an award is sought. A separate itemized statement shall be submitted for each professional firm or individual whose services are covered by the application, showing the hours spent in connection with the proceedings by each individual, a description of the specific services performed, the rate at which each fee has been computed, any expenses for which reimbursement is sought, the total amount claimed, and the total amount paid or payable by the applicant or by any other person or entity for the services provided. The administrative law judge may require the applicant to provide vouchers, receipts, or other substantiation for any expenses claimed.

Subpart C—Procedures for Considering Applications

§ 14.20 When an application may be filed.

(a) An application may be filed whenever the applicant has prevailed in the proceeding, but in no case later than 30 days after the FAA Decisionmaker's final disposition of the proceeding.

(b) If review or reconsideration is sought or taken of a decision to which an applicant believes it has prevailed, proceedings for the award of fees shall be stayed pending final disposition of the underlying controversy.

(c) For purposes of this rule, final disposition means the later of:

(1) The date on which an unappealed initial decision becomes

affidavits or a request for further proceedings under § 14.26.

§ 14.24 Comments by other parties.

justified, whether the applicant unduly protracted the proceedings, or whether special circumstances make an award unjust.

adjudication has been sought by the applicant or any other party to the proceeding.

VOL 54 ISS 210 NO 1 1989 UMI

(c) For purposes of this rule, final disposition means the later of:

(1) The date on which an unappealed initial decision becomes administratively final;

(2) Issuance of an order disposing of any petitions for reconsideration of the FAA Decisionmaker's Final order in the proceeding;

(3) If no petition for reconsideration is filed, the last date on which such a petition could have been filed; or

(4) Issuance of a final order or any other final resolution of a proceeding, such as a settlement or voluntary dismissal, which is not subject to a petition for reconsideration.

§ 14.21 Filing and service of documents.

Any application for an award or other pleading or document related to an application shall be filed and served on all parties to the proceeding in the same manner as other pleadings in the proceeding, except as provided in § 14.11(b) for confidential financial information.

§ 14.22 Answer to application.

(a) Within 30 days after service of an application, counsel representing the agency against which an award is sought may file an answer to the application. Unless agency counsel requests an extension of time for filing or files a statement of intent to negotiate under paragraph (b) of the section, failure to file an answer within the 30-day period may be treated as a consent to the award requested.

(b) If agency counsel and the applicant believe that the issues in the fee application can be settled, they may jointly file a statement of their intent to negotiate a settlement. The filing of this statement shall extend the time for filing an answer for an additional 30 days, and further extensions may be granted by the administrative law judge upon request by agency counsel and the applicant.

(c) The answer shall explain in detail any objections to the award requested and identify the facts relied on in support of agency counsel's position. If the answer is based on any alleged facts not already in the record of the proceeding, agency counsel shall include with the answer either supporting affidavits or a request for further proceedings under § 14.26.

§ 14.23 Reply.

Within 15 days after service of an answer, the applicant may file a reply. If the reply is based on any alleged facts not already in the record of the proceeding, the applicant shall include with the reply either supporting affidavits or a request for further proceedings under § 14.26.

§ 14.24 Comments by other parties.

Any party to a proceeding other than the applicant and agency counsel may file comments on an application within 30 days after it is served or on an answer within 15 days after it is served. A commenting party may not participate further in proceedings on the application unless the administrative law judge determines that the public interest requires such participation in order to permit full exploration of matters raised in the comments.

§ 14.25 Settlement.

The applicant and agency counsel may agree on a proposed settlement of the award before final action on the application, either in connection with a settlement of the underlying proceeding, or after the underlying proceeding has been concluded. If a prevailing party and agency counsel agree on a proposed settlement of an award before an application has been filed, the application shall be filed with the proposed settlement.

§ 14.26 Further proceedings.

(a) Ordinarily the determination of an award will be made on the basis of the written record; however, on request of either the applicant or agency counsel, or on his or her own initiative, the administrative law judge assigned to the matter may order further proceedings, such as an informal conference, oral argument, additional written submissions, or an evidentiary hearing. Such further proceedings shall be held only when necessary for full and fair resolution of the issues arising from the application and shall be conducted as promptly as possible.

(b) A request that the administrative law judge order further proceedings under this section shall specifically identify the information sought or the disputed issues and shall explain why the additional proceedings are necessary to resolve the issues.

§ 14.27 Decision.

The administrative law judge shall issue an initial decision on the application within 60 days after completion of proceedings on the application. The decision shall include written findings and conclusions on the applicant's eligibility and status as a prevailing party and an explanation of the reasons for any difference between the amount requested and the amount awarded. The decision shall also include, if at issue, findings on whether the agency's position was substantially justified, whether the applicant unduly protracted the proceedings, or whether special circumstances make an award unjust.

§ 14.28 Review by FAA decisionmaker.

Either the applicant or the FAA counsel may seek review of the initial decision on the fee application in accordance with subpart G of part 13 of the Federal Aviation Regulations, specifically 14 CFR 13.233. Additionally, the FAA Decisionmaker may decide to review the decision on its own initiative. If neither the applicant nor the agency counsel seeks review within 30 days after the decision is issued, it shall become final. Whether to review a decision is a matter within the discretion of the FAA Decisionmaker. If review is taken, the FAA Decisionmaker will issue a final decision on the application or remand the application to the administrative law judge who issued the initial fee award determination for further proceedings.

§ 14.29 Judicial review.

If an applicant is dissatisfied with the determination of fees and other expenses made under this subsection, pursuant 5 U.S.C. 504(c)(2), that applicant may, within thirty (30) days after the determination is made, appeal the determination to the court of the United States having jurisdiction to review the merits of the underlying decision of the FAA adversary adjudication. The court's determination on any appeal heard under this paragraph shall be based solely on the factual record made before the FAA. The court may modify the determination of fees and other expenses only if the court finds that the failure to make an award of fees and other expenses, or the calculation of the amount of the award, was unsupported by substantial evidence.

§ 14.30 Payment of award.

An applicant seeking payment of an award shall submit to the disbursing official of the FAA a copy of the FAA Decisionmaker's final decision granting the award, accompanied by a statement that the applicant will not seek review of the decision in the United States courts. Applications for award grants in cases involving the FAA shall be sent to: The Office of Accounting and Audit, AAA-1, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591. The agency will pay the amount awarded to the applicant within 60 days, unless judicial review of the award or of the underlying decision of the adversary adjudication has been sought by the applicant or any other party to the proceeding.

Issued in Washington, DC, on October 27, 1989.

James B. Busey,

Administrator.

General Services Administration

Public Buildings Service

41 CFR Part 101–17
Assignment and Utilization of Space; Proposed Rule

VOL 54 ISS 210 NO 1 1989 UMI

GENERAL SERVICES ADMINISTRATION

41 CFR Part 101–17

Assignment and Utilization of Space

AGENCY: Public Buildings Service, General Services Administration.

ACTION: Proposed rule.

SUMMARY: This proposed regulation would provide revised procedures concerning the assignment and utilization of space in Federal facilities under the custody and control of GSA. It would supersede the provisions of FPMR Temporary Regulation D–73 of February 11, 1987. FPMR Temporary Regulation A–29, Supplement 2, "Physical Fitness Facilities," would also be superseded, and its requirements included in this regulation.

DATES: Comments due by: Agencies comments should be submitted on or before January 2, 1990.

ADDRESS: Comments should be submitted to the General Services Administration, Public Buildings Service (PQ), Washington, DC 20405.

FOR FURTHER INFORMATION CONTACT: Robert E. Ward, Director, Real Estate (202–566–1025).

SUPPLEMENTARY INFORMATION: Authority for issuing this regulation is contained in the Federal Property and Administrative Services Act of 1949, as amended (40 U.S.C. 486(c)), in Executive Order 12411, and in Executive Order 12512.

The purpose of this regulation is to refine GSA's space assignment criteria and to modify and/or clarify certain space-related policies and requirements.

Having operated for over two years under Temporary Regulation D–73 (Quality Workplace Environment), GSA has had the opportunity to assess the results and impacts of the program. Federal agencies have shown a commitment to improving the quality and efficiency of their workplace, and through close cooperation, GSA and Executive agencies have effected substantial improvement in space usage. By applying the guidelines and criteria in FPMR D–73, significant utilization rate imorovement has been accomplished. This has occurred primarily because cooperative efforts have allowed us to meet the goal of 135 square feet or less per workstation, including support space, for new space assignments. In addition, revised leasing requirements, the increased use of furniture systems, and greater attention to agency needs in planning and designing spacc have resulted in improved space quality and efficiency.

The new criteria contained in the present regulation is designed to build upon these efforts and to focus attention on the portion of the office space—the Primary Area—where further space improvement can be effected. The primary (personnel-occupied) areas in most GSA-controlled offices are similar in use and configuration; thus, uniformity and consistency of space assignments within these areas should be readily attainable. GSA's aim is to make sure we do not exceed what we have already attained at the 135 level under D–73, and to focus on making new primary office space assignments for agencies in GSA-controlled space at a rate not to exceed an average of 125 square feet per person. This rate plus the 22 percent allowed for support space compares favorably with the amount of space we are currently providing, and will enable us to keep up the momentum established over the past few years for improving the utilization of Government space.

The 125 square foot target rate for new assignments will apply to all space actions submitted to GSA under part 101–17. It is separate from, and should not be confused with, any target rates established under FPMR part 101–16 for Governmentwide inventory management. Progress toward the Governmentwide target(s) will be reported in accordance with guidance contained in FPMR part 101–16. However, the aim of both the GSA and Governmentwide target rates will be to maintain the control over the growth of the Federal space inventory that was begun under Temporary Regulation D–73.

Changes from the previous regulation (D–73) include:

—Modification of the strict numeric criteria for assignment of space; emphasis on professional space analysis, programming and planning.
—Redefinition of office space to recognize its essential components: Primary (personnel-occupied) area and support area.
—Focus on primary area utilization rate (square footage primary area divided by personnel).
—Support space allowance of 22 percent of primary area.
—Clarification of the policy on the location of Federal facilities and space.
—Revision of the GSA policy on agency moves.
—Revision of the space classifications for GSA-controlled space.
—Changes to the standard alterations in GSA-controlled space.
—Amended definition of occupiable space.
—Revision of the Standard Form 81 and 81A, and inclusion of a Space Requirements Questionnaire to assist in the space planning process.
—Inclusion of criteria on physical fitness facilities and child care centers.
—Modification of telecommunications policy.

Prior to deregulation of the telephone industry in 1984, Federal agencies paid for the cost of telephones and full telephone service as part of a monthly tariff charged by the telephone company. When forced moves of Government agencies by the Public Buildings Service (PBS) took place, PBS only paid for connect and disconnect charges and move of the telephone instrument, which at that time included dial tone service. The telephone company owned the telephone equipment as well as all other components of the telecommunications system, and was financially responsible for moving its equipment and related component parts.

After deregulation, the telephone industry considered the telephone instrument and hookup from the wire closet to be the personal property and financial responsibility of the user. As a result of this change, the monthly tariff paid to the telephone company no longer included rental of the telephone instrument and the costs associated with wiring from the wire closet. At this time, PBS attempted to approximate in forced moves what it previously provided (i.e., paying for the connect and disconnect charges for the telephone instrument and physically moving the instrument to the agency's new location).

In order to be consistent with the changes that had taken place in the telephone industry, GSA developed a telecommunications policy on February 25, 1988, whereby agencies would be responsible for customer telecommunications equipment and related costs thereof. This policy was to be phased in on a case-by-case basis based on an agency's ability to pay, and by October 1, 1989 (the beginning of Fiscal Year 1990), the agencies would be fully responsible for budgeting all costs related to telecommunications.

Recently, some concern has been raised by agencies whether GSA has allocated the appropriate share of the telecommunications costs between PBS and the user agencies. GSA is studying the problem and is coming close to resolution. It appears that some adjustment to GSA's policy may be necessary. In that regard, the telecommunications policy discussed in this FPMR is under review. As an example, some of the issues being considered are who would be the appropriate party to pay for the cost of dial tone service in a GSA directed move, and the appropriateness of having PBS provide "like service" at the new location in GSA directed moves. "Like service" is defined as the existing telephone service in the existing space. When this proposed policy revision is completed it will be published in the **Federal Register** with a 30 day comment period.

GSA has determined that this rule is not a major rule for purpose of Executive Order 12291 of February 17, 1981, because it is not likely to result in an annual effect on the economy of $100 million or more; a major increase in costs to consumers or others; or significant adverse effects. Therefore, a regulatory impact analysis has not been prepared. GSA has based all administrative decisions underlying this rule on adequate information concerning the need for, and consequences of, this rule; has determined that the potential benefits to society from this rule outweigh the potential costs and has maximized the net benefits; and has chosen the alternative approach involving the least net cost to society.

Before issuing a Final Rule, GSA will make all necessary evaluations of economic effects, major cost to consumers or others, and significant adverse effects.

List of Subjects in 41 CFR Part 101–17

Administrative practices and procedures, Federal buildings and facilities, Government property management.

Authority: Sec. 205(c), 63 Stat. 390, 40 U.S.C. 486(c).

Accordingly, it is proposed to amend 41 CFR Chapter 101 as follows:

1. The appendix to subchapter A of 41 CFR chapter 101 is amended by removing FPMR Temporary Regulation A–29.

2. The appendix to subchapter D of 41 CFR chapter 101 is amended by removing FPMR Temporary Regulation D–73.

3. Part 101–17 is revised to read as follows:

SUBCHAPTER D—PUBLIC BUILDINGS AND SPACE

PART 101–17—ASSIGNMENT AND UTILIZATION OF SPACE

Sec.
101–17.000 Scope of part.
101–17.001 Authority.

Subpart 101–17.1—Basic Policy

101–17.100 Scope of subpart.
101–17.101 Policies.
101–17.102 Definition of terms.

Subpart 101–17.2—Assignment of Space

101–17.200 The space assignment process—agency development of need and GSA determination of requirements.
101–17.201 Exception to submitting requests for space.
101–17.201–1 General exceptions.
101–17.201–2 Delegation of authority.
101–17.201–3 Action when existing space is not available.
101–17.202 Space for Short-term use.
101–17.203 Space requirements for ADP, office automation and telecommunications equipment.
101–17.204 Location of space.
101–17.205 Move policy.
101–17.206 Applications of socioeconomic considerations.
101–17.207 Standard alterations.
101–17.208 Wellness/physical fitness facilities.
101–17.209 Child care centers.
101–17.210 Centralized services in Federal buildings.
101–17.211 Reviews and appeals of space assignments.
101–17.211–1 Formal review.
101–17.211–2 Initial appeal.
101–17.211–3 Final appeal.

Subpart 101–17.3—Utilization of Space

101–17.300 Responsibility of GSA.
101–17.301 Responsibility of agencies.
101–17.302 Procedures for agency-initiated relinquishment of space.

Subpart 101–17.4—Space Programming, Layout, and Design Services

101–17.400 Initial layout services.
101–17.401 Other services.
101–17.402 Provision of services.

Subpart 101–17.5—Annual Census

Subpart 101–17.6—Exhibits

101–17.600 Illustration of office support space.
101–17.601 Space classifications and standard alterations.
101–17.602 Space for data processing, office automation, and telecommunications equipment.

Subparts 101–17.7—101–17.47 [Reserved]

Subpart 101–17.48—GSA Regional Offices

101–17.4800 Scope of subpart.
101–17.4801 GSA regional offices.

Subpart 101–17.49—Forms

101–17.4900 Scope of subpart.
101–17.4901 Standard forms.
101–17.4902 GSA forms.

Appendix A to Part 101–17 Space Classification and Standard Alterations

Appendix B to Part 101–17 Wellness/Physical Fitness Facilities

Appendix C to Part 101–17 Child Care Centers

Authority: Sec. 205(c), 63 Stat. 390, 40 U.S.C. 486(c).

PART 101–17—ASSIGNMENT AND UTILIZATION OF GSA SPACE

§ 101–17.000 Scope of part.

This part prescribes policies and procedures for the assignment and utilization of space in GSA controlled facilities. The term "United States" as used in this subchapter, means the 50 States of the United States, the District of Columbia and the Commonwealths, territories, and possessions of the United States. See Part 101–16 for policies and procedures governing the management of all Federal space.

§ 101–17.001 Authority.

This part implements the applicable provisions of the Federal Property and Administrative Services Act of 1949, as amended (63 Stat. 377); the Act of July 1, 1898 (40 U.S.C. 285); the Act of April 28, 1902 (40 U.S.C. 19); the Act of August 27, 1935 (40 U.S.C. 304(c)); the Public Buildings Act of 1959, as amended (40 U.S.C. 601–619); Public Buildings Amendments of 1972 (86 Stat. 219), as amended; the Rural Development Act of 1972 (86 Stat. 674); Reorganization Plan No. 18 of 1950 (40 U.S.C. 490, note); the Federal Urban Land Use Act (40 U.S.C. 531–535); Title VIII of the Civil Rights Act of 1968 (42 U.S.C. 3601); the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321); Intergovernmental Cooperation Act of 1968 (42 U.S.C. 4201–4244, 40 U.S.C. 531–535); Public Buildings Cooperative Use Act of 1976, as amended (90 Stat. 2505); Executive Order 12072 of August 16, 1978 (43 FR 36869); Executive Order 12411 of March 29, 1983 (48 FR 13391); and Executive Order 12512 of April 29, 1985 (50 FR 18453); and the Public Buildings Amendments of 1988 (102 Stat. 4049).

Subpart 101–17.1 Basic Policy

§ 101–17.100 Scope of subpart.

This subpart describes the basic policies that govern the assignment and utilization of GSA space, and defines terms used in part 101–17.

§ 101–17.101 Policies.

(a) Federal real property is an asset that has a value to the Government. This

VOL 54 ISS 210 NO 1 1989 UMI

asset shall be managed and maintained in a manner that enhances its value.

(b) Federal work space is a costly resource and should be acquired and used in the essential minimum amounts needed to support agency mission requirements.

(c) Federal work space should support and improve the productivity of the workers and programs that are housed. Professional standards and practices for space planning and programming, requirements development, furniture use, design and layout shall be used to achieve this goal.

(d) It is GSA policy to provide agencies a quality workplace environment that supports program operations; preserves the value of real property assets; and reduces Federal work space to essential minimum requirements. This includes the provision of child care and physical fitness facilities in the workplace when adequately justified.

(e) Federal space needs will be satisfied in Government-owned space to the maximum extent practical. Available space in buildings under the custody and control of the U.S. Postal Service should also be given priority consideration.

(f) Each agency shall determine the appropriate geographic area for its space facilities and certify that its locational decision is consistent with the requirements of the Rural Development Act of 1972 (86 Stat. 674), Executive Order 12072, and the GSA–USDA Memorandum of Understanding on the location of Federal facilities (1979). See § 101–17.204 regarding application of the locational policy.

(g) The GSA move policy is implemented to require agencies to relinquish all or a portion of assigned space if this action is in the best interest of the Government and would not unreasonably interfere with the agency's performance of its mission. GSA will fund standard alterations and agencies will pay telecommunication expenses and reimburse GSA for the cost of above standard requirements. See § 101–17.205.

(h) Agencies will be assigned space by GSA based on a detailed analysis of workspace and support space requirements. The purpose will be to achieve the optimum use of space for each assignment at the minimum cost to the Government. The best opportunity for space efficiency occurs with new assignments. Therefore, GSA will employ professional methods and techniques of space analysis, planning, and programming in developing space requirements. Utilization rates will be held to the minimum square footage per person for the particular activity. Any utilization rate goal(s) established for new space assignments will apply to all actions involving more than 8 personnel. New assignments for 8 or fewer personnel will be processed on a case-by-case basis and will be housed as efficiently as possible. GSA will implement policies and procedures to ensure that assignment of workstation and support space is consistent throughout its regional offices. (See § 101–17.200, The space assignment process—agency development of need and GSA determination of requirements.)

(i) Officials of GSA client agencies shall be familiar with the policies governing the acquisition, use, assignment, and management of GSA space. These officials shall cooperate with and support GSA in implementing and furthering these policies.

(j) Federal work space should be acquired and occupied in a timely and expeditious manner. GSA shall use professional planning techniques to assist agencies in preparing the Standard Form 81, Request for Space, and support documentation and shall provide technical assistance at an early stage in the requirements development process. This will ensure the acquisition and use of space that supports mission needs at a minimum cost.

(k) GSA will make full and efficient use of Government-controlled space for housing Federal agencies. Space for which there is no current foreseeable Federal need will be disposed of when practicable and prudent to do so. GSA will make every effort to maximize the productive use of an otherwise unused resource through out-granting (i.e., outlease, permit, license).

(l) Space requests for the U.S. Postal Service will be processed in accordance with the "Agreement between GSA and the U.S. Postal Service Covering Real Property Relationships."

§ 101–17.102 Definition of terms.

(a) *"Acceptance of space"* means a certification from and commitment from an agency to occupy space. Based on agency acceptance GSA may commit to the use of Government funds to award a lease, make a commitment for initial alterations, and/or establish a date of occupancy. Agencies are financially responsible for losses incurred by the Government caused by any failure to fulfill a commitment to accept space.

(b) *"Acquisition of work space"* means the process of obtaining work space by purchase, lease, donation, exchange, eminent domain, construction, or by any other means permissible by law.

(c) *"Agency-controlled space"* means federally owned, leased, or controlled space acquired or used by Federal agencies under any authority other than the Federal Property and Administrative Services Act of 1949, as amended. It also includes space for which authorities for acquisition, use, or disposal have been delegated to other agencies by GSA.

(d) *"Cost-effective"* means justified by an analysis which evaluates alternatives in terms of expenses incurred by the Government.

(e) *"Delineated area"* means the specific boundaries within which space will be obtained to satisfy an agency space requirement.

(f) *"Excess holdings"* means any work space or related furnishings which are not essential to a Federal agency's existing or planned programs.

(g) *"Federal agency"* means any department, agency, or independent establishment in the Government, including any wholly-owned corporation.

(h) Federally owned, leased, or controlled work space":

(1) *"Federally owned"* means work space, the title to which is vested, or will become vested pursuant to existing agreement, in the United States Government.

(2) *"Federally leased"* means work space for which the United States Government has a right of occupancy by virtue of having acquired a leasehold interest.

(3) *"Federally controlled"* or *"Government-controlled"* means work space for which the United States Government has a right of occupancy by ownership, by lease, or by any other means, such as by contract, barter, license, easement, permit, requisition, or condemnation, whether or not paid for. This does not include space owned or leased by private sector entities performing work on Government contracts.

(i) *"General purpose space"* means space which is determined by GSA to be suitable for the general use of agencies. General purpose space is categorized as office, storage or special. The physical characteristics are the basis for determining the proper space category.

(j) *"GSA-controlled space"* means space assigned to an agency by GSA by authority of the Federal Property and Administrative Services Act of 1949, as amended, or by authority of any other statute. It includes any space for which an agency pays GSA directly.

(k) *"Initial space layout"* means the specific placement of workstations, furniture and equipment for new space assignments. These initial services are provided by GSA at no cost to the agencies, upon agency request.

(l) *"Inventory"* means a summary, survey, or itemized list of the space, assets, or materials under the control of a Federal agency.

(m) *"Joint-use space"* means occupiable space, such as cafeterias, conference rooms, credit unions, snack bars, and certain wellness/physical fitness facilities and child care centers, which is available for common use by personnel of any Federal agency.

(n) *"Measurement of space"*; (1) *"Gross square footage"* means all floor area (including all openings in floor slabs) measured to the outer surfaces of exterior or enclosing walls, and includes all floors, mezzanines, halls, vestibules, stairwells, service and equipment rooms, penthouses, enclosed passages and walks, finished usable space with sloping ceilings (such as attic space) having 5 feet or more headroom, and appended covered shipping or receiving platforms at truck or railroad car height. Also included in gross floor area, but calculated on one-half of actual floor area, are covered open porches, passages and walks, with appended uncovered receiving and shipping platforms at truck or railroad car height.

(2) *"Net usable space"* means the area to be leased for occupancy by personnel and/or equipment. It is determined by:

(i) Computing the inside gross area of the space by measuring from the normal inside finish of exterior walls, or the room side finish of fixed corridor and shaft walls, or the center of tenant separating partitions.

(ii) Making no deductions for the columns and projections enclosing the structural elements of the building.

(iii) Deducting from the gross area the following, including enclosing walls when applicable:

(A) Toilets and lounges
(B) Stairwells
(C) Elevators and escalator shafts
(D) Building equipment and service areas
(E) Entrance and elevator lobbies
(F) Stacks and shafts
(G) Fully enclosed convectors when the housing rests on the floor, each end abuts a column or wall, and the convector occupies at least 50 percent of the length of the exterior wall.

(3) *"Occupiable area"* means that portion of the gross area which is available for use by an occupant's personnel or furnishings, as well as space which is available jointly to the various occupants of the buildings, such as auditoriums, health units, and snack bars. Occupiable area includes that space available for an occupant's personnel and furnishings which is used to provide circulation, whether or not defined by ceiling high partitions. Occupiable area does not include that space in the building which is devoted to its operations and maintenance, including craft shops, gear rooms, and building supply storage and issue rooms. Occupiable area is computed by measuring from the occupant's side of ceiling-high corridor partitions or partitions enclosing mechanical, toilet, and/or custodial space to the inside finish of permanent exterior building walls or to the face of the convector if the convector occupies at least 50 percent of the length of the exterior wall. When computing occupiable area separated by partitions, measurements are taken from the center line of the partitions.

(o) *"Non Federal organizations"* means organizations such as credit unions, concessions operated by the blind and handicapped, and organizations under the direct sponsorship of a Federal agency such as grantees and contractors.

(p) *"Office support area"* means all secondary/shared workstations, extraordinary circulation space, and those specific and discrete areas constructed as office space and used to meet mission needs outside the agency's requirements for housing personnel, such as public-oriented or centralized reception, hearing or meeting facilities, service, inspection, distribution, storage or processing activities. Such space is most cost-effectively collocated with normal office space. Illustrations are contained in § 101–17.6.

(q) *"Office support area allowance"* is the percentage of office space, over and above the primary office area requirement, allocated for office support functions.

(r) *"Personnel"* means the peak number of persons to be housed during a single 8-hour shift, regardless of how many workstations are provided for them. In addition to permanent employees of the agency, personnel includes temporaries, part-time, seasonal, and contractual employees and budgeted vacancies. Employees of other agencies and organizations who are housed in the space assignment are also included in the personnel total.

(s) *"Primary office area"* is the personnel-occupied area in which an activity's normal operational functions are performed.

(t) *"Primary office area utilization rate"* is an indicator of the efficiency with which the primary office area is used. It is calculated by dividing the total occupied primary office area square footage by the total number of people in that area.

(u) *"Request for space"* or *"space requests"* means a written document upon which an agency provides GSA with the information necessary to assign space. A request for space shall be submitted on Standard Form 81 and Standard Form 81–A, and the Space Requirements Questionnaire. (See §§ 101–17.4901–81 and 101–17.4901–81A, Standard forms.) The request shall, at a minimum, contain descriptions of the amount of space, personnel to be housed, geographic area, time period required and funding availability.

(v) *"Secondary/shared workstations"* are nondedicated workstations used more than 50 percent of the time by two or more persons occupying a space assignment during an 8-hour shift. They function in support of the occupancy agency's mission and are distinct from the primary personnel-occupied workstations.

(w) *"Space"* means space in buildings, and land incidental to the use thereof, which is under the custody and control of a Federal agency.

(x) *"Space allocation standard"* means an agreement between GSA and an agency, written in terms which permit nationwide application, used as a basis for establishing that agency's space requirements. These standards identify the specific amount of space an agency will be allocated, and establish exceptions to general guidelines for GSA and agency responsibility in initial tenant funding.

(y) *"Space assigned by GSA"* means space in buildings, and land incidental to its use, which is under the custody and control of GSA; space made available by the U.S. Postal Service; or space for which a permit for use has been issued to GSA by another agency.

(z) *"Space assignment"* means an administrative action by GSA which authorizes the occupancy and use of space by a Federal agency or other eligible entity.

(aa) *"Space inspection"* means a reconnaissance-type evaluation of the manner in which assignments are being utilized to determine whether a utilization survey is warranted.

(bb) *"Space planning"* means the process of using recognized professional techniques of space programming, planning, layout and interior design to determine the best location and the most efficient configuration for agency facilities.

(cc) *"Space requirements program"* means the statement of an agency's space needs as expressed on Standard Form 81–A, Space Requirements Worksheet, Space Requirements Questionnaire and additional supporting

VOL 54 ISS 210 NO 1 1989 UMI

documentation such as adjacency diagrams, and summarized on Standard Form 81, Request for Space. (See §§ 101–17.4901–81 and 101–17.4901–81A, Standard forms.)

(dd) *"Space typicals"* means examples of workspace and support space allocations based on functional analysis.

(ee) *"Space utilization survey"* means the process of employing recognized professional techniques to determine how efficiently an agency is utilizing its workspace, and to verify that space is being used in accordance with this regulation.

(ff) *"Special purpose space"* means workspace which is or has been constructed and predominantly utilized for the special purpose of an agency and is not generally suitable for the use of other agencies. This includes, but is not limited to, schools, hospitals, mints, embassies, and consulates.

(gg) *"Standard alterations (SA's)"* are those alterations necessary to prepare an agency's space to meet a particular classification, i.e., office, storage, or special, and permit occupancy of the space. (See § 101–17.207).

(hh) *"Unique agency space"* means any general purpose space which either consists of more than 50 percent special-type space not likely to be needed by another agency, or space of any type located in an area where it would be impractical to house another agency. (See § 101–17.302(d).)

(ii) *"Work space"* means federally-controlled space in buildings and structures (permanent, semipermanent, or temporary) which provides an acceptable environment for the performance of agency mission requirements by employees or by other persons occupying it. It is further classified as "office space", "storage space", or "special space". (Also, see § 101–17.601, Space classifications and standard alterations).

(1) *"Office space"* means space which provides an environment suitable in its present state for an office operation.

(2) *"Storage space"* means space generally consisting of concrete, wood block, or unfinished floors; bare block or brick interior walls; unfinished ceilings; and similar construction containing minimal lighting and heating. It includes attics, basements, sheds, parking structures and other unfinished building areas.

(3) *"Special space"* means space which has unique architectural/construction features, requires the installation of special equipment or requires varying sums to construct, maintain and/or operate as compared to office and storage space.

(jj) *"Workstation"* means a location within an office space assignment that provides a working area for one or more persons during a single 8-hour shift. Secondary or shared workstations; are part of office support area.

Subpart 101–17.2 Assignment of Space

§ 101–17.200 The space assignment process—agency development of need and GSA determination of requirements.

(a) This section discusses the process for determining and documenting an agency's space needs and identifying the technical requirements and specifications that describe this need. These requirements are included in the lease and/or construction/alteration contract to ensure that all offerors are responding to the same need and to place the Government in the best possible competitive advantage.

(b) Requirements development is a joint GSA-agency responsibility. The agency understands its mission and program function needs. GSA has the professional and technical knowledge and abilities to translate these needs into technical real estate requirements and deliver space that supports the agency's ability to execute the mission. It is the agency's responsibility to ensure that GSA has the information necessary to develop requirements in a timely manner. It is GSA's responsibility to provide the technical expertise necessary for timely requirements development.

(c) The space assignment process is designed to shorten and simplify the space delivery; to promote a positive working relationship between GSA and client agencies, based on early joint planning; and deliver the optimum amount of space at the minimum cost to the Government. In this process, GSA assumes an early active role in the development of client agency requirements, and provides assistance in the preparation of the Request for Space (SF–81). The goal is to eliminate the need for changes to requirements once the acquisition process has begun. This is accomplished by ensuring that requirements: Are developed accurately, using professional space planning standards and techniques; reflect the true needs of the client agency; and are agreed to by GSA and the client agency early in the process.

(d) GSA has the responsibility to assign and reassign space in an efficient manner using professional space management techniques. In making its space assignments, each GSA regional office will consider the prudent and judicious use of Government funds and resources and will base its decision on local market conditions, available vacant space, restrictions imposed by furniture and equipment, professional space management principles, and agency mission needs. Whenever possible, GSA will satisfy new space requests through the reassignment of vacant available space in the inventory. GSA will advise agencies when the space requested has been determined to be unique agency space.

(e) Agencies requiring space shall contact the appropriate GSA regional office. Within two weeks of the initial contact, GSA will formally acknowledge the initial contact via letter, and will identify a GSA point of contact.

(f) Agencies will be asked to assemble preliminary information and to notify the GSA contact when the information is available.

(g) GSA and the agency will jointly develop space requirements through the completion of the Space Requirements Worksheet (SF–81A), a Space Requirements Questionnaire and a Request for Space (SF–81). (See § 101–17.4901 and § 101–17.4901–81A, Standard Forms). In the requirement development process, GSA will place major emphasis on planning and programming to assure that the final space request accurately reflects the needs of the agency.

(h) In developing space requirements, the analysis will center on the two components of general purpose office space: the primary (or personnel-occupied) area, and the office support area. The requirements development process will define the functions of the space to be designed; identify special agency requirements; review existing conditions; analyze spatial relationships and adjacency requirements; and, through application of the accumulated data, formulate the total space need. Strong emphasis will be placed on agency documentation of all support area requirements including secondary/shared workstations. The resultant office space will reflect the optimum square footage required for the activity involved at the least possible cost to the Government.

(i) Since the primary personnel-occupied areas in most GSA-controlled offices are similar in use and configuration, uniformity and consistency of space assignments within these areas should be readily attainable. Therefore, in assessing utilization rates for its space assignments, GSA will focus on the square footage per person within the primary office area. The utilization rate for new assignments in the primary area will be an average of 125 square feet per person.

(j) The space allowance for the support area will be developed on the basis of professional standards and practices, and normally should not exceed 22 percent of the primary office requirement. (The specific amount of support space will be established during the analysis and planning process.) Support space requirements exceeding 22 percent allowance will be subject to further analysis, and, possibly, higher level review within the GSA region. The support area will be comprised of the areas described in § 101–17.600, and will include secondary (or shared) workstation areas. Space requests within 125 square feet per person for primary office space plus 22 percent for support space will be subject only to minimal review.

(k) Use of Standard Forms 81 and 81A, the forms identified in paragraph (g) of this section, is mandatory for all space requests to GSA. The Space Requirements Questionnaire must also be used, except in those cases where GSA determines that the size of the space need or the degree of complexity of the requirement does not demand the level of detail the form provides. Agencies may prepare the documents themselves (i.e., without GSA assistance) if they desire. Those so submitted will still be subject to thorough analysis by GSA to verify requirements. Agencies will be encouraged to obtain GSA assistance in preparation of the GSA Space Requirements Questionnaire.

(l) To assure uniform action on the part of GSA regional offices, GSA will use the data developed in the requirements development process to establish workstation typicals, support space typicals, test case precedents, and space allocation standards. These will all be used in developing subsequent space requirements in conjunction with the agencies or in reviewing requirements prepared by the agencies. Agencies interested in developing a space allocation standard should contact GSA's Office of Real Property Development (PQ), Washington, DC 20405. All standards negotiated since January 1, 1987, will remain in effect.

Note: Normal horizontal circulation is included in the space typicals developed by GSA. If, in GSA's judgment, there is an extraordinary circulation requirement (e.g., for safety, code, or security purposes) which exceeds the normal allowance, the excess amount will be regarded as support space.

(m) Upon completing assembly of all preliminary documentation including the SF–81A, the Space Requirements Questionnaire and all support data, the client agency and GSA shall complete the SF–81. This is a summary document that incorporates and summarizes all information gathered. In signing the SF–81 the client agency certifies: The need for the space requested; that funds are available to pay for the space and alterations; that the delineated area was designated in accordance with appropriate laws and executive orders and meets agency mission needs; and that an agency representative (by name) is available to accompany GSA on the market survey.

(n) Even though the SF–81 formally identifies an agency's space requirement, the space process starts when an agency informs GSA it has a need for space. The purpose of the new requirements development process is to facilitate the delivery of space. It is GSA's aim that both formal and informal processes be completed as quickly as possible and both the requirements development and acquisition phases will be monitored for timeliness throughout the entire effort. GSA and the agency will jointly develop a space delivery schedule for each project.

(o) When appropriate, GSA will request agencies to submit GSA Form 144, Net Space Requirements for Future Federal Building Construction (see § 101–17.49 Forms).

(p) Agencies will be financially responsible for losses incurred by the Government as a result of any failure to fulfill a commitment to accept space. Agencies are also financially responsible for any additional costs resulting from changes to space requirements made by the agency after a lease or alteration contract has been awarded.

§ 101–17.201 Exception to submitting requests for space.

§ 101–17.201–1 General exceptions.

Standard Form 81 need not be filed by Federal agencies when the space desired or to be acquired is:

(a) General purpose office space of 2,500 square feet or less falling within the geographical area where leasing authority has been delegated to the agency (see § 101–18.104).

(b) Special purpose space (see § 101–17.102(ff)) of 2,500 square feet or less irrespective of geographical location.

(c) Space acquired by the U.S. Postal Service.

(d) Space for short-term conference and meetings (see § 101–17.202).

Note: Agencies are reminded of the need to maximize the use of vacant available Government-controlled space to meet their space requirements.

101–17.201–2 Delegation of authority.

(a) Upon written request from an agency head, the Administrator may delegate authority to acquire space by lease when, in GSA's sole opinion, the delegation is in the best interests of the requesting agency and the Government. GSA will specify the terms and conditions of any delegation in writing at the time the delegation is made.

Note: An authorization to procure parking is not a delegation of leasing authority but rather an authorization for an agency to use its own procurement authority to acquire parking by service contract. This determination can be made at the regional level and does not require the authorization of the Administrator of General Services.

(b) Agencies acting under delegations shall make every reasonable effort to utilize existing Government-controlled facilities before acquiring new space. Agencies shall make inquiries to GSA regional offices regarding the availability of Government-controlled space, and the agencies shall document their lease files if such space is not available. This documentation shall include the date of contact and the name and position of the GSA individual contacted.

(c) Agencies acting under delegation from GSA are required to comply with all relevant sections of this part 101–17, other pertinent portions of subchapter D—Public Buildings and Space, and the Federal Acquisition Regulations.

§ 101–17.201–3 Action when existing space is not available.

(a) If no suitable federally-controlled space is available, GSA will advise the requesting agency by returning a signed copy of the Standard Form 81, showing the action to be taken.

(b) When the agency has acquisition authority or has been delegated such authority by GSA, it may proceed to acquire the requested space consistent with existing laws and regulations. The signed copy of the Standard Form 81, if required, shall be attached to the leasing or related instrument made available to the General Accounting Office.

(c) At the agency's option, GSA may take necessary action to acquire space for agencies having acquisition authority when the latter so requests.

§ 101–17.202 Space for short-term use.

Agencies having a need for facilities for short-term use (such as conferences and meetings, judicial proceedings, and emergency situations) shall utilize available Government-owned or -leased facilities. Agencies shall make inquiries regarding availability to GSA regional offices and document such inquiries as

VOL 54 ISS 210 NO 1 1989 UMI

outlined in § 101–17.201–2(b). If no suitable Government-controlled facilities are available, an agency may arrange for the use of privately owned facilities for a period not to exceed 180 days. Extensions beyond 180 days must be approved by GSA.

§ 101–17.203 Space requirements for ADP, office automation and telecommunications equipment.

Agencies requiring space for the installation of specialized equipment shall provide information as described in § 101–17.602. This information should be forwarded to GSA in sufficient time in advance of equipment delivery so that space can be provided in a timely and efficient manner. This information shall be incorporated into the delivery schedule developed in connection with the preparation of the Standard Form 81. (See § 101–17.200(n).)

§ 101–17.204 Location of space.

(a) Each Federal agency is responsible for determining the delineated area where its facilities are to be located and certifying and documenting that these location decisions are in compliance with the Federal Property Management Regulation; the Rural Development Act of 1972; Executive Order 12072, August 16, 1978; and the Competition in Contracting Act (CICA) of 1984.

(b) In identifying the delineated area, most agencies housed in General Services Administration (GSA) space have mission requirements that are satisfied in the central business district area (CBA) or in locations which permit maximum use of existing federally-controlled facilities. When the agency selects the CBA or a portion of the CBA as the delineated area in accordance with paragraph (a) of this section, no additional supporting documentation to justify the location decision is necessary.

(c) It is recognized that there are agency missions and circumstances which dictate non-CBA locations. These include situations where the client population is located outside the CBA or the agency mission requires the agency to be located at airports, border stations or other such non-CBA locations. It is the client agency's responsibility to provide GSA with adequate justification to support these location decisions.

(d) GSA is responsible for reviewing an agency's delineated area to confirm that where appropriate there is maximum use of existing Government-controlled space and that established boundaries provide competition as defined in the Competition in Contracting Act (CICA), which amends the Federal Property and Administrative Services Act of 1949. In addition, in cases where the agency's delineated area is a non-CBA location, GSA will review the agency's justification to confirm that the agency has adequately supported its location decision. When the agency's delineated area includes both CBA and non-CBA locations, the CBA will be given first consideration over other locations, the CBA will be given first consideration over other locations when all other factors are equal.

(e) For the National Capital Region (NCR), location decisions shall be based on consideration of the most cost-effective alternative in conjunction with regional policies established by the National Capital Planning Act of 1959 (66 Stat. 781), as amended, and the requirements of the Competition in Contracting Act of 1984.

§ 101–17.205 Move policy.

The situations which cause an agency to move and the responsibility for the relocation costs are indicated below. GSA is responsible for determining the most beneficial alternative course of action in each situation.

(a) *Lease expiration.* GSA will determine if it is cost-effective to the Government to seek alternative leased space. Generally, this will be done 18–24 months prior to lease expiration (or earlier for prospectus level projects) so that agencies have time to budget for expenses associated with above-standard alterations and telecommunications.

(b) *Agency expansion.* New requirements may generate the need for additional space. This can be provided at the existing location as contiguous expansion space; at a new location by separating the existing assignment from the new requirement; or by relocating the existing assignment and collocating with the expansion requirement at a new location. Acquisition of expansion space shall be scheduled to coincide with lease expiration to the maximum extent practicable. Responsibility for the costs of providing expansion space are as follows:

(1) GSA will pay for all expansion SA's (see § 10117.207);

(2) The expanding agency will pay for all of its above-standard requirements and telecommunications.

(3) When an expanding agency has a justifiable need for contiguous expansion space and has to displace a neighboring agency, the expanding agency shall pay for its own moving costs and the displaced agency's moving cost and replication of the current above-standard alterations. The displaced agency shall pay for the cost of relocating its telecommunications equipment and services.

(c) *Consolidation.* It is Federal Government and GSA policy to continually review the opportunities for consolidating several locations into one location. GSA shall prepare an economic analysis that demonstrates the cost of consolidation. To the maximum extent practicable, agency consolidation shall be planned to coincide with lease expiration in order to keep costs to a minimum and reduce adverse impacts on agencies. When a multiple agency consolidation is GSA directed and does not coincide with lease expiration, GSA will pay for SA's, above-standard alterations, and moving costs. However, regardless of when a single agency consolidation occurs, the agency will be responsible for paying for the replication of its above-standard alterations and telecommunication services.

(d) *Emergency relocation.* An emergency relocation results from an extraordinary event such as a fire, natural disaster, or immediate threat to the health and safety of occupants of the space which renders the current space unusable and requires that it be vacated. In these cases, it is necessary to act swiftly and expeditiously to react to the emergency. This may require obtaining approvals and funding authorizations from OMB and Congress. It is best to have a central coordinator for such a task and GSA is suited for this role. GSA will be responsible for paying SA's, above-standard alterations, and moving costs for emergency relocations. The agency will pay for the cost of relocating its telecommunications equipment and services. A summary of relocation situations and identification of the responsible part (GSA or agency) is as follows:

Move situations	SA's	Above standard	Moving costs	Telecommunications
Lease Expiration	GSA	Agency	GSA	Agency
Agency Expansion—				
1. Avail Contiguous	GSA	Agency	GSA	Agency
2. Unavail Contiguous	GSA	Agency	GSA	Agency
3. Split Assignment	GSA	Agency	GSA	Agency
4. Displaces agency				
A. Expanding Agency	GSA	ExpAgc	ExpAgc	ExpAgc
B. Displaced Agency	GSA	ExpAgc	ExpAgc	DispAgc
Consolidation				
1. At Lease Expiration	GSA	Agency	GSA	Agency
2. GSA Directed	GSA	GSA	GSA	Agency
Emergency Relocation	GSA	GSA	GSA	Agency

§ 101–17.206 Applications of socioeconomic considerations.

When actions are proposed to accomplish the reassignment or utilization of space through the relocation of an existing major workforce, the impact on employees with low and moderate incomes and minority employees shall be considered. Under these circumstances, the requesting agency shall consult the Department of Housing and Urban Development in accordance with the memorandum of understanding between the Department of Housing and Urban Development and the General Services Administration. (See § 101–19.4800 for text).

§ 101–17.207 Standard alterations.

(a) Standard Alterations (SA's) are those alterations necessary to prepare an agency's space to meet a particular classification, i.e., office, storage, or special space, and permit occupancy of the space. Consistent with its responsibility to provide commercially comparable space, GSA will fund the cost of SA's. The alterations necessary to provide space at the classification requested by an agency are indicated in Appendix A of this part. Also shown are examples of items that are above-standard for the classification.

(b) There are situations when an agency's requirements exceed the standard level for a particular classification of space. In such cases, the requesting agency shall submit a GSA Form 2957, Reimbursable Work Authorization (RWA), to GSA to pay for the cost of the above-standard items including design work. GSA will provide technical assistance to agencies in developing these costs. GSA cannot obligate funds for the acquisition or alteration of space without the RWA.

(c) In situations where GSA alteration funds are unavailable within the timeframe requested by the agency, if the work is funded reimbursably and results in a higher cost space classification, the RENT rate per square foot will not be increased until the beginning of the fiscal year immediately following the first full fiscal year after the start of the alterations project. This will permit the requesting agency to budget for the increased RENT rate. If the alterations result in a lower cost space classification, the reduced RENT rate per square foot will be effective upon completion of the alterations.

§ 101–17.208 Wellness/physical fitness facilities.

Appendix B of this part sets forth the standard alterations provided by GSA for wellness/physical fitness facilities, and establishes criteria for the establishment of such facilities in GSA-controlled space.

§ 101–17.209 Child care centers.

Pursuant to 40 U.S.C. 490(b), GSA is authorized to allot child care centers in GSA-controlled space. Federal agencies are responsible for determining their respective child care needs and then requesting the appropriate space from GSA. Upon receipt of such a request, along with the results of a needs assessment survey indicating sufficient employee interest, GSA will provide the standard alterations for the center. (See Appendix C of this part).

§ 101–17.210 Centralized services in Federal buildings.

See 41 CFR 101–5, regarding the establishment of centralized services in multi-occupant Federal buildings.

§ 101–17.211 Reviews and appeals of space assignments.

§ 101–17.211–1 Formal review.

A request for a formal review of a space assignment or space acquisition action shall initially be submitted to the appropriate GSA regional office by the agency official authorized to sign the Standard Form 81, Request for Space. A request for a formal review shall be in writing and shall include all pertinent information and supporting documentation. The GSA Real Estate Division will verify the data, perform additional investigations, as necessary, and issue a decision.

§ 101–17.211–2 Initial appeal.

(a) Within 15 calendar days after receiving the decision, the regional agency head or his/her designee may submit an appeal of the decision to the Regional Administrator, GSA. In the appeal, the agency official shall state, in writing, the basis for the request for formal review.

(b) Within 15 calendar days, the Regional Administrator, GSA, will notify the agency of his/her decision. In cases requiring more detailed analysis than can be accomplished in 15 days, the Regional Administrator will notify the agency and establish a date on which his/her decision will be rendered.

§ 101–17.211–3 Final appeal.

Within 15 calendar days after the agency has been notified of the Regional Administrator's decision, a final appeal may be filed by the agency head with the Administrator of General Services. The Administrator will render the agency's final decision within 30 calendar days of receipt of the appeal whenever possible; if additional time is required, the Administrator shall notify the agency of the date a decision will be made.

Subpart 101–17.3 Utilization of Space

§ 101–17.300 Responsibility of GSA.

(a) GSA shall conduct space inspections and space utilization surveys to promote and ensure efficient utilization, recapturing for release or reassignment any space the agencies do not justify as being required. The agency will be provided with a written summary of significant findings and recommendations, together with data concerning improvements which are planned by the agency, and those which are planned by GSA.

(b) GSA will maximize the use of vacant space in its inventory. All new requests for space will be carefully screened against vacant available space. GSA, in consultation with the requesting agency, will determine whether the request will be satisfied through the reassignment of suitable vacant space before action is taken to acquire new space.

(c) GSA will be responsible for promptly correcting an agency's assignment records, and for providing

VOL 54 ISS 210 NO 1 1989 UMI

the agency a timely record reflecting that the change has been made.

§ 101–17.301 Responsibility of agencies.

Agencies shall cooperate with GSA in the assignment and utilization of space. Agencies shall:

(a) Furnish information regarding the use of assigned space;

(b) Furnish data on personnel consistent with budget submissions to the Office of Management and Budget and with existing appropriations;

(c) Continually study and survey space occupied to ensure efficient and economical utilization of office space consistent with the minimum amount required to perform the agency mission; and

(d) Promptly report to GSA any space which is excess to their needs for assignment to other agencies.

§ 101–17.302 Procedures for agency-initiated relinquishment of space.

(a) An agency occupying GSA-controlled space shall notify the appropriate GSA regional office as soon as possible, but at least 120 calendar days before vacating, whenever space is no longer needed. Notification shall be in writing, giving a description of the space, a floor plan, and the estimated date of release.

(b) When a portion of space is relinquished, that space shall be consolidated, accessible, and readily assignable or marketable. Expenses required to alter the space to these conditions shall be borne by the agency. Agencies should contact the GSA regional office to determine alteration requirements prior to initiating such alterations under their own authority.

(c) The agency shall be responsible for space charges until the date of release specified in the notification, or until the date space is actually vacated, whichever occurs later. When an agency has not made timely notification to GSA, that agency shall be responsible for space charges for a period of 120 calendar days following the date of notification or until the space has been reassigned, or terminated, whichever occurs first.

(d) When the space relinquished is "unique agency space", the agency shall also be responsible for space charges for a period of 120 days following notification. Further, beyond 120 days the agency shall be responsible for actual expenses incurred by GSA until:

(1) The space is assigned or otherwise disposed of by GSA, or

(2) The expiration of the term specified on the most recent Standard Form 81 applicable to the area in question.

(e) Agencies who commit to occupy space but never occupy that space are responsible for space charges for 120 days from the day they notify GSA that the space is not required. If the space is unique agency space, the provisions of paragraph 101–17.302(d) shall apply.

(f) When an agency is responsible for the operation, maintenance, and protection of Government-owned space assigned by GSA, and the agency determines that this space is no longer needed, the agency shall so notify GSA at least six months before relinquishing the space. The operation, maintenance, and protection of the space shall continue to be the responsibility of the agency until the beginning of the next fiscal quarter following the end of the 6-month period.

Subpart 101–17.4 Space Programming, Layout, and Design Services

§ 101–17.400 Initial layout services.

(a) GSA recognizes that professional space programming and layout are necessary preconditions to achieving optimum space usage at a minimum cost to the Government and for the successful accomplishment of standard alterations and modifications to existing space.

(b) GSA will provide space programming and/or layout services for an initial space assignment, for expansion of an existing assignment, or for a GSA initiated move at no cost to the agency. All requests shall be made to the appropriate GSA regional office.

(c) Agencies may also request other services in conjunction with initial layouts, such as master planning, macro-level programming, and interior design. GSA will consult with the agency to determine the scope of assistance required. Such services will be provided on a reimbursable basis. Agencies must certify the availability of funding before performance of services.

§ 101–17.401 Other services.

Agencies may request space programming, layout and interior design services for space actions other than initial layouts, such as reconfigurations of existing assignment, alterations, reductions, consolidations, requested relocations, and as-built drawings. Such services will be provided on a reimbursable basis. Agencies must certify the availability of funding before performance of services.

§ 101–17.402 Provision of services.

(a) No Federal agency occupying GSA-controlled space shall contract for these services without first consulting GSA. GSA may provide requested services through use of in-house professional staff or contracted professional space planning firms. If necessary to meet contractual commitments, avoid duplicated services and/or ensure cost-effectiveness, GSA may require agencies to use existing GSA space planning contracts or new contracts awarded by GSA.

(b) In the event that GSA is unable to provide requested services, either in-house or by contract, agencies may request a project waiver from the provisions of paragraph (a) of this section to procure such services on their own authority. The request should be made to the GSA regional Public Buildings Service and should document the unavailability of GSA-provided services, the basic scope of service required, and the name, location, and size of the project. If the request is approved by the regional office, the agency shall consult with GSA on contract scope, tasks, and deliverables.

(c) Regardless of the method used to provide these services, work performed on an agency's behalf in GSA-controlled space will be reviewed and approved by GSA to ensure that no adverse impacts on mechanical or utility systems, structural integrity, fire and safety requirements, or assignment management considerations would result.

(d) Requests for services which apply across GSA regional boundaries, such as development of nationwide bureau-level space allocation standards, shall be made to the GSA Central Office, Office of Real Property Development, (PQ), Washington, DC 20405.

(e) GSA will provide services on a reimbursable basis and on request for agency-controlled space as resources permit; however, priority must be given to requests from agencies occupying GSA-controlled space.

Subpart 101–17.5 Annual Census

GSA will conduct an annual census to determine space efficiency. A computer printout will be distributed for each agency assignment by the GSA regional office. Verification of the data requires an agency representative to provide the peak number of personnel to be housed during the fiscal year. This printout is to be returned to the appropriate GSA regional office within 30 days of receipt.

Subpart 101–17.6 Exhibits

§ 101–17.600 Illustration of office support space.

The following list describes the types of space included in the support area component of general purpose office space.

Support area	Description
Reception/waiting area.	Identifiable (i.e., individually distinct) area of the office used for walk-in patron/clientele traffic and/or specific waiting area associated with conference room.
Hearing/meeting/interview areas.	Identifiable area(s)/room(s) established specifically for one or more of the listed purposes.
File areas	Centralized files of material primarily from outside the operational unit (e.g., job applications, mortgage applications, etc.); official personnel files maintained by a central personnel office; active files of cases under adjudication that must be maintained in compliance with legal requirements or mission demands. All such files must be housed in a distinct area separated from other files.
Central storage areas.	Separate areas used for central storage of supplies (may be physically secured with restricted access). Limited to one such space per operational unit site.
Processing area	Space dedicated to a machine or process, including copier rooms, mail rooms, microfiche areas, computer terminal areas, dry labs.
Library/reference area.	Areas dedicated to functions normally associated with libraries; library/reference areas required by statutes, regulation, or mission. Libraries with no special features.
Secondary/shared workspace.	Nondedicated workstations used more than 50 percent of the time by two or more persons occupying a space assignment during an 8-hour shift. It functions in support of the occupant agency's mission and is housed outside primary personnel-occupied office area.
Extraordinary circulation space.	Horizontal circulation space which GSA determines must be provided to meet such needs as safety, security, and code requirements, and which exceeds the normal circulation included in GSA's space typicals.

§ 101–17.601 Space classifications and standard alterations.

Appendix A outlines the various classifications of general purpose office and related space and their associated standard alterations. Also shown are examples of items that are above-standard for the classification.

§ 101–17.602 Space for data processing, office automation and telecommunications equipment.

This section contains the information required on space requests for these specialized functions.

(a) Agencies requiring space for the installation of such equipment must provide the following information in addition to the requirements of § 101–17.203:

(1) Type of equipment (including make, model number, manufacturer, and number of units of each);

(2) Space and environmental requirements, including:

(i) Floor weight (lbs.);

(ii) Machine dimensions (width, depth, and height in inches);

(iii) Service clearance (front, rear, right and left sides);

(iv) Power in voltage and kv.-a, (starting loads and operating loads);

(v) Heat dissipation in B.T.U./hr. and air flow (c.f.m.); and

(vi) Need for raised floor, acoustic ceiling, and air-conditioning.

(3) Related requirements, such as storage space for supplies, tapes, and disks; work space, including desk and aisle space; and future expansion needs;

(4) Agency responsibility for funding; and

(5) Required occupancy date.

(b) The above information should be provided as separate supplemental data to Standard Form 81, Request for Space, and forwarded to the GSA regional office. The space requirements indicated on Standard Form 81 must include the space requirements for all components of Automated Data Processing, Office Automation and Telecommunications Equipment. The supplier should be consulted prior to establishing space needs in order to ascertain any specific or peculiar space requirements of the equipment involved.

(c) It is essential that this information regarding the requirement for such space be transmitted to GSA as far as possible in advance of delivery of equipment (preferably 18 months or more) so that space can be provided in a timely and economical manner.

Subparts 101–17.7—101–17.47 [Reserved]

Subpart 101–17.48 GSA Regional Offices

§ 101–17.4800 Scope of subpart.

This subpart identifies the regional offices of GSA, describes the geographical areas of jurisdiction, and lists the office address.

§ 101–17.4801 GSA regional offices.

GSA Region	Area served	Mailing address
2	Connecticut, Maine, Massachusetts, New Hampshire, New Jersey but (all 6 southern counties), New York, Rhode Island, Vermont, Puerto Rico, U.S. Virgin Islands.	General Services Administration, 26 Federal Plaza, New York, NY 10278.
3	Delaware, Maryland (except NCR area), Pennsylvania, Virginia (except NCR area), West Virginia, 6 southern counties of New Jersey.	General Services Administration, Ninth and Market Streets, Philadelphia, PA 19107.
4	Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee.	General Services Administration, 75 Spring Street, SW., Atlanta, GA 30303.
5	Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin.	General Services Administration, 230 South Dearborn Street, Chicago, IL 60604.
6	Iowa, Kansas, Missouri, Nebraska.	General Services Administration, 1500 East Bannister Road, Kansas City, MO 64131.
7	Arkansas, Colorado, Louisiana, Montana, New Mexico, North Dakota, South Dakota, Oklahoma, Texas, Utah, Wyoming.	General Services Administration, 819 Taylor Street, Fort Worth, TX 76102.
9	Alaska, Arizona, California, Hawaii, Idaho, Nevada, Oregon, Washington; Guam, Trust Territory of the Pacific Islands, American Samoa.	General Services Administration, 525 Market Street, San Francisco, CA 94105.
NCR	Washington, DC and nearby metropolitan area of Maryland and Virginia.	General Services Administration, 7th and D Streets, SW., Washington, DC 20407.

Subpart 101–17.49 Forms

§ 101–17.4900 Scope of subpart.

This subpart contains information on forms that pertain to the assignment and utilization of space and instructions in their use.

§ 101–17.4901 Standard forms.

(a) Forms referenced to this § 101–17.4901 are Government standard forms. The subsection numbers in this section

BEST COPY AVAILABLE

correspond with the standard form numbers.

(b) Supplies of standard forms can be obtained from the nearest GSA supply

carpet standards used for schedule purchases.

Ceilings—must be structurally sound, and be at least 8' 0", and no more than 11' 0' clear

Fire & Safety—Building shall conform with the criteria cited in FPMR 101–20.105.

Typical above-standard office space alterations, which must be justified by the

Floors—Sealed concrete, wood block, or other material adequate for general storage.

Ceilings—Unfinished.

Partitioning—No additional partitioning or

1. *Laboratory and Clinic Area (SP–1)*—Space containing built-in equipment and utilities required for the qualitative or quantitative analysis of matter,

f. Table areas in cafeterias (with supplementary HVAC or other special features), and

g. Mini-computer/mega frame equipment

VOL 54 ISS 210 NO 1 1989 UMI

correspond with the standard form numbers.

(b) Supplies of standard forms can be obtained from the nearest GSA supply distribution facility.

§ 101–17.4902 GSA forms.

(a) Forms referenced to this § 101–17.4902 are GSA forms. The subsection numbers in this section correspond to the GSA form number.

(b) Agencies may obtain their initial supply of GSA forms from GSA National Forms and Publications Center, Box 17550, 819 Taylor Street, Fort Worth, TX 76102–0550. Agency field offices should submit all future requirements to their Washington headquarters office which will forward consolidated annual requirements to the General Services Administration (CAR), Washington, DC 20405.

Appendix A to Part 101–17—Space Classification and Standard Alterations

Classification

A. *Office Space* (Space which provides a suitable environment in its present state for an office operation, and which includes, among other features, adequate lighting, heating and ventilation, floor covering, finished walls, and accessibility.) The following represent uses of office space:

(1) General purpose office space,
(2) Private corridors,
(3) Meeting rooms (without special equipment and additional heating, ventilation, and air-conditioning (HVAC)),
(4) Training rooms (without special equipment and HVAC),
(5) Libraries (without extensive built-in stacks and special floor loading),
(6) Dry laboratories,
(7) Storage in office space,
(8) Credit unions (without fixed equipment),
(9) Lounges (other than toilet areas),
(10) Reception areas,
(11) Hearing rooms (without special equipment and HVAC),
(12) Mail rooms,
(13) Health rooms (without special equipment), and
(14) Table areas in cafeterias (without supplementary HVAC or other special features),
(15) File areas (without increased floorload),
(16) Wellness/physical fitness facilities (exercise and/or locker areas finished to office standards, and
(17) Child care facilities (except toilets and kitchen areas).

Standard Alterations (SA's)

SA's are those alterations necessary to prepare an agency's space to meet the basic requirements for the particular classification of space:

A. *Office Space.*

Floors—either resilient flooring or carpeting of a grade and type specified in the Standard Solicitation for Offers (SFO) or by the most recent Federal Supply Service (FSS) carpet standards used for schedule purchases.

Ceilings—must be structurally sound, and be at least 8' 0", and no more than 11' 0' clear from finished floor to the lowest obstruction. STC rating of 40.

Partitions—new and/or existing ceiling high interior partitions shall be provided to a maximum of one linear foot for each 10 square feet of occupiable office type space. STC rating of 40.

Wall Treatment—Paint or vinyl wall covering as is the building standard. (Vinyl will not be less than 13 oz. per square yard. Government approved wood, rubber, vinyl, or carpet base, will be provided as part of the initial tenant buildout (per building standard).

Window Treatment—Building standard. Any deviation will be considered reimbursable.

HVAC—Heating, ventilation, and air-conditioning (HVAC) capable of maintaining an *acceptable* operating environment.

Lighting—Must provide a minimum of 50-foot candles at work surface.

Electrical Outlets—Electrical outlets will be provided to a maximum of two duplex or one quadruplex electrical outlet for each 100 sq. ft., or in the case of systems furniture, 1 base feed for every 100 sq. ft. of occupiable office type space. Workstation outlets shall be wired so that no more than four workstations are on one 20 AMP circuit. Convenience outlets (outlets mounted on columns or permanent walls or in private offices, conference rooms, libraries, or file/supply rooms) shall be wired to accommodate no more than 8 receptacles to one 20 AMP circuit. Special copier or printer outlets shall be provided at the rate of 1 outlet for every 10,000 sq. ft.

Telecommunications Requirements—Conduits and ducts will be provided for tenant agencies telecommunications based on a standard planning assumption of one telephone and one data instrument for every 100 square feet of occupiable office space. In those building areas where the utilization rate is less than 100 square feet of occupiable office space, that lesser rate will be standard. Any requirements above this level are above-standard and are to be reimbursed to GSA. (For additional information, see "GSA Telecommunications Procedures", February 10, 1988.)

Computer Local Area Network (LAN) System Cable Installation—Conduit and/or raceway to accommodate LAN cable installation on a floor or between floors shall be installed as part of the standard tenant buildout. All LAN cable must be purchased by the tenant agency and furnished to a lessor or a contractor for installation (lessor or contractor will specify amount of cable required based on Government layout). Installation instructions and diagrams must be provided by the tenant agency's computer vendor to the lessor or contractor along with the approved space (design intent) layout. Cable installation shall be done by the lessor contractor with the assistance and/or advice of the tenant agency's computer vendor. The computer vendor must be hired and funded by the tenant agency. Cable installation (excluding installation of connectors for the machines) will be done as a part of the standard tenant buildout.

Fire & Safety—Building shall conform with the criteria cited in FPMR 101–20.105.

Typical above-standard office space alterations, which must be justified by the agency, include the following:

- Folding partitions and structural support work required to support them.
- Nonstandard lighting (decorative lights, spot lights, etc.). Parabolic light fixtures shall be considered as standard lighting if they are installed as a standard feature of a building.
- Observation windows in private offices, side light glass panels installed for decorative purposes.
- Dutch doors (agency to pay the difference in cost between a standard door and a dutch door).
- Glass pass-through windows installed in standard office space.
- Glass doors or double doors except for main (central) reception doors or doors to large supply or forms areas where shipments come in from dock areas.
- Digital security locks, magnetic (Card Key or Kastle System) locks.
- STC ratings greater than 40 in walls and ceilings (unless otherwise indicated in an agency SAS).
- Alarm systems; if not required by GSA risk assessment.
- Single electrical outlets on one 20 AMP circuit, unless specified in approved GSA-agency Space Allocation Standards.
- Sound masking.
- Interior private or semiprivate office door locks (standard private or semiprivate shall have passage set hardware) conference and supply rooms may have locks.

Provision of the above will be on a reimbursable basis.

Classification

B. *Storage Space* (All storage space will be classified under subset of general storage area, inside parking area, or warehouse.)

1. General Storage Areas (ST–1). Storage in general purpose buildings generally consisting of unfinished floors, walls, ceilings, and adequate HVAC and lighting, including:
a. Basements,
b. Attics,
c. Supply rooms (not finished to office standards),
d. Storerooms (not finished to office standards), and
e. File rooms (not finished to office standards).

2. *Inside Parking (ST–2)*—Inside parking areas include:
a. Garage,
b. Parking areas (including rooftops and decks), and
c. Motor pool parking.

3. *Warehouse Areas (ST–3)*—Space specifically designed for materials storage and handling operations consisting of features which include, but are not limited to, concrete or *wood block* floors, unfinished ceiling, heavy live floor load capacity (over 200 pounds psf), high ceiling (over 14 feet), and industrial lighting.

Standard Alterations (SA'S)

B. *Storage Space*

1. *General Storage Areas.*

Floors—Sealed concrete, wood block, or other material adequate for general storage.

Ceilings—Unfinished.

Partitioning—No additional partitioning or wall finish except for required firewalls and agency separating partitions. Door openings shall be wide enough to allow the passage of hand trucks. Doors and jambs shall be installed with protective plates to prevent damage.

Heating and Ventilation—Capable only of maintaining an operating environment with a temperature between 65° and 85°.

Lighting—Maintain 30 foot candles at floor level.

Fire and Safety—Buildout shall conform to the criteria cited in FPMR 101–20.105.

Typical above-standard alterations for general storage areas include:

- Dead bolt locks on interior room doors. The entry door can be secured with a deadbolt lock.
- Interior security/safety partitioning. Subdivision of tenant areas by wire mesh partition is adequate when security is not a major consideration.
- Above-standard levels of lighting (above 30-foot candles).
- Special fire protection features for flammable materials.

2. *Inside Parking.*

—Adequate identification of parking areas will be provided.

—Sprinkler protection (Fire and safety—buildout features shall conform to the criteria specified in FPMR 101–20.105.)

3. *Warehouse Areas.*

Floors—Sealed concrete, wood block, or other material adequate for warehousing service.

Ceilings—Unfinished.

Partitioning—No additional partitioning or wall finish except required firewalls and agency separation partitions.

Heating and ventilation—Capable of only of maintaining an operating environment.

Lighting—Maintain a minimum of 10-foot candles.

Toilet Facilities—On a case-by-case basis.

Electrical Service—As required, and including normal hookup to agency warehousing equipment. No telephone outlets will be provided.

Exterior Building Features—Features, such as covered loading docks, power operated doors, dock-levelers, and railroad sidings available for use will be provided when justified by agency and approved by GSA.

Typical above-standard alterations for warehouse areas include:

- Plumbing (excluding toilets).
- Load levelers.
- Loading ramp.
- Floor drains with sediment trap and sump.
- Special fire protection features for flammable materials.

Classification

C. *Special Space*—(Space that necessitates the expenditure of additional or varying sums to construct, maintain, and/or operate as compared with the amount spent for office and storage space. This space is further defined according to one of the following subsets:

1. *Laboratory and Clinic Area (SP–1)*—Space containing built-in equipment and utilities required for the qualitative or quantitative analysis of matter, experimentation, the processing of materials, and/or the physical welfare of employees or the public including:
a. Wet laboratories,
b. Clean laboratories,
c. Photographic laboratories,
d. Clinics,
e. Health units and rooms (with special equipment),
f. Private toilets,
g. Wellness/physical fitness facility shower rooms, and
h. Child care facility toilets.

2. *Food Service Areas (SP–2)*—Space in buildings devoted to the preparation and dispensing of foodstuffs including:
a. Cafeterias (kitchens, related storage and service areas),
b. Snack bars,
c. Mechanical vending areas (where plumbing is provided), and
d. Private kitchens with plumbing (including kitchens in child care facilities).

3. *Structurally Changed Areas (SP–3)*—Areas having architectural features differing from normal office or storage areas, such as sloped floors, high ceilings, increased floor loading, steel mesh within partitioning, sound conditioning over Sound Transmission Coefficient (STC)–40 rating including:
a. Auditoriums,
b. Gymnasiums,
c. Libraries (with special stacks and floor loading),
d. Target ranges,
e. Courtrooms,
f. Security vaults,
g. Secured Compartmented Information Facility (SCIF), and
h. Detention cells.

4. *Automatic Data Processing (ADP) Area (SP–4)*—Areas having special features such as humidity and/or temperature control, raised flooring, and ceiling heights exceeding office standard; and extensive power requirements (requiring its own power panels, etc., including:
a. Computer rooms, telecommunication (PBX) rooms with special environmental requirements;
b. Computer support areas with special flooring and/or wiring and (with humidity and/or temperature control); and
c. Computer tape vaults.

5. *Conference and Classroom/Training Facilities (SP–5)*—Areas used for conferences, training, library, hearings or mini-computer use with supplemental HVAC and/or built-in special equipment such as blackout curtains, lighting controls, projection booths and sounding conditioning, in addition to office finishes:
a. Conference rooms (with special equipment and/or HVAC),
b. Hearing rooms (with special equipment and/or HVAC),
c. Classroom/training rooms (with special equipment and/or HVAC),
d. Exhibit areas (with special equipment and/or HVAC),
e. Courtrooms (no structural changes but with special equipment),
f. Table areas in cafeterias (with supplementary HVAC or other special features), and
g. Mini-computer/mega frame equipment rooms adjacent to office area requiring supplemental HVAC and minor special buildout such as deadbolt locks, dedicated electrical service, LAN cable distribution access, etc. (rooms requiring substantially less than SP–4 buildout).
6. *Light Industrial Areas (SP–6)*—Areas which may have some or all of the characteristics of warehouse space but, in addition, may be provided with one or more of the following features: air-conditioning, humidity control; special power, and a light level equal to or slightly less than that provided for office space including:
a. Records storage (with humidity control);
b. Storage type space (with air-conditioning);
c. Printing plants;
d. Product classifying laboratories;
e. Motor pool service areas;
f. Postal workrooms, swingrooms, locker rooms, mailing vestibules and platforms, and lock box lobbies;
g. Shop (other than PBS);
h. Loading docks and shipping platforms;
i. Canopy areas (if included in occupiable area);
j. Vertical improved mail system areas; and
k. Telephone frame rooms and unattended switchboards (for specific agency use).
7. *Quarters and Residential Housing*—Quarters and residential housing areas (housing and quarters that do not logically fall in the other categories).

Standard Alterations (SA's)

C. *Special Space.*

1. *Laboratory and Clinic Area*—Alterations will be provided in accordance with the levels specified for office space. In addition, they may include the installation of special building equipment to meet the environmental requirements of the laboratory and/or clinic as shown below:

Floors—As reqdired special floors such as quarry tile, grating, etc., will be provided by GSA.

Plumbing and sewage—As required, special building equipment such as special piping and associated water treatment equipment, special sewerage disposal systems, and water, gas, compressed air, and vacuum systems will be provided by GSA. Normal hookup will be provided to the space perimeter consistent with architectural, mechanical, electrical, and structural limitations.

Electrical distribution—Electrical service, including normal hookup, will be provided consistent with architectural, mechanical, electrical, and structural limitations.

Heating, ventilation, and air-conditioning—As required, special building equipment to treat and exhaust to the atmosphere noxious or offensive gases produced by agency program equipment will be provided. In addition, fresh air suitable to meet the special requirements, up to 100 percent fresh air, temperature control +/−2 degrees within the design range, and humidity control +/−5 percent within the

design range will be provided. HVAC services will be provided for an 11 hour day, 5 days a week (excluding holidays). Service required beyond normal work hours or on weekends and holidays are reimbursable.

lighting and other agency program equipment).

SA's for courtrooms are as follows:

Floors—Acceptable grades of commercial carpeting suitable for heavy traffic or the

Federal judges and magistrates or other court personnel will be designed, furnished, and installed, at the courts' expense, whether provided through new construction in an existing building or by modification of

c. Supplemental, separately zoned heating, ventilation, and air-conditioning in *conformance* with *GSA standards*; all duct penetrations into the room shall be baffled so as not to compromise the STC requirement of

(4) Sound attenuation to provide a minimum sound transmission class of 40 (STC 40).

(5) Adequate lighting to maintain acceptable levels of illumination.

within the agency. For guidance on the development of health service programs, agencies may consult the PHS, Department of Health and Human Services.

Appendix C to part 101–17—Child Care

VOL 54 ISS 210 NO 1 1989 UMI

design range will be provided. HVAC services will be provided for an 11 hour day, 5 days a week (excluding holidays). Service required beyond normal work hours or on weekends and holidays are reimbursable.

* * * * *

Typical above-standard alterations for laboratory and clinic space:

- Fumes hoods.
- Emergency showers.
- Eye wash station.
- Revolving dark room doors.
- NOTE: Laboratory casework is considered to be furniture and will not be provided or installed by GSA. GSA will, however, prepare floors, ceilings, and/or walls as necessary to permit the installation of casework.

2. *Food Service Areas*—Food service areas will be provided with initial alterations in accordance with the levels specified for office space, with additions or exceptions as follows:

Floors with nonslip tile or quarry tile with cove base molding in large commercial type kitchen areas;

Smooth surface, washable *ceilings, partitions,* and *walls* in food preparation areas;

Heating, ventilation, and *air-conditioning* capable of maintaining an acceptable operating environment in food preparation areas, vending machine rooms, and other concession areas having heat generating equipment;

GSA will provide *electrical service,* including normal hookup, consistent with architectural, mechanical, electrical and structural limitations and the provision and installation of *conduit* for telephone distribution. Telephone *service* will not be provided by GSA in concession or blind operated facilities;

Plumbing as required, water, gas, and waste systems, including normal hookup, consistent with architectural, mechanical, electrical, and structural limitations; and

Special equipment as determined by GSA on a case-by-case basis.

Fire & Safety—Buildout shall be in accordance with the criteria cited in FPMR 101–20.105.

C. *Special Space*—Structurally changed areas will be provided with initial alterations at levels required to provide standard features normally associated with the type of space being provided. Determination of the normal level will be made by GSA on a case-by-case basis using both industry and GSA-recognized standards.

Courtrooms. Courtrooms and other court related space will be prepared in accordance with current design criteria.

All raised ceiling courtrooms are included in the category of Structurally Changed Areas. Office type court facilities will be finished to a quality equivalent to those supplied for general-use office space in Federal buildings.

In submitting their space requirements for new or additional court and court-related facilities, the courts shall, as a minimum, stipulate that court funds will be made available to GSA for reimbursement for the cost of known special requirements (i.e., security features, counters, emergency lighting and other agency program equipment).

SA's for courtrooms are as follows:

Floors—Acceptable grades of commercial carpeting suitable for heavy traffic or the equivalent will be provided in all areas;

Ceiling—Ceiling systems will be determined on a case-by-case basis depending on existing or proposed architectural features, acoustical requirements (N.R.C. 0.65–0.80 range), electrical distribution and HVAC systems. However, standard level ceiling materials are limited to those which are readily available in the building supply market and do not involve unusual cost to provide, install, and maintain.

Walls—Construction in conformance with applicable GSA criteria for courtrooms, vaults, holding cells, etc.

Lighting—Conventional standards for illumination levels will apply. Lighting fixtures for standard alterations are limited to commercially available units which do not involve unusual cost to provide, install, and maintain;

Window treatment—Building standard.

HVAC—Conventional standards for HVAC systems will apply. Court space may be furnished with HVAC by a supplemental system in conformance with GSA standards;

Electrical distribution—Standard electrical connections will be supplied as required and will be provided consistent with architectural, mechanical, and structural limitations;

Telecommunications requirements—Conduits and ducts will be provided for courts' telecommunications requirements, but not to exceed a standard of one telephone and one data instrument for every 100 square feet of space. Any requirements above this level are above-standard and are to be reimbursed to GSA.

Sound systems—Only required wiring and related conduits will be provided;

Toilets—Toilets in detention cells are treated as a part of the overall cost of providing this special facility. Detention cells will be assigned to the requesting agency (U.S. Courts or Department of Justice);

Security systems—All security measures and systems are considered above-standard alterations and therefore, reimbursable. This includes: armor for the judge's bench, closed-circuit TV, warning signals, and communications systems; and

Furnishings—All courtroom furnishings whether fixed or movable shall be funded by the Courts. This includes the judge's bench, jury box, witness box, railings, and public seating.

Standard space alterations for judge's chambers—will be provided in accordance with current court design guide criteria;

Private toilets—Judges, bankruptcy judges, and magistrates may be provided private toilets in locations where court is held on a full-time basis. In locations where court is held only on a part-time basis, private toilet facilities will be provided only for the District Court judges. Circuit Court judges will also be provided private toilets at their official stations. Private toilets are classified as laboratory and clinic space (SP–1)

Elevators—Special elevators for use by the marshals service for prisoner movement or by Federal judges and magistrates or other court personnel will be designed, furnished, and installed, at the courts' expense, whether provided through new construction in an existing building or by modification of existing elevators.

New buildings built by GSA for use by court activities shall include elevator service designed to facilitate the secure movement of judicial officials and/or Federal prisoners within the building.

Fire and Safety—Buildout of facilities shall be in accordance with the provisions cited in FPMR 101–20.105.

4. *Automatic Data Processing (ADP) Area*—Automatic data processing areas will be provided with initial alterations in accordance with levels specified for office space, with additions or exceptions as follows:

(a) *Raised floors,* if required, installed to provide space for electrical and/or HVAC service for ADP equipment;

(b) As determined by GSA, *ceilings* acoustically treated and sound conditioned to meet the conditions and environmental requirements of each location. Ceiling STC shall not be less than 40.

(c) *Heating, ventilation, and air-conditioning* capable of maintaining an operating environment for the ADP equipment compatible with the manufacturer's recommendation; (NOTE: HVAC services will be provided on a standard eleven hour shift five day week, excluding holidays and weekends. Services beyond this standard will be provided on a reimbursable basis.)

(d) *Electrical distribution and electrical services,* including normal hookup to a power panel within the ADP room. (NOTE: Electrical services will be provided on a standard eleven hour shift five day week, excluding holidays and weekends. Services beyond this standard will be provided on a reimbursable basis.)

(e) West pipe *sprinkler protection* in all electronic equipment and tape storage areas. All other fire and safety criteria cited in FPMR 101–20.105 shall be met.

Typical above-standard alterations for ADP areas includes:

- Isolation transformers.
- Emergency shutdown control switches.
- Uninterruptible power supplies.
- Audible and visual alarms.
- Special security locks.
- Supplemental Halon fire suppression system.

5. *Conference and Classroom/Training Facilities*—Classrooms and training areas will be provided standard alterations in accordance with levels specified for office space, with additions or exceptions as follows:

a. Structural floor slab to structural ceiling slab walls with a minimum sound transmission class (STC) of 45. Walls shall be constructed to accommodate agency furnished blackboards, projection screens or similar items.

b. As determined by GSA, ceilings acoustically treated to provide a minimum sound transmission coefficient of 40 (STC 40);

c. Supplemental, separately zoned heating, ventilation, and air-conditioning in *conformance* with *GSA standards;* all duct penetrations into the room shall be baffled so as not to compromise the STC requirement of the wall.

d. Special features normally associated with the subcategories of space under this classification are determined by GSA on a case-by-case basis. These include such features as electrical service and normal hookup to agency equipment, blackout curtains, lighting controls, telephone and data lines and projections booths. In case of small courtrooms, guidelines adopted by the Judicial Conference of the United States will be the accepted reference.

e. *Fire and Safety*—Buildout shall be done in accordance with the criteria cited in FPMR 101–20.105.

6. *Light Industrial Areas*—Light industrial areas will be provided with initial alterations at levels required to provide standard architectural, mechanical, electrical, and structural features normally associated with this type of space. Determination of the normal level will be made by GSA on a case-by-case basis using commercial standards.

7. *Quarters and Residential Housing*—Initial alterations will place quarters and residential housing in an occupiable and satisfactory condition.

Appendix B to Part 101–17—Wellness/Physical Fitness Facilities

1. *Space for wellness/fitness facilities.* Exercise equipment, lockers, and nonstandard interior finishes (purchase and installation) are the responsibility of the tenant agencies. In a multiple tenancy building, a lead agency should be identified to be the focus of actions relating to a fitness facility and to request its establishment. Normally, the lead agency would be the major occupant in the building. Physical fitness facilities in multiple tenant buildings will be assigned as a joint-use space.

a. *Exercise rooms.* Exercise rooms will be treated the same as conventional office space and provided building standard features as follows:

(1) Floor covering such as vinyl tile or equivalent or acceptable grades of commercial carpet.

(2) Ceilings structurally sound and finished.

(3) Ceiling-high interior partitions.

(4) Heating, ventilation, and air-conditioning (HVAC) capable of maintaining the temperature as specified in FPMR 101–20.107.

(5) Sound attenuation to provide a minimum sound transmission class of 40 (STC 40).

(6) Adequate lighting to maintain acceptable levels of illumination.

b. *Locker rooms*—Locker rooms will be treated as conventional office space and provided building standard features as follows:

(1) Ceilings that are structurally sound and finished.

(2) Floors that are concrete or finished with other non-slip material.

(3) Heating, ventilation, and air-conditioning (HVAC) capable of maintaining the temperature as specified in FPMR 101–20.107.

(4) Sound attenuation to provide a minimum sound transmission class of 40 (STC 40).

(5) Adequate lighting to maintain acceptable levels of illumination.

(6) Walls that are wallboard or moisture resistant wallboard, as appropriate, and finished and painted or equivalent.

c. *Shower rooms*—Shower rooms will be treated as Lab and Clinic space (SP–1) and provided building standard features as follows:

(1) Ceilings that are moisture resistant wallboard or equivalent.

(2) Floors with non-slip finishes.

(3) Plumbing and fixtures as required, including water and waste, shower stalls, toilets, and sinks in such numbers as is consistent with the number or facility users and square footage available in the shower rooms.

(4) Adequate lighting to maintaining acceptable levels of illumination.

(5) Heating, ventilation, and air-conditioning (HVAC) capable of maintaining the temperature as specified in FPMR 101–20.107.

(6) Walls that are moisture resistant wallboard and finished and painted, or equivalent.

2. *Criteria for establishing fitness programs.* Agencies shall submit to the appropriate GSA regional office a Standard Form 81, Request for Space, and a plan for the proposed fitness program. Agencies may contact the President's Council on Physical Fitness and Sports for assistance in developing their plan. The plan should set forth the scope and goals of the proposed program and include the following elements as outlined by the President's Council on Physical Fitness and Sports:

(1) A survey indicating employee interest in the program;

(2) A 3 to 5 year implementation plan demonstrating long-term commitment to physical fitness/health for employees;

(3) A health related orientation, including screening procedures, individualized exercise programs, identification of high-risk individuals, and appropriate follow-up activities;

(4) Identification of a person skilled in prescribing exercise to direct the fitness program;

(5) An approach which will consider key health behavior related to degenerative disease, including smoking and nutrition;

(6) A modest facility that includes only the essentials necessary to conduct a program involving cardiovascular and muscular endurance, strength activities, and flexibility;

(7) Provision for equal opportunities for men and women, and all employees, regardless of grade level.

Depending on the scope and goals of the proposed program, one or more of the above elements may not apply or may apply only partially or indirectly. However, every attempt should be made to show that each of the above has been considered in the planning effort or are already provided under existing programs and activities sponsored by the agency personnel office, Public Health Service (PHS) health unit, employee association, or other official organization within the agency. For guidance on the development of health service programs, agencies may consult the PHS, Department of Health and Human Services.

Appendix C to part 101–17—Child Care Centers

A. *Basic policy.* Pursuant to 40 U.S.C. 490(b), GSA is authorized to provide child care centers in GSA-controlled space. Federal agencies are responsible for determining their respective child care needs and then requesting the appropriate space from GSA. Upon receipt of such a request, along with the result of a needs assessment survey indicating sufficient agency interest, GSA will provide the standard of alterations for the center as defined in Appendix A. The cost of any other features not specified in Appendix A will be fully reimbursed to GSA by the user/tenant agency(ies) except as noted in paragraph (f) below.

Agency(ies) will sponsor child centers for their employees, submit space requests for their requirements, allocated space under license or other appropriate authorization document to either the provider of child care services for an employee user group, and pay RENT to GSA for the assigned space.

The provider will occupy the designated space pursuant to an assignment authorizing the sponsoring agency or lead agency (the agency which issues the Standard Form 81, Request for Space in cases involving a joint-use assignment) to allocate the space to the provider of child care services or an employee user group.

B. *Leasing space for a child care center.* When necessary, GSA will acquire leased space to house a child care center or to relocated agency activities displaced by a child care facility established in GSA-controlled space. When leasing space specifically for a child care center, the lease term should not exceed 5 years unless otherwise determined by the contracting officer to be in the best interest of the Government. In the event the space for a child care center is part of a larger space acquisition for an agency or agency(ies), the lease term for the center should be coterminous with the other space leased by the Government in the building.

C. *Developing a child care facility out of existing assigned space.* When a portion of an agency's existing assigned space is made available by the agency for child care center use, the cost of alterations to the space will be fully reimbursable to GSA. However, if any of the alterations result in a higher space classification, GSA will fund the alterations for the upgrading of the space to be classified.

D. *New construction or use of modular buildings for child care.* Space solely for the purpose of providing a child care center will not be made available by GSA through new construction nor through the purchase or lease of modular buildings. However, in special circumstances, where no other space can be economically developed and made available for child care use, modular buildings can be considered. In such circumstances, all expenses associated with site preparation and the purchase or lease of

VOL
54
ISS
210
NO
1
1989
UMI

modular buildings, including design services, water and sewer, and utility service installation costs shall be paid by the sponsoring agency(ies).

E. *Space classification.* Space in child care centers will be classified in accordance with the standards specified in Appendix A.

F. *Special buildout considerations.* In addition to the standard alterations (SA's) specified in Appendix A, child care center space will have all built-in features such as kitchen counters, shelves, cabinets, bookcases, closets, mailboxes, sinks and basins required throughout the center furnished and installed as part of the normal buildout. All restrooms which will be utilized by children from the center should contain child-size toilets, handicapped accessible toilets and child accessible drinking fountains.

Floors in child care centers shall be covered with an acceptable grade of anti-static carpet or tile as appropriate.

All landscaping required to prepare outdoor play areas will be covered by GSA as a part of the standard alterations for a child care center. The purchase and installation of playground equipment will be the responsibility of the sponsoring agency(ies).

G. *Special cleaning provisions.* For reasons of safety and health, the entire child care center will be cleaned in the same manner as clinical (i.e., Health Unit) space, regardless of the space classification.

H. *Compliance with State and local requirements.* To the maximum extent practical, GSA will comply with State and local laws and regulations relating to the development of facilities for use as child care centers.

I. *Special safety and environmental considerations.* Every effort shall be made to minimize safety and environmental hazards in the child care center space and play areas as well as in adjacent areas of a building frequented by children. Construction work on a center shall be done in a manner which will minimize sharp corners, tripping hazards, or other problems which may increase the potential for injury to children.

All lead base paint, even lead base paint in layers below existing coats, shall be removed from all surfaces in space to be utilized as a child care center. All other applicable Federal safety and environmental regulations or requirements as outlined in FPMR 101-20 must also be met.

Dated: October 25, 1989.

William C. Coleman,

Commissioner.

FEDERAL REGISTER PAGES AND DATES, NOVEMBER

46043-46220.....1

CFR PARTS AFFECTED DURING NOVEMBER

At the end of each month, the Office of the Federal Register publishes separately a List of CFR Sections Affected (LSA), which lists parts and sections affected by documents published since the revision date of each title.

LIST OF PUBLIC LAWS

Last List October 30, 1989

This is a continuing list of public bills from the current session of Congress which have become Federal laws. It may be used in conjunction with "P L U S" (Public Laws Update Service) on 523-6641. The text of laws is not published in the **Federal Register** but may be ordered in individual pamphlet form (referred to as "slip laws") from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 (phone 202-275-3030).

H.R. 2978/Pub. L. 101-131

Flag Protection Act of 1989. (Oct. 28, 1989; 103 Stat. 777; 1 page) Price: $1.00

Upon expiration of the 10-day period prescribed by the Constitution of the United States, H.R. 2978 became law on Oct. 28, 1989, without the President's signature.

TABLE OF EFFECTIVE DATES AND TIME PERIODS—OCTOBER 1989

This table is used by the Office of the Federal Register to compute certain dates, such as effective dates and comment deadlines, which appear in agency documents. In computing these dates, the day after publication is counted as the first day.

When a date falls on a weekend or holiday, the next Federal business day is used. (See 1 CFR 18.17)

A new table will be published in the first issue of each month.

New edition .... Order now !

For those of you who must keep informed about **Presidential Proclamations and Executive Orders,** there is a convenient reference source that will make researching these documents much easier.

Arranged by subject matter, this edition of the *Codification* contains proclamations and Executive orders that were issued or amended during the period April 13, 1945, through January 20, 1989, and which have a continuing effect on the public. For those documents that have been affected by other proclamations or Executive orders, the codified text presents the amended version. Therefore, a reader can use the *Codification* to determine the latest text of a document without having to "reconstruct" it through extensive research.

Special features include a comprehensive index and a table listing each proclamation and Executive order issued during the 1945–1989 period—along with any amendments—an indication of its current status, and, where applicable, its location in this volume.

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers for $340 per year in paper form; $195 per year in microfiche form; or $37,500 per year for the magnetic tape. Six-month subscriptions are also available at one-half the annual rate. The charge for individual copies in paper or microfiche form is $1.50 for each issue, or $1.50 for each group of pages as actually bound, or $175.00 per magnetic tape. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or charge to your GPO Deposit Account or VISA or Mastercard.

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 54 FR 12345.

THE FEDERAL REGISTER
WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: The Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:
1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.
